ERRATA.

Page 52, col. ii., line 36 from bottom. For "January" read "December." Line 9 from bottom. For "Wenn" read "Wann."

Page 77, col. i., line 18 from bottom. For "fire-red" read "fine red."

Page 90, col. ii. Dele third paragraph from bottom (Peacock).

Page 127, col. ii., line 3 from bottom. For "phantomnate or phantomnation" read "phantomate or phantomation."

Page 152, col. i., line 27 from bottom. For "T. Codman" read "J. T. Codman."

Page 162, col. iii., line 32. For "Macmillan" read "Henry Frowde."

Page 221, col. iii., lines 19 and 30 from bottom. For "Monsieur" read "Mademoiselle."

Page 343, col. iii., line 30. For "a glass, marble, or a brass ball" read "a glass marble," etc.

The Nation.

NEW YORK, THURSDAY, JANUARY 4, 1900.

The Week.

The reported success of Secretary Hay's efforts to obtain a joint international guarantee of the "open door" in China will constitute, if real, a great diplomatic achievement. That the Government has been working for this end has been no secret. The President alluded to the matter in his message, when he said that no infringement of our treaty rights in China had yet occurred, and that the purpose of the Administration was to see that none should occur. That expression suggests the rationale of the affair—to maintain unimpaired our commercial rights in China enjoyed under existing treaties. The danger was, of course, that the successive annexations, or "leases" for ninety-nine years as the wise it call, might have the effect of snuffing out our treaties. China would be disposed still to observe them, but would the European Powers who had taken over Chinese territory? The example of English experience in Madagascar is instructive. When France, not without some diplomatic trickery, suddenly declared Madagascar French territory, instead of merely a French protectorate, British treaty rights of trade in that island were at once extinguished. Lord Salisbury complained, but M. Hanotaux was firm, and the English were left without redress. Mr. Hay foresaw a similar peril to our interests in China, and took steps to forestall it diplomatically.

Mr. Kasson has taken a hand in explaining the French reciprocity treaty. He is naturally displeased at the assertion of the French Government that they got quite the better of him in the bargain. As a matter of fact, he is certain that he worsted them. They were simply in despair at his superior craft and cunning in the negotiation, and at one time ruefully thought of abandoning the whole treaty, which was such a monument of their diplomatic defeat; but finally they concluded to put a bold face on it and tell the Chamber that they had got the better of the wily Americans. Mr. Kasson, however, is not putting a bold face on it when he affirms that he completely outmanœuvred the Frenchmen; he is telling the simple historic truth, and has no thought of influencing the action of the Senate. Truthful James could not be more solemn than he in assuring the troubled California fruit-growers that their interests are dear to his heart, and have not been neglected in the least. But the amusing thing about all this, as about the Argentine treaty, is that free-trade arguments are so innocently used by men who have gone all their lives in horror of them. "In any other mouth," said Pascal's Jesuit, "these opinions would be orthodox"; coming from a Jansenist, of course they were heretical. So we say, if anybody but Mr. McKinley talked as he does about the French and Argentine treaties, he would be a free-trader.

Appraiser Wakeman continues to be a thorn in the side of New York importers. It has seemed to be his view all along that importing is an immoral act, which has somehow been recognized and tolerated by the United States Government, but which good men should discountenance and prevent as much as possible. So he takes all possible means to check this kind of misdemeanor. The result is that foreign trade really belonging to New York seeks other ports, where less fanatical appraisers are stationed. It would not be surprising if New York should receive the bulk of her dry-goods of foreign make through the Boston custom-house before the expiration of Wakeman's term. So, as we cannot have Wakemans at all our ports, we should not be suppressing the evil practice of importing, but only changing its lurking-place. A report comes from Washington that Wakeman will not be removed from office, but that ne will be warned to mend his ways. Such leniency will be a mistake on the part of the higher authorities. Wakeman has received many warnings to "be decent," but they have been of no avail, because the crime of importing was constantly going on before his eyes. As well expect a Puritan of the seventeenth century to keep his hands off an image in a Catholic church. Foreign goods are a kind of godless idolatry to the Wakeman vision, and an importer, although he may be a protective tariff man himself and a member of the very League of which Wakeman was Secretary, is in his eyes an object of sleepless vigilance and never ending suspicion.

The native Cuban press treated Gen. Brooke's farewell proclamation with grave humor. "We look around us," said the *Diario de la Marina*, "as Gen. Brooke urges us to do, but we do not see the things he says we shall." One of them was judicial and prison reform, upon which Gen. Wood seems now to be entering with vigor. Towards the new Military Governor all factions are very respectful. This, however, may be only provisional, until Wood chooses his Cabinet; then he will be apt to hear things said in fluent Castilian. The *Cubano* already demands the dismissal of Gen. Ludlow, who, it says, "has governed by means of ukases signed with the point of his sword." These are but indications of the swarming difficulties which will try the patience and tact of Gen. Wood in his new and arduous position, but which we think he will surmount.

We suppose that the incorporation of the Panama Canal Campany in New Jersey on Wednesday of last week is intended partly to remove the deadly reproach that it was a "foreign" enterprise. This was used as a fatal taunt in the last Congress. It will be no longer available, however, now that the incorporators are able to announce "the Americanization of the Panama Canal." This makes the Panama route at least as patriotic as the Nicaragua plan, and thus the eminent engineers who are investigating the comparative technical merits of the two are at liberty to dismiss all invidious questions about the flag, and look only for the better place to dig a canal. Their report cannot, in all probability, be laid before Congress in its present session. The President evidently does not expect that it will be, as he said in his message that "a comprehensive and complete investigation is called for, which will require much labor and considerable time for its accomplishment." Yet this, of course, has not prevented the impetuous Hepburn and the fiery Morgan from announcing that they propose to push bills for the construction of a Nicaragua Canal, without waiting for any little thing like a Government report. They will be more than ever inclined to make haste when they learn that the Americanized Panama Company proposes to raise American capital and complete its canal without asking money from Congress.

President McKinley must see the absurdity of forbidding Federal office-holders to attend the Republican national convention for two or three days next June, and at the same time allowing one of the chief among such office-holders to act for nearly a year as chairman of an important partisan committee. It would be logical to let First Assistant Postmaster-General Heath be head of the "committee on organization and literature" just established by the Republican national committee, and also to let as many postmasters throughout the country go to the convention at Philadelphia as could secure election as delegates. It would be logical also to prohibit such partisan activity by both superior and subordinates. But to say that Mr. Heath of Indiana may turn himself into a partisan worker for the next ten months, as First Assistant

Postmaster-General at Washington, while he could not even be a delegate to the national convention if he were a postmaster at home, seems too ridiculous for the President to permit—to say nothing of the scandal involved in the license to neglect his public duties thus given the official who stands next to the head in a great department.

The news which Elliot Danforth, formerly our leading silver and Bryan Democrat in this State, has brought from the South confirms similar information from Washington. He says that the Southern Democratic leaders are not insisting upon making free silver the main issue in next year's campaign, that they acknowledge that the situation has changed since 1896, and that they now think Trusts and imperialism will be the dominant issues in 1900. As for candidates, they mention only Bryan for first place, with some Eastern man for second. Why not throw over Bryan with the free-silver issue? He never had any other excuse for being a candidate, and, without that issue, he will have no claim to a renomination. If he consents to be separated from his issue, he will be repudiated by the free-silverites and other Populistic elements, which were attracted to him by that alone, and he will have great difficulty in gaining the confidence of other elements, both in and out of the Democratic party. Distrust of the man is as strong as distrust in his issue, and if the party has the sagacity to see its opportunity, it will make thorough work of its unloading, and throw both overboard together.

The reaction of sentiment in the House of Representatives regarding the treatment of the Roberts case from Utah at the opening of the session encourages the hope that the Constitution may receive more attention when another claim to a seat comes before that body. Most Representatives now concede that the Mormon claimant ought to have been admitted upon his regular credentials, and then expelled with all the impressiveness which such deliberate action would have commanded. These Congressmen will be disposed to pay more heed to the fundamental law when the case of Gen. Wheeler of Alabama comes before the present House than was paid in the last. The Federal Constitution says that "no person holding any office under the United States shall be a member of either house during his continuance in office." Gen. Wheeler held the office of general in the United States volunteers during the last Congress, but still claimed the right to a seat in the House when he chose to appear there, and the claim was allowed. It is safe to say that he will not be permitted to do the same thing again in this Congress.

It turns out that the Seventy-first New York Regiment does not deserve the bad preëminence recently given it of putting in the largest number of claims for pensions yet received from any regiment which took part in the war with Spain. Its applications at last accounts numbered only 311, while 650 have come in from the Ninth Massachusetts. This latter regiment never had a strength exceeding 1,200 men. It was not mustered into the service until May, 1898, and was mustered out six months later. The remarkable and discreditable contrast between the rush for pensions by soldiers in the brief Spanish war and the spirit manifested by the men who served in the Union army during the four years' struggle against the Southern Confederacy, is best shown by comparing these figures for the Seventy-first New York and the Ninth Massachusetts with the figures for the Pennsylvania regiment which was commanded during the civil war by Col. Beaver, afterward Governor of the State. This regiment had 2,094 enlistments from the beginning to the ending of the war. Up to the close of 1882, seventeen years after the end of the war, only 475 applications for pensions had been filed, of which 90 came from widows, 23 from minors, and 53 from dependent relatives. Most of the soldiers of Col. Beaver's regiment on whose account pensions were granted, were actually killed in battle or died of their wounds.

The plan to increase the number of chaplains in the army, which is now being urged by the War Department, should meet with little public encouragement. For years past the clergymen appointed to the army have largely been men who failed to do well in civil life, and who got their positions only by using political pulls. Once in the service they have been of little value, except as teachers in far-away posts, and have been retired within comparatively few years after their appointment, the average period of service of those now on the retired list being little more than twelve years, while scandals have by no means been infrequent in the corps. For many years thoughtful army officers have favored the total abolition of the office, and foremost among these was Gen. Sherman, who, loyal churchman as he was, never failed to denounce the clerical scrambling for office which these places caused. In view of the fact that the War Department is now trying Chaplain Shields for intoxication, that charges are pending against another, and that, when ordered to Manila recently, several chaplains resorted to all sorts of curious devices to escape duty in the field, the desire of the War Department to increase this class of non-combatant officers has much need of justification.

Good citizens all over the country, no less than in Illinois, will rejoice at the news that Gov. Tanner of that State has reached the end of his career. He has earnestly sought to secure another nomination from the Republicans next year, but the opposition within his own party proved so strong that on Friday he made formal announcement of his withdrawal from the field. Tanner is the worst specimen of the boss building up a State machine after the manner of Platt in New York and Quay in Pennsylvania, that has been seen beyond the Alleghanies. Without a single qualification for high office himself, he managed to secure the Republican nomination for the governorship in a year when he could run nearly 20,000 votes behind his party's candidate for President and still get a plurality of much over 100,000. Installed in the chief office, he used all his influence to lower the standard in other positions, and to organize a machine which should permanently control the politics of the State. He had as little respect for law as for public sentiment, and shocked the nation a year ago by usurping the power to forbid the entrance into Illinois of men from other States seeking work in her mines, and threatening to "blow to pieces with Gatling guns" any body of such offenders. In short, he has been a disgrace not only to his State, but to the whole country, and his final downfall is cause for universal satisfaction.

It is characteristic of a happy-go-lucky nation that, after looking with pleased curiosity for fifteen years at the digging of a drainage canal from the city of Chicago to the outfall of the Des Plaines River, we have suddenly awakened to the fact that this ditch is intended to carry the city's sewage down to the Illinois River and thence to the Mississippi and the Gulf of Mexico. This fact was proclaimed in many ways by the Chicago authorities, newspapers, and financiers. Loans were negotiated to the amount of $30,000,000 or more, for that express purpose. Meetings of engineers and men of science were held to discuss plans for carrying out this design, and considerable *éclat* was earned by the energetic contractors. Pictorial illustrations of their machinery were published from time to time and widely circulated. And yet, on the very eve of opening the drainage canal (on January 2), there arose a sudden demand from down-stream that the opening of the canal be deferred until Congress, or the courts, or somebody should have time to stop it altogether. What effect the drainage scheme may have on the health and beauty of the communities down-stream we do not attempt to divine, but we submit that that question ought to have been put beyond the bounds of controversy before the first dollar was expended on the present scheme, and that it is unreasonable to expect that

Chicago will forfeit the fruition of her labors unless compelled to do so by superior force. Meanwhile, the southward flow has begun.

The war in South Africa has made the world's supply of gold a matter of anxiety to many persons who have no interest in gold mines there or anywhere. It is the habit of the human mind to think of the word supply as applicable only to a commodity which disappears in the using. So, when we speak of the annual supply of gold, we unconsciously liken it to the annual supply of wheat or cotton; and when we hear that the supply is lessening, or that an important source of supply has been cut off, we feel an instant apprehension of scarcity and consequent trouble in the financial world. The phrase "gold famine" was in general use a few years ago, when the silver controversy was at its height. If the war in South Africa had occurred at that crisis in our politics, it might have turned the scale the other way and given victory to the party of 16 to 1. Yet the smallest reflection teaches that gold, when used as money, is not consumed by that process. The only gold actually consumed is the amount used in the arts, and not all of that, but only the portion used in such a way that it cannot be recovered. Its supply is not like that of other commodities, which require constant renewal to keep the stock up to a certain level.

In addition to the lesson in tactics the English are learning at the hands of the Boers, they are gaining much interesting information as to the fundamental weakness of their military organization. It is only a few months since the Government triumphantly laid before Parliament an impressive list of army improvements brought about within a comparatively short time. But these related largely to the strengthening of the standing army, and but little, if at all, to the militia reserves, the militia itself, and the volunteers, to which bodies the country has now turned in its hour of need, as it turned during the Crimean war, the Indian mutiny, and, to a slight degree, during the Sudan campaign of 1885. The present mobilization of the reserve forces is therefore the first important test of their value in nearly half a century, and is being carefully watched by Continental experts. As to the actual strength of the militia, there seem to be few figures available, and it is a matter of doubt whether 90,000 of the paper strength of 135,000 men could take the field with their respective organizations. Competent military critics have expressed high opinions of the value of the raw material to be found in the ranks of the various battalions, while laying great stress upon the hopelessly antiquated system, under which even accurate enrolment lists are an impossibility. In regard to the volunteers and the Yeomanry, now figuring so conspicuously in the dispatches, it is admitted that, as far as training goes, they are of little military value, and their employment in new organizations in South Africa will be an experiment, the outcome of which will unquestionably be watched with considerable misgivings.

The dispatch of the Yeomanry will call still further attention to other military weaknesses—the lack of trained cavalry and artillery remounts and of sufficient reserve equipments and ordnance supplies. What is of greater importance, however, is the fact that the War Office has been forced to draw upon the equipments of both militia and volunteers to complete those of the troops under orders to South Africa. But it is lack of trained officers that the English forces are likely to suffer from most, if the need has not already been felt. The great losses among the commissioned ranks in the victories and defeats thus far, the large number of officers required on staff and supply duty, as well as on the long lines of communication and on detached service in all quarters of the globe, must tax severely the resources of the War Office, which has only the retired and half-pay lists and untrained militia officers to fall back upon. Under these circumstances many Englishmen are asking themselves what would happen if Mr. Chamberlain involved the country in a really great foreign war, and a serious problem of national defence were to present itself. From the temper of the English press and as a result of the humiliating experiences in South Africa during the past month, it already seems plain that the "easy march to Pretoria" will result in radical changes throughout the British military system, and in a great strengthening of its land forces.

That England, with the consent of Germany, is eventually to have Delagoa Bay and the whole Portuguese strip on the East African coast, is a fair inference from what is known of the Anglo-German agreement of 1898, as also from the official and semi-official assertions and denials now appearing in the press. The thing was roundly asserted more than a year ago by "Diplomaticus," the writer who, in the *Fortnightly*, has published so many articles showing a remarkable knowledge of the secrets of English diplomacy. It was affirmed, too, in the dispatches of the *Evening Post's* London correspondent. No official denial touches the substance of the arrangement. Details, as printed, may be wrong, but the gist of the matter has not been officially denied. The nearest to a Government *démenti* that we have seen was the statement made by the Portuguese Ministry some time ago, that no national territory had been sold. But that is obviously inconclusive. The matter is no doubt tied up as yet, as Lord Salisbury hinted some months since, with the arbitration of the Delagoa Bay Railway controversy, on which the verdict of the Swiss tribunal is soon expected. Thus it is not likely that we shall see a speedy English occupation of Delagoa Bay. It may yet occur as a war measure. To get a more feasible line of march into the Transvaal would no doubt be a good thing, but if, in the act, Russia and France were further offended and inclined to some hostile move of their own, the net military advantage to the British might be less than nothing. It is not probable, therefore, that any immediate change will be made in the status of Delagoa Bay.

The German Emperor has now set his heart on a doubled navy, and in his New Year's address he showed that he means to let no occasion pass without arguing for his pet project. Herr Richter, in his biting speech in the Reichstag, made fun of the tendency of the Emperor and of his subservient ministers and newspapers to produce an enlarged German navy as the Q. E. D. of every historical movement and current event. Herr Richter predicted that, if Germany, with a great flourish of trumpets, informed the whole world just how many ships she was going to build in the next eighteen years, other countries would at once enlarge their naval programmes, and the result would be that, at the end of the period in question, the German navy would be relatively as inferior as ever. This is exactly what is already happening. France is about to vote $80,000,000 for naval enlargement, and the Government organs in England are saying that, if the German programme succeeds in the Reichstag, it will be necessary for the British Admiralty at once to provide for new constructions. Mr. Goschen himself, in a public speech on December 18, practically confirmed this view of what England would do. He spoke plainly of the paramount duty of keeping English naval efficiency "unimpaired." If there is to be a race in ship-building, Great Britain will not be left behind. Mr. Goschen was also very direct in what he said of England's watchful attitude at present. Lord Salisbury had before scouted the idea of interference by any other Power in the Boer war. No European country desired to interfere, he was persuaded, but if any did, Great Britain was in a position to prevent it. To these warnings of the Premier, the First Lord of the Admiralty added the words: "We know our responsibilities, and no ship is now disposed of, no ship sent to any quarter of the globe, without our realizing the necessity of taking a broad outlook over the whole state of affairs throughout this great empire."

HAS M'KINLEY "A SURE THING"?

"I suppose you think that McKinley has a sure thing in 1900," said a New Yorker, the other day, with confidence in a ready assent, to a shrewd Republican politician from a State in the Central West, who was making a trip to the East. "I'm not so sure about that," was the unexpected reply. "I can foresee contingencies under which, it seems to me, Bryan will have more than a fighting chance of being elected."

McKinley secured 271 of the 447 votes in the electoral college in 1896, and polled over 600,000 more ballots than Bryan, while nearly 135,000 other votes were diverted from the Democratic candidate by the Palmer and Buckner ticket. In other words, Bryan was in a minority of almost three-quarters of a million ballots, to say nothing of the votes cast for the Prohibitionist and the Socialist-Labor candidates. In speculating about the prospect for 1900, Republican politicians, particularly those of the East, are accustomed to argue that Bryan was beaten worse in 1896 than any other candidate of either party since Greeley's overwhelming defeat by Grant in 1872; that he is weaker now than he was then, because the silver issue which he represents has lost its hold; and that consequently he is certain to lose next fall. This is what any Republican manager from the West also says when he is "talking for publication"; but there are not a few well-informed members of the party in that section who privately admit that they do not at heart feel so confident of the result as they would like to.

There is abundant reason for not regarding the issue of next fall's contest as a foregone conclusion. In the first place, while McKinley's victory in 1896 was in one sense overwhelming, analysis shows that the change of less than 34,000 votes in four Southern and two Northern States would have put his opponent in the White House. Bryan secured one of the electors from Kentucky, and McKinley obtained the other twelve by pluralities not exceeding 281; the other three States of the formerly "solid South" which went for McKinley were carried by 3,837 votes in Delaware, 11,487 in West Virginia, and 32,232 in Maryland. Bryan secured one of the nine electors from California, and lost the other eight by pluralities rising no higher than 1,922. Indiana went for McKinley by a plurality of 18,181. In other words, if the hesitating voters in these half-dozen States, who made up their minds at the last moment, had gone the other way—to the number of 141 in Kentucky, 962 in California, 1,919 in Delaware, 5,744 in West Virginia, 9,091 in Indiana, and 16,117 in Maryland—Bryan would have had 228 electoral votes and the Presidency, despite the fact that, even then, McKinley's plurality over him at the polls would have been much more than half a million.

With almost incredible folly, the Republicans are doing their best to assure Bryan this year the four Southern States which he lost in 1896. Nothing could have been devised better calculated to destroy Republican chances in all of these States than the scheme which has already been brought forward in Congress, and which is to be pushed after the holiday recess, for an inquiry by the Census Bureau into voting statistics at the South, with the avowed purpose of making the result a basis for cutting down the representation of that section in the House of Representatives and the electoral college. The mere agitation of such a project revives that old sectional issue which held the South solid for twenty years, and the dropping of which alone made possible McKinley's successes in the border States in 1896. Maryland has already been recovered by the Democrats in a State election, and Kentucky would have gone the same way in November had it not been for the temporary handicap of Goebelism. The Republicans of Delaware are utterly demoralized by Addicksism. The recrudescence of the race issue justifies the Democrats of West Virginia in hopefulness.

While a new question which helps the opposition is thus injected into the canvass, it remains to be seen whether the Republicans will be as strong on the financial issue in 1900 as they were in 1896. What gave McKinley his tremendous pluralities of nearly 300,000 in Pennsylvania, almost 270,000 in New York, nearly 90,000 in New Jersey, which had been Democratic since 1872, and more than 50,000 in the "doubtful State" of Connecticut? Everybody knows that it was the fear that Bryan's election would mean a change to the silver standard, and in consequence the most terrible financial convulsion ever known. But the Republicans now maintain that the financial measure which they are going to pass in Congress will assure the stability of the gold standard, no matter whether the President be a gold man or not. This is patriotic and necessary legislation, but can Republican stump-speakers and organs turn around next fall and frighten former Democrats into voting for McKinley again because "Bryan's election will ruin this country"?

In 1896 the Republicans had the great advantage of being "the outs," and of having the "hard times" issue against the other party—a combination which has won after every great financial panic in our history for sixty years. In 1900 they will lack this advantage. Supposing the present prosperity to last until next fall, all they can say to the workingman is that McKinley should be re-elected to insure its continuance. They used precisely the same argument under similar circumstances when Harrison ran for reëlection in 1892, and were overwhelmingly beaten.

The Republicans seem to-day to stand a better chance than the Bryanites of carrying three or four States beyond the Missouri which they lost before, namely, Kansas, South Dakota, Wyoming, and Washington, no one of which, however, except Kansas, has above four electoral votes. But all of these will need to be closely contested if McKinley is to carry them, as will also California if he is to hold it. On the other hand, there are States this side of the Missouri in which the opposition will be decidedly stronger in 1900 than in 1896, by virtue simply of the fact that the lurch into Bryanism then left the party almost without leaders, organization, or machinery of any sort, while during the interval something has been built up to supply this lack.

We say nothing of the possible bearing of the course of events in the Philippines upon the voting next November, further than this, that many Republican politicians do not conceal their apprehension of the effect upon the public mind of a long continuance of present conditions, and would dread to make the campaign with a guerilla warfare still running on.

It is obvious enough that the Western Republican whose remark we quoted at the outset is quite warranted in his view that the Presidential race of 1900 may not be a walkover for the candidate of his party. It is well that he and his associates should be apprehensive lest the political pendulum, which, since 1872, has swung the doubtful States, and with them the result of the election, from one party to the other every four years, may not stay in 1900 where it rested in 1896.

"DON'T GIVE UP THE SHIP."

These words are printed on the title-page of a pamphlet which the promoters of the ship-subsidy bill are now circulating in the interest of that measure. They were uttered by Capt. Lawrence when he gave up his life for his country on the deck of the frigate *Chesapeake* in her fight with the *Shannon*. They are now perverted to serve as inspiration for as graceless a raid on the United States Treasury as was ever devised by human greed. The pamphlet in question is entitled 'United States Merchant Marine on the Oceans,' and is published in Cleveland, Ohio. It embraces letters from a large number of persons in favor of the Hanna-Payne bill, all of them in favor of the policy of paying money out of the public Treasury to carry on a private industry. The contents have not been very carefully edited, however. If they had been scrutinized more closely Mr. B. L. Pennington, a vessel-owner of Cleveland, would not have been allowed to repeat and endorse as freely as he does the arguments of those who oppose the bill on economical grounds. Mr. Pennington, we should remark, favors the

bill in spite of its badness; but if all that he says concerning the measure itself and the principles on which it is based is true, it does not need any further argument to consign it to the tomb.

Referring to the "humiliating fact" that 92 per cent. of our goods are carried in foreign bottoms, for which we are paying annually, it is said, two hundred millions, for the most part lost to the United States, Mr. Pennington points out that the sole reason why this has been done is that we could hire foreign tonnage for our needs cheaper than we could own it. "If our capitalists," he continues, "could not build and man ships so cheaply as those abroad, it is evident that other employment of capital was more remunerative, and on which better than foreign wages could be afforded." Then he gives a sly dig at the tariff which has handicapped us hitherto in the ocean carrying trade.

But this handicap is surely passing away. "Social, industrial, and economic changes are now going on at such a rapid pace as to show almost certainly that, before many years, even without such aid, such employment of capital will be profitable." That is, the American merchant marine will be "rehabilitated" in a few years without Government pap, simply because we now excel other nations in the production of iron, steel, and other things which enter into the production of modern ships. In order to hasten the natural course of things by some short period, and for no other reason, Mr. Pennington gives his assent to the principle of the bill, but not to its details. He thinks that "the compensation under clause B is too large, especially for the largest and fastest vessels, since such large craft already have in their favor the fact that they can make much more money than small craft in proportion to their value."

The bill as drawn gives most money to those who need it least. This is usually the case in raids on the Treasury. Such raids would not be started at all except by the rich and powerful, and, as they arrange the details, they naturally arrange them in their own interest. "Besides," says Mr. Pennington, "the smaller compensation in clause A is an unjust discrimination against our existing tonnage, which has fought so long and so bravely against great odds for existence." The late John Murray Forbes of Boston was one of those small-tonnage men, but the peculiarity in his case was that he did not want any subsidy at all. All that he asked was to be let alone. He wanted the privilege of buying ships where they were offered cheapest, but, failing of that privilege, he kept his sailing-ships going to and from eastern Asia, and he opposed every measure for shipping bounties and subsidies down to the day of his death. If he were living now, and in possession of his wonted vigor, he would go to Washington and demolish the Hanna-Payne bill by his arguments and his example, and make Congress ashamed to pass it.

Some evidence has lately been presented showing that the agricultural classes are getting their eyes open to the fact that enormous sums are to be paid out of the national taxes to ship-builders and ship-owners, without any perceptible benefit to the farmers themselves. The argument for the subsidy bill is that foreign ships are carrying our wheat, corn, cotton, and pork so cheaply that our ships cannot compete with them, but must have help from the Treasury. If this is a true statement, how will any of this money reach the farmer's pocket? Confessedly the amount paid to the subsidized ship-owner will only compensate him for the extra sums he has to pay for his ship and wages. Hence there is nothing left to be paid to the farmer in the way of extra profit, even if there were any means for securing and compelling a division. France and Italy pay subsidies like those proposed in the Hanna-Payne bill, but the color of the money was never seen by the agricultural classes of those countries. The latter are supposed to be compensated by tariffs against the farm products of other nations. Even this poor compensation is impossible here, because we are exporters, and not importers, of such products.

The Hanna-Payne bill is a gigantic fraud on the taxpayers of the United States, and it ought to be a serious question among the leaders of the Republican party how many such reproaches they can carry in the coming campaign. They are heavily charged now with monopolies of one kind and another. They are exposed, rightly or wrongly, to the accusation of legislating in behalf of the rich and to the detriment of the poor. If they pass the ship-subsidy bill, they will have furnished one case where the accusation can be nailed upon the party and cannot be explained away. Will not many voters conclude that the other charges are equally well founded?

SURVIVAL OF LETTER-WRITING.

One of the greatest charms connected with the recently published letters of Robert Louis Stevenson was that of finding them actually existing. Men like him had not left off letter-writing then! The discovery was of itself a delight in this age of postal-cards and telegraph-blanks. "I telegraph, therefore I am," was a witty Frenchman's modern reading of the old *Cogito ergo sum.* The stress of business, or paucity of ideas, is reducing current correspondence so much to the semblance of a code-language, or muttered monosyllables, that long letters, written by a busy invalid like Stevenson, come with special grace of surprise. And he was writing them, be it remembered, a man hunted by publishers, who shook their checks in his face for every line he could produce. But he gave away his "copy" to his friends with right royal bounty.

Of friendship, indeed, good letter-writing is perhaps the chief sign and proof. This was the opinion of that copious letter-writer, James Howell. "Friendship," said he, "is the great Chain of human Society, and intercourse of Letters is one of the chiefest links of that Chain." He doubtless was thinking of the revelation and giving of self that letters imply, opening the heart as a key does a door, as his favorite motto had it—"Ut clavis portam, sic pandit epistola pectus." This, too, was the view which Dr. Johnson took when he wrote to Mrs. Thrale that "a man's soul lies naked in his letters." Yet he was conscious that this was not the whole story, for he characteristically observed in his Life of Pope that "no transaction offers stronger temptations to fallacy and sophistication than epistolary intercourse." But there is no doubt that the true Stevenson, the sincere friend and gallant spirit, is displayed in these delightful letters of his. A French critic speaks of them in the last number of the *Revue des Deux Mondes* as the very model of what a literary man's correspondence should be.

For professional writers, one would think, there is a special need of expanding in letters to each other, or to a judicious friend. They have so many things to say which they cannot say to the public. Pearls often decorate a letter which simply could not be cast before —well, the genteel reading-public. There are forms of wicked cleverness, of irony, of truth taught by silent laughter, which would be wasted upon the literal and unwinking devourer of print, and which require the written page and fit audience. Then there are the conventionalities, the humbugs generally agreed upon, which must be observed in decorous magazine or book, but which your true letter-writer finds a delightful freedom in disregarding or exposing in private. This was long ago remarked by Poe, who said that the confidential talk and private criticism of literary men were vastly more illuminating than their public utterance. The reason was that, in a circle of friends, most of all in a conversation *à deux*, a man could not take the trouble to "mould his countenance to the lie" expected of him in print. Many a man's letters are the well in which he keeps truth.

Stevenson's Letters, to come back to them, frequently possess one thing in common with those of the best writers —the attractiveness of impromptu and unofficial criticism. It is getting to be a question if this is not the very best criticism we have. The glancing judgments of FitzGerald's letters, the happy insight in some of Keats's, Tennyson's *obiter dicta*, Browning's keen deliverances in his letters, Lowell's overplus of wit in

his—where in works of formal criticism shall we find their equal for inspiration and solace? It was a surprising thing in Matthew Arnold's Letters that they were so barren of criticism. You would have looked for much of it in the critic by profession. Yet, beyond the undisguised respect with which he analyzed his own poetical powers and prospects, there was little or nothing of it to catch and fix the attention. It takes the more spontaneous natures to overflow in the unpremeditated criticism which makes the cut-and-dried article seem a poor and juiceless affair. Stevenson had some delightful splashes of the former.

But the main thing is, as we said at the start, that he gives us one proof more that letter-writing has survived. The formal and stilted art may have passed away, but the breath and joy of quick and confidential communication of friend with friend remain. It sometimes seems as if nobody but lovers kept up nowadays the practice of close and full intercourse by means of letters. Certainly as long as the world has lovers, suffering like Shakspere from a "separable spite," it will have letters, and long and leisurely ones. The Prince of Wales, who was later George IV., did his twenty-seven pages of "I-love-yous" to Mrs. Fitzherbert as the most natural thing in the world, and natural it continues to men in his condition. But to get two large volumes of letters, like Stevenson's, with never a love-letter in the lot, is a grateful renewal of hope in the persistence, even in our shorthand generation, of deliberate and self-revealing letter-writing.

ELLIOTT COUES.

By the death of Elliott Coues, at the comparatively early age of fifty-seven years, American ornithology has lost one of its most eminent and brilliant expounders. As a monographer and technical writer he has left an enviable reputation for thoroughness of research and keenness of insight, and as a popular writer he was easily without a peer. But his field of activity was by no means bounded by ornithology, his contributions to comparative anatomy being neither few nor unimportant, while his grasp upon the principles and the technicalities of general biology rendered him eminently fitted for his important share in the task of preparing the 'Century Dictionary.' To him were assigned the subjects General Zoölogy, Biology, and Comparative Anatomy, and he both edited and contributed to them some 40,000 entries during the seven years he devoted almost exclusively to this occupation.

Dr. Coues was born in Portsmouth, N. H., September 9, 1842. Eleven years later his father, Samuel Elliott Coues, removed with his family to Washington, where young Elliott was educated. For a time he was sent to Gonzaga College, under the management of the Jesuit fathers. In 1857 he entered what is now the Columbian University, taking his A.B. degree in 1861 and his medical degree in 1863, and receiving later also the honorary degrees of M.A. and Ph.D. He was enlisted as a medical cadet while yet a student, and, soon after graduation, was appointed assistant surgeon in the United States Army, his first station being Fort Whipple, Arizona. After ten years of service as post surgeon, at different military stations, he was ordered to Fort Randall, Dakota, and appointed surgeon and naturalist to the United States Northern Boundary Commission, which surveyed the line of the forty-ninth parallel from the Lake of the Woods westward. The following two years he was engaged in Washington in the preparation of the scientific report of the Survey, and in 1876 was detailed to duty as secretary and naturalist of the United States Geological and Geographical Survey of the Territories, under the late Dr. F. V. Hayden. At the end of four years' invaluable service to the Survey and to science he was again ordered to Arizona. He had now become wholly absorbed in the scientific and literary work for which he was so well fitted, and found the routine duty of a frontier army post, of which he was never over-fond, exceedingly distasteful. Protests and appeals for a more congenial assignment meeting with no favor on the part of the medical authorities of the army, he tendered his resignation in order to continue his scientific pursuits. After 1881 he resided in Washington, frequently making, however, during recent years, long journeys through the West, as will be related presently.

Dr. Coues's ornithological investigations began while he was a mere boy, and his enthusiasm for ornithology suffered no abatement during his later years, though other literary pursuits absorbed the greater part of his activities. His first ornithological papers were published in 1861, while a youth of eighteen years, and related to such technical subjects as are indicated by the titles, "A Monograph of the *Tringeæ* of North America" and "A Monograph of the Genus *Ægiothus*, with Descriptions of New Species." Under the tutelage of the late Prof. Baird, between whom and Coues existed the strongest friendship, these early papers bear the marks of a master hand, not only as regards their technicalities, but in their method of presentation. From this time on there was an unceasing flow of contributions from his pen, literary, philosophic, and scientific, the last-named relating to ornithology in all its varied phases.

His scientific writings number about 1,000 titles, including minor papers and reviews in scientific journals, and, among others, the following special works: 'Key to North American Birds' (1872), with its companion volume, 'Field Ornithology' (1874). The 'Key,' entirely rewritten, was republished in 1884. No work on American ornithology has had so great and so favorable an influence on the progress of ornithology in America as this, the guide and vade-mecum of the present generation of ornithologists. His 'Birds of the Northwest' (1874), his 'Fur-bearing Animals' (1877), 'Monographs of North American Rodentia' (with J. A. Allen), 1877, and his 'Birds of the Colorado Valley' (1878), were all publications of the Hayden Survey. Upon a projected 'History of North American Mammals,' under the same auspices, much work was done, but it never saw the light, owing to Dr. Coues being ordered again to military duty in Arizona in 1881, and the reorganization of the Survey under a new head. This period of his life also yielded several invaluable instalments of a 'Bibliography of Ornithology' (1878-1880). Much the greater part of this immense work, which cost the author years of hard labor, still, unfortunately, remains in manuscript. In 1881 appeared his 'New England Bird-Life' (with W. A. Stearns), and in 1882 his 'Dictionary and Check-List of North American Birds.' He left in manuscript a new edition of the 'Key,' entirely rewritten and brought down to date, and, it is to be hoped, in condition for prompt publication.

In 1869 Coues was elected Professor of Zoölogy and Comparative Anatomy in the Norwich University, Vermont, but this post, being incompatible with army life on the remote frontier, he was unable to fill. In 1877 he was called to the chair of anatomy at the National Medical College in Washington, where for ten years he lectured acceptably on human anatomy from the standpoint of morphology and evolution. At this date he was elected a member of the National Academy of Sciences, the highest scientific honor attainable in American science. It is almost needless to say that he was also a member of all the leading scientific societies of America, and of a large number of foreign academies and societies. He was one of the founders of the American Ornithologists' Union, and at one time its President, and always a valued member of its Council, and a colaborer in the conduct of its journal, the *Auk*, and in the preparation of its 'Code of Nomenclature and Check-List of North American Birds.'

About 1880 Dr. Coues became actively interested in the phenomena of hypnotism, clairvoyance, telepathy, and so-called spiritualism, and in theosophical speculations, in the belief that the principles of physical science might be equally applicable to psychical research. This became with him, for several years, an absorbing subject, and led for a time to his affiliation with Mme. Blavatsky and other prominent Theosophists; but he subsequently lost much of his interest in such studies and all his respect for the leaders of the sect. As a product of this period may be mentioned his 'Biogen: A Speculation on the Origin and Nature of Life' (1883), 'The Dæmon of Darwin' (1884), etc.

After all this prodigious activity in scientific lines, it may almost have seemed to Dr. Coues as if the "final cause" of his training were to rescue from oblivion the sources of the exploration of the great territory beyond the Mississippi. His roving army life combined with his naturalist's experience and knowledge to make him an ideal editor of the Journals of Lewis and Clark, his first (and it was a stupendous) undertaking (1893). Many special journeys were, however, made for this and for other similar pious labors—Zebulon Pike's 'Account,' Fowler's Journal, Larpenteur's Personal Narrative—of which our readers have been duly apprised. The copiousness, sometimes carried to excess, and minuteness of his annotations are almost incredible. It was in pursuance of a journey in the Southwest made last summer with younger and stronger men, in order to fortify his editing of the forthcoming Diary of Francisco Garcés, that Dr. Coues broke down and his magnificent physique was reduced to naught. After a month of acute suffering at Santa Fé in September, he was brought to Chicago, and still hoped, as he wrote us, to get ten or twelve years'

more work out of his organism, whose undermining he was then far from being aware of. November was spent at his home in Washington, but on the 29th he wrote from Baltimore: "The worst possible fears in my case are confirmed by diagnosis made today at Johns Hopkins, and I face the formidable operation which offers hope of prolonging my life." On December 5, firmly pencilled on the last proof returned to the *Nation* were the words: "I am to be knifed to-morrow A. M., and—I am unmoved." On the 13th he wrote, still steadily and at length, believing that surgical skill had granted him a reprieve for further life and usefulness. On Christmas Day he died; and the *Nation*, which has long held him among its most willing, prompt, and attached contributors, will know his hand no more.

Dr. Coues was a fluent and impressive speaker, a writer of exceptional facility of expression and rare vivacity and readability, a man of deep feeling and great fixity of purpose, firm and intense in his friendships, impulsive and sometimes aggressive, and not always discreet in his treatment of an opponent, yet warm-hearted and helpful, as many an aided aspirant for ornithological prominence can testify. He was twice married, his second marriage, to Mrs. Mary Emily Bates of Philadelphia, occurring in 1887; and she, with children by his first marriage, survives him.

AMERICAN HISTORICAL ASSOCIATION.

BOSTON, December 30, 1899.

The fifteenth annual meeting of the American Historical Association, December 27-29, in this city, was in many respects a notable one. A large attendance, an attractive programme, generous hospitality, and ideal weather all contributed to profit and enjoyment, while the atmosphere of historical association and the wealth of places of historical interest proved for many members an especial charm.

So far as the programme is concerned, its most noticeable feature, and the one most frequently commented upon, was the absence of the technical papers, embodying the results of protracted and minute research, which in former years have been of so much importance. Of the sixteen papers read, only two or three were, in the strict sense, historical, the remainder dealing with one or other of the numerous subjects which have been sought to be included under the designation of political science, or with immediate problems of political, economic, or educational policy. Such were the papers of Prof. Andrews of Bryn Mawr, on the place of recent European history in the college curriculum, and the forcible statement by Prof. Ashley of Harvard of the claims of economic history. The change is not without significance, illustrating as it does the broad view of its functions taken by the Association, and its purpose to help, so far as lies in its power, in the solution of present difficulties. That the absence of papers appealing primarily only to the initiated added appreciably to the general interest in the proceedings, and accounted in part for the uniformly large audiences, is probable; and to arouse public interest in historical and political studies, especially at this time, is certainly worth while, even though the next report of the Association be a less learned volume in consequence.

It is impossible to do more than mention a few of the more important contributions and discussions. The address of the President of the Association, Mr. James F. Rhodes, with its plea for the broad study of historical phenomena, was happily in accord with the general spirit of the meeting. The programme itself was made up on a topical plan, papers on the same general subject being brought together in the same session. Wednesday morning, for example, was given to papers prepared by members of the committee for the study of colonies and dependencies, appointed last year at New Haven. Prof. H. E. Bourne of Cleveland, chairman of the committee, gave a résumé of the situation, so far as the United States is concerned, and of the difficulties which beset the path of empire, but cautiously refrained from making specific recommendations other than regard for the merit system in appointments. To those who had hoped that the conclusions of the committee would attain within the year tolerable definiteness and precision, as was the case with the similar committee of the American Economic Association, Prof. Bourne's report was disappointing. A brief account, exceptionally well put, of the selection and training of colonial officials in England, France, and Holland, by Mr. A. Lawrence Lowell, awakened much interest, as did a paper by Prof. F. W. Williams of Yale on the treatment of Chinese emigrants in the Far East.

Perhaps the greatest interest centred in the session of Friday morning at Sanders Theatre, Cambridge. The general subject was foreign relations. The opening paper, by Prof. McMaster, set forth clearly and concisely the view that our new possessions are not within the purview of the Constitution, save as regards the prohibition of slavery, but are subject to the discretionary control of Congress—a view with which Prof. J. B. Moore of Columbia expressed his concurrence. It was noticeable that the question, practically of the first importance, of how far the spirit of certain general provisions of the Constitution is fairly to be regarded as a restraint upon either Congressional or Executive action, was not touched upon. An instructive parallel to our recent dealings with Spain was found by Prof. E. G. Bourne of Yale in the proposed absorption of Mexico in 1847-8. Baron Spech von Sternberg, the German Commissioner to Samoa, reviewed the history of the Samoan question, his account being supplemented by an entertaining explanation by Mr. E. V. Morgan, secretary to the Commission, of the peculiar racial and social difficulties with which the Commissioners had to deal. Finally, in a thoughtful paper on democracy and diplomacy, Prof. Macvane of Harvard pointed out the difficulties of diplomacy in a country of yellow journals and popular clamor, and pleaded again for international arbitration.

The preparation and discussion of formal papers do not compass the active work of the Association. Highly organized and effectively administered, its stimulating and directing force in historical research and publication is every year becoming more important. The Historical Manuscripts Commission, at present engaged upon the preparation of the Calhoun correspondence for publication, continues, of course, though with considerable change of personnel; Prof. J. Franklin Jameson retiring from the chairmanship and Mr. R. G. Thwaites succeeding. The Association did not fail to put on record its appreciation of the great service to historical scholarship rendered by Prof. Jameson as a member of the Commission. The committee on colonies and dependencies contemplate a broad study of their assigned field, and the committee on the Justin Winsor prize, this year again unawarded, propose to readjust the administration of that encouragement to research in such a way as to insure more general competition for it. Three new activities are launched this year: a Public Archives Commission, to investigate the condition and character of national, State, and local records, and facilitate their use by students; a committee to consider the preparation of a monographic history of the United States; and a committee to secure, if possible, the deposit in the Library of Congress of such documents and papers, not in current use, as are now dispersed among the various departments in Washington. That the Association is able to address itself to these large and manifold undertakings, some of which, like the Historical Manuscripts Commission and the Public Archives Commission, must plan their work for years to come, is due to the rapidly growing membership, now numbering more than 1,400, and to the skill with which the finances of the Association have been managed.

Never has the Association been more royally entertained. With no sacrifice of scholarly and professional concentration, the executive committee provided richly for the comfort and pleasure of members and their friends. A luncheon at the new building of the Massachusetts Historical Society as guests of Mr. Charles Francis Adams; a reception by President and Mrs. Rhodes; "smokers" at the Technology and Algonquin Clubs for the men, and a reception and tea at Radcliffe College and Craigie House for the ladies; open doors at the Public Library and Museum of Fine Arts; a luncheon at Harvard as the guests of the University, and a reception at Wellesley as guests of the College; the hospitalities of the University Club for all who chose to avail themselves of them; and a dinner at the Brunswick Hotel in which 150 members joined—make up the list of social functions which the committee had exerted itself to provide. No one who was present at the luncheon in Memorial Hall will soon forget the consummate grace and power with which President Eliot presided, as none who sat at the tables at the Brunswick will forget Col. Higginson's eloquent plea for political and civil freedom, as no less a charge upon us now than in his young manhood of fifty years ago. The Association goes next year to Detroit, with Edward Eggleston as President.

THE SUEZ CANAL.

PARIS, December 14, 1899.

France, as a nation, takes a not undue pride in the Suez Canal, and a few days ago a gigantic statue was placed at the entrance to the canal, in honor of the man who was long familiarly called "le grand Français." This ceremony took place on the thirtieth anniversary of the inauguration of the great work. Renan, who received Lesseps into the French Academy, reminded his audience that the cutting of a Suez canal was one of the dreams of antiquity; that Leibnitz recommended it to Louis XIV.; that the French Directory put it in its pro-

gramme when it undertook the expedition to Egypt.

"As in the time of Alexander," said Renan, "the conquest of arms was a conquest of science. The 24th of December, 1798, our illustrious colleague, Gen. Bonaparte, left Cairo, accompanied by Berthier, Monge, Berthollet, and several other members of the Institute, and of certain merchants who had obtained permission to join his escort. On the 30th he found, to the north of Suez, the remains of the ancient canal, and followed it for five leagues; on the 3d of January, 1799, he saw near Belbes the other extremity of the canal of the Pharaohs. The researches of the Egyptian Commission were the starting-point of all the subsequent designs. One error only, the belief in an inequality of the levels of the two seas (always denied by Laplace and Fourier), was mixed with these valuable researches, and it delayed for half a century the execution of the work planned by the heroic engineers of 1798."

The origin of the enterprise goes back to 1854. Mehemet Ali was in the Libyan Desert with eleven thousand men, and his camp was near Lake Mareotis when he was joined by Lesseps, who had known him in Paris. Lesseps obtained there the concession of the canal. He made a preliminary exploration of the country with Mougel and Linant Bey; he verified the equality of the level of the two seas, which had already been demonstrated by Paulin-Talabot, the creator of the railway which joins Paris, by way of Lyons, with Marseilles.

Notwithstanding the strenuous opposition of Lord Stratford de Redcliffe, then English Ambassador at Constantinople, Lesseps secured the approbation of the Grand Vizier. After some negotiations, it was agreed between the Governments of France and of England that the two would leave the affair of the Suez Isthmus to itself, and would consider it a mere commercial and industrial enterprise. M. de Lesseps met, nevertheless, with much opposition in England. Lord Palmerston was very hostile to the project, and his hostility was felt at Constantinople. After four years of appeals to public opinion, Lesseps dared to make an appeal to the European public. The capital of the company was fixed at two hundred millions of francs, divided into 400,000 shares of 500 francs. He reserved 85,506 shares to England, Austria, Russia, and the United States; the rest was offered to the French public. The emission was covered, and the Society was legally constituted.

The work to be executed extended for 130 kilometres, and five years were judged necessary for the maritime canal, which was to be eight metres deep and to have a breadth on its surface of fifty-six metres. It is not easy to imagine now all the difficulties with which Lesseps had to contend, financial, technical, economical. Mehemet's successor, Said, died in 1863, and was replaced by Ismail Pasha, who received the title of Khedive, and substituted free labor for the forced labor or *corvée*. It was thought that this reform would ruin the company, but the use of improved and gigantic dredging-machines saved it. The inauguration of the Canal took place on the 17th of November, 1869, with great pomp. The Empress Eugénie, the Emperor of Austria, the Khedive Ismail, the Princess of Holland, the heirs presumptive of the crowns of Prussia and of the Netherlands, a host of Russian and German princes, witnessed the ceremony, as well as the Emir Abd-el-Kader. Who would have believed, in those triumphant days, that not many months afterwards the Empress Eugénie would have to flee from the palace of the Tuileries, and, curiously enough, that M. de Lesseps would be one of the few friends to help her to escape?

From the day of the inauguration to the end of 1870, 486 ships crossed the isthmus through the Canal. The cost of construction had been, as we have said, estimated at 200,000,000; but in 1870 the Company had expended as much as 432,000,000, and was obliged to issue debentures and to make loans. The financial difficulties became very great, but the receipts rose gradually; they amounted in 1871 to 7,595,000 francs, in 1872 to 14,377,000, in 1873 to 20,850,000, in 1874 to 22,667,000. In the year 1875 the Khedive Ismail, whose expenses had been excessive, sold the 176,602 shares which he possessed to the English Government at the price of a hundred millions of francs, which represented a value of 568 francs per share. When these shares were offered to England by the Khedive, Parliament was not in session, but Lord Beaconsfield boldly bought the shares, had them paid for temporarily by the Rothschilds, and asked Parliament for a bill of indemnity, which he had no difficulty in obtaining. In consequence of this purchase, the English Government obtained a representation on the board of directors. If the English shares were sold at the present market value, England's profit would be about 528,000,000 francs.

The bombardment of Alexandria in 1882 and the victory of Tel el-Kebir gave England a predominant influence in Egypt. M. de Freycinet asked the Chamber for a credit with a view to the protection of the Canal; this credit was refused by 416 votes to 75, and the French fleet retired from the Egyptian waters. The English became practically the masters of Egypt; but they did not abuse their victory with regard to the Canal. Lord Granville, at the beginning of 1883, addressed a circular to the great Powers; an international commission was appointed and sat in Paris; the discussion lasted several years, and an international convention was signed on the 29th of June, 1888, in virtue of which the neutrality of the Suez Canal was formally recognized. England, notwithstanding her peculiar situation, enjoys no privilege in the Canal and has no right of police over it.

By degrees, many improvements have been executed in the Canal, so as to shorten the time of passage. In 1882, ships spent nearly fifty-four hours in transit. Much time was lost in the places where the ships passed each other and during the night. Methods had to be devised to secure continuity in the passage—the Canal had to be deepened and widened; but the success of the enterprise was such that money could be easily found for these improvements. The use of electric light on the sides of the Canal and on the ships made navigation as easy by night as by day, and nearly doubled the capacity of the Canal. Three cities owe their existence to the Canal—Port Said, Ismailia, and Port Tewfik; the first being the only one which has a true commercial importance. Ships do not stop any more at Suez, but coal at Port Said. This place has now 49,000 inhabitants, of which number the Egyptians and the Arabs count for 24,000. Coal is the chief item of importation to Port Said; more than a million tons being brought yearly to it.

At the late meeting of the British Association at Dover, Sir William White made a report on the progress of steam navigation, and gave curious statistics on the subject from 1870 to 1898. In the course of twenty-eight years, the net tonnage which passed the Suez Canal rose gradually from 436,609 to 9,238,603 tons; the receipts from the special navigation duty on the Canal rose in the same period from 4,345,758 to 82,657,420 francs. The number of passengers increased from 26,758 to 219,554, and the receipts arising from the passenger tax from 263,552 to 2,195,545 francs. Postal navigation, which assures rapid and regular communication between the various countries of Europe and the East, and which receives Government subventions, has increased rapidly and is constantly increasing. In the present state of the East it may be said that India absorbs nearly 50 per cent. of the transit. This proportion explains the immense importance which England attaches and is obliged to attach to the Suez Canal. The population of India exceeds 250,000,000 of inhabitants; England has built in her vast Indian Empire more than 35,000 kilometres of railroads, which in 1898 transported 151,000,000 of passengers and 36 million tons of merchandise. It is not surprising if this great development of India has contributed to the movement of merchandise between Europe and India. The regions which, after India, draw the largest proportion of traffic to the Canal are the French colonies of Indo-China, China, and Japan. China proper and Mantchuria have between them a population nearly equal to that of the whole of Europe—that is to say, 350,000,000 to 360,000,000 inhabitants. All the European nations are eager to trade with China, to build her railroads, to increase their sphere of influence in that enormous and still mysterious Empire. The number of free ports is now thirty-four, and the rivers in all the provinces having treaty ports have been opened to navigation. The inner lines of customs, which are a great inconvenience to trade, will by degrees be removed.

To sum up, the maritime movement of the Suez Canal had attained in 1898 more than nine millions of tons; the increase in the fifteen years which preceded 1898, was 15 per cent. It is highly probable that the same rate of increase will continue, and that in 1903 from ten to eleven millions will go through the Canal.

Correspondence.

THE STRUGGLE IN SOUTH AFRICA.

To the Editor of The Nation:

Sir: The present unfortunate war between the English and the Dutch in South Africa recalls vividly the collisions between the two nationalities in the past, and the cause of their unnatural quarrels. Springing from a common stock, menaced by the same enemies, actuated by similar political impulses, and inspired by the same religious reform movements, the two nations in bygone days should always have been friends; but commercial rivalry and opposing trade interests intervened to make them foes.

Old Holland has now settled down to a comfortable old age, having made her fortune, and being content to enjoy it in peace, reaping the benefits of past enterprise from her still vast Oriental empire. But her chil-

dren at the Antipodes, actuated by the stubborn spirit of their ancestors, have challenged England by the arbitrament of war to make good her claim to be the supreme Power in South Africa, as their forefathers contested England's right under Cromwell and Charles II. to be the mistress of the sea.

The trade of the Orient was, in the seventeenth century as now, the great cause of jealousy among commercial nations. The English East India Company was created in 1599, and the Dutch in 1602. They were rivals from the start. Strange to say, the East India question is again involved in this fresh English-Dutch collision. It was the India trade in the hands of the Dutch East India Company that gave Holland her naval and commercial importance after she had so gloriously thrown off the shackles of Spain. And it was Holland's jealousy of England's commercial growth and of her inroads on her Eastern market that irritated the pride of the two peoples, and embittered their relations until they flew at each other's throats. It was as a half-way house to England that the Cape Colony was established by the Dutch in 1652, and as such it became of supreme importance in Holland's trade. Had she retained her full commercial vigor, she would not have submitted as meekly as she did to its conquest by the British in 1806. Conditions are somewhat changed to-day. The Suez Canal gives a short cut to the Orient. One line of railroad is already completed connecting the North Atlantic with the North Pacific, and others are projected. But, nevertheless, the great pathway of the sea is, and will continue to be, the highway of commerce. It can never be obstructed nor blown up. Yet it can be used effectively only by steam vessels, and steam vessels must have coal; and therefore coaling stations are as essential to a great naval Power as the sea itself. Cape Town is the corner shop, and Cape Colony the corner block, of the two highways of the Atlantic and Pacific; and England will cease to be the naval Power she is, as certainly as Holland has shrunken to a shadow of what she once was, if she allows so vital a link in the long chain of naval stations which bind her commercial centres with her foreign markets to be snapped.

There is no proof that any such far-reaching schemes as a resuscitation of Holland's former greatness through the infusion of young Dutch blood has ever entered the minds of the South African Dutch; but there is good reason to suppose that their plans of empire are on as magnificent a scale as their preparations for war. The influx of wealth from the gold mines excited their imagination. Instead of putting it into their pockets, as was supposed, they have put it into armaments. As we ourselves know, the ideas of national greatness grow with their gratification, and nothing stimulates magnificent national aspirations as sensitively as military success. That the Boers enjoyed in 1881, and it has influenced their policy ever since. It would be astonishing, therefore, if hopes were not excited of recreating a new Dutch republic out of human elements as sturdy as those which set Spain at defiance, by men inspired by religious fervor as free from the taint of either ritualism or scepticism as that which steeled the soldiers of William the Silent. There is every reason for supposing that the Afrikander Bond has had more intricate ramifications than was ever dreamed of by the political agents of Great Britain, and that the military preparations throughout all South Africa were on a scale not even suspected by Englishmen living among the Dutch themselves. It is not unfair, therefore, to assume that brilliant statesmen like Dr. Leyds and President Stein, and sturdy, silent, profound diplomats like Krüger, and generals as thoroughly versed in the art of war as Joubert, should have dreamed dreams not only of complete independence, but of creating another New Netherland, which at any rate would be free from absorption by the Power that engulfed the struggling colony of Dutchmen on the Hudson.

One thing is certain, that England is face to face with another crisis in her history; that Englishmen the world over now realize it, and are prepared to act as one man in meeting it. Whatever may have been the exciting cause of the trouble—probably unjust distrust on one side and disregard for national sensibilities on the other—the Dutch of South Africa have evidently been preparing for many a day to throw off all dependence on England, and have been waiting till either a favorable opportunity occurred of forcing a quarrel, or till compelled to unmask their batteries by Britain's advance. The world at large is interested in the struggle, inasmuch as no commercial nation can view with indifference the transfer from one Power to another of such a pivotal point in the earth's geographical and commercial surface as the Cape Colony.

JAMES DOUGLAS.

NEW YORK, December 23, 1899.

TO THE EDITOR OF THE NATION:

SIR: Will you allow an American who, from fourteen years' residence in England, should know something of the feeling in at least one of its centres, to protest against the misleading effect of some resolutions recently proposed in sympathy with the Boers, though, happily, not carried? Whatever the point in this deplorable war may or may not be, one thing is certain, that the English are in no sense whatever endeavoring to crush republicanism. The two sister states might have been as radical as even French socialism could wish them to have been, but it would have had nothing to do with the terrible conflict. The English were simply forced into war by personal insolence, making commercial grievances more intolerable. No English person could live in the Transvaal without receiving affronts such as would be met in the West by a "shot on sight." The Boers either sold their gold-bearing lands, or else protected the vendors, because they had not the acumen nor capital to work them at a profit; and then they repented of their bargain, and began to criticise the fine mining town which grew up on the spot, and proceeded to impose their unbounded taxations and disqualifying regulations. Bad morals in a mining city, as anywhere else, are sickening indeed, but the human subject is still a very rudimental being, and it ill becomes those who could make a joke on the "place of spiritual punishment" (hell, in plain words) being "within the city limits" of a great emporium, to express astonishment at a miners' settlement. I write with no desire to screen speculators, but I do hope that all honest people will remember that combinations of capital are inevitable. We have the poor always with us, but we (likewise) cannot get rid of the rich.

But whatever the merits or demerits of the case may be, "the heroic struggles" of the Boers are in no sense intended to defend republican institutions as such, much less their hearths and homes—they have troubled many another person's hearth and home; and it is political blasphemy to hint at such a thing, much less to formulate it in a resolution. England takes kindly to republics, and for more reasons than one. Imagine how she would have liked it if the two sister republics had been two "brother kingdoms." If the Boers have done what they have done in the green tree, what would they have done in the dry? It ill becomes any section of Americans, whose land was saved by England so very short a time ago, to rail at her as if she were attempting to crush what she would gladly have nurtured. She wishes to crush insolence and unfair dealing, and not republics.

Yours, etc., L. H. MILLS.

OXFORD, December 14, 1899.

THE SEAT OF THE WASHINGTONS.

TO THE EDITOR OF THE NATION:

SIR: Upon Washington's ancestry, the subject of a most interesting paper by Mr. W. H. Whitmore in your issue of September 21, which I have just read, it seems to me that I may be able to throw some light, inasmuch as what I have to say on it fits in with Washington's own statement, as quoted by Mr. Whitmore: "I have often heard others of the family, older than myself, say that our ancestor who first settled in this country came from one of the Northern Counties of England, but whether from Lancashire or Yorkshire or one still more northerly, I do not precisely remember."

In the year 1865 or 1866, my father, Thomas Farrer, bought the farm of Gateside in the township (in this part of England a township is a tract of country containing probably three or four thousand acres, and is, I believe, a subdivision of a parish) of Howgill, in the West Riding of Yorkshire, and lived there until he died in 1876. When he bought it, he told me that the tradition was attached to it that it had been the home and property of the Washingtons before they went to America. He also told me that an old stone barn on it, which was larger than is usually found on a farm of the size (about seventy acres, if I recollect aright) of Gateside, was said to have been built by a Washington for the purpose of storing his wool at a time when the price for wool was too low to satisfy him. This would be likely to be the case, because the ownership of Gateside carried with it the right to pasture a considerable number of sheep on Howgill Fell.

Gateside is in the Parish of Sedbergh, from which town it is distant about four miles—probably less. It is situated on the road between Sedbergh and Low Borough Bridge, a place on the River Lune, consisting, if I recollect aright, of a solitary inn, and important only because an ancient cattle-fair is held there once a year. This road runs between the house and the farm-buildings, and the homestead is distant about half a mile from the Lune, which there separates the Counties of Yorkshire and Westmorland. The nearest railway station is Lowgill, which is distant

about a mile and a half; but when I left home, now over thirty years ago, there was nothing at Lowgill but the station buildings and a few cottages for railway employees. Lowgill station is on the main London and North Western line, and is the junction-station where the line which passes Leeds, Skipton, Ingleton, Kirkby Lonsdale, and Sedbergh joins the main line. There is no town or village nearer to Gateside than Sedbergh.

If the tradition I have given be true, it is practically certain that Washington's English forefathers were, like my own, whose old homesteads have all been within four or five miles of Gateside, "dalesmen" and "statesmen" (estatesmen) or yeomen—that is to say, farmers who owned the land they farmed.

It is possible that the Sedbergh Parish registers may yield some information in regard to Washington's family; but a search which I had occasion to make during a visit home some twenty years ago of the registers of the adjoining Parish of Kendal, showed me that, previous to the beginning of last century, they had not been very well kept.

I may state that Gateside now belongs to my only brother; but he does not live there, but at another farm of his in Lambrigg, about five miles distant; and a tenant is probably in occupation of the farm. The house is a rather old stone building, but I should think not so old as to have been dwelt in by the Washingtons. Although a single building, it is usually occupied by two families, the front and one end being for the gentler folks, and the remainder for the farmer who rents the land. After my father's death, the gentler-folks' part was, I believe, let to the widow of a clergyman. The house, in fact, is such as would be likely to be built by a well-to-do "statesman" for his own use.

In regard to my father as an authority for this tradition, I may state that he was born in 1804 at Wythmoor, in the Township of Lambrigg, in the County of Westmorland. As Wythmoor is distant only about four miles from Gateside, and the loss of the American colonies was then a recent event, there would most likely be much interest taken in Washington during my father's boyhood; and his father, who had been born in 1767 in the adjacent township of Grayrigg at the farm of Blacketbottom, which is about five miles from Gateside, would have been likely to have told him of the tradition. It is possible, also, that some special reason may have existed for my family retaining their interest in their old neighbors, the Washingtons; but of this I have received no tradition. Since I left home, the old people who knew of the tradition will have died; and it may even be that by this time it has been lost to the district altogether.

If this tradition is established as a fact, and it is shown that our old north-country "dale" stock has furnished a man who played such a part and carried himself so honorably in the world as did George Washington, I shall, of course, be very proud; but I should be infinitely prouder if a "dalesman" were to play a great part in welding together the two separated parts of our race.—I am, sir, faithfully yours,

WILLIAM FARRER.

P. S.—As it is now over thirty years since I was at Gateside, and I only resided a few times and for short intervals at my father's house after he went to live there, it may be that I have not been quite accurate in some of the distances I have given. W. F.

LAMBRIGG, QUEANBEYAN, NEW SOUTH WALES, November 15, 1899.

[We print the above letter since so much has been said about the Washingtons of Yorkshire as a possible link in the pedigree of George Washington; but we must say that the present bit of evidence is very shadowy, as the authenticated facts will show.

The two emigrants, John and Lawrence, were born in 1634 and 1635, in Tring. Their father, Rev. Lawrence W., was born in 1602, in Northamptonshire, as his matriculation record shows, being the son of Lawrence Washington of Brington, who was son of Robert Washington of Sulgrave, County Northampton, whose father, Lawrence, Mayor of Northampton, was the grantee of Sulgrave, 30 Hen. VIII., A. D. 1539. We know that Rev. Lawrence W. married and had children at Tring, County Hertford, 1635-1641, soon after he became a Fellow of Brazenose College, Oxford. In 1633 he obtained the living of Purleigh in Essex, from which he was expelled in 1643, and he then lived in poverty at Maldon until his death in 1652. Thus, we have five generations of the ancestors, covering the period from A. D. 1539 to 1652, all accounted for as living in Northamptonshire and Essex. Before that, three generations are said to have lived in Lancashire, but we need not go so far back.

Mr. Farrer's father was born in 1804, and his grandfather in 1767, and it is only thought possible that the latter gave the tradition about the Washingtons. This would at best be a whole century after the emigrants left for Virginia; and when they went, their property and interests were clearly connected with Tring in Hertfordshire. For two centuries, therefore, we can see no possibility of any of George Washington's ancestors having lived at Sedbergh, to say nothing of the improbability of any tradition of such residence surviving during a period when the Washingtons were of no account. In fact, until 1775, no Englishman, especially in a small village, would have any reason to ask who the Washingtons were. Even in Virginia in 1775, no one unconnected with the family could have told who George Washington's great-grandfather, the emigrant, was. How, then, could the villagers at Sedbergh know it? The emigrants were certainly in Virginia in 1677. There were Washingtons in Yorkshire, and one may have lived at Sedbergh. There were several emigrants of the name who came to America; but no one cares for any line except the one glorified by the immortal George.—ED. NATION.]

IRREGULAR DEGREES.

TO THE EDITOR OF THE NATION:

SIR: A prominent religious weekly had, not long since, in its personal items the following announcement: "The Western University of Chicago, Ill., has conferred, as the result of examination, the degree of Ph.D. on the Rev. Mr. ——, rector of —— Church," etc. In its last number it says: "In reference to the statement published in this column, December 9, that the Western University of Chicago had conferred the degree of Ph.D., we are informed that the Western University, though chartered, has no resident faculty or college buildings."

The last report of the Department of Education of the State of Illinois in its list of colleges does not mention the name of this institution, neither does the last report of the United States Commissioner of Education.

The bestowal of degrees by one other institution in Chicago in an irregular manner has previously occasioned public protest. Is it not possible for educators in Illinois to secure State control of advanced degrees? The reckless manner in which such degrees are conferred in several professional schools of Chicago has led to Government action in France against the holders of all similar American degrees. H.

CORNELL UNIVERSITY, December 25, 1899.

"IMMIGRANT."

TO THE EDITOR OF THE NATION:

SIR: In the notice of the last section of the Oxford Dictionary, your reviewer referred to "the American origin of *immigrant* in 1792, its inventor being Jeremy Belknap" (*Nation*, November 9, p. 354). Three years earlier, Jedidiah Morse had written: "Besides the Dutch and English already mentioned, there are in this state [New York] many immigrants from Scotland, Ireland, Germany, and some few from France" (*American Geography*, 1789, ix., 253).

There is also a still earlier alleged example. On January 15, 1788, in the Massachusetts Convention for ratifying the Federal Constitution, Rufus King is reported to have spoken as follows: "The immigrants from Massachusetts, who settled on Connecticut River, appointed representatives to meet in the General Court of that colony for only six months." (In *Life & Corr.*, 1894, i., 296, taken from Elliot's *Debates*, ii. 35.) Suspecting that there might be an error, I examined two editions (1827, 1861) of Elliot and three editions (1788, 1808, 1856) of the 'Debates, Resolutions, and Proceedings' of the Massachusetts Convention, and found that in all five the word in question reads "emigrants." Hence Morse's use of *immigrant* in 1789 is the earliest thus far recorded. A. M.

BOSTON, December 30, 1899.

Notes.

The authorized biography of the late Dwight L. Moody is to be prepared by his son, William Revell Moody, who desires that any letters or information of special interest for the work may be addressed to him at East Northfield, Mass.

In furtherance of an historical task, Miss Alice B. Adams, No. 93 Hancock Street,

Auburndale, Mass., desires to learn where she may find the following documents: Reports of the American Convention of Delegates for the Abolition of Slavery, for the years between 1798 and 1809 (there should be six of them); the Report of the same Convention for the year 1815; and the ninth volume (or, new series, vol. 3) of the *Genius of Universal Emancipation*, from August, 1828, to January 3, 1829.

'Men and Things I Saw in Civil War Days' is a collection of sketches of a dozen prominent men of the civil war, mostly generals in command of armies, but including Lincoln and Johnson. James F. Rusling, the author, was an officer in the Quartermaster's Department, both in the field and at supply depots, and has put his recollections of leading men he met into lively chapters, which must be read as presentations of off-hand opinions and predilections rather than critical estimates of historical value. The biographical sketches are followed by a hundred and fifty pages of the author's private letters of the period, containing a good deal of interesting matter, which would have been improved by passing through the hands of an editor of severe good taste, condensing and making excerpts, with suppression of the too abundant "display" letterheads, to use a printer's phrase. The book is well printed and the portraits are generally well chosen. Eaton & Mains are the publishers.

Those who wish a small Bible dictionary and who are satisfied with the position of the Princeton School, will find exactly what they want in the 'Dictionary of the Bible,' by Prof. John D. Davis of the Princeton Theological Seminary (Philadelphia: The Westminster Press). It is a very straightforward, plain little book of some 800 pages; there is no doubt as to its meaning, and that meaning belongs to the Year One. Some one said of Dr. Hodge that he knew all the systems of philosophy and all the different ways of being an unbeliever, and they had all had no effect on him. Here, too, there is no trace of effect by modern criticism. The book is adapted for those who can walk unshakingly in the old paths; those who are already wandering in darkness will find no help in it.

The last instalment of Hugo's 'Choses Vues,' recently noticed at some length by our Paris correspondent, has been published in an English dress by the Messrs. Dillingham. This translation, by Mr. John W. Harding, has the merit of clinging to the text so closely as to reproduce with great accuracy the jerky effect of Hugo's staccato sentences. Further, it is for the most part correct in its renderings. But when the original says of an old book "n'ayant plus de sa reliure que le dos," the translator should give some explanation for his stating (p. 20) that "the binding was missing from the back." The *front-door* is a doubtful equivalent for "porte-cochère." Without discussing either the general question of slang or its international correspondences, we hesitate to accept *chestnut* as admissible, while "galette" passes current in French. Hugo says that Blanqui, when in prison at Vincennes, lived chiefly on bread and *pommes crues*; the translator, remembering that *pommes frites* is restaurant French for "fried potatoes," makes out the unfortunate conspirator to have been fed on tubers, not fruits.

So admirable, quaint, and fascinating are the many stories of the 'Decameron' suited to the taste of the reading public of today that it is surprising how seldom the idea of selection has been adopted. About fifteen years ago Henry Morley reprinted an archaic and most unsatisfactory rendering of some of the stories, but this was one of the cases where the *traduttore* was a veritable *traditore*. The translation was colorless and full of ridiculous blunders. And now comes Mr. Joseph Jacobs with his 'Tales from Boccaccio' (Truslove, Hanson & Comba). He has selected the four well-known stories of Griselda, Torello, Federigo's Falcon, and Lisabetta, and has printed them in a volume which owes a very large part of its attractiveness to Mr. Byam Shaw's illustrations. The choice of stories is a good one, because, apart from their obvious merits, three of them have been incorporated in English literature by Chaucer, Keats, and Tennyson; but we cannot commend Mr. Jacobs's rendering, which is rather a paraphrase than the scholarly translation we had expected. For instance, in the story of Lisabetta, Boccaccio says that her brothers decided to conceal their knowledge of her amour with Lorenzo until a favorable opportunity offered: "Nel quale essi, senza danno o sconcio di loro, questa vergogna, avanti che più andasse innanzi, si potessero tôrre dal viso"—that is to say, an opportunity to rid themselves of this ignominy before it went any further, whenever it could be done safely. Mr. Jacobs's rendering is as follows: "To the end that, when the time came when they could take vengeance without loss or damage to themselves, it would come about better if they could take him out of sight." Syntax, idiom, and sense are here alike missed. There is plenty of this sort of thing and of slipshod English throughout the book, and it is clear that the ideal rendering is still to come.

We can hardly more than mention the extensive 'Treatise on Crystallography,' by Prof. W. J. Lewis, published by the Cambridge University Press (New York: Macmillan). It will be indispensable to all who have to do with crystals. We will, however, permit ourselves a single observation. Seeing that every descriptive notation for a crystal-face is nothing but a way of writing the analytical geometer's equation for the intersection of that plane with the plane at infinity, it would seem that to undertake the study of crystallography without having first mastered the modern methods of plane analytical geometry would be one of those feeble, half-prepared ways of working that vernacular speech calls "slouchy," and which no course of instruction ought to contemplate as admissible. But a student who has thus prepared himself will find a great part of Prof. Lewis's work tedious, because it is needlessly prolix and is complicated with such inessentials as a third dimension. It is true that the final chapter partly remedies this fault, in the same sense that the fatigue of a five-act drama might be said to be relieved if, at the end, the green curtain were to be rung up for a one-act condensation of it. Yet even this supplementary chapter is not as modern as it should be.

From Lemcke & Buechner we receive the 137th issue of the 'Almanach de Gotha,' which flings down the glove to heretics on the century question by speaking of "1900, the last year of the century now closing." Nevertheless it chooses this last year rather than the first of the twentieth century for turning over a new leaf by a change to a slightly larger form, thus keeping down the number of "signatures"—in other words, the thickness; yet the quantity of matter is greater than ever. In the genealogical portion several improvements are noted, including a hint how to address any member of a family inserted in the 'Almanach.' A new state, "Crete," has swept into the editor's sky; and behold a chapter, "Notice statistique sur les États protégés Colonies des États-Unis," which must swell our protectionist President with pride: Guam, Hawaii, Philippines, "Portorico" (this for the benefit of purists who reject our English name Porto Rico and overlook the Spanish adjective "portoriqueño," Porto Rican), and Cuba. Of the four regulation steel portraits, the most eminent is President Loubet's.

The tenth volume of the 'Cotta'sche Musenalmanach' since the revival of the annual in 1891 under the editorship of Dr. Otto Braun, has just appeared (Stuttgart). The contents consist of two novels, both excellent, but wholly different in character—"Mater Dolorosa," by Frau Henriette Keller-Jordan, and "Das Stumme Klavier," by Ernst von Müllenbach-Lenbach—and a variety of poems by Martin Greif, Isolde Kurz, Julius Grosse, Max Haftung, Max Kiesewetter, Irene von Schellander, Eduard Paulus, Carl Weitbrecht, and many other writers of epic and lyric verse. Especially noteworthy are Prince Emil von Schönaich-Carolath's "Hans Habenichts," a series of "Landsknechtlieder," Hermann Lingg's "Carmen Saeculare" in praise of "Die Elektrische Kraft," Wilhelm Hertz's "Lautlose Nacht," and Max Haushofer's "Der Gast der Einsamkeit." There are six full-page illustrations.

The fourth volume of 'Franz Liszt's Briefe, gesammelt und herausgegeben von La Mara' (Leipzig: Breitkopf & Härtel) contains his letters to the Princess Carolyne Sayn-Wittgenstein. There are 360 letters, all in French and extending over a period of about twelve years, from July, 1847, to December, 1859. They were obtained by the editor from the Princess Marie Hohenlohe, daughter of the Princess Wittgenstein. There are also portraits of Liszt and the Princess, and a biographical sketch of the latter. We may add that a most interesting account of the friendship between the composer and this lady is given by their mutual friend, Malwida von Meysenbug, in her recently published volume, 'Der Lebensabend einer Idealistin.'

A valuable contribution to the already voluminous Bismarck literature is 'Meine Erinnerungen an Bismarck,' by G. v. Wilmowski, edited by his son, and just published by Trewendt in Breslau. The author was Bismarck's legal counsellor and a Liberal in politics, and his reminiscences are the more interesting and instructive from the fact that he was not always in sympathy with Bismarck's policy, although fully appreciating his ability and integrity as a statesman. It is a record of intimate intercourse and interchange of thought on public affairs from 1867 to 1870, three eventful years in the history of Germany.

Soon after the death of Ludwig Bamberger, on the 14th of March, it was announced that his reminiscences had been found among his posthumous papers. These

autobiographical records have now been published under the title, 'Erinnerungen von Ludwig Bamberger, aus dem Nachlass herausgegeben von Paul Nathan' (Berlin: Reimer), with a portrait of the deceased and a brief introduction by the editor. The volume begins with charming details of Bamberger's boyhood in Mayence, his native town, followed by descriptions of his life as a student in the University and as a young lawyer. In 1848 he took part in the Revolution, and a year later was a political fugitive in Switzerland and England. Extremely interesting are his experiences as a merchant in Holland, and especially as a banker in Paris, where he associated intimately with Renan, Jules Simon, Crémieux, Sainte-Beuve, Littré, Turgeneff, Caroline Jaubert, Juliette Adam, and other men and women of note in the city on the Seine. The work concludes with his return to Germany and the renewal of his political activity, with characterizations of prominent statesmen and leaders of parliamentary factions, Bismarck, Lasker, Windthorst, Forckenbeck, Twesten, Johann Jacoby, and others. Bamberger is a delightful *causeur;* and although he did not live to complete these recollections, which end abruptly and do not include his later brilliant career till his retirement from public life in 1893, they give an attractive and instructive retrospect of the formative period of his development during his sojourn in foreign lands, and are an admirable supplement to the 'Charakteristiken,' 'Studien und Meditationen,' and other essays in the five volumes of his "Gesammelte Schriften" published by Rosenbaum & Hart in Berlin.

Since Cromwell is "in the air," one must mention 'The Cromwell List,' a charming brochure, "being Notes for the Study of Oliver Cromwell," published by the City Library Association of Springfield, Mass. What is singular about this bibliography is, first, that it has special reference to an historical novel, by Arthur Paterson, 'Cromwell's Own,' selected, we are frankly told, not because it is the best novel of its class ever written, "but because it is a new, wholesome story," etc., etc., and fits in with the prevailing Cromwellian revival. (This booming of a work of fiction has evidently great possibilities.) Next it is provided with excerpts from the major poems on the Protector—Milton, Marvell, Byron, Swinburne, Lowell; and, finally, loosely inserted are photographic copies of Bernini's bust of Oliver, an old Dutch print of him, and portraits of Ireton and Vane. The whole is most daintily printed and embellished with initial letters, headpieces, etc., and is put on sale at 25 cents.

An offprint has been made from the United States Fish Commission's Bulletin for 1899 of Capt. R. W. Shufeldt's paper entitled "Experiments in Photography of Live Fishes." This delicate operation, conducted in an aquarium, holds out a great temptation to ambitious amateurs. Capt. Shufeldt's success has been notable, as his beautiful plates show. His experience is set forth for the benefit of whom it may concern.

Mr. Norman Hapgood's article on "The Theatrical Syndicate," in the first number of the *International Monthly* (Macmillan), does not cast much new light upon the subject, but sums up the existing situation very fairly. It bears most severely, if unintentionally, upon the actors who, having induced some of their associates to join them in a combination against "The Trust," as it is called, promptly deserted them and went over to the enemy for a pecuniary consideration. This inability of actors, on account of their mutual suspicions, jealousies, and rivalries, to stand together, is one of the chief secrets of the Syndicate's power. It is a case of men of business, intent solely upon their own welfare, profiting by the incompetency and general silliness of the geese who lay for them the golden eggs. As yet, the public is not suffering much from the monopoly, which is giving the best of modern plays in very creditable style. The great evils of the system, upon which Mr. Hapgood does not sufficiently insist, are that the men who have seized upon the direction of the theatre know nothing and care nothing about it except as a speculation, and have devised a scheme which, although it is putting money into their pockets, and, in a measure, into those of actors also, is striking at the very roots of the "profession," by cutting off the means of good theatrical education. There will be good plays in the future, as there have been in the past, but, unless there is a speedy change for the better, there will be no one capable of acting them.

Mr. Hapgood's article is one of five (but not the fifth, as represented in the unpaged table of contents on the cover), the others being "Later Evolutions of French Criticism," by Édouard Rod; "Influence of the Sun upon the Formation of the Earth's Surface," by Prof. N. S. Shaler; "Organization among American Artists," by Charles De Kay; and "Recent Advance in Physical Science," by Prof. John Trowbridge. The number gives evidence of haste in preparation. The running-title, *International Monthly,* is repeated on every page, thus making it extremely difficult to find a given article; and the proof-reading leaves much to be desired.

The principal article in the *Geographical Journal* for December is Mr. W. R. Rickmers's account of his travels in eastern Bokhara, of which the most interesting part is the description of the gold-washing in the mountain valleys. The yearly output is estimated at $150,000, "a mere trifle considering the potentialities of the alluvial deposits." By the primitive method of treating the gravel and sand "all gold in the shape of dust is lost, some of the rougher particles only being secured." The deposits are very extensive, the gold occurring "exclusively in tablet form, grains and nuggets being nowhere found." Mr. C. Raymond Beazley gives an estimate and summary of what has been done recently for the study of mediæval geography, and Mr. L. H. Moseley describes some little-known regions in the valley of the Benue, the eastern tributary of the Niger. He passed through a district in which, though the natives go entirely naked, "save for a beautifully woven grass cap," they build "large two and three-story houses, beautifully made of a hard red clay over a foundation of fan-palm stalks, having windows and doors with well-fitting frames, roofs of a pyramid shape, with rafters of the same palm, perfectly thatched with special grass. Furniture of a useful and comfortable kind, consisting of well-made bamboo beds, wooden chairs, and couches, is found inside. The formation of the chief town is quite European in its style—straight, wide roads, with squares at intervals, the houses being built with even frontage and the whole kept beautifully clean."

The Consular Reports for December contains a detailed description of an electric dredge just built at Hoboken, near Antwerp, for the River Volga. The entire equipment was supplied by the General Electric Company of New York, and it was demonstrated at the official trial that "the electric features have manifestly added enormously to the effective use of the dredge, and have minimized all possible interference with commerce." Other articles are upon the dried-beef industry of Uruguay and the Argentine Republic, the motor-carriage exposition at Berlin, with plates, and French savings banks, in which children are largely represented as depositors. "In the common schools the children deposit with their teachers from one sou upward, and a representative of the savings bank comes around once a month to collect these little hoards. If a child deposits but one sou, he receives in return a very small *livret,* or bank-book. When his deposits reach the sum of one franc, his importance entitles him to a "grand livret." An interesting list of flowers, grasses, vegetables, and grain grown in the Yukon territory shows the agricultural possibilities of the Klondike. Wheat sown May 22 was harvested August 28. The season lasts five months in the lowlands and two to four weeks longer on the hillsides with southern exposure.

Thousands of suburban residents, tourists, pleasure-seekers on foot or on the wheel, owners (actual or prospective) of real estate, have profited by the maps forming collectively the topographical State Atlas of New Jersey. This pioneer work, begun in the lifetime of the late Prof. George H. Cook, State Geologist, could not fail, after the lapse of a decade, to be out of date in more than one particular, especially in densely peopled and rapidly growing sections. A resurvey was accordingly undertaken last year, but no longer on a scale of one inch to the mile. The new sheets give nearly two and a half inches to the mile, and are blocked out quite differently from the old. They are about 21x30 inches in dimension, and, while preserving the figured contour lines, the roads, the shore and river soundings, take notice of some economic features such as quarries and pits, reservoirs and pumping stations, cemeteries, steam and electric railways, etc. Four sheets have thus far appeared, designated respectively Jersey City, Newark, Paterson, and Hackensack, and embracing the environment of those places. They are already for sale, at the old price of twenty-five cents apiece, and may be had on order at the office of the Geological Survey at Trenton.

—Concerning the 'Lectures on Memory Culture, consisting of the Famous Lectures Delivered throughout the United States and England,' etc., by "Dr. Edward Pick, Ph.D., M.A.," etc., etc. (E. L. Kellogg & Co.), Prof. James certifies that "there is absolutely no element of charlatanry about them," and that they "are based on solid psychological principles." For a man who appeals to the million to unite those two contrary virtues is harder than to pass through the eye of a needle, since the profession of psychology, like that of medicine, inculcates a little imposing upon people. The mnemotechnic systems of Loisette and White, as well as earlier ones, whose absurdities Dr. Pick puts

in a strong light, were likewise based on some sound psychological principles; only they unfortunately left others out of view. Dr. Pick does much better, and it will undoubtedly surprise most people to find, for instance, that in from three to five minutes they can indelibly impress upon their memory all the French nouns which are feminine by exception. Yet Dr. Pick does not entirely escape the old fault of leaving out of account some of the elements of the problem. The problem is to find a method of establishing a mental association such that a given kind of experience shall enable us voluntarily to recall a number or a word. For this purpose, the first condition to be remarked is that association is between pairs of ideas, and of this principle Dr. Pick makes proper use. The second thing to be remarked is that the suggestion is to have two steps, namely: first, the suggesting experience is to awaken an act of will, not deliberate but spontaneous; and, second, that act of will is to call up the desired word or number. Now an act of will, or what is essentially the same thing, occurs only as an inseparable part of a physiological reaction; and consequently such a reaction must enter into the process of learning. If a person once has a tooth filled by a French dentist, he will never forget the word *plomber*, because a strong reaction has taken place in the learning. For this reason, not to speak of another, in learning a language we ought to associate the foreign words directly with experiences of the things or actions they signify, and not directly with English words. But this is not the only principle that Dr. Pick seems to overlook.

—Mr. C. S. Terry's 'Life and Campaigns of Alexander Leslie' (Longmans) is not so much a continuous biography as a detailed study of nine years, 1638-47. During the Swedish period of the Thirty Years' War, Leslie was a prominent staff officer, and merited the rewards of Gustavus Adolphus by his steadiness and caution. Even before Gustavus landed at Usedom, Leslie had distinguished himself greatly by the successful defence of Stralsund, 1628, at a time when Wallenstein was trying by every expedient to reduce it. Soon after the final descent of the Swedes upon Pomerania, the Scottish adventurer became, by the capture of Frankfort-on-the-Oder, governor of an important city. He was not present at Breitenfeld, at the passage of the Lech, or at Lützen, but, after the King's death, he saw much service, and finally gained a Field Marshal's baton. His German campaigns brought him wealth, which he carefully secured by the purchase of two earldoms in his native land. In 1638 Queen Christina released him from her service, and he returned home just at the moment when Scotland needed the services of a skilled commander. There is nothing whatever about the character of Leslie which can awaken enthusiasm, and it is not strange that he should have waited so long for a biographer. Mr. Terry's chief interest in him arises from the nature of the part he took in the contest which arrayed on British soil the three armies of Charles, of the Parliament, and of Scotland. The action of the book centres around Marston Moor more than around any other battle, and Mr. Terry forcibly supports the thesis that Scottish assistance there was indispensable to Cromwell's success. Before the fight, Leslie had swept the royal garrisons from the northern counties, and, despite ill-founded charges which have been brought against his courage, his part in securing the victory yields only to that of Cromwell himself. Indeed, Mr. Terry, when distributing the laurels, says: "Apart from the contribution of individuals, the victory was shared perhaps in equal proportions by the left wing of the horse and the right wing of the foot, by Cromwell's and Leslie's troopers and the Scottish musketeers and pikemen." After Charles's surrender at Newark, Leslie was placed in a delicate position, from which he issued without having done anything to embroil the two kingdoms still further. Mr. Terry really begins his story at the First Bishops' War, and closes it at the moment when the Scotch were paid off for the surrender of their king. Into the Dunbar campaign, where David rather than Alexander Leslie met defeat, he does not enter, although his appendix contains a number of documents relating to it. As an essay on a striking phase of military history, this book is valuable. Moreover, it escapes all suspicion of having been merely "cribbed" from Firth and Gardiner.

—Last year Prof. Henry Simonsfeld delivered before the Royal Academy of Munich a memorial oration on Wilhelm von Riehl, in which he analyzed Riehl's position as an historian of civilization. This address has since been published by the Academy in a somewhat augmented form, under the title 'Wilhelm von Riehl als Kulturhistoriker' (Munich: Franz)—a well-merited distinction, both on account of the writer whose characteristic traits are here most luminously brought out, and by reason of the interest attaching to the often discussed question of the best aims and methods of historical study. Briefly stated, Riehl's lasting contribution to the stock of human culture is found by Prof. Simonsfeld to be a twofold one. As an artist, he is the undisputed master—if we except Gustav Freytag—of German historical genre painting. As an investigator and thinker, he stands midway between the individualists and the collectivists. Few works probably of the last fifty years have given a stronger impulse to the sociological study of history in all its relations—political, religious, literary, artistic—than Riehl's 'Land und Leute,' or 'Die bürgerliche Gesellschaft,' and it can with probability be said that, but for his activity, the present school of collectivist historians of civilization would not be what it is. On the other hand, no one could be more explicit than Riehl in the assertion of individuality as one of the prime forces in the history of human progress, and it is well worth while to quote at least one of his many declarations on this point, brought together by Prof. Simonsfeld. "The age," he says in his 'Kulturhistorische Studien,' "creates the man, and the man helps to create his age. Every productive mind is at the same time child and father, disciple and master of his time. For what does this word 'time' mean but the sum total of simultaneous intellectual tendencies which press upon, subdue, and shape the individual mind? But this individual mind is also a constituent part of the sum total of simultaneous tendencies; and the more fully the individual man is influenced by these tendencies, the more strongly will he influence, subdue, and direct them. He who knows how to combine these contrasts has the key to the mysterious law of human progress."

—Prof. Otto Harnack, author of 'Die klassische Æsthetik der Deutschen,' has collected his numerous contributions to German literary periodicals, especially the *Preussische Jahrbücher*, in a volume entitled 'Essais und Studien zur Litteraturgeschichte' (Brunswick: Vieweg), which is an interesting index of the present drift of literary criticism in German academic circles. While the new literature, the school of Ibsen and Tolstoi, has found, apart from its large popular following, not a few brilliant theoretical champions among independent journalists and writers (such as Edgar Steiger, Paul Schlenther, Otto Brahm), there is, as far as we know, only one university professor in Germany (Prof. Litzmann of Bonn) who has openly expressed his sympathy with the latest phase of German dramatic or novelistic art. Since one of the principal functions of universities consists in the preservation of old wisdom, this is perhaps a natural and wholesome condition of things, although the new literature would undoubtedly gain much from a somewhat friendlier and more active interest of the academic critics. Prof. Harnack especially, with his keen and deep understanding of what constitute the essential elements of the greatness of classic German literature, would be a most admirable critic and guide for the younger writers of to-day if he chose to give such criticism and guidance; and one cannot help regretting that almost the only reference to Gerhart Hauptmann found in these essays is a most depreciative, if not contemptuous, allusion to his 'Vor Sonnenaufgang.' This lack, of course, does not take away from the value of the bulk of the essays dealing with Goethe and his circle, in which, naturally enough, Prof. Harnack shows himself a strict adherent of the Classicist doctrine as against the unruly aspirations and heresies of the Romanticists. Perhaps the most suggestive of these essays are two dealing with Goethe's relation to Wilhelm von Humboldt and Heinrich Meyer respectively. New and convincing is the proof of Goethe's indebtedness to Raffael Mengs for his views on the imitation of nature; masterly is the sympathetic analysis of Goethe's 'Pandora'; and truly enlightening is the characterization of Ibsen.

—It is strange how so important a language as Hausa could have been so much neglected. It is spoken by one per cent. of the whole population of the world, and is certainly the language of the future for tropical Africa. Philologically it is of the highest interest and value; it may, perhaps, be the key to the yet unsolved problem of the relation of the languages which we used to call Hamitic to the Semitic group. It has been known since Mungo Park's time, and yet only now have we a dictionary of it that can be called in any degree satisfactory ('Dictionary of the Hausa Language,' by Charles Henry Robinson, M.A., Trinity College, Cambridge, assisted by W. H. Brooks, B.A.; volume i., Hausa-English. Cambridge [Eng.]: University Press; New York: Macmillan). Canon Robinson's work is based on the Dictionary of Schön, corrected throughout and much enlarged. He has fitted himself for his task by residence in the Hausa country and by collecting Hausa

MSS., the orthography of which he takes as a basis. Schön, on the contrary, worked entirely by ear, and was unaware that Hausa had any literature or had even been reduced to writing. In his preface, Canon Robinson deals at length with the phonology of the language and with its relations to Semitic. Setting aside his little absurdity about Hanno's expedition and possible Carthaginian influence—from which the Tyrwhitt Scholar who assisted him might surely have saved him—his remarks are full and good. His difficulty that the Arabic element in Hausa belongs rather to the classical language than to the present-day colloquial idiom is not serious. Hausa speakers have long been in touch with speakers of Arabic; even in mediæval times they were known to Arabic geographers. In all probability, also, they have been much in contact with the Bedawi tribes of the Sahara, and from them would pick up words of the Bedawi dialect, which is comparatively near to classical Arabic. Further, it is evident, though Canon Robinson does not notice this, that they derived their alphabet from the Moors and not from Egypt. It is in Moorish Arabic, therefore, that parallels should first be sought. As for the primitive Semitic basis of Hausa, as distinguished from such loan-words, it is to ancient Egyptian that we should look for comparisons, and not to Coptic, as the Canon suggests. The pyramid texts are none too ancient for that purpose. The lexicon has evidently been compiled with diligence and knowledge. It marks a great advance in the study of an important language and is a step towards the solution of the "Hamite"-Semitic question. The get-up of the book is fully worthy of the Cambridge University Press.

—The movement towards developing and extending a common, artificial language for Norway based on the existing peasant dialects is receiving severe criticism from many leading Norwegian writers and public men. This language reform is only one of many expressions—some wise; more, foolish in the extreme—of the national consciousness that has been developing in Norway during the past fifty years. While all the other demands, as that for a separate Foreign Office and a non-union flag, have been directed against the sister kingdom of Sweden, this one is intended to remove the last evidence of the earlier union with Denmark. The leaders of the "Landsmaal," or national tongue, called by its critics "paper tongue," claim that the true Norse spirit is hampered by being expressed through the inferior and foreign Danish, even when the latter limps under the name of Dano-Norwegian. At a meeting held recently in Christiania, Björnstjerne Björnson and Sophus Bugge addressed a large audience, representing different political tendencies, and exposed the weakness of many of the patriotic claims. Björnstjerne Björnson, the most frankly Norse of the four leading living Norwegian writers, while pressing the claims of Danish as the cultural language of Norway, at the same time warmly recommended the use of the existing dialects as dialects, especially in connection with fiction, to give local color. Prof. Bugge aptly characterized the whole movement when he said that it was the outcropping of a worn-out romantic enthusiasm for the past, of vague dreams of the glory of the Middle Ages, of a greater respect for the letter than the spirit, and of a faulty appreciation of contemporary history and the realities of life.

THE PHILIPPINE JUGGLE.

The Expedition to the Philippines. By F. D. Millet, Special Correspondent of *Harper's Weekly*, and of the London *Times*, etc. Illustrated. Harper & Brothers. 8vo, pp. 275.

Mr. Millet was already favorably known by his career as an artist and war correspondent, and more lately by his well-told and well-illustrated tour of the Danube from the Black Forest to the Black Sea; and his employment as correspondent of the London *Times* gave him, in the Philippines, exceptional advantages. The fruit of these is seen in his chapters on his excursion over the railway to Dagûpan, which our troops have reached very lately, and his attendance at the opening of the Philippine Congress at Malolos. He writes from fullest sympathy with our officers and men in every phase of their arduous and embarrassing task. He went out with Gen. Merritt from San Francisco, and, after the few days' halt at Honolulu to coal (which he put to good use), went on with the headquarters to Manila. His stay did not extend long beyond the occupation of the city and the transfer of the Military Governorship to Gen. Otis, for he took ship for home before the 1st of October. His narrative, therefore, covers the original expedition of the army, the short campaign against the Spaniards, and the establishment by the insurgents of the investing lines about Manila, which was practically a siege as before, the garrison being changed from Spanish to American. For this period he seems to be a competent and candid guide. Both directly and incidentally, Mr. Millet gives us much interesting and useful knowledge of Luzon and its people; and the fifty reproductions of photographs, even the poorest of the snap-shots with the kodak, are full of instruction.

It is, of course, in its bearing on the military and governmental problems that the book has its serious interest. Some telling criticisms are made, both expressly and by implication, on the errors in fitting out the expedition, in the landing of the troops, and in adapting their physical discipline to the new conditions of climate and country; but we must confine our attention to the relations of the army to the insurgents, for the seeds of the subsequent collision with them and of the existing war were planted as soon as the expedition arrived in Manila Bay.

It will be remembered that Admiral Dewey's naval victory had been in the southern bight of the great bay opening to the west, where he had bombarded also the fortifications at the village of Cavité, and driven the Spaniards from them. These works were then occupied by Aguinaldo and his army of insurgents, and here was the harbor where our troops landed, and which became the base for operations against the city of Manila, lying in the northern bight of the bay, some twenty miles from Cavité by land, though not more than half that distance by water. Between the two places was a sandy beach bordered by a fringe of tropical trees, beyond which, again, was a plain becoming marshy and impracticable as one gets further from the shore. Deeper in the interior the country rises to the mountains which are the backbone of the island. The topography decides the line of advance northward along the shore, on either side of the main road from Cavité to the city, called the Camino Real. Sluggish streams cross this route and empty into the bay. These, of course, were lines of defence, and were to some extent entrenched. The fleet could steam along, abreast of the infantry advance, and when the fort of San Antonio de Abad (defending the suburb on the bay) was reached, the heavy naval fire would either drive out the garrison or prepare for our infantry assault.

When Gen. Merritt arrived, not only did Aguinaldo hold Cavité, but Mr. Millet tells us that he had troops on all the principal roads leading out of Manila, and had "completely invested the town, from Caloocan on the north to Maytubig on the south" (p. 61). His forces were organized, and he had several generals in subordinate commands. He was, therefore, the commander in fact of an army similar in organization and in numbers to our own under Gen. Merritt. His troops were neatly uniformed in Spanish uniforms captured at Cavité, were armed with excellent rifles of recent patterns, and the photographs show a soldierly, martial appearance. Our first transports landed Gen. Anderson's brigade within the insurgents' post at Cavité. The second fleet landed Gen. Greene's at Tambo, behind the insurgents' investment lines south of Manila, and MacArthur's followed. The only troops then engaged with the Spaniards were Aguinaldo's, and, to attack Manila, Merritt must advance through the insurgent lines unless he were willing simply to support their attack.

With two such armies bent upon the common purpose of reducing the Spanish stronghold, the first step, an intelligent observer would say, must be a conference between the commanding officers. The part each is to play must be defined. A plan must be arranged and definitely settled, as at Sebastopol the English took the right and the French the left. There should be a commandant of the whole, if possible, as Washington was of the French and American forces at Yorktown. If that could not be arranged, there must at least be action under constant consultation and agreement between the chiefs, as between the English and French in the Crimea. The conduct of war is a matter of such terrible consequences, and the coöperation of armies of different nationalities is so complicated and delicate a business, that it would be about as bad to wage war without such full and constant understanding as it would be to let the brigade commanders make each a campaign of his own, without a common superior or mutual agreement. Such coöperation with a de-facto army, if frankly conducted, does not imply any diplomatic committal to the recognition of the government behind the army. But Mr. Millet confirms what was hardly credible as we got it in current news dispatches of last year, in saying that "no official notice was ever taken of Aguinaldo, although he repeatedly made urgent requests to be recognized as an ally, or at least to be notified of his acknowledged status." It is added that "he never called upon Gen. Merritt, and, although the latter passed through Bacoor, Aguinaldo's headquarters, they never met" (p. 61). Reflect upon it for a moment. Merritt landed his

army upon territory actually held by Aguinaldo, and went into camp under protection of the insurgent pickets and skirmish lines which held back the Spaniards from attacking the boats as they approached the shore. Not only had no previous invitation been sent to Aguinaldo to meet the American commander and make a mutual concert of action or a definite separation, but the course taken was to ignore his existence, and, in the necessary contact with his troops, to shoulder them aside, quietly if possible, and have no official intercourse with them even in doing so.

An organized army is so hard a fact in time of war that not even Mother Eddy's disciples could dissolve it into thin air by faith in its non-existence. When a movement toward Manila was to be made, Aguinaldo's men had to be got out of the way, for they held the line across the shore facing the Spaniards, and it would be awkward marching over them if they resisted it. How should it be done? They would obey no orders except from their own chief, with whom Gen. Merritt would not communicate. Mr. Millet explains it thus: "On the afternoon of the 28th [July], General Greene received a verbal message from General Merritt, suggesting that he juggle the insurgents out of part of their lines, always on his own responsibility, and without committing in any way the commanding general to any recognition of the native leaders, or opening up the prospect of an alliance" (p. 83). We are told that General Greene accomplished this very cleverly by politely inviting to an interview General Noriel, insurgent commander on their left, and persuading him of the desirability of putting in one of our effective batteries opposite the Spanish fort; and when room was made for the guns, two battalions of infantry went in also. Noriel had referred the matter to Aguinaldo, who consented on condition that General Greene gave a written receipt for the part of the lines. We are told that the latter sent to Aguinaldo "a carefully worded letter, stating that he had occupied a specified part of the line," though the author does not vouch for its text.

It is hard to see what benefit could come of such "juggling" more than by frank dealing. The advantage of a verbal arrangement was certainly not in freedom from misunderstanding and later recrimination. Writing is usually insisted on in such cases to prevent disputes afterward. Gen. Greene's dealing with Gen. Noriel was as really the United States recognizing the insurgent army as Merritt's with Aguinaldo would be. The Filipino seems to have been shrewd enough to get a writing at last, and, with this as the proof of some sort of a transaction, we must either stand by the honest revelation of the whole of it, or lie about it. Mr. Millet loyally concludes that "the insurgents were thus beaten at their own game," but it does not seem so clear who was beaten. We are often told that war justifies deceptions of the enemy, which are called *ruses de guerre*, but we do not recall any authority on the laws of war which approves practising them on your friends. On the other hand, history gives many instances in which insincere dealing with friends has made enemies.

Honesty in the matter would not seem to have been bad policy. The natural thing for Merritt to do, and the thing which his training would probably have made most agreeable to him, would have been, immediately upon his arrival, to invite Aguinaldo to a conference, and to say to him: "In our war with Spain we seek to defeat and capture the Spanish army holding Manila. You have an army now investing the place. We have no directions to excite a revolution here, and if peace results from our military and naval operations here and elsewhere, it may be on the basis, so far as these islands are concerned, of leaving them as they were. We cannot pledge you anything in the future; but you command an army, and your purpose seems in harmony with ours. We can recognize you as commandant of an army in fact, and must let the future develop itself. We must either work together to enforce the surrender of Manila, or we must play at cross-purposes. Shall we work together on this basis?"

There can hardly be a doubt that such overtures would have been cordially met. No complications could have arisen at all comparable with those which came from the course actually pursued. The habit of coöperation and transparent dealing would have begotten confidence. If the treaty of Paris had turned out just as it did, the way would still have been prepared for the Filipinos to organize an autonomous government under our friendly protection, and amicable diplomacy would have had a promising field. We are, in this, carefully avoiding the supposition of any ultimate purpose different from that which our Government has avowed at each step in the progress of events. We are simply noting the gross blunder in methods, assuming the policy in general which our War Department indicated to its officers in the field.

Following Mr. Millet's narrative, things went from bad to worse. On the 7th of August Admiral Dewey and General Merritt sent a peremptory demand of surrender to the Spanish Governor-General, threatening an assault and a naval bombardment of the town if the demand was not complied with in forty-eight hours. Of this no notice was given to the Filipinos, who still occupied the whole line of investment except a regimental front on the shore. There was more "juggling," now with the Spaniards, resulting, as Mr. Millet intimates, in an understanding that, after a noisy show of defence, a surrender should be made to our troops, who were to answer for the exclusion of the Filipinos from any occupation of the walled town. This was much the smaller part of the city, being that portion south of the Pasig River which was originally included in a regular bastioned enceinte, as Vienna used to be before the fortifications were levelled and turned into the boulevard of the Ring-Strasse. On the 13th the noisy comedy came off. Our troops advanced along the shore, and the navy knocked the stones and mortar about on San Antonio de Abad, from which, to avoid accidents, the Spanish troops seem to have been early withdrawn.

As our troops went forward with a narrow front along the sands, their flank was, of course, wholly exposed to the insurgent army. A deplorable fiasco would have occurred if Aguinaldo had proved hostile. From a military point of view, the movement was conceivable only on the faith of the trustful friendship of the Filipinos. Though these had been contemptuously ignored, and in their exclusion from knowledge must have suspected that they were looked upon as enemies—though they had grown restive, as the author tells us, and in many ways showed their not unreasonable irritation and distrust of our purposes—yet no allies acting upon an agreed countersign could have gone forward, side by side with our troops, more promptly than they did.

When Fort San Antonio was occupied by our own men, and the columns pressed forward towards the permanent fortifications of the inner city, the Spaniards hoisted a white flag, and a mixed naval and army commission entered to settle the capitulation. While these officers were in conference with the Spaniards, and two hours after the white flag had been shown at noon (p. 152), the firing was still continued along the whole line except that of the advance of Greene's brigade, say along three-quarters of the whole. The Spaniards again closed the gate where Greene had entered in a carriage sent for him, to join the commission, and now fired upon those who approached. The insurgents were pressing through the suburbs on east and north, MacArthur's brigade was following them or trying to elbow through them, and the conundrum was, How to make the Filipinos stop fighting without communicating with them or recognizing them?

At five o'clock a rough draft of the capitulation was hurriedly signed (p. 162). The Spanish flag was still flying on the northwest bastion, in sight of the foreign ships in the bay, but naval officers now hurried to it and replaced it by the American ensign. A half-regiment landed from a steamer with Gen. Merritt, as a headquarters guard. The Filipino puzzle seems to have been settled by having Greene's brigade, with arms a-port, push back the insurgents (whose leaders restrained them from fighting) and admit McArthur's men, keeping out Aguinaldo's, who now learned again how they had been "juggled" as they stood looking foolishly up at the American rifles on the parapet. Our triumph was nearly complete. We had the inner city, and we had not recognized the insurgents, whom we were now ready to bid go about their business. When they visited the city, they were required to disarm, though the Spanish officers, under the capitulation, wore their side-arms.

But the insurgents still held the outer town and the surrounding villages. They established their picket lines and made stringent rules for entrance and exit. For their own support and in the name of the Revolutionary Government which Aguinaldo had proclaimed on June 23, they levied duties on supplies and merchandise entering the city, where prices rose to siege rates. They were constantly offering to come to some distinct understanding or to negotiate a *modus vivendi*, but the bugbear of recognition prevented our doing this. Meanwhile, the picket lines were nearly in contact, and each side sought to "juggle" the other out of some desirable post. Gen. Merritt left things in this condition when he was ordered to Paris to assist the negotiators there in settling the final disposal of the islands under the peace protocol which had been signed on the same day Manila surrendered.

Gen. Otis replaced Merritt in a task that was by no means an easy one. As is always the case, mere necessity brought about

modes of dealing with an army in Aguinaldo's position. Mr. Millet estimates the number of rifles, captured and other, which could be directly traced into Aguinaldo's hands, at 35,000, and he is confident the number of men in the insurgent army was about the same as the number of guns, though not all concentrated at Manila (p. 224). We are told that this army was constantly strengthened by recruits, and that the officers worked diligently in discipline, drill, and firing practice. Of the people he says that "one of their strongest characteristics is an implacable spirit of revenge, and that nothing is more actively provocative of this feeling than a real or imaginary slight or an act of injustice" (p. 61). What must we say, then, of a policy begun in most insulting slights which were continued daily and hourly through weeks and months, of constant wounds to pride, of petty advantages got by "juggling," of persistent refusal to confer or to make a candid comparison of views? The incurable mischief was evidently done before the Peace Commission was sent out to Manila. We wonder the armed collision did not begin sooner, and we do not wonder that Mr. Schurman found so rooted a distrust that it could not be overcome. To call the policy which dictated Merritt's course ignorant and childish would be flattery. The responsibility for it remains to be fixed.

If we keep steadily in mind the fact that Mr. Millet's narrative covers only the period from General Merritt's arrival till Otis assumed command, we shall find that it not only is consistent with such official documents as the President sent to Congress at its last session, but makes them clearly intelligible in the bright light of current events as they were seen by a keen observer. Prior to Merritt's landing, Consul Pratt at Singapore had been the means of putting Aguinaldo in communication with Admiral Dewey, and the latter had brought the insurgent leader to Manila, landed him at Cavité, given him arms and the means of calling his people into the field. The uprising openly declared itself the liberation of the Philippines, and its aim the overthrow of Spanish domination in the archipelago. With Dewey's encouragement, Aguinaldo got together an army, occupied Cavité, fought numerous engagements, drove the Spaniards from a dozen villages, captured two or three thousand Spanish troops, completely invested Manila, and shut it off from all communication with the interior as Dewey did from the sea. Here was no squeamishness about coöperation or recognition.

General Anderson came with the first army detachment and continued the existing relations. He promptly sought from Aguinaldo "a definite understanding, which I hope will be advantageous to both," and asked for "your Excellency's advice and cooperation." His Quartermaster, in a letter asking for horses, buffaloes, and carts, which was written by Anderson's direction, said our troops were there "to expel the Spaniards and to give a good government to the whole people. . . . General Anderson wishes you to inform your people that we are here for their good." Under the initiative Admiral Dewey had taken, the army action was so far harmonious with that of the navy.

On the 25th of July Gen. Merritt entered the bay, and a new spirit at once became evident. What Mr. Millet so clearly saw there, now followed. What were Merritt's instructions? The *fact* is told not only by Mr. Millet, but by Gen. Greene in the long official paper sent to the Senate. "Aguinaldo did not call upon Gen. Merritt on his arrival, and this enabled the latter to avoid any communication with him, either direct or indirect, until after Manila had been taken." Gen. Greene further tells us that "the day before the attack on Manila he [Aguinaldo] sent staff officers to the same general [Anderson], asking for our plans of attack so that their troops could enter Manila with us. The same request had previously been made to me by one of his brigade commanders, to which I replied that I was not authorized to give the information desired." Finally, we have the same authority for saying that after we were in possession of Manila, Gen. Merritt declared to a staff officer of the insurgent army that "even if the services of Aguinaldo's forces had been needed as allies, he should not have felt at liberty to accept them." We will not assume that here was a deliberate juggle with the word "allies."

It was not only after the occupation of Manila, but a week after, that the first direct communication between Gen. Merritt and Aguinaldo took place. The Filipinos held the water-works, and the scarcity of water in the city made some arrangement necessary. Without naming Aguinaldo, Gen. Merritt on the 20th of August addressed a letter to "The Commanding General of the Philippine forces," in reply to a memorandum Aguinaldo had sent to Gen. Anderson suggesting arrangements to relieve the strained situation. Again the mischief of informal communication became apparent, as Gen. Merritt insists upon an oral agreement with staff officers of the Filipinos, in which he is clear as to what he demands, but vague as to the conditions on the other side, and the whole of which, Aguinaldo asserts, were to be distinctly reduced to writing before binding either party. Merritt, on the 24th, treats it as an agreement pure and simple to withdraw the Filipino forces from all the suburbs of the city, and says he "must insist upon the carrying out of this." He adds, "I am the more insistent in this particular because recent instructions from my home Government contemplate this course." Aguinaldo had already given proof of his good faith by allowing the water supply to be resumed, and his long letter of the 27th, which closes the correspondence, is dignified and conciliatory, and bears the marks of sincere conviction that he is in the right.

It is pitiful to be forced to the conclusion that the outline thus drawn will be that which history will confirm. The conscience of our people has groaned over the story of our dealings with the red Indians, in which the ablest and most experienced of our soldiers have borne concurrent testimony that their wars were uniformly provoked by exasperating wrongs. Another war is probably near its close, another chapter is added to a humiliating tale of incapacity to deal with weaker tribes of men. What has been done is now past praying for; but ought we not to enter upon the duty of giving to the Filipinos an opportunity of free development and real self-government, with a clear consciousness of the utter unwisdom of our dealings with them hitherto?

RECENT NOVELS.

A Confident To-morrow. By Brander Matthews. Harper & Bros.

The Etchingham Letters. By Sir Frederick Pollock and Ella Fuller Maitland. Dodd, Mead & Co.

Parson Kelly. By A. E. W. Mason and Andrew Lang. Longmans, Green & Co.

Stalky & Co. By Rudyard Kipling. Doubleday & McClure Co.

On Trial. By Zack. Charles Scribner's Sons.

Ridan the Devil, and Other Tales. By Louis Becke. London: T. Fisher Unwin; Philadelphia: J. B. Lippincott Co.

Little Novels of Italy. By Maurice Hewlett. The Macmillan Co.

The Powers at Play. By Bliss Perry. Charles Scribner's Sons.

A Silent Singer. By Clara Morris. Brentano's.

In 'A Confident To-morrow' Mr. Matthews brings a young gentleman from Kansas to New York, armed for conquering fortune with a novel in manuscript. This Mr. Sartain is not imprudent, for he has secured in advance a salaried position in a publishing house, thus providing against hunger and heartrendings while his novel is circulating among the "readers." His career is not meant to resemble that of a rocket. He has enough ability to get on, and even that modest provision is not ostentatiously displayed. He temperately treads the middle way. The worst thing he does is to answer an invitation on a postal-card, and the best to fall in love with a pretty girl of excellent character. He has an unconquerable shyness, which diminishes his conversational efficiency and also deprives him of distinction as the personage of a longish novel.

But Mr. Matthews's design is not so much to paint individuals as to compose a characteristic New York group, and present through them some aspects of the city's life. Thus he introduces Mr. Sartain at once into the home of a successful novelist, associating him intimately with art and letters. Mr. Vivian's home is the scene of Mr. Sartain's social experiences, and these are quite within the range of common knowledge. He is uniformly dull at five-o'clock teas, and at first a little awkward at dinner. The object of particularizing the menu of the Vivians' Thanksgiving dinner we confess escapes us; a generalization about this feast which opened Sartain's eyes to observe the beauty of "simplicity and luxury," would seem to us sufficient. A jaded eye might have questioned the perfect taste of "a mould of fancy ice cream, representing a hen sitting upon a nest of spun sugar," but the feeling for gastronomy and æsthetics is otherwise so fine that it is perhaps finical to challenge the hen. The chapters descriptive of Sartain's venture in the editing of a weekly magazine give a side of life not familiar to the public, and one with which the author is most competent to deal adequately. Mr. Matthews rather insists on the modernity of the persons who surround Sartain—a quality which hardly needs emphasis, since they are mostly young and could not very well help being modern. Mr. Matthews encourages the cheerful sentiment that there is no time like one's own time; but, to reflective per-

sons who look before and after, this particular work is not convincing. We all know something of our own time superficially, but its meaning, its heart, what it stands for in human history, is perhaps more deeply hidden from the general than that of times seen in perspective. It is for persons of intuition and acute perception to penetrate and explain our own mystery, and we feel that if Mr. Matthews had gone deeper for proof of validity of his pleasant assumption, he might more completely have brought us all over to a state of blissful content with ourselves.

Several popular and not altogether arbitrary prejudices are dispelled in 'The Etchingham Letters.' Almost every one shirks fiction in epistolary form, feeling that narrative will not be sustained and that characterization will be reduced to description. One cannot easily become interested in affairs to which attention is invited so obviously at second hand. Distaste for works of imagination written in collaboration is, with less reason, almost as pronounced. That two minds will not work as one is a foregone conclusion, and, with unity as the desideratum, one rejects the comfort of the thought that there are many ways in which two minds work better than one. Perhaps the authors of 'The Etchingham Letters' were not much concerned about public approval, and have unconsciously succeeded in those directions where failure seemed foredoomed. At all events, in the correspondence between Sir Richard Etchingham and his sister a domestic drama is carried along smoothly, and the characterization is extremely lively. They are ideal collaborators, because they are bound together by affection, by perfect understanding, and by congenial tastes. Their intellectual curiosities and interests are keen and comprehensive, and the ironical humor which runs through their confidential discussion of the rest of the family and their intimates is similarly happy, savored with a subtle distinction of sex. To speak of the little book justly would be to praise it unstintedly, and that praise may be comprehended in the comment that it is one of those infrequent contributions to "light literature" which are delightfully light and unquestionably literature.

'Parson Kelly' is another example of successful collaboration; also a good tale, swaggering somewhat saucily, yet with excellent credentials, into the exclusive company of refined letters. Among the pleasant paths long trod by Mr. Lang for the entertainment of the public, none is more emphatically his own than are those leading up to and away from and round about the expulsion of the Stuarts. For Jacobite plots and plotters he has the scent of the hound for the hare, though he does not always pursue with the intention of destroying. Mr. Mason's graceful reproduction of an eighteenth-century literary manner has quite recently attracted notice in a tale entitled 'The Watchers'; so to narrate the fortunes of gentlemen who answered to almost any name except their family one, who crossed the Channel to and fro without passports, preferring the night to the day, who had no defined occupation and no visible means of support, all about the year 1720, it would be hard to find persons better fitted than Mr. Lang and Mr. Mason. Being Irishmen, Parson Kelly and Nicholas Wogan show more zeal and fervor than discretion in the service of their king, and the parson's heart so often controls his head that Wogan is kept very busy retrieving his friend's errors by use both of his wits and his sword. They are more heroes of drawing-room intrigue than of out-door adventure, and conduct their important business with great elegance and gallantry, conspicuous figures moving in a charmed circle of satin petticoats and link boys, lace ruffles and ready rapiers. Lady Oxford (whose proceedings are not historical) is a fascinating great lady, wicked but not weak, and with the courage and wit to hold her own against the dreadful tongue of Lady Mary Wortley Montagu. Without any private honor, without even good repute, power was still possible to great ladies in the gay society of that cynical age, but none so high-placed, so supreme, as to survive the breath of ridicule. When Lady Oxford knows that her world is just going to laugh at her, the nerve with which she challenges that laugh, the effrontery, the tact, the unscrupulousness are magnificent. It would have been better art, we think, if not better morals, to have left her here, saved for the moment by her own daring and the parson's delicate honor. The last chapter is only a tag, a sop for those who crave definite endings, and especially a tribute to that sentiment, so illogical yet so common to imperfect humanity, that glows virtuously on beholding the degradation of the sinner who has enjoyed a long run of prosperity.

Mr. Kipling has never appeared to less advantage than in 'Stalky & Co.' Unless they are ingenious and funny, the pranks of schoolboys do not make interesting reading for mature people, and a little even of the frolic spirit goes a long way. For youngsters the pranks of such boys as Stalky & Co. make very bad reading. Boys are sometimes mischievous, impudent, and unruly to a degree that invites repression, and we have never known one so devoid of these qualities that it could be necessary to encourage their growth by providing him with printed models. 'Stalky & Co.' may have grown up to become the modest heroes described in the last chapter of their history; but when writing that, if Mr. Kipling kept in mind half of what goes before, we think he forgot that the wisdom of experience has been concentrated in a proverb, "The boy is father of the man."

The lady who, assuming the name "Zack," proclaimed her depressing views of life a year or so ago in a volume of short stories, appears in the meantime to have sunk into deep despair. 'On Trial' is a most discouraging work. The study of ignoble character, the representation of pits which a congenital liar and coward may dig for himself, and the process by which he involves in his ignominy the confiding and innocent, are not cheerful themes for fiction, but they are legitimate. When presented impersonally, objectively, in the Greek dramatic fashion, an elevating, exciting impression of great tragic force can hardly fail to be conveyed. From contemplation of the spectacle we spontaneously appreciate its awfulness, even hopelessness. But this method of standing aloof from your subject, putting trust for its life chiefly in its intrinsic vitality, is not Zack's method. To the moral cowardice of Dan Pigott, the generous weakness of Phœbe, the crude villany of Silas Trustgore, she deliberately adds her own very emotional nature and very excitable style. Her personality so infects her people that at last the thoughtful reader comes to disbelieve in Dan and Phœbe, to discredit the incidents, and to resent having had his feelings harassed and his intelligence imposed on. Such fiction as 'On Trial' is neither useful nor beautiful, but it has a sort of hysterical idealism which is at once responded to by sentimental, emotional readers, and thus gets a reputation for truth to life, even for literary skill, which is not deserved.

The South Sea tales and sketches in Mr. Louis Becke's volume entitled 'Ridan the Devil' are as entertaining and even instructive as are his earlier pictures of similar scenes and people. Like Mr. Kipling, he is great in the art of the single, vivid, complete impression. He characterizes with a phrase, and by a single incident throws a search-light on the history of a fairly long life. He is very quick, very sure, always interesting, and sometimes surprisingly funny. "Bilger of Sydney" and "Denison" enjoying his berth ashore are not figures for refined comedy, but any one who takes a tolerant view of human nature may easily laugh with them till he cries. All the work, indeed, is excellent, and that in spite of odd grammar and uncouth phrases which we take to be the popular grammar and expression of Australia and the South Seas.

The infinite scope and variety of our fiction are immediately striking when one takes up Mr. Maurice Hewlett after Mr. Louis Becke. Extremes of natural ability, of education, of outlook meet on a common ground. Mr. Becke is the man of action and observation in fiction, and Mr. Hewlett the man of letters and contemplation. They come together in admiration for the exceptional and fine qualities of human nature, and in generous understanding of those which are more common but less inspiring. In the very modern form of ironical humor, sometimes gay and sometimes grim, they are as one man. Mr. Hewlett's 'Little Novels of Italy' are tales of times when love and murder and Art flourished greatly, when life had but a precarious tenure, yet ran its course gayly unhampered by morals. He has a wealth of knowledge of those times and a diction of wonderful fluency and color, so that one sees and feels more the outward garment than the inward substance. The identification of the author with his period is particularly interesting. The Middle Ages, or rather the picturesque and sensuous aspects of the Middle Ages, have almost extinguished the modern. Mr. Hewlett appears not as one who trod the austere way of Dante or Savonarola, but as an accomplished associate of Boccaccio's merry company.

The tales in the volume entitled 'The Powers at Play' are all readable, but none is more than that. The Powers play in somewhat perfunctory fashion, and, to escape being fatigued by the spectacle, one must always go out between acts. The most amusing incident is found in "The Fish-warden of Madrid," and the most interesting idea in "Jepson's Third Adjective." In the opening tale the vacillating young doctor is kept up to "His Word of Honor" by an accident. Morally, he appears to be about as insecure as if he had broken his pledge. Technically, the tales have the assurance of a practised hand.

The stories included under the title 'A Silent Singer' have very little technical merit, but, on the other hand, much sympathy

with life, especially with life that for one reason or another has not been prosperous or very happy. It is difficult to read the book without mental reference to the author's fame as an actress, and it is almost impossible not to feel that, had she chosen letters, she would have been equally famous as a writer. Besides sympathy, she has a clear vision, both for character and for causes, and, in spite of a leaning towards the sentimental view, she holds her emotions pretty well in hand. We have many better writers than Clara Morris, but few of them have written better tales.

A Century of Science, and Other Essays. By John Fiske. Boston: Houghton, Mifflin & Co. 1899. 8vo, pp. 477.

Agreeable and profitable reading is assured in any book by Mr. Fiske. The fourteen essays composing this latest volume may not make quite so stimulating a draught as some of his other writings, but what they lack in this they make up in their sparkling flow of information and refreshing good sense. The longest and, perhaps, the most interesting, is a eulogy of the historian Parkman, exhibiting the impressive picture of his life and labors. The two next in order of length are, with one exception, the slenderest in matter. One of these, an account of "Some Cranks and their Crotchets," makes one laugh a little, but the most irresistible things in it are quoted from De Morgan's incomparable 'Budget of Paradoxes.' The other is a refutation, neat as a proposition in Euclid, of the theory that Bacon wrote Shakspere. It is only a pity that the object of attack does not offer sufficient resistance to allow of much strength being put forth against it. Less courteous is a brief insession upon the Rev. Joseph Cook. Three of the remaining essays deal largely with the author's reminiscences. In an account of "Cambridge as a Village and as a City," it is the ancient history that is the most curious. There is little about the aspect of the modern village before its incorporation in 1846, since Mr. Fiske did not see it until fourteen years after that event, when its sweet childish ruralness had given place to an ungraceful hobbledehoy suburbanity. There are two obituary notices of the author's friends, Edward Augustus Freeman and Edward L. Youmans, the latter of autobiographical, as well as other, interest. In a discussion of the arbitration treaty we note that as lately as 1897 Mr. Fiske dreamed that our proud and successful rejection of a standing army might stand as an example that Europe must, in course of time, emulate. So it is that each step toward knowledge of ourselves consists in the dissipation of some illusion.

The author evidently attaches considerable importance to his paper on "The Part Played by Infancy in the Evolution of Man," and in his intimate dedicatory epistle to Prof. Thomas Sergeant Perry he properly reclaims for himself the title to the authorship of the theory that the prolonged period of infancy of men is the cause of the persistence of family relations and so of human society. The objection that man's infancy is not, in fact, particularly prolonged seems never to have received from Mr. Fiske an adequate reply.

An essay on "The Scope and Purport of Evolution" is a protest against the assumption that that doctrine is unfavorable to belief in immortality and in God. Here Mr. Fiske is not at his best. Instead of first endeavoring fully and fairly to state wherein lies the persuasiveness of the line of thought against which he argues, but which has deeply impressed a good half of the thinking men of our generation, he pitches upon a vague and shambling sentence of a German professor, as if showing inexactitude in that could serve to prove there was no justice in the thought behind that awkward mouthpiece. Moreover, instead of considering the natural tendencies of evolutionary philosophy, as such, he limits himself to Spencer's special doctrine, which makes the principle of the conservation of energy the root of all the phenomena of the universe. Now what this results in is a virtual splitting of the universe into two uninteracting departments of matter and of mind, and such a breach of continuity cannot satisfy men long, since it ignores the requirements of the logic of this kind of reasoning.

The strongest of the papers is that which gives its title to the book. This is intended to show that the nineteenth century has been intellectually the greatest of all ages, that the idea of evolution is the greatest product of this greatest age, and that Herbert Spencer is the greatest exponent of this greatest of ideas. Most readers will be ready enough to agree that the trick of inquiring concerning each generic phenomenon how it came about or could have come about, is, on the whole, the most cunning lesson that the nineteenth-century animal has learned. Many among our reading millions innocently suppose that Herbert Spencer invented evolutionary philosophy. They do not realize that what probably first magnetized the youthful Aristotle from a student of medicine into a student of the cosmos was the influence of the strong current of evolutionary thought that had been set up in his environment by Democritus—thought that must have seemed as novel and as scientific to him as that of Spencer first seemed to the youthful Fiske, albeit there is reason to suspect that it was even then ancient lore.

Aristotle, by the way, though he always retained a high opinion of Democritus, did not persist in such unparalleled devotion and faith of discipleship as Fiske retains for Spencer. Some of Mr. Fiske's readers, however, while willing to accord a good measure of applause to Spencer's early discernment of how much slow growth might bring about, will nevertheless remark two circumstances which will limit their admiration of him. The first is, that his 'Psychology' and 'First Principles' were not the earliest expressions of evolutionary philosophy, nor even of evolutionary philosophy of a quasi-scientific cast, for the nebular hypothesis, which to any thinking man carries along with it a general doctrine of biological evolution, was given to the world by Kant in the year 1755. The second circumstance is, that Spencer is really not an evolutionist of a thorough-going kind, since he explicitly proclaims that, in his opinion, evolution is only one of two alternating processes, evolution and dissolution (the γένεσις and φθορά of Democritus), which he places on a par, while he further makes both those processes alike mere consequences of an eternal law that never came about at all, the "law of the persistence of force"; and against any attempt to drive investigation into the origin of that, he sets up a warning notice of no thoroughfare. That Spencer saw and felt some truths before almost anybody else, nobody can deny; but how far his writings have really influenced the deeper thinkers of the century, which seems to be the true point in question, is something Mr. Fiske still leaves in doubt. One brilliant disciple the Synthetic Philosophy can boast; but, after him, we can call to mind only men whom it were flattery to call mediocrities in philosophy. In short, the nineteenth century has brought us all to agree that nearly everything is to be accounted for by evolution; but the question as to how evolution is itself to be accounted for, or what rank it is to take among the uniformities of nature or the categories of philosophy, looks to-day less like finding a speedy settlement than it did soon after the publication of the 'Origin of Species.'

Point and Pillow Lace: A Short Account of Various Kinds, Ancient and Modern, and How to Recognize Them. By A. M. S. New York: E. P. Dutton & Co.

Embroidery and Lace: Their Manufacture and History. By Ernest Lefébure. Translated and enlarged with Notes by Alan S. Cole. G. P. Putnam's Sons. 1899.

Embroidery; or, The Craft of the Needle. By W. G. Paulson Townsend. New York: Truslove, Hanson & Comba. 1899.

The compiler of 'Point and Pillow Lace' has very efficiently grappled with the task she set herself, and has produced a valuable guide to lovers of lace, excellently well illustrated by magnified photographs of each particular kind and of all details connected with her subject. A. M. S. was incited to undertake this manual by the extreme difficulty of identifying any particular piece in the more exhaustive 'History of Lace' of Mrs. Palliser and other well-known experts, to whose studies she acknowledges her obligation in the production of this work.

The earliest pictorial record of lace is supposed to be in a picture of Quentin Matsys in the Church of St. Peter at Louvain of 1495. In England lace seems not to have come into use on frills and ruffs before Queen Elizabeth's reign. In the portraits of Mary Tudor in the National Portrait Gallery we note plain embroidered linen cuffs, while in the adjoining picture just after her time lace edging is used. It is in the work of the old masters that the history of lace is to be studied. It cannot be traced to more than three hundred years before our own time, and its production in France flagged considerably after the Revolution, during the period when simplicity in dress became the order of the day. The art of fine lace-making is again reviving in France, as also in Italy, where, through the efforts of the late Countess Marcello and the immediate patronage of Queen Margaret, Burano has a lace manufactory exactly following in its ancient traditions, and rose point is produced in Venice almost as fine as in ancient times. Besides the lace-workers in Venice, A. M. S. seems unaware that in Romagna the Countess Pasolini has also revived the industry on her estates for the advantage of the young peasant girls, who thus add to their slender dowries by making rose point and coarser laces when not occupied in field labor; and the Countess Brazza in Lombardy has even more hands occupied with this delicate work.

The great lace-making centres were Ve-

nice, Brussels, and Alençon. Although each had distinctive methods and styles of design and production, fashion often controlled the demand for certain kinds of lace to such an extent that it is not always easy, even for an adept, to judge certain specimens. Our authoress assures us that Spanish point and the so-called Greek lace and Point de Raguse are all of Venetian provenance, just as Point d'Angleterre is essentially from Brussels, notwithstanding its name. Venetian lace-workers brought to Alençon by Colbert under Louis XIV. taught their art in France with splendid results, since in time the French surpassed the skill of their masters, and for a century the lace produced at Alençon was by royal decree called Point de France. We have not space to follow our authoress through her series from mediæval drawn work or *punto tirato* to the humble machine-made lace of Nottingham. Her book will be useful especially to collectors who need knowledge and advice in the purchase of examples of the art.

We have a cheaper and revised edition of Ernest Lefébure's interesting history of 'Embroidery and Lace,' in which he demonstrates the important part woman's work has taken in decoration in the world's history, in the hope of inciting the new woman to devote her energies to these humbler walks of art. The additions include a more complete list and illustrations of different kinds of Irish lace, a further illustration of Greek embroidery (p. 46), and several emendations of the text. We observe, however, in a footnote (p. 240), for which Mr. Cole is responsible, that Ragusa is described as having been "one of the principal Adriatic ports belonging to the Venetian Republic." The Republic of Ragusa was always independent of Venice, while open to Venetian trade and influence. Its independence was terminated by French occupation under a treaty in the Napoleonic wars. The illustrations which profusely intersperse the text, though poor in execution, are very useful, and well chosen to give an idea of the historic pieces of embroidery described.

Mr. Townsend's little manual, with a preface by Walter Crane, is intended as a practical guide to students of the beautiful art of embroidery. It treats of design as well as of the diversity of methods, and abounds in examples of all kinds of embroidery, from ancient times down to our own. The illustrations are, unfortunately, of a cheap character, which falsify the values of the colors represented, and therefore fail to be as instructive as they should. The diagrams of stitches at the end are very intelligible, and will be found useful to beginners. Our author says but little that is really of practical use as to design; he justly warns his readers to avoid certain well-known pitfalls, such as representing flowers in a naturalistic manner and forcing light and shade; he advises on what lines nature should be studied by seeking to express the characteristics of the plant, flower, or fruit designed, its growth, the way the leaves spring from the stem, its buds in different stages of development. He insists on being truthful to facts, but on their being treated decoratively. His views are unquestionably correct, and he seems to have sought them at excellent sources, judging by the list of books he quotes as having helped him for this work. The difficulty of producing a good design remains, however, unsolved, and the examples of modern work among the illustrations show how very far we are from understanding decoration, and how in less enlightened times, before so much was thought and written on art problems, personal taste and the natural desire to embellish objects of daily life produced a far more attractive result. The panel of Pomona, which serves as frontispiece, designed by Sir Edward Burne-Jones and William Morris and very inadequately represented here, is the only remarkable modern piece of work in the volume. We have always understood that the Royal School of Art Needlework excelled rather in its execution of work than in its designs.

A General Survey of American Literature. By Mary Fisher. Chicago: McClurg & Co.

The author of this comely and well-printed book complains of Walt Whitman (p. 363) that "He is like a little second-hand country shop that calls itself the 'World's Bargain Store' and has the earth for its sign." It evidently does not occur to her that this description is not wholly inappropriate to her own book, the comprehensiveness of whose title is curiously in contrast with the mediocrity of its execution. This would perhaps be scarcely worth saying, were it not that it illustrates a serious peril of our widespread public-school system, namely, the constant multiplication of text-books proceeding from teachers who are themselves of crude and untrained mind. This book, which is a sample of many, is honest, sincere, courageous; but it is on the other hand immature, unequal, and goes little behind the ordinary sources of daily knowledge.

It has plainly undergone little revision, and makes mistakes which any common encyclopædia would have corrected—as, for instance, where it repeatedly spells Charles Brockden Brown's family name Browne (pp. 13, 17, 18, 138, 383), or says of James Russell Lowell that "The city of Lowell, Massachusetts, was named after one of his ancestors, and another was the founder of the Lowell Institute, Boston" (p. 312), although as a matter of fact it was his uncle whose name was given to the city, and his cousin who founded the Institute; the former event occurring when Lowell was a baby and the other after he had left college. So the Quinquennial Catalogue of Harvard University would have shown the writer that Jones Very, the poet, was never tutor in Greek at the Harvard Divinity School, but in the college itself; nor did he ever study theology in that school (p. 127). So her severest charges against Margaret Fuller (p. 139), that she did not recognize Wordsworth as a "new star," and that she "left no memorable word" about Goethe, are easily disposed of by her own published letter (Memoirs i., 167), in which she says of Wordsworth, in 1836, "I find my insight of this sublime poet perpetually deepening," and that passage in which Prof. Hedge, then unquestionably the best German scholar in America, says of her critique on Goethe, "As far as it goes, it is one of the best criticisms extant of Goethe" (Memoirs i., 96).

These are misstatements more serious than the misspelling of a man's name, and in regard to Charles Brockden Brown himself a little more knowledge of the literary history of the period would have shown the author that his novels, while still hampered by the ghost of Mrs. Radcliffe, really laid the foundation for modern American realism in their description of Philadelphia society and manners, of the roving Indian, the newly arrived French musician, the gray cougar amidst his limestone caves. His novels had a distinct influence on the Godwin and Shelley circle in England, and Mrs. Shelley, in her novel of 'The Last Man,' founds her description of an epidemic on "the masterly delineations of the author of 'Henry Mervyn.'"

There are no doubt many other school text-books of no more value than this. If we select this for criticism, it is because it is one of the latest and most ambitious, both in preface and in title. A book calling itself 'A General Survey of American Literature' which does not mention Harriet Beecher Stowe, even in its index, or quote a line of Emerson's poetry, must be regarded as self-condemned in advance.

Botanizing: A Guide to Field Collecting and Herbarium Work. By William Whitman Bailey, A.M., Professor of Botany in Brown University. Providence: Preston & Rounds Co. 1899.

This is an honest and successful attempt to attract amateurs to the delightful study of plants in forests, fields, and waters. The endeavor is made to show the casual as well as the expert collector that, by the employment of a few simple appliances and by the exercise of a certain amount of patience, it is possible to accumulate at small cost in spring and summer a wealth of material for fascinating investigation during the winter months (which here extend from November through April). Prof. Bailey believes with Charles Darwin, that "if you catch quite a beginner and want to give him a taste of botany," you must "tell him to make a perfect list of some little field or wood." The taste of botany acquired in this manner speedily becomes a taste *for* botany, and yields the refreshment to the tired brain of the worker in other fields that was so often curative in the cases of John Stuart Mill, John Ruskin, and a host of other busiest thinkers.

Of late there has been a feeling in some circles that botany consists largely in the acquisition of materials for the exercise of what is known as nomenclature—a device for attaching personal names to helpless plants; and it has been further felt that, if the supply of personal names to be commemorated should outrun the supply of plants, it would be necessary to reshuffle the cards and name the species all over again. Fortunately, there has been a very large number of students who have preferred to look upon plants not so much as things to be named as things to be studied, and there have been many diligent observers who have taken up the task of asking all sorts of searching questions of the plants themselves, such as: How did you happen to settle here? Who were your ancestors? Are your relations to your neighbors at present agreeable? What are you good for? and, Where do you think of going next? The answers to such questions are given by the plants, sometimes rather vaguely, and oftentimes very clearly. The amount of information which has been acquired in this way concerning the structure, the habits, the uses, the diseases, and the probable origin of plants, is now rea-

sonably large, and in its printed form is accessible in numerous works. Some of our very latest text-books are filled with these answers stated in a charming way. Profs. Atkinson, Barnes, Coulter, and a good many others in our country have restated the answers in attractive form, and numerous local clubs are searching in a quiet manner for wider information by putting all the questions more specifically in "some little field or wood."

To all beginners and all experts who are to ask these questions, Prof. Bailey's book is a convenient aid. But it is more than this: it is filled with a great amount of wise advice as to the gardens and museums, private and public, and especially the herbaria, the most useful of all. The range of collecting is very wide, comprising everything from fossils to seaweeds. Many of our readers have doubtless fallen in with some of Prof. Bailey's occasional poems, and have noted their good taste and high literary excellence. Good taste and literary excellence characterize the present volume of prose.

The Wheat Problem.

Based on remarks made in the Presidential Address to the British Association at Bristol in 1898; revised, with an answer to various critics, by Sir WILLIAM CROOKES, F.R.S., with two chapters on the future wheat supply of the United States, by Mr. C. WOOD DAVIS, of Peotone, Kansas, and the Hon. JOHN HYDE, Chief Statistician to the Department of Agriculture, Washington, 12mo. (*Nearly ready.*)

This volume is an elaboration of the presidential address delivered by Sir William Crookes before the British Association for the Advancement of Science. In this address the author pointed out the serious peril awaiting wheat-eaters who contentedly pursue the present wasteful system of cultivation. Under the present conditions of wheat culture, scarcity of wheat is within an appreciable distance, as the wheat-growing lands all over the world are becoming exhausted, and it seems to the author that at some future time—and, in his opinion, at no far distant time—no available wheat land will be left.

Certificate of Superintendent of State of New York Insurance Dept.

ALBANY, January 4th, 1900.

I, LOUIS F. PAYN, Superintendent of Insurance of the State of New York, do hereby certify that the NEW-YORK LIFE INSURANCE COMPANY, of the City of New York, in the State of New York, A MUTUAL LIFE INSURANCE COMPANY having no Capital Stock, is duly authorized to transact the business of Life Insurance in this State.

I FURTHER CERTIFY that, in accordance with the provisions of Section Eighty-four of the Insurance Law of the State of New York, I have caused the policy obligations of the said Company outstanding on the 31st day of December, 1899, to be valued as per the Combined Experience Table of Mortality, at four per cent. interest, and I certify the same to be $192,024,281.

I FURTHER CERTIFY that the admitted Assets are

$236,450,348

The general Liabilities $2,990,583. The Net Policy Reserve, as calculated by this Department, $192,024,281, making the Total Liabilities per State Laws,

$195,014,864

The additional Policy Reserve voluntarily set aside by the Company,

$3,507,699

The Accumulated Surplus Funds voluntarily reserved and set aside by the Company to provide dividends payable to policy-holders in 1900, and in subsequent years,

$28,862,362

Other funds for all other contingencies,

$9,065,422

IN WITNESS WHEREOF, I have hereunto subscribed my name and caused my official seal to be affixed at the City of Albany, the day and year first above written.

LOUIS F. PAYN, Superintendent of Insurance.

Important New Biographies

MRS. HOWE'S REMINISCENCES

A book of remarkable personal, social, and philanthropic interest. By JULIA WARD HOWE. With 24 illustrations, including many Portraits. A handsome Crown 8vo, gilt top, $2.50.

JAMES RUSSELL LOWELL AND HIS FRIENDS

A fascinating book of Biography and Reminiscence. By EDWARD EVERETT HALE, D.D. With 48 Illustrations, including many unfamiliar but very attractive Portraits. 8vo. $3.00.

JOHN MURRAY FORBES—LETTERS AND RECOLLECTIONS

The story of a great Bostonian and American. Edited by his daughter, SARAH F. HUGHES. With portraits, map, and facsimile. 2 vols. 8vo, $5.00.

KROPOTKIN'S AUTOBIOGRAPHY—MEMOIRS OF A REVOLUTIONIST

An extraordinarily interesting book. By PRINCE KROPOTKIN. With 3 portraits. 8vo, $2.00.

An admirable book on a great light of the American pulpit, who was also a great citizen. By THEODORE T. MUNGER, D.D. With 2 portraits. 12mo, $2.00.

CONTEMPORARIES

By THOMAS WENTWORTH HIGGINSON, author of "Cheerful Yesterdays," etc. 12mo, $2.00. The subjects treated in this delightful volume are: Emerson, Alcott, Theodore Parker, Whittier, Whitman, Lanier, "H. H," John Holmes, Garrison, Phillips, Sumner, Dr. S. G. Howe, etc.

SALMON P. CHASE

By ALBERT BUSHNELL HART, professor of History in Harvard University. In the series of American Statesmen. 16mo, with very full index, $1 25.

LIFE OF EDWIN M. STANTON

A work of remarkable interest on Lincoln's great War Secretary. By GEORGE C. GORHAM. Illustrated, 2 vols., 8vo, $6.00.

Sold by all Booksellers. Sent, postpaid, by

HOUGHTON, MIFFLIN & CO., Boston; 11 East 17th St., New York

The Spectator.

The Proprietors who in 1861 purchased the *Spectator* have since that date conducted it themselves. They are therefore exempted from many influences which press severely on the independence of journalism, and have from the first made it their chief object to say out what they believe to be truth in theology, politics, and social questions, irrespective, not only of opposition from without, but of the opinion of their own supporters. Their object is to reflect the opinion of cultivated Liberals; but in the matter of the American War they fought against the mass of the very class they are trying to represent, and were finally acknowledged by them to have been in the right.

The news of the current week is compressed into an animated narrative, which the laziest or busiest may read, without missing the life or import of the events.

The *Spectator* contains a list of all Books published during the week (not under one shilling in price), with the names of the publishers and the prices attached, a feature which will greatly increase its value to booksellers, librarians, literary institutions, and private gentlemen.

The *SPECTATOR* is on sale regularly at **Messrs. Damrell & Upham's**, 283 Washington St., Boston, Mass.; **The International News Co.**, 83 and 85 Duane St., New York; **Messrs. Brentano's**, Union Square, New York; **The Subscription News Co.**, 47 Dey St., New York, and 77 Clark St., Chicago, and **The Harold A. Wilson Co., Ltd.**, 35 King St., West Toronto, Canada, where single copies can be obtained and subscriptions are received.

SUBSCRIPTION,* PAYABLE IN ADVANCE, *$7.50 A YEAR.

SPECTATOR, LTD., 1 Wellington Street, Strand, London, England.

NEW YORK, THURSDAY, JANUARY 11, 1900.

The Week.

It was made evident in the first session of the Senate after the holiday recess that the Administration policy of secrecy and suppression regarding the course of affairs in the Philippines can no longer be pursued with impunity. When Mr. Pettigrew of South Dakota offered a resolution directing the Secretary of War to furnish the Senate information as to the circumstances under which the present war with the Filipinos began in February, 1899, four Republicans were promptly on their feet to object. Mr. Pettigrew is so little respected, and has such small influence in the Senate, that any protest from him against the smothering of the proposed inquiry would have counted for little. But it was a very different matter when that veteran Republican leader, Mr. Hoar of Massachusetts, denounced what he termed an "attempt to throttle Senators" in their efforts to obtain information concerning the "deplorable conditions" which have existed in the Philippines for some time past; and gave notice that, if there was to be an absolute suppression of all requests for information concerning the war with the Filipinos, he should object to the taking up of other matters during the morning hour when such resolutions are pending. This declaration of independence served its purpose, and forced Mr. Aldrich, who had led in the objections to the Pettigrew resolution, to disclaim any intention to suppress information.

The policy of hush about the Philippines ought to have been applied to official documents before the attempt was made to enforce it in the Senate. Gen. Otis's report, for example, throws a glaring light upon the blundering which led to the war with the Filipinos. When the President's illegal proclamation of December a year ago reached him, he was thunderstruck—not at its illegality, but at its unwisdom. So what did he do but edit it! Here is his own account of the matter:

> "After fully considering the President's proclamation and the temper of the Tagalos with whom I was daily discussing political problems and the friendly intentions of the United States Government towards them, I concluded that there were certain words and expressions therein, such as 'sovereignty,' 'right of cession,' and those which directed immediate occupation, etc., which, though most admirably employed and tersely expressive of actual conditions, might be advantageously used by the Tagalo war party to incite widespread hostilities among the natives. The ignorant classes had been taught to believe that certain words, as 'sovereignty,' 'protection,' etc., had peculiar meaning disastrous to their welfare and significant of future political domination, like that from which they had recently been freed."

Accordingly, Gen. Otis took the liberty, only to be justified by his acute apprehensions respecting the military situation, of modifying the President's proclamation, which he saw would be a firebrand. But, unluckily, Gen. Miller at Iloilo printed the document entire, with the amazing result, as he telegraphed Otis, that "the people laugh at it." Then from Iloilo the proclamation in its unexpurgated form found its way to Luzon, and Gen. Otis plaintively records that "it was not long before it was delivered at Malolos, and was the object of venomous attack." Think of it—laughter and venom for that humane offer of President McKinley not to kill the Filipinos if they would be good and submit to him! They certainly deserve no mercy after that.

As the only member of either branch of Congress who has been in the Philippines, Senator Beveridge of Indiana was sure of an attentive hearing when he rose on Tuesday to defend the Administration's policy. Mr. Beveridge came into prominence in his State as a "boy orator," and there has never been a more striking illustration of a man "inebriated with the exuberance of his own verbosity" than he now presents. For "spread-eagleism" the Senate chamber has never heard anything to equal that part of his speech in which he turns seer, and interprets the meaning of expansion as a policy in national and world development.

We have been waiting for the imperialist press to go into transports over Gov. Leary's order abolishing slavery in the island of Guam, but we have waited in vain. The reason, however, we can make a shrewd guess at. After defending the toleration of slavery in the Sulu islands, you cannot suddenly rise up and bless an American Governor who breaks out in noble indignation at the spectacle of slavery under the United States flag, and boldly declares it in violation of the Constitution of the United States. The dilemma is an awkward one. If Gov. Leary is right, Gen. Otis and President McKinley are wrong; if they are correct in their view of the legal right of slavery to exist under our flag in the Sulus, then he is all at sea in maintaining that it has no such right in Guam. There cannot be two rules of law for like cases. And if it is not our law or our Constitution that applies, but the *Outlook's* "Mosaic dispensation," we submit that it is just as good for Guam as it is for the Sulus. Gov. Leary appears to be a sort of Sancho Panza ruling his island. Some of his orders regulating agriculture and domestic life have a distinctly comic flavor. But this decree of his abolishing slavery, even in the mild form of peonage, is no joke. Nor is it a joke that the American people are now so humiliated by the existence of slavery under their jurisdiction in the Sulus that they cannot even applaud its abolition in Guam.

Senator Foraker of Ohio is going to force consideration of another question which is only less important than our course in the Philippines. This is the relation that Porto Rico shall occupy to the United States. From the very nature of the case, no excuse for maintaining the present military administration can long be found in an island where there is no danger of outbreaks. A civil government of some sort must be established at an early day. Even the great temporizer in the White House admitted in his message to Congress last month that some legislation should be enacted at this session with reference to Porto Rico. Mr. Foraker on January 3 introduced a bill which would establish a form of government that would treat the island like one of our existing Territories. He proposes that the President shall appoint a Governor, a Supreme Court, seven heads of departments, and five native citizens, who, with the Governor and department heads, shall constitute the upper branch of the Legislature; that the lower house, consisting of thirty-five members, shall be elected by the citizens of the island; that the latter shall also elect a delegate to Congress, who shall have a seat but no vote—as has always been the rule with our Territories; and that the Constitution and laws of the United States, so far as the latter are locally applicable, shall be extended to Porto Rico, with the consequent prohibition of export duties and with free trade between Porto Rico and the United States proper.

We continue to receive circulars from the Planters' and Farmers' Association of Cuba, asking for assistance in procuring the repeal of the "Foraker amendment," which prohibits the granting of any charters or franchises in the island while it continues under our military government. In the last one so received we are reminded that every State in the American Union has upon its statute-book a law permitting franchises to be taken by persons needing them by simply filing a schedule with the names, purposes, and amount of capital stock of the incorporators. Yet Cuba, just emerging from centuries of Spanish oppression, cannot get a charter for a mortgage bank to lend her farmers the capi-

tal to rehabilitate their cane-fields. This is certainly a trying situation. If only financial considerations were taken account of, nothing could be said in favor of the Foraker amendment. But the political consideration is involved in the financial one. The Cuban papers which favor an independent government are strongly opposed to a repeal of the *ley Foraker*. *La Discusión*, for example, urgently insists that no charters should be granted in Cuba except by "a government or entity freely chosen by the Cuban people." If franchises are granted by the military commander, there will be a rush of the capitalist and speculating class to the United States authorities, and gradually the feeling of independence and the desire for it will be sapped, and the resistance to annexation will be lessened in both countries.

The appointments of Gens. Young, MacArthur, and Ludlow to brigadier-generalships in the regular army are the most interesting in years to army officers. Not since 1873, when George Crook was similarly promoted, have any officers below the rank of colonel in the regular army been given these coveted places. But Gens. MacArthur and Ludlow were not only lieutenant-colonels when advanced, but staff lieutenant-colonels as well, and it would be necessary to go back to civil-war times to find similar cases. For decades past, line officers alone have been deemed eligible for promotion to the line generalships, and a staff officer could hope to become a brigadier-general only by appointment as head of his own corps. That this departure from well-established tradition will create considerable ill-feeling among the forty-two colonels of cavalry, artillery, and infantry of longer service who have been jumped, cannot be doubted. At the same time, no one will deny that these places have been bestowed upon men who have thoroughly earned them. The services of MacArthur and Young in the Philippines would have won similar, if not greater recognition, in any foreign service, while Gen. Ludlow's work in Havana has been of a far higher and better kind. It is an interesting and extraordinary fact that the last-named officer was nominated to and confirmed by the Senate for a brigadier-generalship which does not become vacant until January 21, on the retirement of Gen. Anderson. We do not recall another case where appointment was made to an office before it was vacated.

The greater part of the speech which Senator Aldrich made in reporting back the currency bill of the House with the finance committee's amendments will receive the hearty concurrence of all the advocates of sound money. There was little that could be called new in what he said, but the saying of it in the Senate by authority of one of its committees is so opposed to the custom of that body that it arrests attention at once. It is a stroke upon the clock of time signalizing that the United States is about to put the great question of the standard of value beyond further dispute, and address itself to other issues. Mr. Aldrich did well to expose the sham and pretence of those who profess to believe that the free coinage of silver at the ratio of 16 to 1 by the United States alone would have the effect of lifting the value of silver up to the level of gold. He characterized this belief as either dishonesty or insanity. He said that the passage of the bill before the Senate would not disable this country from joining in a future conference to promote international bimetallism. That is quite true, but it puts international bimetallism *hors de combat* just the same. There is no discernible movement in the world to call another such conference. All the movements are in the direction of the single gold standard. Russia has adopted that standard and has actually resumed specie payments. India, by declining the allurements of the Wolcott Commission, has ranged herself under the same standard. Austria, in spite of her political difficulties of recent years, has steadily pursued the course which she laid out for herself in 1893. And now the United States, which has not departed from the gold standard at any moment since specie payments were resumed in 1879, makes public declaration that "the standard unit of value shall, as now, be the dollar, and shall consist of 25.8 grains of gold nine-tenths fine." This is practically giving notice to the world that we have no further desire to join in conferences to bring about a change of standard.

The bill to amend the Interstate Commerce law recently introduced by Senator Cullom, it is understood, was prepared in the office of the Interstate Commerce Commission. It has been submitted, in a more or less formal manner, at meetings of commercial associations, where commendatory votes have been obtained. Railroad managers do not appear to have participated in the preparation of it, although a comparison between its terms and those of the bill presented by the Commission last year shows that modifications have been made in certain features that were then especially criticised. The bill, as now presented, may be regarded as an official proposition, and it will doubtless be made the basis of any legislative action that may be had during the present session of Congress. It therefore should receive the utmost publicity and the most careful consideration, both in respect to its general scope and its details. The Interstate Commerce act, since its passage in 1887, has been amended in a few comparatively unimportant particulars. The bill now introduced proposes to rewrite eight sections of the act and to add two new sections. The changes proposed are important, affecting as they do the short-haul section, the publicity section, the punishment section, the commission-procedure sections, the enforcement section, and the annual-report section. The additions proposed provide for a national classification of freight and for rehearings by the Commission. The important fifth section, which prohibits pooling agreements, is not affected. No attempt is made to relieve the roads from the difficulties created by the interpretation which has been given to the anti-Trust law. Intimations, however, have been thrown out that a section authorizing pooling and other agreements may perhaps be added in committee, provided that the language of such amendment be guarded to the satisfaction of the Commission, and that the desires of the Commission as now formulated be not interfered with.

The measure is entirely one-sided; it contains only regulative features. It does not in the least attempt to protect carriers in their rights, or to assist them in their efforts to transact the business of transportation in conformity with the requirements of the law. This course of procedure seems unfortunate, and likely to prevent, rather than to promote, the attainment of much-needed amendments of the law. It is not usual for a public body, in proposing a legislative measure, to ignore deliberately the interests of an important section of its constituents. In the present case this has been done, and it seems like asking a good deal to expect the roads to unite cordially in action to make the proposed reconstruction of the statute a practical success. Certainly this result cannot be arrived at unless the propositions of the Commission are all inherently just, and unless other necessary features are to be welcomed as proper to be incorporated in the bill.

The announcement that a majority of the Senate committee on privileges and elections will make an adverse report upon Quay's claim to a seat by the appointment of the Governor of Pennsylvania is no surprise. All the members of that committee sat in the Senate when a somewhat similar question came up during the last Congress on an appointment by the Governor of Oregon (all but two of the nine having been on the committee then), and they stand now where they stood before. Mr. Hoar, the leader of the minority in the committee, has always been a stout defender of the Governor's power in the premises, and, of course, it is a question of principle with him. He is quite right in the indigna-

tion which he expresses against those people who have written letters begging him not to stand by the appointee of the Pennsylvania Governor because that appointee is a "bad man," while it was right for him to sustain a similar exercise of power by the Governor of Oregon when the latter named a good man. This represents the same attempt to elevate prejudice over Constitutional duty, as a Senator sees that duty, which was tried, unhappily with success, at the other end of the capitol last month, when Representatives who believed that Roberts of Utah came with credentials which entitled him to a seat, pending an investigation, refused to admit him because there was a popular clamor for his exclusion, without regard to either Constitution or precedents.

The champions of Quay say that the fact that a majority of the committee on elections and privileges is against him will have no effect upon the result, when the final vote shall be taken in the Senate. Nevertheless, it is true that it is a decided advantage to have any proposition come before either branch of Congress with a favorable report; and if the majority in this case had been for Quay, his friends would have claimed, and with good reason, that the "moral effect" would help him decidedly. It would make it easier for new members to take the Quay side of the controversy, and less difficult for old members who are on record against the Governor's power to shift their ground. The only hope for the Pennsylvania boss from the start has been that there would be many such changes of base, since without them there would be an assured majority against him. So far the only Senators willing to confess that they will turn around on grounds of personal friendship are Quay's man Penrose of Pennsylvania and Carter of Montana. There are few others who are open to the suspicion of joining a band with such leaders. Everything consequently now indicates that Quay cannot get his seat by Gov. Stone's appointment, and if he shall fail in this, his prestige at home will be gone. Indeed, there are already signs that the Republican politicians of Pennsylvania have concluded that his power is broken, and the rats are beginning to desert the sinking Quay ship.

Mr. Bryan stands by his colors. It has been hard work to maintain that the country was being ruined by the gold standard and the money power during these years of prosperity, but the recent collapse of prices in Wall Street furnishes an argument. In his speech at Omaha on Monday, he assured his hearers that those who studied the money question in 1896 foresaw the danger threatened by the gold standard, and pointed out that its permanent establishment would involve us in every financial disturbance accruing in Europe. Behold now, a few victories by the Boers have so frightened the bankers that they have suppressed their sympathy for a struggling republic, and are hoping for the extension of the authority of a queen. If a little war like this nearly brings on a panic, what would happen if war should break out between two gold-standard countries of the first class? The moral of this is, have nothing to do with the gold standard and be financially independent. It might seem a proper reply to this argument to say that the financial consequences of a war between two great Powers would be very much the same whether they used the gold or silver standard, but doubtless Mr. Bryan would retort that there are no first-class Powers having the silver standard, and hence there could be no war between them. Perhaps if we could make sure of enduring peace by adopting the silver standard, we might be tempted to try the experiment, but the danger would be that other Powers might do the same thing, and then we should be worse off than we are now. The argument that we ought to adopt the silver standard in order to escape financial disturbance is so absurd as to make it plain that Mr. Bryan has almost exhausted his ammunition.

The conference of leading Populists from a number of States in the West and Southwest at Lincoln, Neb., on Friday simply proved what had been clearly enough foreshadowed before—that the managers of that party heartily favor Bryan's renomination, and are ready to coöperate to that end, in whatever may be the most effective way, with their fellows in the so-called Democratic party. In point of fact, there is no longer any difference of principle between the managers of these two organizations. There is an element in the Populist party which was not satisfied with the Chicago platform of 1896. It is composed of sincere but narrow and ignorant men, who believe in an irredeemable paper currency, and "lots of it," and who cared for the free coinage of silver at 16 to 1 only as a short step on the long road which they wanted to travel. This "Middle-of-the-Road" element would like now to nominate an independent Populist ticket on a platform of its own, the cornerstone of which should be the issue of greenbacks without limit. But these people have no leaders with the slightest influence. The professional politicians of the Populist party know that there would be nothing in such a campaign for them. Their only possible chance is in another fusion with the so-called Democrats who supported Bryan in 1896, and who want him for the leader again in 1900. These professional Populist politicians absolutely control the machinery of their party, and they will run it in Bryan's interest. The same class among the so-called Democrats who have accepted Bryanism control the machinery of that organization, and will run it to the same end, with hardly any more effective opposition from the element which is tired of the leader and of his cause than the Populist politicians will encounter from the "Middle-of-the-Road" element.

Gov. Pingree's administration in Michigan, admittedly a failure in the matter of the promised changes in the method of taxing railroad and other corporate property, on which issue he was elected, bids fair to end now in disgrace through the peculation of his subordinates in the military department. There, as elsewhere, war provided the opportunity for designing men to enrich themselves at the State's expense. As disclosed by the investigation of the grand jury, the officials in charge of the military department, under the pretence that the soldiers to be furnished to the United States for the war with Spain needed new equipment, entered into a conspiracy with a manufacturing concern, whereby the old equipment, bought from the State for about $12,000, was resold to the State for $60,000, the conspirators sharing the stealings. One of the indicted parties is a fugitive from the State, and several others are awaiting trial. One of them held very confidential relations with the Governor; and although there is nothing to indicate that the latter was cognizant, in the slightest degree, of the stealing, the developments must needs smirch the Administration.

Few who followed the testimony before the French High Court expected that the charges of conspiracy to overthrow the republic would be sustained. Accordingly, it is no surprise to find most of the defendants acquitted. Conspiracy is a crime notoriously hard to prove in any court. Evidence in plenty was adduced that Déroulède and his fellows had indulged in the wildest kind of talk, had held suspicious relations with Socialist and Royalist plotters, and had in general conducted themselves like men who wished to be taken for dangerous conspirators. But proof of overt acts of treason was lacking, and concerted treason was still further from being demonstrated in court. This failure to convict may discourage the Government from prosecuting Gen. Mercier, as it has been hinted that it would soon do for his part in the Dreyfus affair. That doughty soldier is now standing for a vacant seat in the Senate, counting upon Royalist and anti-Semite support, and is evidently ready to play the part of Boulanger II., if the way opens.

THE GOVERNMENT DEPOSITS.

The recent outcry against Secretary Gage for alleged favoritism to one large bank in depositing the surplus funds of the Treasury, brings to notice afresh a serious danger in the financial situation and equally in the political. We need not go back to Gen. Jackson's time to learn what enmities may be stirred up by adroit politicians against banks, and how fatal such enmity may become to parties and public men. The bank war of Jackson's time culminated in the removal of the Government's deposits from the Bank of the United States, and their transfer to the so-called "pet banks" of that period, and later to the independent Treasury system, which is still in force. The independent Treasury system means that the Government itself takes care of its own collections and disbursements of money without the aid or intervention of banks. At first sight this seems the proper thing for a government to do. Private individuals make their own collections and disbursements; why should not the Government do likewise? But private individuals deposit their surplus money in banks. They do not carry in their pockets or keep in their private safes more than they need for daily disbursements. The Government, it is true, is now equipped with the apparatus for taking care of its surplus funds. It has vaults and offices more capacious and commodious than any private bank whatsoever. Why should it not receive, store, and pay out its own funds regardless of the banks? Why should it not continue to do what it set out to do when the independent Treasury was first established?

If the Government's collections and disbursements were made in equal times and amounts, there would be no reason for storing a dollar of its money in any place except its own vaults. If, however, its collections grow to an enormous mass, creating a corresponding vacuum in the money market, then it is obvious that there ought to be some method of avoiding contraction and returning this idle money to the channels of business. This goes without saying, and the only question is how the equilibrium which has been disturbed by the operations of the Treasury shall be restored. As the *Financial Chronicle* says in a recent article on this subject, the business community want no favors of the Treasury in this matter, but simply ask it to keep "hands off." In all other countries, all the public money is deposited in banks as soon as it is received by the collecting officers, and is drawn out when wanted by the checks of the disbursing officers. Thus the surplus or balance on hand at any time is at the service of the business community in the form of loans and discounts like the balances of private depositors. No tightness of money can ever arise from the Government's arbitrary withdrawal of funds from business circles.

The state of the Treasury, present and prospective, is such that early attention must be given to the disposal of the surplus. Prosperous business now insures the largest income that the taxes are capable of yielding at any given time, and the war-revenue act is now at its best. Although the war in the Philippines is not likely to come to a sudden end, it is not likely to be as expensive as heretofore, but in any case there will probably be a surplus during the ensuing twelve months of $100,000,000. It is estimated that this surplus will reach $60,000,000 about the time that the political campaign becomes hot next fall. If this money is locked up in the Treasury, it may cause a financial crisis. If it is deposited in banks, as was done by Secretary Fairchild in the midst of the campaign of 1888, then the present Secretary of the Treasury will probably be subjected to the same kind of ignorant or malignant slander that was then heaped upon Mr. Fairchild, importing that he was governed by political motives in the selection of banks to receive the overflow of funds from the Treasury. If he goes into the market to buy bonds he will run up the price, and subject himself to the charge of favoring the bondholders and bond speculators.

In view of these facts and prospects, the *Financial Chronicle* suggests that Congress pass a law requiring the Secretary of the Treasury to deposit each week in depository banks all the money collected by the Government in excess of its current expenses; Congress to fix at the same time the security that shall be required for the same. The security now required is Government bonds, with a margin of ten per cent. computed not on the market value, but on the par value of the bonds. This is considerably more security than private borrowers are required to give when they borrow from banks, and the *Chronicle* thinks that it might properly be fixed by law at something less. The main point of the suggestion, however, is to take from the Secretary the discretion and responsibility which he now exercises of depositing or not depositing the surplus in banks, and of determining the margin of security required. Of course, the Secretary, exposed as he is to suspicion and blackguardism whatever he may do, or even if he does nothing, will welcome such a law. All his successors in office will be glad to be protected by it, and the business community ought to be equally so, since such a law would be a guarantee against unnecessary contraction of the currency. There could be no contraction due to the operations of the Treasury that could not be relieved by the deposit of bonds as security. Any contraction not severe enough to call out this kind of security would not be intolerable. We all look forward to a time when we shall have no war on our hands, when the national debt shall be paid, and when we may reduce the taxes to the measure of the expenditures. Then the independent Treasury system may again vindicate its *raison d'être*. At present, however, something ought to be done to relieve the strain which it produces, and we see nothing better than the *Financial Chronicle's* plan for meeting the crisis.

GOV. ROOSEVELT ON TAXATION.

A large part of Gov. Roosevelt's message this year relates to taxation; and while the opinions expressed are rather indecisive, they are not more so than those of the best authorities we have on that subject. State and local taxation remains, as it has been during the past fifty years, a great puzzle for both statesmen and economists. The American principle that all rights should be shared equally and all burdens be borne equally, has been translated to mean that all property should be taxed equally. Nothing seems fairer than this. Long ago it took the form of the general property tax, which was embodied in most of the State constitutions, but was somehow left out of that of New York. The principle underlying it was, however, embodied in the State law, but was gradually minimized in practice. The general property tax requires that all property shall first be valued, and that then Mr. A shall pay the rate which the Legislature finds necessary, say 2 per cent., on the value of his real estate, that Mr. B shall pay it on that of his horses and wagons, Mr. C on his merchandise, Mr. D on his railway and bank stock or bonds, Mr. E on his cash, and so on through the list.

It was early discovered that this fair-seeming plan could be carried out only as regards property which could be found and estimated by the officer appointed to make the valuation. Real estate could always be found. Some kinds of personal property could be found and valued with more or less accuracy and fairness, but a large and increasing share of personal property could not be found so as to be put upon the assessor's lists unless the owner cooperated with him. Few owners would take the necessary pains to get themselves taxed as much as they ought to be, even when they were required to make out lists of their personal property under oath. The system broke down in practice in New York, and in nearly all the States. So it has come to pass that real property is taxed more heavily than it ought to be if the principle of equality of taxation is to be observed.

When the fact became well understood that personal property in the many forms and guises which it has taken in the progress of society, and especially in stocks and bonds, could not be

taxed with any approach to certainty and equality, the Legislature turned to the corporations themselves, and said, "Here is the source of the income which ought to, but does not, pay its share of the public expenses; here is something that resembles real estate in the fact that it cannot hide; let us tax the income at its source." Hence came the corporation tax—a reasonable tax, but one which was in some danger of being carried to excess whenever corporations should become unpopular. The facility with which they could be reached made them a tempting object to the taxing power, which is the legislative power. Up to the present time, however, it cannot be said that the corporation tax has been unduly severe in New York. The franchise tax passed at the last session of the Legislature, has not yet gone into operation, and we do not yet know whether it will prove a valuable addition to the fiscal and social apparatus of the State or not. Although the details are very complex and are not yet unravelled, there is nothing in the outlook which is in any degree discouraging. The underlying idea of the law, that a corporation enjoying a special franchise, such as the right to use a public street for a private purpose, should pay a special tax for it, is sound in principle. Whether it can be taxed as real estate is a disputed question among lawyers, but it is not likely that the courts will declare the tax unconstitutional.

The next step in the evolution of personal property is the Trust. This is a very vague term, and Prof. Clark rendered a real service to the literature of the subject when he said at the Chicago convention that a Trust is "any corporation that is big enough to be menacing." The corporations that come under this definition have naturally exercised the power which our laws and jurisprudence give them, of seeking their domicile in the States where they are taxed least. They can exercise their powers in any State of the Union, or they could do so until certain States began to pass anti-Trust laws; but, having their domicile in only one State, they have aimed to secure the minimum of taxation, if not entire exemption, in other States. Gov. Roosevelt gives much space to the subject of Trusts in his message, without presenting any clear idea of what he would do with them, or about them, till near the close of his disquisition. Here he makes two very pregnant suggestions. One is that Trusts should be subjected to the law of publicity, *i. e.*, that their financial condition, their earnings, and their operations should be open to public inspection, criticism, and possibly censure. He thinks that many of the evils complained of may be cured by the force of public opinion in this way. The suggestion is plausible, and it is sustained by experience in the treatment of railroads in Massachusetts and elsewhere. Then he adds:

> "Where a Trust becomes a monopoly, the State has an immediate right to interfere. Care should be taken not to stifle enterprise or disclose any facts of a business that are essentially private, but the State, for the protection of the public, should exercise the right to inspect, to examine thoroughly all the workings of great corporations, just as is now done with banks; and, wherever the interests of the public demand it, it should publish the results of its examination. Then, if there are inordinate profits, competition or public sentiment will give the public the benefit in lowered prices; and if not, the power of taxation remains."

Yes, the power of taxation remains, and there is no danger that it will not be exercised. The power of the corporations to control the Legislature through political bosses will also remain, and the struggle for such control is likely to become more momentous with the progress of time. The Governor has done well to bring these subjects up for discussion. They would force themselves to the front soon even if he should leave them alone.

"A DAY OF HUMILIATION."

A widespread demand has been made in England for the appointment of a day of national humiliation, fasting, and prayer. The London *Times* has printed columns of letters from indignant people who want to know what the civil and church authorities are thinking of not to have called upon the people to prostrate themselves before the Almighty, now that his displeasure has been so clearly shown in the reverses which have befallen the British arms in South Africa. It might seem that every man is at liberty to go off and humiliate himself all alone—go into his closet, shut the door, and pray to the Father who seeth in secret. But no, what is wanted is national humiliation and supplication. Hence the impatient cry for the Queen, or the Archbishop of Canterbury, or Lord Salisbury, or the Commander of the Forces, or the newspapers —somebody, anyhow—to name a day for the nation to put on sackcloth and ashes.

Nothing has been done, however, and it is probable that nothing will be done. The difficulties are too numerous and great. It is doubtful if the Nonconformists could be got to humble themselves on a day named by the Church of England authorities, or vice-versa. And the civil rulers will surely be slow to move. It would look too much like calling upon the people to pray God to deliver them from the disasters into which the folly of their Government had brought them. This would be too inconveniently of the nature of a Liberal election placard (and dissolution cannot be long adjourned) for a Conservative Ministry to issue it. So we think that, however richly entitled to a day of humiliation England may deem herself, no day formally and officially so called will be set apart.

And is it not true that devout Englishmen would find a good many awkward questions rising in their minds if such a day were to be appointed? Would they be beating their breasts and crying out "Miserere nobis," simply because their armies had been whipped, or because they had been fighting in a bad cause? What does the Divine displeasure mean when expressed in a lost battle? If the English had won, would that have shown that they were men after God's own heart? Then what are we to say of the Boers, who did win? These are but specimens of the moral and religious perplexities which arise as soon as a nation at war begins to feel it is losing because it has been forgetting God. Perhaps it forgot him when it began the war. And the complication becomes simply terrible when the war is against so notoriously pious a people as the Boers, who hold prayer-meetings in their camps, go to battle singing hymns, and devoutly ascribe every victory to the good hand of God upon them.

Then, again, if England is to repent in dust and ashes, it would be necessary to specify what for. Repentance is good for the soul only when it ceases to be general and comes right down to the facts. Here would be fresh dangers. All the Liberals would abase themselves before the Most High for belonging to a country which had tolerated a Conservative Government. Imagine that devout churchman, Sir William Harcourt, making his confession; would it not surely run: "Lord, have mercy on Joseph Chamberlain, miserable sinner"? If Mr. Lecky were to do an act of public penance in Dublin, what would it be most apt to be? We think it would be to humble himself before his Maker on account of the university which he represents in Parliament. He himself had described Mr. Chamberlain's conduct in terms of the severest moral condemnation; yet Trinity College, Dublin, the other day conferred the honorary degree of LL.D. upon that statesman. What is more, the Latin orator, Prof. Tyrrell, spoke of him as a man whom all looked up to with the utmost confidence ("summa fiducia suspicimus"). We think that Mr. Lecky could make out a strong argument for the belief that it was upon this act, more than upon the unlucky British soldiers, that the Divine displeasure had been visited, and that it was for this that repentance is in order.

The truth is, we suppose, that the whole order of ideas involved in the observance of days of national humiliation is ill at ease in the modern world. The heathen way, of course, was to abuse divinities, instead of worshipping them with fresh devoutness, when disasters befell. A fetish gets sadly banged about when its tribe loses a battle. Something of lurking reproach used to appear even in Old Testament addresses to Jehovah

in times of calamity. It is possible often to detect something like it in national prostrations before God to-day. "Why has Thou cast us off?" "Do not disgrace the throne of Thy glory." We know, of course, that none of the moral difficulties we have spoken of ever cross the consciousness of thousands of devout souls who simply turn to God, in public as they do in private distresses, as a very present help in time of trouble. But when the humiliation is made official and ostentatious, all sorts of awkward things come in. In England, for example, a fixed day for public penitence, with business suspended, would necessarily be treated by multitudes as a holiday, and amusement and irreverence would be rife. And would not the most saintly minded Englishman jump from his knees to rush out and buy an "extra" with news of a great victory on the Tugela?

DELAGOA BAY.

Mr. Lucas, the historian of British Colonies, is doubtless right in saying that the opening of the Suez Canal led at first to a decided flagging of English interest in South Africa. The Cape was, historically, the half-way house to India. Naturally, therefore, it seemed to lose its critical importance to the empire when a shorter and safer route to Bombay was made possible by way of the Red Sea. But it was not long before there came a dawning sense that South Africa was not only on England's road to an empire, but was an empire in itself. The immense mineral and agricultural development of the territories accessible through Cape Town, Port Elizabeth, and Durban induced a quite new idea of the value of those ports. Inevitably, also, it led to a longing in the breasts of English statesmen to own the fine natural harbor of Delagoa Bay.

That possession of Portugal had been languidly contested for by Dutch and Portuguese for generations, but it did not become the prize it is until gold was discovered in the Transvaal, and until the establishment of an English protectorate over Bechuanaland made it highly desirable for England to have at least the right of access through Delagoa Bay. Desire had already found law to justify it. Great Britain, in the early seventies, claimed, by virtue of an old treaty made with a native chief in 1823, all the territory up to the southern shores of the estuary. Portugal, on the contrary, claimed both shores and as far down the coast line as 26 degrees 30 minutes south latitude. In 1872 the two Powers submitted the dispute to the arbitration of the President of the French Republic, Marshal MacMahon. He decided in 1875 wholly in favor of Portugal.

Next came English diplomatic efforts to obtain from Portugal rights of passage through Delagoa Bay, with a certain control over Portuguese territory lying between the Bay and the Transvaal. Sir Robert Morier, British Minister in Lisbon, actually succeeded in securing a treaty from Portugal in 1879, conferring such valuable privileges upon England. If she enjoyed them now, what a different face would be put upon the war! But the treaty was never ratified. The Conservative government then in power treated the whole matter with supine indifference, just as it did Sir Bartle Frere's urgent representations from the Cape, and the invaluable instrument went by the board. However, there came later the Anglo-Portuguese convention of 1891, which contained a pledge that Delagoa Bay should never be alienated to any Power except Great Britain, and also assured to England the right of preëmption of any territories south of the Zambesi within the Portuguese sphere of influence. Thus no room is left anywhere on the eastern coast of South Africa for the intervention of any European nation.

The third act in the drama is the Delagoa Bay Railway controversy and arbitration, of which we have been hearing so much. This arose in 1889. In that year Portugal seized the Delagoa Bay Railway, which had been partially built under a concession held by an American citizen, Edward MacMurdo, and annulled its charter. This act led to vigorous protests by our State Department, conjointly with the British Foreign Office (English subjects being also parties in interest), and in 1890 Portugal agreed to submit the matter to arbitration. Three jurists were named by the President of the Swiss Republic to pass upon the matter, which they have now been doing these nine years, supported in their arduous investigations by the knowledge that they were drawing a salary of $25,000 a year each. Of course, the question is an intricate one; knotty legal and engineering problems have to be solved; yet, even so, and allowing for the death of one of the arbitrators, the delay seems extraordinary. A decision was confidently expected three years ago. On July 8, 1897, Salisbury characteristically said in the Lords, in answer to an interpellation on the subject:

> "If my noble friend asks me what are the prospects of the arbitration, my answer is that I am informed that the decision will speedily be given; but I am afraid I shall not carry much comfort to his mind when I tell him that the same information has been supplied to me for several years past, and also to the noble lord opposite [the Earl of Kimberley]. Therefore I fear I must leave the noble lord to such consolation as he may be able to obtain from the reflection that, after all, he is supporting a sound principle of arbitration."

The suspicion that the case was being nursed along for some ulterior end was heightened, if not confirmed, by what came to be known of the Anglo-German agreement of 1898. That England was to get Delagoa Bay in some fashion, and that Germany was to come into control of Portuguese possessions on the west coast of Africa, adjoining the German protectorate declared over Damaraland in 1884, was asserted by those having the best means of information. All doubt on the point was removed by the official note issued in Lisbon last Saturday. In that, the Portuguese Government declared that England and Germany, "having previously reached an agreement between themselves," had notified Portugal that, in case she needed a loan, they were prepared to guarantee it, and "further suggested that the loan should be guaranteed by the colonial and customs receipts." Now, as soon as the Delagoa Bay Railway decision is made, which will undoubtedly be against Portugal, and may compel her to find $15,000,000 or $20,000,000, she will need a loan. Then the benevolent English and German governments will come forward to urge the money upon her. If she will not borrow peaceably, they may force her to. The result, we suppose, will be an occupation of the Portuguese colonies in South Africa very like the English occupation of Egypt. Sovereignty may not be asserted—the fiction of Portuguese sovereignty may be kept up as solemnly as that of Turkish sovereignty in Egypt—but the colonies will be administered under foreign control. Time and method are uncertain. The Boer war may hasten or may retard the step. But that Delagoa Bay is to be under British control in the near future, is what the international map-makers undoubtedly regard as a fixed fact.

"IGNOBLE PEACE."

I noticed in the *Evening Post*, a few days ago, some merriment over Gov. Roosevelt's comments on what he calls "ignoble peace." The Jingoes who look on war as boys look on football, think that people make peace because they are tired of the fun. But the fact is, you may count upon the fingers of one hand the wars that have been concluded for any other reason than the inability of one side or the other to continue them. One of the combatants has to sue for peace, because he has no more men or money to continue the fight, so that ignoble peace is largely a creature of the Jingo imagination. These sportive men would have had England continue the contest after Lord Cornwallis's surrender, the French after the battle of Waterloo and after Sedan, and Austria after Königgrätz. People make peace when they are conquered, not for the purpose of affording sermons to Jingo historians.

If Gov. Roosevelt used the phrase "ignoble peace" properly, he would make it mean, not simply peace after war with sword and gun. It means peace after any kind of dispute between man and man. No matter what kind of difference you have with your fellow-man, if you make any concession to him which you feel in your conscience is bad for him, or bad for you, or bad for the community, in order to procure something you desire, you are guilty of "ignoble peace." Gov. Roosevelt has apparently a comic notion that everybody is

prone to commit "ignoble peace" unless closely watched and warned. This is probably the result of excessive preoccupation with one subject. He is constantly thinking about fighting, and wishing people would fight more, and he naturally gets to thinking that it is an act of baseness to stop fighting. He wants them to fight freely in order to elucidate his theories of human society. He reminds me in this of the people in the Roman amphitheatre, who, as Seneca tells us, used to be furious with the gladiator who spoilt their fun by showing a disinclination to be killed. His belief in the general proneness to "ignoble peace" is very like the state of mind a few years ago of the opponents of marriage with a deceased wife's sister in England, who wrought themselves up into thinking that every man in England wanted to marry his deceased wife's sister, and could be saved from this enormity only by legislation and constant admonition. In like manner, one would imagine from Gov. Roosevelt's sermons that everybody in America was infected with a morbid lust for shameful submission to enemies.

But it is sadly true that there is rife in America to-day some disposition to an ignoble peace. Two-thirds of our evils, both in public and in private life, are due to it. The indisposition to have principles, to stand fast and adhere to them, to meet the enemy in the gate, and sink or swim, live or die, for what you believe will be right rather than pleasant, is the curse of the nation and the great obstacle to reform.

Gov. Roosevelt himself is one of the great illustrations of it. We believed, and thousands believed, too—thousands who were just as brave as Gov. Roosevelt—that had he brought back the laurels of San Juan to the aid of reform in this State he might have been elected Governor on a new basis, and without the aid of Platt. From a correspondence which I saw between him and Col. Waring, I judge that Col. Waring believed this, and said so to Gov. Roosevelt. But Gov. Roosevelt, knowing well what kind of man Platt was, what kind of politics he stood for, what his career for the last twenty years had been, deliberately threw the reformers overboard, and made an "ignoble peace" with said Platt. The gentlemen of the Republican Committee of Twenty-five, who exposed in January, 1896, enormous, astounding primary-election frauds committed by Platt's machine, and put their names to a report in which they said, as one of their number, Cornelius N. Bliss, asserted in a published interview at the time, that Platt's conduct was so bad that they could never again coöperate with him, "even in a good cause," and almost immediately afterwards dined with him, wined with him, and gratefully accepted office at his hands, were guilty likewise of "ignoble peace." In fact, "ignoble peace" is what Gov. Roosevelt is "conferring" about, every week, with the machine. The only reason for "conference" is to find out how little "ignoble" his peace will have to be. To say that he is conferring in the interests of good government is like saying that Luther ought to have conferred with the Pope, and that an occasional supper with the devil would be a great help to a revival preacher.

Of course, it may be said that Gov. Roosevelt had to have the help of Platt in order to be elected, but if he cannot bear defeat in a good cause, how absurd it is to keep preaching to his neighbors about "ignoble peace." We may be sure that unless we can procure the services of men who have the courage "never to submit or yield," and who have sufficient confidence and hopefulness to believe that it is the right thing which will sooner or later win, we may abandon the silly idea that we shall reform the State by "conferring" with bad men and tinkering charters and "jamming" bills.

E. L. G.

THE ARCHÆOLOGICAL INSTITUTE AT NEW HAVEN.

NEW HAVEN, January 2, 1900.

The Archæological Institute of America has a peculiar constitution. It is formed of nine "affiliated societies" which are established in Boston, New York, and other cities. Its Council is made up of delegates from the affiliated societies and a few ex-officio members, and, at its annual May meeting in New York, listens to no learned papers, but simply transacts business. The Institute has conducted important excavations in Asia Minor, and has published two volumes of Papers with regard to these in its Classical Series; it has carried on interesting explorations and researches among the Indians in the southwestern part of the United States, and has published five volumes of Papers in its American Series; it has fostered the American Schools of Classical Studies at Athens and in Rome, which are in a sense its daughters, and maintains a fellowship in each of them; it generously supported the excavations on the site of the Argive Heræum by the School at Athens; it subsidized the *American Journal of Archæology* in its earlier series, and publishes the current series of that periodical as its own *Journal*. But the Institute hitherto has held no general meetings for the reading of papers, such as are held by the Philological Association and other scientific bodies, except that, just five years ago, it took part in the joint meeting of learned societies which was held in Philadelphia to do honor to the memory of Prof. Whitney, who had recently died. In the revision of the regulations of the Institute three years ago, provision was made for such general meetings, but none was held until this year.

The opening words of Prof. Norton's address on the first evening of the meeting held in this city December 27-29 were:

"The first general meeting of the Archæological Institute of America is a fitting celebration of the coming of age of the Institute. Twenty-one years will be complete next spring since its foundation. The hopes of its founders have not been disappointed, and this meeting is the assurance that what the Institute has up to this time accomplished is but the promise of still better achievements."

Since the main purpose of such gatherings is recognized as being not so much the imparting and acquisition of knowledge as the promotion of personal intercourse between those who are engaged in the same field of work, and stimulus and encouragement to scholars who are necessarily somewhat isolated in their investigations, even without regard to papers the meeting at New Haven would be regarded as entirely successful. The registered attendance was ninety-four, exclusive of the Yale contingent, representing forty-three institutions of learning. Never before, except perhaps at the "Whitney meeting" to which reference has been made, have so many classical scholars been gathered in America. From Harvard came Profs. Norton, Goodwin, F. W. Putnam, Smith, Warren, Wright, C. H. Moore, and Mr. G. H. Chase; from Columbia, Profs. Perry and Wheeler, and Drs. Earle, Young, and Olcott; from Princeton, Profs. Marquand, West, and Frothingham. Prof. Kelsey came from Michigan, Prof. Slaughter from Wisconsin, Prof. Fossum from Minnesota, Dr. Hussey from Chicago, and Prof. Carter from Montreal. Most of the colleges of New York and New England were represented by two professors. The weather was favorable, the building of the Yale School of Fine Arts in which the meetings were held was charmingly convenient, the doors of the Graduates' Club were hospitably thrown open, and opportunities for informal discussions abounded.

The President of the Institute, Prof. John Williams White, being absent from the country, Prof. Charles Eliot Norton, Honorary President of the Institute, delivered the principal address, on the "Work of the Archæological Institute of America"—an address which was not only graceful and highly finished, but strong and inspiring. This address, we are glad to learn, is to be published in an early number of the *Journal* of the Institute. President Gilman of Johns Hopkins University, a Vice-President of the Institute, presided at the earlier sessions.

The executive committee, which had charge of the arrangements for the meeting, had expressed the desire that the range of papers might be as broad as the constitution of the Institute, and embrace the whole field of archæology. Naturally, however, a large majority of the scholars present were classical scholars, and most of the papers presented were in the department of classical archæology. The influence of the American School at Athens was indicated by the fact that exactly half of the papers offered were by former students or professors of that school. The session of Thursday morning, presided over by Dr. Talcott Williams of Philadelphia, was devoted largely to the special interests of museums, their collections and recent acquisitions, and to excavations. The executive committee has expressed the hope that the annual meeting of the Institute may bring together year after year the administrative officers of museums. On Thursday afternoon Mr. C. P. Bowditch presided, and opened the session, which was devoted chiefly to American archæology, by an exceedingly clear and forcible address on the explorations which are conducted in Central America. He was followed by a paper by Prof. G. Frederick Wright on Objects of Archæological Interest in the State of Ohio, and by an address by Prof. Putnam on Ancient Pueblos of the Chaco Cañon.

Too many papers were presented at the meeting. Though several were withdrawn when the situation became evident, and others were presented only in an abstract, no time was afforded for public discussion, and one or two whom the audience would gladly have heard to the end were obliged to stop abruptly. But, at the first meeting of such a body, this infelicity is not surprising. Naturally some papers were read which will be more intelligible in print, but, by the free use of the oxy-hydrogen lantern, the subjects which demanded illustration received it, and the attendance on the sessions remained good until the adjournment on Friday noon.

Many results of importance were presented, but most of these were too technical to be reported here. Of the papers of general interest, perhaps those by Dr. William Hayes Ward on "Goddesses in Early Babylonian Art," by Prof. Sterrett on "Some Troglodyte Dwellings in Asia Minor," by Mr. E. P. Andrews of Cornell on "The Inscription on the East Architrave of the Parthenon," by Prof. Putnam on "Ancient Pueblos," and by Dr. Young on "Ancient Greek Dressmaking," were most enjoyed. These were all well illustrated—Dr. Young's by a manikin, as well as by views on the screen, and Mr. Andrews's by a long strip of paper which enabled him to show how he deciphered his inscription merely by means of the holes for the nails which had held the bronze letters attached to the architrave. Prof. Sterrett's account of the dwellings in the great pumice-stone cones which stand near the River Halys in Asia Minor was like a fairy-tale to many of his hearers.

This meeting was not for business in the strict sense; the management of the affairs of the Institute is left to its Council. But resolutions were adopted with regard to two matters—urging that objects of antiquity and art should be admitted to this country free of custom-house duties, and that our Government should take measures to protect and preserve the remains of an earlier civilization within our own borders—not allowing the indiscriminate digging for relics which threatens to destroy many important monuments. With this action of the general meeting of the Institute all thinking men are likely to be in accord. Y.

THE MODERN LANGUAGE ASSOCIATION IN NEW YORK.

NEW YORK, January 1, 1900.

The seventeenth annual meeting of the Modern Language Association was held at Columbia University on Wednesday, Thursday, and Friday of last week. The headquarters of the association were at the Hotel Empire, at the corner of Columbus Avenue and Sixty-third Street, but there was a good deal of scattering, as was natural in a large city.

One of the most noticeable features of the meeting was the fact that this Association, which one is wont to regard as still young, is passing into the hands of a younger generation. There were a number present who were instrumental in the organization of the Association in this city some sixteen years ago, and their presence gave character and attractiveness to the gatherings, but not more than two of them read papers. With very few exceptions, the papers presented were by men whose doctor's diplomas are not five years old. There is also a marked difference between the average paper of to-day and that of fifteen years ago. At that time the subjects presented at the meetings were often of a general character, such as were more or less familiar to a considerable number of the members present; hence discussions, sometimes considerably prolonged, were usual. To-day the average paper is technical and presents the results of the writer's special study, and it is rare that other members are in a position to criticise off hand what is thus laid before them. The fact that many able papers in this way pass without discussion led to the proposition that, in future, the number of papers be reduced so as to leave more time for discussion, and that persons be selected beforehand to lead debate. But it was made clear that it was not lack of time, but a change in conditions, that has brought about the general abandonment of discussion, and it was finally decided that any attempt to stimulate it artificially would be unwise.

There was a good representation of the country as a whole. Though the central division of the Association was in session at Nashville, the South and so much of the Middle West as lies east of Chicago were well represented at the New York meeting. Lower Canada also sent delegates and two good papers. Of individual institutions, Michigan was represented by three papers, Harvard by two, not counting the address of President von Jagemann, and Bryn Mawr, Johns Hopkins, Pennsylvania, and Western Reserve by two each. There were no papers read by delegates from Brown, Cornell, Princeton, or Yale, nor, strange as it would seem, by representatives of any universities or colleges in or near New York. Two of the papers were presented by ladies: one by Dr. Gertrude Buck of Vassar on the present state of rhetorical theory, and one by Miss Julia Leavens of Brooklyn, on modern English dictionaries. Two extremes in the form of woman's activity in linguistics could hardly have been more marked; Miss Buck's clear, calm, and modest presentation of a well-considered paper contrasting sharply with the sensational dilettantism and naïve assumption of Miss Leavens.

Thirteen of the papers dealt with English themes, six with German, three with Spanish, and one each with Italian and French—in contrast with the half-dozen papers on French subjects that were presented at the previous meeting. The increase in the number of papers on Spanish subjects cannot be brought into any connection with recent history. One, on the poet Luis Barahona de Soto, was sent by Prof. Rennert of the University of Pennsylvania, but read only by title; in another, Prof. Marden of Johns Hopkins presented a capital explanation of an interesting alteration in the 'Poema de Fernan Gonzalez,' and Prof. Bourland of Michigan discussed the date of the 'Rimed Chronicle' of the Cid. Literature, or rather the history of literature, seems to be most cultivated by the members of the Society. There were eighteen such papers to four or five that dealt with philological problems, and two or three with matters of rhetoric. The nearest approach to pure literature was made by Prof. Edgar of Victoria University, Toronto, in his paper on the nature poetry of Shelley and his contemporaries. Prof. Tupper of Western University, London, Ontario, presented a study of Pope's imitations of Horace; the paper of Dr. Thorndike of Western Reserve treated of the influence of court masques on the regular drama, and of the light which this throws on the chronology of the drama of 1605-15; Mr. E. K. Putnam of Harvard discussed the Lambeth version of 'Havelok,' and Prof. McKnight of Ohio State University the Germanic elements in 'King Horn,' while Mr. Arthur Brown of Harvard presented an able paper on the Round Table before Wace. In German literature, Goethe and Hauptmann monopolized attention: Prof. Manning of Delaware College discussed the date of the first paralipomenon of 'Faust,' and Dr. Eggert of Chicago the curse-idea in "Iphigenie auf Tauris"; Dr. Schuetze of Pennsylvania read a paper on fatalism in Hauptmann's dramas.

Of the philological papers probably the most important was that of Prof. Callaway of Texas, on the appositive participle in Anglo-Saxon. Prof. B. J. Vos of Johns Hopkins discussed rime-parallelism in Old High German verse, and Prof. Kurrelmeyer of Franklin and Marshall College presented a study of the development of the type of the first person plural imperative in German—a portion of his Hopkins doctor's thesis. Prof. Hempl of Michigan explained the rise and fall of the forms *a'n't* and *ha'n't*, and Prof. F. N. Scott, also of Michigan, read an interesting paper presenting students' reminiscences of the impressions that grammatical terminology first made upon their minds. In his presidential address on Thursday evening, Prof. von Jagemann of Harvard urged that philologists should regard the discussion of matters of good usage as a part of their proper field of activity, and should not leave it to dilettanti and amateurs; but he warned them that learning alone would not suffice as an equipment—a liberal spirit and a willingness to recognize the claims of all periods and of different sections being essential.

In behalf of the committee on international correspondence, Prof. Magill of Swarthmore read an interesting report on the rapid progress made during the year in the use of this important aid in the acquisition of modern languages. Inquiries may be addressed to Prof. Magill at Swarthmore, Pa. (see also *Modern Language Notes*, vol. 14, page 48). The final presentation of the report of the Committee of Twelve on methods of instruction and the training of teachers did not elicit detailed discussion. The report is printed in full as chapter xxvi. of the Report of the Commissioner of Education for 1897-8 (U. S. Bureau of Education, Washington, 1899), and is incorporated in the Report of the committee on College Entrance Requirements, July, 1899.

The Association is also interested in various celebrations that are soon to take place. The seventy-fifth birthday of Dr. Frederick Furnivall, the distinguished English scholar who established the Early English Text Society, the Chaucer Society, and various other societies for the promotion of English studies, will be celebrated this year in England. Various members of the Modern Language Association of America are to contribute papers to the jubilee volume that is to be published, and all are urged to aid in putting the Early English Text Society on a sound financial basis, contributions to be sent to Prof. Bright of the Johns Hopkins. As the year 1900 brings the five-hundredth anniversary of the death of Chaucer, it was decided to constitute one session of the next meeting of the Association a Chaucer Session, at which papers dealing with Chaucerian subjects only will be read. The year following is the one-thousandth since the death of King Alfred, and will be celebrated throughout the English-speaking world. Papers will be contributed to the memorial volume by Profs. Bright, Hempl, Kittredge, and others, and the Modern Language Association will delegate its Secretary and other members to represent it at the celebration in the city of Winchester, which was the capital of Wessex, the royal residence and the burial-place of Alfred. The American Dialect So-

ciety, which is practically a section of the Modern Language Association, held a business meeting Friday noon. The Secretary, Prof. Emerson of Western Reserve University, reported that the publication of *Dialect Notes* would be resumed at once, and on his motion the price of back numbers was reduced in such a way as to stimulate sales.

The social features of the meeting were pleasant and sufficient. President Low welcomed the Association to Columbia, and on Thursday evening, with Mrs. Low, received the delegates and others at his home. The University gave a luncheon in the Engineering Building on Thursday noon, and "the courtesies of the club" were extended to the delegates by the University Club and the Century Club. A considerable number of the members joined in a *Kneipe* at Hollander's on Wednesday evening. Heinrich Conried, manager of the Irving Place Theatre, kindly placed his private box at the disposal of some of the members, who were thus given the opportunity of seeing Schweighofer, the distinguished Viennese comedian.

The next meeting of the Association will be held in conjunction with the Philological Association and other similar bodies, presumably at Philadelphia. The new President is Prof. Thos. R. Price of Columbia.

THE ECONOMIC ASSOCIATION AT ITHACA.

ITHACA, December 30, 1899.

The common experience that a quiet locality and academic auspices are the most favorable conditions for a successful gathering of scientists, was fully confirmed by the results of the twelfth annual meeting of the American Economic Association held here this week with Cornell University. In the absence of distracting engagements, in the occasion for personal intercourse, and in the stimulus of informal discussion, no recent meeting of the Association has been so successful. The programme was on the whole less striking than that of the preceding year, and the American Historical Association was not in joint session; but, on the other hand, a single roof sheltered practically all of the members in attendance, and the close and continuous contact which resulted more than compensated for the lacking elements. The essential qualities of the memorable Indianapolis meeting were reproduced without the inconvenience of a snow blockade.

The most important single event of the meeting was, as had been expected, President Hadley's stimulating address as President of the Association, on "Economic Theory and Political Morality," delivered at the opening session on Wednesday morning. It was a continuation of his presidential address of the preceding year, and was characterized by the same acuteness of thought and clearness of expression. The central argument of the address was that, in the endeavor to increase his influence upon the political world, the economist "should undertake to realize the very highest ideals, as a scientific man who stands above the clouds of prejudice and therefore sees farther than those about him; that it is his high mission to be the representative and champion of the permanent interests of the whole country, in the face of conflicting claims from representatives of temporary or partial ones."

This view of the mission and the duties of the political economist, President Hadley pointed out, has been challenged on three grounds: as bad psychology, bad politics, and bad ethics. As a matter of practical psychology, no one, it is contended, can make his judgment as to national well-being independent of his social antecedents and his ethical training. It would accordingly seem far better to recognize from the first that each of us represents a locality or a class, and that the moral judgment of each observer is sure to be affected and, to some degree, distorted by his own personal prepossessions. In the second place, an attempt on the part of the economist to represent the total interest of the public, even if it proved approximately possible, would not be good politics. "Even if you believe yourself wholly disinterested, you must appeal to classes and secure the partial good which is attainable, rather than aim at the greater good which you are from the outset fated to miss." Finally, this latter view of the matter is not only practical politics, but practical ethics. The man who would sink the interest of a class in a supposed general public interest, is but depriving that class of its own natural safeguard in the struggle for existence.

Upon analysis, it appears that the views thus outlined are an outgrowth of our experience with two important institutions: competition and representative government. Competition has led people to see how frequently the self-interest of the individual, as given free play, conduces to the general advance of the public. Representative government has shown how a full expression of opinion by those who speak for the several parts or classes in the community, can be made to contribute to an advance which inures to the advantage of all parts and all classes together.

President Hadley's vigorous dissent from this theory of struggle and compromise as a normal means of progress was based upon a brilliant interpretation of the real nature and function of modern competition and representative government. It is not a struggle between different parts for their class interests, but struggles within each class that work out in an economic harmony. The success of competition, so far from warranting us in the adoption of a system of political morality and a theory of political progress based on advocacy of class interests, proves rather the advantage and even the necessity of subordinating those interests to a wider common good. With respect to representative government, profounder study of constitutional history shows that parliaments and congresses in the really great periods of their history have been valuable as a field not of compromise between local interests, but of information as to general ones; not for the consummation of private bargains, but for the creation of public spirit. To the extent to which our representative assemblies have ceased to be places for debate and have become bodies for the making of laws rather than for the making of opinion, they have lost in salutary influence.

However undesirable it may have been in the past, certainly, in the light of recent political and economic developments, it has become impossible for those who are placed in authority to represent personal or class interests, without gross violation of fundamental dictates of sympathy or of justice. President Hadley's own note was one of high optimism:

"We shall meet the new collective needs of industry and government with a true collectivism of spirit and purpose. Not with that superficial collectivism or socialism which, like the individual that it strives to supersede, often makes too much of mere political machinery, and believes that men are to be saved by their institutions rather than their characters; but with a public spirit which demands, as a part of the national ethics, that men shall shape their course on the basis of conviction rather than of compromise, and that public discussion shall look towards a common understanding rather than a bargain."

In the animated discussion of President Hadley's address, the leading part was taken by Prof. John R. Commons, whose contribution was in the form of a detailed review of the address. He urged that the economist should acknowledge that no man is great enough or good enough to stand for such an abstraction as society as a whole. It is out of the combined result of public-spirited men contending for their own convictions and authorized to speak for others whose convictions are the same, and who are able to make concessions in the interest of all, that all of society is truly represented. Not the individual economist, but the combined economists, represent the permanent interests of society as a whole.

The most attractive single session of the meeting was, beyond all question, that of Thursday morning, devoted to papers and discussion upon the subject of corporations and Trusts. The points of approach were hopelessly at variance, and the residuum was somewhat less than might have been expected. But interest never flagged, and only the peremptory summons of a formal luncheon appointment was able to effect adjournment. Two of the three papers presented were by non-professional economists, ex-Secretary of the Treasury Charles S. Fairchild and Mr. James B. Dill of New York city, and their crispness and vigor illustrated anew the wisdom of varying academic abstraction with a strain of practical experience in the arrangement of the programme. Mr. Fairchild described in clear and explicit detail the complex operations incident to the financiering of a typical Trust. Mr. Dill captivated his auditors by a characteristically sparkling address upon "Some Tendencies in Recent Combinations which may become Dangerous," in which graphic if not scientifically accurate distinction was drawn between legitimate corporate enterprise and "incorporated wind," and a vague degree of "publicity" was suggested as a corrective of corporate abuses, as viewed from the investor's standpoint.

A really substantial contribution to the discussion was made by Prof. Sidney Sherwood of the Johns Hopkins University in a thoughtful paper upon "The Influence of Trusts in the Development of Undertaking Genius." Prof. Sherwood urged that the costly wastes of our modern industrial system are the wastes of misdirected production, and that it is the natural and spontaneous effort of a progressive industrial organization to get undertaking genius at its head which has produced the Trust. In other words, the persistence of the Trust is dependent upon its securing and retaining the highest leadership. It is upon this historic superiority in undertaking genius in the capacity for organization that our future economic supremacy must rest. The destruction of Trusts

would be the death-blow to our hopes for industrial leadership in the international struggle for future mastery. They are the most effective agencies for preventing the waste of competitive production. What is needed is an enlightened public appreciation of the possibilities for good which they offer, and a calm and wise limitation of their possibilities for evil through governmental regulation.

The afternoon sessions of both Wednesday and Thursday were devoted to the presentation and discussion of miscellaneous papers in theoretical and practical economics. Probably the most striking contribution was that of Prof. H. C. Emery of Bowdoin College on "The Place of the Speculator in Distribution," in which attention was called to the differentiation in recent industrial organization of the functions of risk-taking and entrepreneur's superintendence, and to the difficulty of assigning the compensation for industrial risk to any of the recognized factors or shares in distribution. In precision and clearness the paper left nothing to be desired, and its publication is likely to stimulate profitable discussion. The only other contribution to economic theory was a careful exposition of Senior's surprisingly modern theory of monopoly by Prof. Richard T. Ely of the University of Wisconsin. No one of the classical economists has suffered greater neglect at the hands of students than the author of the abstinence theory of interest, and it is to be hoped that Prof. Ely will supplement his partial review by a full study of Senior's place in the history of economic thought, and, better still, by an adequate edition of his scattered writings.

The subject of municipal finance was represented by a carefully prepared paper on "Taxation as a Partial Substitute for Borrowing to Cover Permanent Municipal Improvement," by Prof. E. D. Durand of Stanford University, author of the valuable study of the finances of New York city. The dangerous tendency of American, and, indeed, of British, municipalities to provide by funding instead of taxation, not only for permanent additions to the municipal plant, but for improvements properly chargeable to current income, is familiar. Grave embarrassment is, however, encountered in the rigid application of the salutary corrective suggested by Prof. Durand. The ordinary American city is in the midst of critical change from a mere industrial segregation to a self-conscious entity. The prevalent conditions are imperative municipal improvements, burdensome tax-rates, and inelastic revenues. Under such circumstances it is idle to suppose that a municipal electorate will content itself with cobble-stone pavements, surface drainage, and obsolete school-houses, while local borrowing remains so easy and agreeable a process. Expediency seems the only practicable rule that can be laid down for the fiscal conduct of American cities in this particular within the near future. To "pay as you go" is by all odds the safer rule; but, as was noted in the discussion of this important paper, the likelihood of decline in the burden of present municipal indebtedness through refunding operations and through a more consistent policy of amortization, and the certainty of progressive increase in the basis of municipal taxation, offer some justification for specific departure therefrom.

The three papers read on Thursday afternoon were all concerned with railway economics. Mr. W. H. Baldwin, jr., President of the Long Island Railway, discussed the organization and usefulness of railroad relief and beneficiary associations. Dr. B. H. Mayer of the University of Wisconsin presented an admirably clear and scholarly study of railway charters, and Prof. Henry C. Adams, Statistician of the Interstate Commerce Commission, considered certain aspects of the pooling problem.

The final session of the meeting was held on Friday morning. Prof. John Graham Brooks spoke of the work of the Consumers' League, and of the movement against the sweat-shop by the adoption of a League label, affixed to garments made under decent industrial conditions. Prof. Walter F. Willcox of Cornell University, now Chief Statistician of the Twelfth Census, described the plans for the approaching Census, and further details were added by Mr. H. T. Newcomb, Chief of the Agricultural Division. Both statements were objective and guarded, and yet the impression left was one of hopeful anticipation as to the scientific value of the forthcoming enumeration. It was impossible not to recall the discussion upon the plan and organization of the Census which took place at the New Haven meeting last year, and equally impossible not to feel a keen sense of gratitude to the special committee whose admirable report and critical essays on the Federal Census appear to have exerted direct and important influence.

Pressure of time permitted a bare reading of the report of the special committee on colonies, constituted at the last meeting, and composed of Prof. Jeremiah W. Jenks, chairman; the Hon. Charles S. Hamlin, Prof. E. R. A. Seligman, and Dr. Albert Shaw. The efforts of the committee have been directed to securing information regarding the fiscal methods and economic conditions of typical modern colonies, with a view to suggesting tentatively, on the basis of this information, some general principles which might be applicable to the government of the new dependencies of the United States. With the material thus far secured, the committee felt itself warranted merely in offering certain general suggestions as a preliminary report.

These included the recommendations that the finances of each colony should be managed exclusively for the sake of the colony and its development; that each colony must be considered by itself, and its system must be adapted to its conditions; that each colony should be made, as far as possible, self-supporting, but the mother country may well sustain the colony's credit or make temporary advances; that, in undeveloped colonies, important public works may well be owned by the Government and managed by Government officials. Sources of revenue should be selected in accordance with the economic and social conditions of the colony. Where the development of trade with foreign countries is the chief economic consideration, import duties should be very low or practically nonexistent. In colonies of undeveloped economic resources, the chief reliance for general government income should be on excise duties, levied primarily on a few articles of general consumption. When any colony has decided advantages in the production of some specially favored commodities, it may be desirable to impose business licenses or similar duties, or even low export duties, on such commodities. Local revenue should in most cases be derived in a large measure from real estate, business licenses, and kindred specific taxes. In the administration of fiscal affairs, natives wherever possible should be utilized as officials, and native customs continued during the period of transition; but the desires of the United States Government are to be paramount and its decisions final. In those dependencies where it is difficult to secure an adequate supply of efficient native labor, the question of an admission of foreign labor should be seriously considered. Finally, for the proper administration of the fiscal system in any of the dependencies of the United States, it is absolutely essential to establish a civil service which is beyond question as respects the ability and honesty of its personnel.

As intimated at the outset, the peculiar success of the meeting was largely due to the opportunities for personal contact and social intercourse which it offered. In securing this result, the social courtesies extended by the local committee were in great measure responsible. The members of the Association lunched in Sage College on Wednesday and Thursday as the guests of Cornell University; they were received by President and Mrs. Schurman at a delightful reception on Wednesday evening, and a convivial smoker on Thursday evening at the Town and Gown Club was the crowning function of the meeting.

The business transacted by the Council of the Association was for the most part routine. A slight change was made in the form of publications, and the Executive Committee were authorized to appoint special committees on the agricultural problem and on the negro question. The only changes in the officers of the Association were the election of Prof. Richard T. Ely as President, and the consolidation of the offices of Secretary and Treasurer in the person of Prof. Charles H. Hull. Detroit and the Christmas recess of 1900 were selected as the time and place of the next meeting, thus making possible a joint session with the American Historical Association. J. H. H.

Correspondence.

THE SEIZURE OF THE *BUNDESRATH*.

TO THE EDITOR OF THE NATION:

SIR: A question of international law seems to have arisen between England and Germany. It is in respect to the capture of the German steamer *Bundesrath* by a British cruiser, on the ground of her carrying contraband of war, claimed by England to be destined for the Boers, to a neutral port.

Heretofore the right of capture of contraband goods being carried to a neutral port has been understood to exist only where the ulterior destination is to a belligerent port. It is stated that England claims that, to justify the capture, the ultimate destination need not be to a "belligerent *port*." But a neutral has the undisputed right to sell and deliver munitions of war to a belligerent; and if this extension of the rule in favor of belligerents should be admitted, it would place the trade of neutral nations

under restrictions that would not be tolerated.

Suppose a war between England and France in which a New York merchant orders and receives certain goods that are munitions of war from his correspondent in Germany. Under international law he has a clear right to buy the goods and, on receiving them, to sell and deliver them in Canada. Could a French cruiser capture the vessel and carry her into a French port for adjudication, on pretext that the ultimate destination of the goods was to a place or (we will say) to a military post in Canada?

FRANCIS J. LIPPITT.

BOER PREPARATIONS FOR WAR.

TO THE EDITOR OF THE NATION:

SIR: "An American," in your issue of December 14, evidently believing in Boer deep, sinister designs against the British Empire (designs of which we heard nothing before the war), asks: "Did the big guns and the big officers come in during, previous to, or subsequent to the franchise discussions?" The following figures enable us to answer the question. They have been brought together from official sources by Mr. Alfred Marks, a London banker, have gone the rounds of the press here, and have, so far as I know, never been questioned. These are for the last ten years all the heads of account of Transvaal expenditure under which it has been suggested that military preparations could have been included:

	Military	Public Works.	Special Payments.	Sundry Services.	Total.
1889	£75,523	£300,071	£58,737	£171,088	£605,419
1890	42,999	507,579	58,160	133,701	742,439
1891	117,927	492,094	52,486	76,494	739,001
1892	29,739	361,670	40,276	93,410	525,095
1893	19,340	200,106	148,981	132,132	500,559
1894	28,158	260,962	75,859	163,547	528,526
1895	87,308	353,724	205,335	838,877	1,485,244
1896	495,618	701,022	682,008	128,724	2,007,372
1897	396,384	1,012,866	248,684	135,345	1,793,279
1898	*163,451	383,033	157,519	100,874	804,877

* First nine months.

There is no special rise in such expenditure until after 1894. In that year the nature of the reception by British residents accorded to Lord Loch in Pretoria naturally aroused the Boers to a sense of their danger. In 1896 came the raid and its virtual condonation by the British Government. Since 1896 the expenditure has steadily declined. Will these figures satisfy "An American"? Doubtless not. During your war of the Rebellion, I never knew any one's opinion on this side concerning the war altered by argument. There is much truth in "Lewis Carroll's" dictum: "My view of life is, that it's next to impossible to convince anybody of anything."

Yours very truly, ALFRED WEBB.

SHELMALIERE, DUBLIN, December 25, 1899.

TELL IT NOT TO THE TAGALS.

TO THE EDITOR OF THE NATION:

SIR: Your readers may be interested to know how long the books sent from Europe are kept in New York. You will see that the wrapper I enclose, which left Edinburgh on December 11, has been stamped twice in New York—on December 21 and January 5—so that it stayed fifteen days in your city. New York custom-house officers must have taken a very long vacation. The duty is charged here with extreme rigor. For the "Vazír of Lankurán," a Persian play with an English translation, which costs half a guinea, I had to pay ninety cents duty. An attempt has even been made to make me pay duty on postage, and it took me some time to prove to the officials that they had no right to do so. A book sent from Germany by registered mail is very often marked here as dutiable, and, even after the package is opened and the book found to be a foreign one, it is not delivered to the addressee immediately, but the postmaster has to write to Boston in order to get permission to deliver it free of duty, which takes some five days.—Yours respectfully,

JOSEPH DE PEROTT.

CLARK UNIVERSITY, WORCESTER, MASS., January 7, 1900.

ERRING WITH PLATO.

TO THE EDITOR OF THE NATION:

SIR: In connection with recent discussions regarding the initial year of the new century, it has already been noted in your columns that the same confusion marked the beginning of the present one. The jest in Heine's 'Reisebilder' that because he was (assumedly) born on the 1st of January, 1800, he was therefore one of the first men of the century, is another illustration, in which he doubly falsified the record. At about the above date, Schiller writes to Goethe with greetings "for the new year and the new century"; and Goethe, replying under date of January 1, 1800, responds that he is "right glad to have finished in Schiller's company, on the previous evening, the year and the century, too."

Very truly yours, H. S. WHITE.

ITHACA, N. Y., January 1, 1900.

Notes.

An anonymous antiquarian has been at the pains to prepare an 'Historical Index' to the series of expensive manuals of the corporation of the city of New York known as Valentine's (1841-1870), which went under with the Tweed régime. They are rich in matter concerning the annals, buildings, manners and customs of this city, jumbled together and only to be sifted with great labor. Francis P. Harper has ventured an edition of 250 copies of this collection of 2,325 references.

Balthasar Hubmaier and Faustus Socinus will be combined in the next volume of the "Heroes of the Reformation" series, being treated respectively by the Rev. Henry C. Vedder, D.D., and the Rev. Alexander Gordon. Messrs. Putnam have also in press 'A Book for All Readers,' by Ainsworth R. Spofford of the National Library at Washington; and 'Let There be Light,' "the story of a workingmen's club, its search for the causes of poverty and social inequality, its discussions, and its plan for amelioration," by David Lubin.

Ginn & Co., Boston, have ready a literary map of England, prepared by Prof. William Lyon Phelps of Yale, which is designed to convey a knowledge of the mother country to school children and college students, and should have a still wider utility.

Mr. Frank Stockton's 'Rudder Grange' celebrates its twentieth year in the fine uniform edition of this writer's works which the Scribners have in hand. A younger brother and less famous is 'The Hundredth Man,' which forms the companion volume. Mr. Stockton could hardly have found a more sympathetic illustrator than Mr. Frost, whose designs are frontispieces only, and harmonize perfectly with the elegant typography.

The pot-pourri of 'Stories from Old-Fashioned Children's Books, brought together and introduced to the Reader by Andrew W. Tuer, F.S.A., adorned with 250 Amusing Cuts' (London: The Leadenhall Press; New York: Scribners), is arranged by dates, ranging from 1767 to 1828. There is no other order, and typographically this curious collection is quite disorderly. The pictorial illustrations are of a generally poor and rude character, and the text (as Mr. Tuer himself warns) had better be attacked at intervals. Numerous facsimile title-pages are given, and one of these does injury to Bewick by attributing to him cuts that he was guiltless of. The book was worth making, but how much better it might have been done!

Harper & Brothers have reprinted from the *North American Review* a number of papers on the South African question under the title 'Briton and Boer.' The first of these, and the only one of great value, is Mr. James Bryce's statement of the "Historical Causes of the Present War in South Africa." Of this we need only say that it is an incomparable piece of work, not merely in its estimate of the forces in operation, but also in the compactness of its presentation of the facts in the case and in the marvellous impartiality of its view. Perhaps none of its statements can be successfully controverted, and yet the advocates of the British cause will feel that somehow the ground on which they stand has been seriously undermined. The papers by Karl Blind, Francis Charmes, and Demetrius Boulger indicate that while the great Powers may not combine against England, the sentiment of Continental writers who have been friendly to her is unfavorable to her present course. It is unnecessary to say that those who have been heretofore hostile have not been propitiated.

The house of Cotta in Stuttgart announces Friedrich Theodor Vischer's "Shakespeare-Vorträge," to be issued in six volumes, the first of which, comprising 510 octavo pages, has just appeared. In an introduction of 228 pages the author discusses the Baconian hypothesis and a variety of kindred questions, gives a survey of the pre-Shaksperian drama, describes the theatre of his time, and deals at length with editions, translations, criticisms, etc., of Shakspere's works in different countries. The rest of the volume is devoted to the analysis and appreciation of "Hamlet." These lectures were justly celebrated when they were delivered many years ago at the University of Tübingen. Unfortunately there is no complete manuscript of them in existence, and the editor, Robert Vischer (the Professor's son), is obliged to reproduce the text so far as possible from the stenographic notes of students. The result is a fair summary of the substance of the lectures, without the fulness of elucidation and grace of style which originally characterized them.

Edwin Bormann, perhaps the most plausible of all "Baconians," follows up a volume ('Das Shakespeare-Geheimniss,' Leipzig, 1894) well illustrated with facsimiles that alone give it value, with a similar one entitled 'Bacon-Shakespeare's Venus und Adonis.' It is an exact reprint of the ori-

ginal edition (1593) of the poem, with annotations for the purpose of discovering in the text cryptographic allusions to Lord Bacon. This part possesses the usual marks of hallucination, but every owner of the book will be glad of the authentic pictorial apparatus. Bormann has announced his intention to publish all the works of Shakspere in the same style and with annotations from the same point of view. If he carries out this plan, we shall have a series of volumes which, so far as paper, typography, exact reproductions of the earliest texts, and rare illustrations are concerned, will leave nothing to be desired and will be a delight to all lovers of English literature.

The Florentine antiquary Leo Olscki has recently discovered in the house of a Venetian patrician a complete copy of the Bible with Nicholas Lyra's commentary, printed in 1471-72 by Arnold Pannartz in the palace of the Marquis Pietro Massimo at Rome. This work is extremely rare, and a copy of it was sold in Italy not long ago for 30,000 lire. The copy found by Olscki is richly illustrated with colored drawings of real and fabulous beasts of a symbolical character, heads of angels, plans of sacred edifices, and six emblematic jewels. The drawings are by a contemporary artist, probably Andrea Mantegna, or at least by one of his pupils. Luther is known to have prized this commentary highly, and to have used it in his interpretation of Holy Writ. This indebtedness gave rise to the saying: "Si Lyra non lyrasset, Luther non saltasset"—If Lyra had not played the lyre, Luther would not have danced.

The Statistical Year-Book of Canada for 1898, issued by the Department of Agriculture, is the fourteenth volume of this valuable annual. It contains all needful information as to the agricultural and mineral products, trade and commerce, finance, transportation by rail and canal, the post-office, insurance, temperance, crime and education; and, in an appendix, records the personnel of the several governments of the Dominion.

Amid the usual interesting variety of the *New England Magazine* (Boston: Warren F. Kellogg) in the January issue—illustrated articles on Peter Faneuil and his famous Boston Hall, "White's Selborne Revisited," Northampton, and others—the sketch of Mrs. Ellen Cheney Johnson and the Sherborn (Mass.) Prison for Women, by Isabel C. Barrows, may preëminently claim attention. The death of Mrs. Johnson could but be felt, by those who knew her and had seen her at her post of superintendent, as that of a necessary person; one could not imagine the work going on without her. As the minister is the church, and the editor the paper, so she was that innovating institution which is one of the gems in the humane diadem of Massachusetts. Worth reading the article is in every word, and this passage is worth quoting: "It is doubtful whether any other penal institution in the world encourages reading to the extent that this does. Every woman is compelled to have on her dress skirt a large, strong, flat pocket into which a book can be easily slipped."

The multitudinous thoughts which M. Brunetière puts forth in his survey of the "Literature of Europe in the Nineteenth Century" (*Revue des Deux Mondes* for December 1) will very likely awaken dissent or doubt in the minds of most readers as often as their hearty concurrence; but it will be found that the "curve of evolution" is, on the whole, skilfully traced. The features inviting criticism are, on the negative side, some very noticeable gaps, natural enough where the field is so vast, and, on the positive, an occasional infelicitous grouping of writers and certain startling comparisons, as, for example, when George Eliot, Tolstoy, and Dostoyevsky are associated with Balzac, Flaubert, and Dickens, to suggest, in the field of literature, a counterpart of the Dutch school of painting (p. 672); or when (seemingly for the sake of a pleasing rhetorical contrast to Musset and Leopardi) Heine is said to pour out in his lyrics with poignant utterance his suffering from doubt or unbelief (p. 660)! Where in Heine's lyrics can M. Brunetière have found "les sanglots les plus purs" of that tenor? And, without wishing to forestall what the future may bring, can it be said at the present time that Wagner's poetic activity has had as important results as his musical achievements (p. 661)?

By an unfortunate error our recent review of Dr. Spingarn's 'Literary Criticism in the Renaissance' stated that, among others, Paccius, Parrhasius, Landi, Capriano, Piccolomini, and Giasone di Nores did not seem to be included in this study. All are included except Parrhasius, as a correspondent has pointed out to us.

—The *Atlantic* for January gives the place of honor to the autobiography of W. J. Stillman, which takes us back to the first half of the century. Of his early childhood Mr. Stillman paints a rather depressing picture; it is hard to remember that so small a stretch of time separates us from the period when parents, no matter how tender-hearted, felt themselves under the necessity of flogging their children for what we should now consider trivial offences. It is easy to see that the idea at the root of the system was that the vice to be eradicated by the lash was disobedience; it mattered little, in this view, what the proscribed act was, so long as it *was* proscribed. The violation of the parental order was the crime, the heinousness of which was equally great in all cases. Such a system could not outlive the discovery, made early in this century, that the amount of obedience secured was not in proportion to the amount of physical pain inflicted for disobedience. To many readers T. J. J. See's "Recent Astronomical Discoveries in the Southern Hemisphere" will be as interesting as anything in this number of the magazine. Thanks, in great measure, to American astronomers, the exploration of the Southern heavens has been undertaken within the last thirty years "with a degree of thoroughness commensurate with the inherent interest of the richest portion of the celestial sphere." Like all popular astronomical papers, this one is, to the layman, full of surprises. Mr. See calls attention, for instance, to the "somewhat remarkable fact" that, since the time of Newton, "no certain advance has been made toward explaining the nature of gravity," adding that Laplace made numerous investigations to ascertain whether it is propagated with a finite velocity, like light and electricity. The result of his labors was that, if gravity has a finite velocity, it must be "millions of times" greater than that of light, which travels at the rate of 186,000 miles per second. Mr. See goes on: "From Laplace's investigations, and those made since his time, the indications are that gravity acts instantaneously throughout the universe, and is not propagated like other forces with a finite velocity. The nature of gravity thus remains an enigma, and it is not easy to see how any light can be thrown upon the cause from which it arises."

—The current *Scribner's* opens with Mr. Roosevelt's profusely illustrated Cromwell. Like some of his predecessors, he takes occasion to allow his study of the Protector's life to reveal his views of contemporary politics. He declares that what rendered it necessary for England "to pass through the fiery ordeal of the Civil War in order that she might be saved," was that she had been steeped, "during the first forty years of the country," in an "ignoble and therefore an evil peace." Such a peace "is as great a curse as the most unrighteous war." Those who doubt this, says Mr. Roosevelt, "would do well to study the condition of England during the reign of James I. and during the first part of the reign of Charles I. England had then no standing army and no foreign policy worthy of the name. The chief of her colonies were growing up almost against her wishes, and wholly without any help or care from her. In short, she realized the conditions, as regards her relations with the outside world and 'militarism,' which certain philosophers advocate at the present day for America." *De te fabula.* In other words, those who are opposed to militarism at the present day would have America take the attitude towards the outside world in which James I. and Charles I. put England. Mr. Roosevelt is too hard on Charles I. If Charles were alive now, he would necessarily sympathize with much that Mr. Roosevelt writes. For instance, he was a great naval reformer, at least in theory; it was his anxiety to give England a fine navy to counterbalance those of France and Holland which led to his imposition of the ship-money tax. Hampden and his friends resisted this, but the tax was sustained in the courts. "The Poetic Cabarets of Paris," by Eliot Gregory, with illustrations by Mr. Gregory and E. Potthast, gives some entertaining information about a part of the life of Paris little known to Anglo-Saxons. To understand Paris one must understand the *cafés*, just as to understand London one must understand the clubs. We have or may have heard Yvette Guilbert sing; but how many Americans have any knowledge of Jules Jouy, who wrote her ballads, and is a man whose praise has been sounded by such critics as Sarcey and Jules Lemaître? Undoubtedly many of these ballads, like Yvette Guilbert herself, are under the ban of propriety, but the same cannot be said of Caran d'Ache and his great café success of the "Épopée of Napoleon"—and what distinct knowledge or estimate have we of that? Perhaps the Bohemia of our day will yet produce its Mürger, and then we shall know more.

—*Harper's* has an illustrated article by Arnold White on "The British System of Colonial Government," which contains a good deal of information not readily accessible. Mr. White has had exceptional opportunities for observation, as he has served, since its creation in 1887, on the voluntary committee which administers the Bureau

of Emigrants' Information under the control of the Colonial Office. From 1793 down, for sixty years, the same minister had charge of the business of war and the administration of the colonies. Only in 1854 were the two separated. According to Mr. White, the separation was due to the "Crimean fiasco." How many Colonial Secretaries there have been since 1854 does not appear; but from 1794 to 1899 there were forty-six secretaries who administered either the War and Colonial Office jointly, or the latter separately. The continuity of administration is kept up by under-secretaries and a permanent staff; otherwise, with such constant changes of the head, effected through the mutations of domestic politics, there could be none. When Lord Palmerston took charge, he is reported to have addressed one of the permanent officials on his first visit to the office in the following words: "Let us come up stairs and look at the maps and see where these places are." The Colonial Minister is directly concerned with the details of forty distinct and independent governments, to say nothing of scattered dependencies which do no possess regularly formed administrations. The line of demarcation between the duties of the Colonial Secretary and the Secretary for Foreign Affairs is not clearly marked out. Lord Salisbury's bailiwick includes the British North Borneo Company, the Somali Protectorate, British East Africa, the Niger Coast, and the Uganda Protectorates; the Transvaal, officially recognized by England for fifteen years as the South African Republic, and which no one pretends is a colony, is, as every one is aware, under Mr. Chamberlain's care. There is a good deal more information than literature in this number of *Harper's*. For the latter we turn inevitably to Mrs. Humphry Ward's "Eleanor." This is at least a real novel by an accomplished hand. It introduces a new type, in a woman's man who has given up politics (he might have been Prime Minister) to write a book which shall, however, be his political vindication; and a new form of an old type—the American girl abroad. In this case the little charmer is a Vermont Methodist, who has perfect manners, but does not know how to dress or arrange her hair. The hero, it should be said, is a Catholic reactionary, and if he does not become interested in the pretty Methodist, the readers of instalments yet to come will certainly be surprised.

—The *Century* is so devoted to art that criticism of it as periodical literature covers only half the ground. Such a paper, for instance, as that of Frederick A. Cook on "The New Antarctic Discoveries" is mainly interesting through its novel "pictures in color after photographs by the author." The same cannot be said, however, of Joshua Slocum's "Sailing Alone Around the World," which will, no doubt, soon appear as a book. The present number contains the fifth instalment, "From Australia to Cape Town, South Africa." The pictures, by Thomas Fogarty and George Varian, are decidedly subordinate to the nautico-literary yarn spun by the hardy and cheerful skipper and master of the *Spray*. We have to go back to Marryat for anything at all like it, but it must be remembered that Marryat was a writer of mere fiction, while Capt. Slocum confines himself strictly to fact. Were it not for this we should give him credit every now and then for drawing on his imagination. For instance, his interview with Paul Krüger (he made incidentally the trip from the Cape to Kimberley, Johannesburg, and Pretoria) is curious. Judge Beyers, the gentleman who introduced Capt. Slocum, mentioned that he was on a voyage round the world, upon which the President of the South African Republic corrected the Judge rather sharply, reminding him that the world was flat. "You don't mean *round* the world," said the President, "you mean *in* the world"; and not another word would the President utter. The Judge is reported to have been "embarrassed," as well he might be, but the Captain was delighted, and gave the story to an enterprising journalist of Cape Town, who made a very good caricature of it for local consumption. But what is a caricature compared with the report of the original conversation by the person to whom the remark was addressed? It is the narrative of the actual voyage of the *Spray*, however, rather than the account of what happened to the author when ashore, that gives the story its value. An out-of-the-way piece of fiction is Ernest Seton-Thompson's "The Biography of a Grizzly," with pictures by the author. Perhaps, after all, it should not be regarded as out of the way so much as a novel development of an old species of story—that in which an animal is the hero. Æsop made use of animals for one purpose, the author of 'Black Beauty' for another, and still more recently we have had Kipling unlocking the secret thoughts of wolves, tigers, and other wild beasts. Mr. Seton-Thompson's tale might never have been written had it not been for Kipling, but his grizzly is what might be called a romantic or operatic bear, who dies to slow music in the last act, and makes us feel happier for having known him. Wahb may or may not be real, but he possesses interest, which (*pace* the realists) is more important in fiction than verisimilitude.

—New signs of the fusion, or at least *rapprochement*, of the two great currents of higher education may be observed at the University of Göttingen. Prof. Klein, the famous mathematician, who, perhaps from fear of giving umbrage to some possible labor organization, delighted his American audiences with such a harmless subject as the "Theory of the Top," has founded a "Society for the Advancement of Applied Physics," counting among its members, aside from eight professors of the University, several representatives of German industrial firms. Furthermore, the newly opened laboratories for electrotechnics (under Prof. Descoudres) and of general technical physics (under Prof. Eugene Meyer) are attracting students whose instruction would hitherto have fallen rather within the province of technical institutions. Another step towards modernizing higher education is suggested by a petition to the Prussian Minister of State from a large number of German jurists, contending that graduates from the Realgymnasia should no longer be refused admission to the law courses in the universities. A similar agitation among the medical profession, it will be remembered, has been going on for some years. Protests against such "Americanizing tendencies," however, are, and no doubt will continue to be, heard from various quarters. Thus, the new rector of the German University of Prague, Dr. von Holzinger, the classical philologian, in his inaugural address (published in *Hochschul-Nachrichten* for November) has no sympathy whatever with such new-fangled ideas as the welding of polytechnic school and university into a "mongrel colossus," the presence of women students in the "Männeruniversitäten," and that "new growth upon the ancient university body, called university extension."

—Volume xxvi. of the Transactions of the Asiatic Society of Japan consists of a single booklet, containing four papers of value. Dr. Ludwig Riess contributes an exhaustive "History of the English Factory at Hirado." At this island, called "Firando" on old maps, the English opened trade in 1614, attempting also agencies at Osaka, Yedo, Sakai, Kioto, Shidzuoka, and Uraga, and on Tsushima for the trade with Korea. The English factory did not follow the policy of their Dutch rivals, which was to do business as wholesale traders, selling to Japanese shop-keepers on a credit system; it wanted to sell directly to the consumer by means of its branch offices and agencies. The story, exceedingly interesting in detail and worthy of study, is one of failure. After ten years the enterprise was abandoned, and with it the hope of opening China also to trade. The only trace left on the spot of the former English factory at Hirado is part of the wall of the burial-place on a hill outside the town. Incidentally, on the subject of extra-territorial jurisdiction and its embodiment in modern treaties, our envoy, Mr. Townsend Harris, is fully justified by Sir Ernest Satow, British Minister and one of the first scholars in Japanese. Harris's action "was perfectly in accord with Japanese ideas." Prof. Ernest W. Clement opens a chapter in the feudal chivalry of Japan in his charming paper on the "Instructions of a Mito Prince to his Retainers." The subject is ably followed up by Mr. J. H. Gubbins in his too brief sketch of "Laws of the Tokugawa Period" (1604-1868). Mr. John Foster Fraser tells of his travels through upper Burma and western China. The appendices, discussions, and data concerning the Society are all of prime interest to the student of Japan.

JOHN BULL, PAINTER.

The Life and Letters of Sir John Everett Millais, President of the Royal Academy. By his son, John Guille Millais. With 316 illustrations. Frederick A. Stokes Co. 1899. 2 vols., 8vo.

Sir John Everett Millais: His Art and Influence. By A. L. Baldry. London: George Bell & Sons; New York: Macmillan Co. 1899.

These two books, the one mainly biographical, the other mainly critical, deal with the extraordinary career of an artist who, beginning as a rebel, ended as the official chief of British art, and who lived through a storm of savage criticism to become the most popular painter ever known, and the darling of the great British public. From "Johnny" Millais, P.R.B., to Sir John Millais, P.R.A., was a vast stride; and from the painter of "Ophelia" and "The Huguenot" to the painter of "Bubbles" seems, at first sight, an even longer one, though critics have differed as to its direction. To us, however, looking back from the vantage ground of the present, it seems certain that Millais was essentially the same from beginning to end, that his ultimate triumph was always assured, and that the only

wonder in the matter is, that it should have taken the British public so long to discover that he was the man for its money. As a matter of fact, it did not take the public as long to find this out as it did the critics, and the engraving of "The Huguenot" was selling like hot cakes while the press was snarling and snapping at the painter's heels.

John Everett Millais was born at Southampton, June 8, 1829, of a family of poor gentlefolk from the Island of Jersey, where much of his childhood was passed. He exhibited a remarkably precocious talent for drawing, and was taken to London at the age of eight to begin the serious study of art, entered the schools of the Royal Academy at ten, and had taken every prize that that institution offered to students before he was twenty. It was this pet of the schools, this predestined Academician, who in 1848 joined with the earnest but obscure Hunt and the flighty and untrained Rossetti to found the Pre-Raphaelite Brotherhood, and unfurled the banner of revolt against accepted methods of painting. Both the younger Millais and Mr. Baldry rate Millais's influence in founding the Brotherhood higher than has generally been done hitherto. Rossetti has been generally credited with the leadership, but this claim is scouted by the present writers, who consider him as rather an uncertain ally. As little as possible is said by either of them about Ford Madox Brown, who had begun to do Pre-Raphaelite work before the Brotherhood was heard of; and while Hunt's vigorous personality cannot be overlooked, the general impression is given that Millais was not only the most conspicuous figure in the fight that followed, but the real leader as well. The truth seems to be that Pre-Raphaelism was a very complex movement, compounded of Rossetti's poetic mediævalism, Hunt's religious mysticism, and Brown's naturalism and love of detail, and that it was only with this last that Millais had any real sympathy. His "Isabella" was influenced by Rossetti, and his "Carpenter's Shop" by Hunt; after that, his Pre-Raphaelism took a color of its own and became merely a manner of painting. He was much the most brilliant executant of the set and a splendid fighter, and therefore naturally bore the brunt of the opposition aroused by the movement.

There are, however, not wanting signs that the opposition was less serious than has been thought. The fact is lightly passed by, with scarce a mention, that in 1850, the year of "The Carpenter's Shop," when the "storm of execration" was at its loudest, Millais was elected an Associate of the Academy, and the election annulled only because it was discovered that he was not yet of the requisite age. In 1852 came "The Huguenot," the first picture definitely his own; and in 1853, when "The Proscribed Royalist" and "The Order of Release" appeared, the Academy capitulated. It had taken only five years to force its doors, and Millais was an A.R.A. at twenty-four. Meanwhile it is well to note that his pictures were almost invariably sold, and for what still seem very fair prices. The "bullying" of the press really did him no harm, and brought out Ruskin in his defence. He was the most discussed and therefore the most famous artist of the day. In his letters he grumbles much and talks of efforts to "put him down," and seems to dream of a conspiracy against him. The fact is, rather, that few young artists have had so easy and rapid a road to success.

As early as 1850 he had confided to W. Bell Scott that Pre-Raphaelism was "all nonsense," and that "one could not live doing that"; and in the same year he said to Mrs. Combe: "People had better buy my pictures now, when I am working for fame, than a few years later, when I shall be married and working for a wife and children." How far the fact that one "couldn't live doing that" influenced the change, it is hard to say, but it was within two years of his marriage that his break with Pre-Raphaelism began to show itself in "Sir Isumbras," and it was more clearly accented by "The Vale of Rest" and "Apple Blossoms" in 1859. For a time the fight was on again in all its fury, with Ruskin now at the head of the enemy. These pictures were still too Pre-Raphaelite for his old opponents, while they had ceased to be Pre-Raphaelite enough for his old friends, and nobody was pleased. The "Apple Blossoms," which seems to us one of his most artistic productions, was, perhaps, the most unpopular picture he ever painted. This time, however, the opposition collapsed even more quickly; "The Black Brunswicker" of the next year becoming vastly popular. In 1863 appeared "My First Sermon," the earliest of his pictures in what may be called his "Christmas *Graphic*" style, and he was made a full Academician at once.

Madox Brown lived and died an unsuccessful man. Rossetti was the painter of a clique and the founder of the æsthetic cult. Holman Hunt, by dint of dogged persistence and by his appeal to the religious sentiment, worked his way through long neglect to a partial popularity. Millais was, almost from first to last, a favorite of the British Philistine, because he saw with the eyes, thought with the brain, and felt with the soul of the average Briton. Mr. Baldry says, speaking of "Chill October" and its successors, "The unquestionable popularity that Millais gained by his excursions into landscape was certainly due to the fact that his observation was of the ordinary and everyday kind"; and a little later:

> "He never could be ranked among the inspired painters of the open air, nor could he ever be said to have dealt exhaustively with the problems presented by natural phenomena. He remained untouched by the subtleties of atmospheric effect, by the varieties of momentary illumination, or by the fleeting glories of aerial color, which provide the student of nature's devices with the chief incentive to artistic effort."

This is very acute criticism, and it is surprising that the author of it did not see that, in everything else as in landscape painting, Millais's "observation was of the ordinary and every-day kind," and that his phenomenal success was due as much to the fact that he never puzzled his public by seeing what it could not see, as to the fact that he saw and rendered what it did see with wonderful accuracy.

In the 'Life and Letters' we are given many illuminating glimpses of Pre-Raphaelite methods of study and production. The formula was something like this. One took a canvas into the country and found something that interested him as a background. Often the subject of the picture was still undetermined, and always the figures were, at most, lightly outlined on a white ground. Leaving a space for the figures, the background was painted "inch by inch," as Ruskin used to say. It might take months to complete, but changes of season mattered as little as changes of light, and the painter who could work eleven hours a day "under an umbrella throwing a shadow scarcely larger than a half-penny" without noticing that the sun had changed its position, was not likely to be bothered by the succession of blossoms. When the picture was "done, all but the figures," it was taken to London, and there, in a studio, the figures were painted with equal minuteness from life. And this was supposed to be truth to nature. It is not until "The Proscribed Royalist" that we hear of any effort to paint the figure in the same light as the landscape, the effort consisting in letting in the sun through a window. In this case Millais also rigged up a lay-figure on the spot to get the draperies right with their surroundings. He does not seem to have done the like very often. Brown's conscientiousness in painting out of doors in cold weather to get the purple color of the flesh was never much in Millais's line. The minuteness of finish Millais gradually abandoned. The painter who had said, in 1851, "Great success blunts enthusiasm, and little by little men get into carelessness, which is construed by idiotic critics into a nobler handling," could say of Ruskin in 1859, "He does not understand my work, which is now too broad for him to appreciate, and I think his eye is only fit to judge the portraits of insects"; but the change was in reality only a superficial one, and the "breadth" was that of brush-stroke only, not of point of view.

The truth is that Millais was, all his life, equally insensible to truth of values and beauty of tone; to the larger truths of nature as to the greater qualities of art. The lack of minute finish in his later work only renders more evident the limitation of view that was always there. It is not more essentially—only more visibly—artificial than his early work. But if Millais never had any sense of values, no more had he any feeling for composition or for drawing as such. He drew fairly well as regards accuracy to fact, but we see nothing in his work to show that he ever cared for line or form as a means of artistic expression. In fact, we do not think he ever cared for any purely artistic quality because it was artistic. He was a typical Englishman, with the Englishman's love of sport, of out-of-doors, of the family, and of sentiment. He loved a landscape because it was a good spot for fishing or shooting, an incident because it was heroic or sentimental, a woman because she was handsome, and a child because it was a pretty child; he never cared for or thought of what he could make of it in a work of art—the grace of an outline, the intricacy of a pattern, the dignity of a silhouette, or the harmony of tone and color. He looked at landscape like a game-keeper, and it has been said that he saw children "like a nursery-maid." In early days he enjoyed the minutiæ of realization, and in later days he revelled in the sleight-of-hand of suggestion, but it was always representation that he cared for, never art; and representation of mere fact, never of effect.

He has been much blamed for the falling off of imagination and invention in his later work—as we think, unjustly. He had never had much, and what little he had was illustrative, not pictorial, imagination. His tendency to produce his result with as little trouble as possible showed itself at least as

early as "The Huguenot." He had meant merely to paint two lovers, but Hunt persuaded him that the motive was not sufficiently dignified, and that some historical episode must be suggested. The white scarf did the business, and a picture resulted that took the public taste. As Mr. Monkhouse says, in 'British Contemporary Artists':

"The picture touched the dearest sentiments of the English, it appealed to their sense of beauty, to their affections, to their love of moral courage, and to their religious convictions. If Millais had thought it all out beforehand . . . he could not have chosen a subject more attractive to the visitors of the Royal Academy."

The type of picture once established was adhered to, and "The Huguenot" was followed by "The Proscribed Royalist," "The Order of Release," and "The Black Brunswicker." Gradually it dawned upon Millais that even this much of invention was more than was necessary, and that one figure and a title (if the figure were that of a pretty woman) would answer the purpose; and he painted "The Gambler's Wife" and "Yes or No." What did it matter? All he cared for himself was the model and the sleight-of-hand. "If I were a rich man," he said, "I would pay some one to paint pictures for me, and spend my time in putting high lights in the boots." His executive talent nearly reached the level of high art at times, and "The Yeoman of the Guard" and "Mrs. Bischoffsheim" are so brilliantly executed as to be nearly great. At worst it degenerated into a wormy, stringy handling that is distressing. On the other hand, his later attempts at grand art, such as "Jephthah" and "Victory, O Lord!" are lamentable failures. Better a hundred "Cherry Ripes" than one such Historical Picture. After all, there is subject enough in "Cherry Ripe" for a Sir Joshua, or even for a Velasquez, if only there were the artist eye to see it.

But if Millais was very little of an artist and only half a painter, he was an illustrator *pur sang*. Trollope said that 'Orley Farm' was the best illustrated of any novel ever published, and probably he was right. Millais's merits and faults equally helped to make him a good illustrator, and in Trollope he found the man he was best fitted to illustrate. The author gave the ideas, and the artist found the forms; and the more he was occupied with sheer representation and the less he bothered about composition, the better. All Millais's illustrative work shows his remarkable fitness to become eye and hand to another man's brain. He did not have persistent visions of his own which came between himself and the page, to lead him, as they led Rossetti, into fantastic embroideries upon the text. What Millais saw in his reading was just what the average Englishman sees there, and that he put down quite clearly and comprehensively. In Trollope he found a man of his own type—an average Briton like himself—and we have Trollope's own word for it that Millais's drawings are an exact transcript of what the author meant.

There was one other field in which Millais's preoccupation with representation rather than art, and with fact rather than with aspect, was of service to him—that of portraiture. The very greatest portraits are works of art also, but there is a level at which artistic preoccupation hinders veracity. Millais will not rank with the greatest portrait-painters, but at least he did not allow style or line or tone to stand between him and a clear perception of the sitter. In his portraits of women and children he did, indeed, allow the desire of prettiness to master him; but in his best portraits of men he is earnest and veracious, and some of England's greatest men will probably be remembered as he has represented them.

The late President of the Royal Academy always knew what his public liked, and always gave it them, while he had sufficient skill as a technician to merit and to retain the respect of his professional rivals. He was far from a great artist, but he was a most industrious and honorable man, and probably deserved all that he received. If there were, perchance, truer artists who were neglected while he succeeded, they had their reward in the doing of their work and the hope of a posthumous immortality, even if their portraits do not hang in the Uffizi.

The 'Life and Letters' is somewhat confusingly written, skipping back and forth and sometimes giving contradictory accounts of the same event; but it succeeds, on the whole, in drawing a clear picture of the cheery, hearty, determined, straightforward, eminently British personality of the man. Mr. Baldry's unpretentious little volume is quite definite in its presentation of his view of the artist, a view which we only partially share. The larger book is profusely illustrated, perhaps too profusely for the greatest glory of Millais, yet it needs supplementing here and there by reproductions only to be found in the smaller. More than once the 'Life' gives a fragment of a picture only, without warning that it is not the whole, and in one instance this is set right by the other book. Both are needed, and, from the two, aided by a faculty of reading between as well as in the lines, a clear conception may be formed of the most thoroughly English of modern painters.

McCRADY'S SOUTH CAROLINA.

The History of South Carolina under the Royal Government, 1719-1776. By Edward McCrady. Macmillan. 1899. Pp. xxviii, 847.

Mr. McCrady has continued, in the present volume, the work begun with so much success in his earlier book on 'South Carolina under the Proprietary Government.' The volume now issued, covering the period from the end of the proprietary administration until the establishment of independence, is similar in plan and execution to its predecessor, and has much the same characteristics as a piece of historical workmanship. There is the same wide investigation, the same wealth of local detail, and the same pronounced loyalty to the State. If the later work is less interesting than the earlier one, the reason is to be found, doubtless, in the more noticeable absence of striking situations in the period dealt with, and the less direct bearing of events upon the general course of our history; but the service has been painstakingly performed, and Mr. McCrady's volumes are pretty certain to remain the authoritative history of the South Carolina colony for some time to come.

The historian of a State of the American Union has presented to him a difficult task. Few States have what may be called individuality—few, that is to say, have passed through such experiences as to give them a distinctive and well-marked character, or to invest their annals with a general interest apart from that which attaches to the career of the nation. The political affairs of any State other than one's own are commonly not viewed as matters of general concern. In every-day thinking there is a marked tendency to merge the State, as a political organism, in the larger life of the nation, and to estimate the importance of State affairs by the relation they bear to the common life of the whole people, rather than as, in and of themselves, matters of distinct and permanent importance. There are, however, exceptions to the rule, and South Carolina is one of them. Largely, no doubt, because of its prominent position in the great discussions over slavery, nullification, and secession, South Carolina has come to be looked upon as one of the foremost of the Southern commonwealths, possessing a certain distinction of character and manner which has tended to make its citizens South Carolinians first and Americans afterwards. It is manifestly of great advantage, therefore, to the historian to have for his subject a political unit which stands out conspicuously among its companions, and does not need constantly to be disentangled from a mass of wider interests in which its own identity is largely lost.

The characteristics which, operating through nearly the whole period of its history, have combined to give to South Carolina its peculiar prominence, are its unique social life, its system of slavery, and its attitude towards constitutional interpretation. The first and last of these, already outlined in Mr. McCrady's earlier work, are traced with additional wealth of fact and illustration in the present volume, though without, we think, adding materially to the former presentation. More than any other colony, South Carolina developed, from the beginning, at once a social class and a social caste. The social and political importance of Charleston, as the centre and source of provincial life, was not markedly lessened when the back counties came to be settled; and the political turbulence of the new settlements, and their long-time clashing with the provincial administration, were legitimate outgrowths of the centralized control and pervading indifference to changing conditions, which had marked the colony from the first. One misses, in South Carolina history, the voice of the people, the widespread discussion of politics and men, the surge and ferment of a political life in which the rights of one were the concern of all, that fill so large a place in the annals of a colony like Massachusetts. What we have, instead, is the political activity of a small, compact, and assertive ruling class, intelligent, zealous, and patriotic, knit together by intermarriage and community of interests, and dominating by their wealth, their aggressiveness, and their solidarity the political life of the province. It is the presence of this class which insures, for the genealogical details with which Mr. McCrady's volume is thickly strewn, so general a local acceptance; and it was this governing class, at once the State and the rulers of the State, which, more than any other one thing, gave to South Carolina its striking political complexion, and made it, in a larger sphere, once the way was cleared for it, so powerful and impressive a political force.

So, too, though in lesser degree, with con-

stitutional interpretation. Of the genesis of the strict-constructionist view of things, in the long struggle between the colony and the proprietors, Mr. McCrady has already given an acute and interesting exposition; and he does not add greatly to it in the volume before us. The times, however, had changed. With the transfer of the proprietary rights to the crown, the immediate occasion of difference was removed; and the disputes which soon began with the royal governors, while locally important, contributed little in the way of new principles of colonial opposition. As the breach with the mother country widened, however, the disposition to insist upon the letter as well as the spirit of colonial rights once more asserted itself; and the pretensions of King and Parliament came finally to be resisted in South Carolina on much the same lines as those on which the people had resisted the imposition of Locke's "Fundamental Constitutions."

The discussion of slavery in South Carolina, by a loyal son and prominent citizen of the State, could hardly fail to be of some importance; and Mr. McCrady's treatment of the topic, though brief, is of as much general interest as anything in his book. It was the distinction of South Carolina to be the only colony in which the negroes outnumbered the whites; and the horrors of its rice swamps, the severity of its slave code, and its devotion to slavery as a domestic institution worthy of all commendation, have been set forth in vivid colors by numerous writers. Bearing in mind the period of which he is treating, Mr. McCrady's statements do not tend to confirm the extreme views of slavery opponents. As he exhibits it, slavery in South Carolina was by no means unusually severe. The slave laws, while rigorous in terms, provided punishments for whites who should ill-treat, maim, or kill their slaves; and the evidence shows that the laws were enforced. While the large number of slaves emphasized the need of control, and doubtless gave to the customary slave code a degree of harshness not always found elsewhere, there does not seem to have been, in this early period, the pervading fear of negro uprisings sometimes represented; nor were the insurrections which occurred followed by any special increase of severity towards the slaves. A curious exhibition of confidence was given by the reënactment, in 1720, of a law of 1708 providing for the organization of a negro militia, and this on the heels of a recently attempted outbreak. As to the general condition and treatment of the slaves, there does not appear to have been any noticeable difference between South Carolina and the other colonies, save that the labor of rice cultivation was peculiarly exhausting, and shortened the average life and usefulness of the blacks.

It is partly, no doubt, because of its distinctive character, and partly because of its geographical location, that the history of South Carolina, during the sixty years covered by Mr. McCrady's volume, seems somewhat aside from the social and political life of the other colonies. About much of it there is an undeniable air of remoteness. Not until the Sugar Act and Stamp Act brought the beginning of the end, did South Carolina come into the close contact with the other continental colonies which ultimately made union possible; and, even then, one can but feel that the province follows rather than leads, and that the springs of organized resistance are elsewhere. The record, as here brought out, is as honorable as any; but South Carolina had not felt, or even imagined that it felt, the burden of restrictive parliamentary legislation as much as had some of its neighbors, and its incentive to protest and revolt was, in consequence, not so keen. As elsewhere, too, the aggressiveness of the Revolutionary party met, at first, but a languid response from the majority of the people; while the arbitrary enforcement of the non-importation agreement aroused the opposition of those who, while not averse to ultimate independence, shrank from an independence so rudely ushered in.

Mr. McCrady's book has, as we have said, the general traits of its predecessor. It has also, in the main, the same limitations and defects. Like most elaborate State histories, there is much attention to local happenings, and considerable allotment of space to matters of antiquarian interest. The strict chronological arrangement makes against the interest of the narrative, and renders it difficult, at times, to follow the main course of events. To any but an ardent South Carolinian, the reading of the book can hardly be other than a task. It is unfortunate, too, that the author should not have thought it worth while to assist the reader by some of the mechanical helps commonly thought essential to good bookmaking. In a volume of 800 pages, there are no chapter headings except dates, and no page headings save the repeated title of the book. There is, however, a good table of contents, which the earlier volume wanted, and a full index. The citations of authorities lack uniformity, and show occasional errors, due, apparently, to hasty proofreading. These are minor blemishes, however, and do not detract seriously from the merits of a work which can unhesitatingly be pronounced a valuable and needed addition to American historical literature.

The Stones of Paris in History and Letters. By Benjamin Ellis Martin and Charlotte M. Martin. 2 vols. Charles Scribner's Sons. 1899.

There is, we are confident, no ironical purpose in the publication of two volumes which, on the eve of the Paris Exposition of 1900, declare, in the opening sentence of their introduction, that the work is in no wise intended for such as see in the Elysium of good Americans nothing more than a "city of shows." The magazine articles of which it is composed have already given prospective tourists some inkling of the *Paris inconnu, négligé*, which may be visited with profit at any hour between the *café au lait* of early morning and the *apéritif* of late afternoon. More comprehensive, as well as more ambitious, than Mr. Hare's useful guidebook to the antiquities of Paris, the present work seeks to vivify those fascinating streets by repeopling them with notable personages of history and fiction, and thus, if we may be allowed the figure, of masking the odor of modern asphalt with the aroma of historical and literary suggestion.

The topographical knowledge shown in this book is singularly wide and detailed. Hardly a step taken by its authors between Père Lachaise and the Bois, between the Butte Montmartre and the Observatoire, but opens up a vista on the interesting past; and, though making no profession of exhaustiveness, the long succession of stories contained in these volumes omits very little of permanent value to the completeness of the retrospect. We can readily imagine the pleasure of the intelligent traveller who, on substituting these volumes for the traditional red-covered handbook, discovers that the "Pension Vauquer" still exists in an objective tangibility as real as that of "Les Jardies."

Secure though they are on their own ground, the collaborators seem to have been less wary in their verification of assertions along the neighboring byways. This applies to fact and opinion concerning certain literary notabilities whose haunts are visited in these wanderings. Thus, in a chapter on "The Scholars' Quarter" (i., 93), it is said that Calvin "was induced by a daring relative to read the Bible, and the ultimate result was Calvinism, as it has been interpreted by his bigoted disciples," without any indication as to the direction and degree of the alleged divergence. We were under the impression that the 'Institution' is still the basis of Calvinistic theology. The well-known remark of Voltaire to Congreve, during the Frenchman's visit to England (1726), is here (i., 197) reported as having been addressed to Wycherley, who died in 1715. It may be true to declare that "slight trace is to be found of Jean-Jacques Rousseau in the Paris of to-day," but it argues a misconception of his influence to add that signs of it are equally absent "in the minds of men of to-day" (i., 206). On the same page we read that Rousseau sent his five children successively to the foundling hospital, "according to his own statement, which is our only reason for doubting that he did it." The testimony of a literary man regarding his own actions stands, it would appear, on a different footing from that of an ordinary witness in a court of law. We should further like to know on what authority it is said that of music "Rousseau knew nothing, except by the intuition of genius" (i., 206). Again, when reference is made (ii., 12) to the hissing of Sainte-Beuve by the students of the Collège de France (1854), it should be noted that, though the critic ascribed the misadventure to purely political motives, his own change of front towards the Romantic movement had aroused literary hostility in many of its younger energumens.

Errors, or slips of minor importance, for the most part easily avoidable, are noted in the following instances: Lancres (for Langres) as the birthplace of Diderot may be a misprint; but Saint Thomas of Aquinas is to us a new designation of the Angelic Doctor who immortalized Aquino. Chateaubriand's name never appears with a circumflex accent in any sound French authority. Lamartine, with all his slipshod style, was surely not guilty of exalting Charlotte Corday's heroic crime in such a barbarism as "l'ange de *l'assassination*." In magazine articles of this character it may seem hypercritical to insist on details of style and expression; still, when we read (i., 60) that Philip the Good, Duke of Burgundy, "loved maids-of-honor, and, indeed, paintings in general," the ambiguity of this quotation might, we should think, have provoked some comment from its too conscientious transcribers. When the latter give loose rein to their fancy, the reader may chance to be surprised with such a paraphrase of Mirabeau's celebrated aphorism (ii., 8) as the following: "A volcano is not to be squirted

cold by rose water." Given a small-sized volcano and unlimited rose-water, we should like to try the experiment.

But these volumes are, in other respects, an excellent means of preparation for an unconventional tour about Paris. They bring before one's very eyes a crowd of details, which, interesting though they are, find little space in guide-books, and none at all in the memory of the most garrulous courier; while the illustrative photographs and woodcuts give to description and narrative the welcome addition of concrete reality of presentation.

The History of the Great Boer Trek, and the Origin of the South African Republics. By the late Hon. Henry Cloete. Charles Scribner's Sons. 1899.

Side-Lights on South Africa. By Roy Devereux. London: Sampson Low, Marston & & Co.; New York: Scribners. $1.75. 1899.

The Hon. Henry Cloete was Commissioner for Natal in 1843-4, and, before and after that date, was prominent in the affairs of that colony. Between 1852-5 he delivered a number of lectures before a literary society in Pietermaritzburg, the substance of which is now reproduced by his grandson in this volume. At the present crisis, this statement of the origin of the conflict between the English and the Dutch is of no little value. It is, of course, free from the distorting passions which affect most of the publications now appearing on South African affairs; and while Mr. Cloete was a firm believer in the "paramountcy" of Great Britain, he gave a very fair account of the events that caused the Boers from time to time to submit and to rebel.

Mr. Cloete laid emphasis on the fact that the Boers were a pastoral people and a slaveholding people, and if it is considered what degree of civilization is attained before agriculture is regularly practised, much light is thrown on their history. When England acquired the Cape Colony, the Boers had been accustomed to receive grants of land for their "laagers," measuring from ten to thirty square miles. This policy not only removed the settlers from the influence of government, but also resulted in constant encroachment on the lands of the native tribes. Hence there was incessant friction on the frontier, and the British Colonial Office alternately defended the "pioneers," as such aggressive settlers have been called in this country, for the sake of the endangered Cape Colony, and, when the responsibility became too great, or the Government changed in England, took the part of the outraged natives. So things went till the great Kafir rising in 1834. This was put down by the British Government, which, however, refused to allow the claims for compensation made by the Boers, and the latter in disgust migrated in great numbers to Natal. From similar causes the trek into the Transvaal followed.

Into these particulars we need not enter further, but those who wish to understand the South African situation may well consult this authority, whose simple and slightly archaic style makes his lectures pleasant reading. We note that the account of one of the earliest defeats inflicted by the Boers on English troops, almost sixty years ago, reads like the reports now coming to hand of the recent surprises. We may also note, in the interest of historical accuracy, that Mr. Cloete was the person to whom some rather celebrated counsel was given. On his departure from England some one, whom he describes as "an eminent special pleader of Lincoln's Inn," said to him, "Now, Mr. Cloete, you have entered the law, and may possibly one day be elevated to the judicial bench. Allow me, therefore, to give you one friendly advice. Whenever you have to give your judgments, abstain as much as possible from giving your reasons; for your judgments may often be perfectly right, and yet your reasons altogether wrong." It only remains to determine the name of the "eminent special pleader" in order to put this often misquoted story on the footing that its merits deserve.

There is much good description of scenery in 'Side Lights on South Africa,' the authoress of which was correspondent of the *Morning Post*. Nor are her accounts of political and economic conditions undeserving of attention, her British prejudices being not offensively displayed. Her testimony is positive as to the unwillingness of the British Outlanders to accept the franchise in the Transvaal Republic. Their discontent was due to the fact that they chafed under Boer rule, and were determined to be free from it. Mrs. Devereux mentions incidentally numerous circumstances which show that it was not the oppressiveness of the Boer government which was the real grievance, but the fact that it was not British government. Of course, the exactions and restrictions of the Transvaal government are assigned as the cause of discontent, but there is a lack of specific charges. Concerning the high rates on freight, it is to be remembered that the Cape Colony exacts a heavy transit duty on merchandise passing through its limits.

Another fact mentioned by this writer deserves consideration. Mr. Rhodes's Chartered Company has the right to take one-half of the vendor's interest in every company organized for gold-mining. It has generally contented itself with 30 per cent., and to favored concerns it grants easier terms. Were such exactions practised at Johannesburg, the English press would ring with them. Mr. Rhodes has also formed a railroad combination intended to force the transportation of goods over his lines, instead of by the far shorter route by the east coast. In Kimberley Mr. Rhodes is an absolute ruler. The native workmen, when not below the surface of the earth, are confined in a strongly guarded pen. The whole development of Rhodesia may be said to depend on what is there called a proper supply of laborers, but which is really the maintenance of slavery.

On the whole, Mrs. Devereux's book is well written, and contains a good deal of information. Being made up of newspaper letters, it would be unreasonable to demand a very systematic arrangement of its contents.

L'Education au point de vue sociologique. By J. Elslander. Paris: H. Le Soudier. 1899.

M. Elslander is not the first to tell us that our system of education is all wrong, or to point out a road to its regeneration. His book has a certain vigor, thoroughness, and scientific air, however, which separate it from much that is written on the subject. While he shows faults in detail, he does not allow the reader to suppose, even for a little while, that these faults are attached to a structure fundamentally sound: the structure itself is the worst fault of all, the inevitable parent of all the rest. And this is so because our whole system of education, physical, intellectual, and moral, assumes certain conditions of society and educates children to conform to those conditions. Now *conformity* is the one word with which M. Elslander will have nothing to do in education, so far as it applies to anything but "Nature." The forces of "Nature" are beneficent in their effect upon the child always and everywhere, but restraint imposed by the hand or will of man is inevitably bad. The child's natural impulses are invariably good until they are perverted by impertinent interference in the name of education. These impulses themselves, not a predetermined programme, should be the guide in education; we should follow where they may lead, not try to make the child what we wish him to be. Develop every aptitude displayed, with no curbing whatever, and develop it just when and where it is displayed. All interference with the child's personality, all bumping against its egoism, is sure to do mental and moral injury.

The average reader will hardly fail to wonder whether M. Elslander has any children of his own, and, if so, just how he succeeds practically in steering as absolutely clear of conflict with their egoism as his book demands. Is it their natural disposition to want their faces washed and their clothing changed at about the right time? Certainly a large proportion of parents find serious and frequent occasion for conflict with the egoism of their children along this line. But possibly our notions as to clean faces and clothes are merely a product of a perverted and perverting civilization, not a part of the eternal fitness of things. Seriously, when one proposes absolute non-interference with natural impulses in education, and insists that his plan must be put in operation from earliest infancy, such points as these become of the deepest importance, and we can hardly let M. Elslander off from the charge of dodging when he ignores them.

Much as we should like to be convinced that there is a way to bring up children without any of the conflict that is usually so disagreeable to both sides, we must say frankly that this book justifies no such conviction. There are parts of it, however, which we wish that most parents and teachers might read. The thoughtful observer knows that many a child is curbed and fretted unnecessarily and harmfully in the home, that much of the work in the primary schools is stale and uninteresting and unprofitable. He knows that much of the moral instruction given is capricious and contradictory, that many of the answers to the questioning of morally perplexed children are mere evasions. He is well aware that the exercise of discipline has too often the practical effect of cultivating in the child the idea that it is all a matter of superior strength—that his own turn will come when he, too, has grown strong, and then the account will be evened up. The thoughtful observer knows all this, we say; but not all of us who have the responsibility of young children upon us, whether as parents or teachers, are thoughtful observers, and M. Elslander has put these things and others of the same nature in such a way that the reader can hardly pass lightly over them.

And their rehearsal is likely to have all the more effect when the reader sees how easily they may be turned into plausible premises for conclusions fundamentally repugnant to what he is apt to consider as the fundamental elements of a sound social organization. Or, to put the matter in another way, the asthor has given us an extremely suggestive book in a field where genuine, earnest thought is sorely needed; and he who does this does often a better service than one who writes a sound logical treatise which we may read without any mental or moral shock, and then neglect without any compunction of conscience.

The volume before us does not pursue the subject beyond the earlier years of the child's development. Of course so radical a revolution as is proposed needs to be elucidated clear through, and the author promises to complete the work in another volume.

E. T. A. Hoffmann's Sämtliche Werke, in 15 Bänden. Herausgegeben, mit einer biographischen Einleitung, von Eduard Grisebach. Leipzig: Max Hesse. 1899.

One of the most marked tendencies of contemporary European life might be designated as the return to Romanticism. What is Nietzsche's "Uebermensch" but a Wilhelm Heinse or Friedrich Schlegel redivivus? What is Maeterlinck but a new Novalis? What does this revelling of nearly all the most recent painters, poets, and dramatists in hazy, capricious, abrupt, symbolical conceptions—not to say hallucinations—mean but a reaction against the self-satisfied common sense of the Bismarckian age, an essentially Romantic attempt to go back of the world of appearances to the world of the great unknown, to the fleeting shadows and the unfathomable night of the infinite? Under these circumstances, it is not surprising that renewed popularity should have been brought to a writer who, after having profoundly influenced the imagination of the contemporaries of Heine, Victor Hugo, and Carlyle, seemed to be unable to hold his own in the realistic atmosphere of the last generation, a writer who may fairly be called the master, among the Romanticists, in the gruesome, erratic, and morbidly fantastic—E. T. A. Hoffmann, author of 'The Golden Pot' and 'The Devil's Elixir.'

It is only fair to add forthwith that this formula does not by any means express the whole of Hoffmann's literary character. It is a significant fact that three of the most artistic representatives of modern German realism—Friedrich Hebbel, Heinrich Seidel, and Gerhart Hauptmann—testify to the great stimulus which they received from him, and it is not too much to say that his true mental make-up consists of a most subtle combination of visionary, somnambulist imaginings with an unusually shrewd and wide-awake observation of actual life. To have demonstrated this double quality of Hoffmann's work constitutes the principal merit of an account of his life which was published in 1894 by Dr. Georg Ellinger ('E. T. A. Hoffmann, sein Leben and seine Werke,' Hamburg: L. Voss), the first biography of Hoffmann worthy of the name. Ellinger shows convincingly that Hoffmann's whole literary career was the continual struggle of a most sensitive artistic nature against the philistinism and æsthetic obtuseness of commonplace surroundings. Had his path been freer, had he not been obliged to fight first against desperate need, later against the miserable literary coteries of provincial towns, and finally against the narrow-minded bureaucracy of the Metternich régime, his literary development would probably have been much more normal, and less marred by intellectual eccentricities and antics. As it was, these eccentricities seemed the only possible outlet for his creative energy, and we can only regret that, instead of dissipating this energy in so many different directions, as story-teller, critic, composer, conductor, designer, fresco-painter, and jurist, he should not have concentrated it upon literature alone. Surely, he had the stuff in him for a great classical humorist; and some of his characters at least—above all, the melancholy, thoughtful, impassioned, and inspired Kapellmeister Kreisler, in whom Hoffmann seems to have embodied the best of his own self—take rank with the finest of Jean Paul's creations.

The present edition of Hoffmann's collected works opens with a biographical introduction by Eduard Grisebach, which, while adding hardly anything to Ellinger's book, gives a convenient summing up of its main results, and helps to bring out Hoffmann's personality by wisely selected passages from his correspondence. The works themselves are marshalled in chronological order from the 'Phantasiestücke in Callot's Manier' to the 'Neueste Schicksale eines abenteuerlichen Mannes' and other posthumous fragments; while the last volume contains a number of essays and sketches hitherto hidden in out-of-the-way periodicals or newspapers. Of the illustrations, the eight engravings after Callot, which are taken from the first edition of the 'Prinzessin Brambilla,' are particularly commendable. Altogether, this seems one of the most attractive and useful editions of Hoffmann that have thus far appeared.

The German Sectarians of Pennsylvania, 1708-1742. A Critical and Legendary History of the Ephrata Cloister and the Dunkers. By Julius Friedrich Sachse. Philadelphia: Printed for the Author. 1899. Octavo, xx+506 pages.

'Since 1881, when Pennypacker gave an account of the Ephrata Martyr-Book in the *Pennsylvania Magazine*, interest in Ephrata and Ephratana has increased with wonderful acceleration. It was soon ascertained that about fifty German books and pamphlets, previously unknown to collectors of Americana, had been printed during the eighteenth century by the Dunker Community of Ephrata, and a bookseller of Lancaster, Pa., issued catalogues offering some of these imprints at high prices. Seidensticker, in 1883, published the first comprehensive history of this singular sect, and gave the first critical analysis of its mystic theology. So great was the interest that Hark in 1889 was led to publish a translation of the 'Chronicon Ephratense.' Other investigators, chief among whom was Sachse, travelled from house to house through Lancaster and Lebanon Counties, and discovered manuscripts of much value, especially a roster of the celibates and a diary of the sisters' cloister. In 1892 a lot of type was turned up by the plough, and in 1898 more was found in the collar of one of the old community houses. Letters and pamphlets have been discovered in European archives, and many legends handed down by family tradition have been reduced to writing. From all these sources Sachse has produced a book of great interest to students of the religious history of colonial times. It is profusely illustrated with facsimiles of autographs, with initial letters and tail-pieces from the Ephrata manuscripts and books, as also with twenty-eight plates of portraits and buildings, and thirty-eight facsimiles of title-pages of rare books.

Seidensticker's work on the Ephrata Community ('Ephrata: Eine amerikanische Klostergeschichte,' Cincinnati, 1889) has never received the recognition it deserves. It is remarkable for its characterization of personages, is written from a broad, philosophic standpoint, and is invaluable for its thorough analysis of the mystic theosophy promulgated by the magnetic Conrad Beissel. The monks and nuns of the Ephrata cloisters are set forth as actors on a stage where the play was real to them, while to Seidensticker it was merely an exhibition of human nature, guided and swayed by the impulses of a peculiar religion and the circumstances of environment. To him the monastic community was an interesting phenomenon, that rose, flourished, and died without exerting material influence on the morals or theology of the people of Pennsylvania. Sachse's work, on the other hand, makes Ephrata the central feature of German influence in Pennsylvania during the eighteenth century. Mennonites, Lutherans, Reformed, Schwenkfelders, and Moravians are mentioned and briefly discussed, but these revolve like satellites around the central planet of the Seventh-day Dunkers at Ephrata. Sachse excels Seidensticker in detailed descriptions. The rise of the cloister buildings is minutely explained; scenery is painted vividly; we hear the tolling of the midnight bell and the whistling of the winter wind. His knowledge of bibliography is wide and thorough; matters of family relationship are set forth painstakingly, and numerous legends appear now for the first time in print. Yet it must be said that, in characterization, in critical analysis, and in a certain appropriate philosophic sarcasm, Seidensticker's modest work holds the higher place.

In truth, the influence of Conrad Beissel and his teachings was but slight. Even in the height of the prosperity of the cloister its celibate inmates numbered only about eighty, and the total number of adherents to the faith was probably less than 300. The Mennonites were counted by thousands, and the same was true of the Lutherans and Reformed. The Moravians, though few in number, exerted an influence, on both the colony and the Indians, beside which that of Ephrata was insignificant. Ephrata deserves attention as a phenomenon, both social and religious, but so isolated was it that its work had become almost forgotten in the early years of the nineteenth century. Its quaint monastic life, its peculiar Biblical theosophy, and its publications, all of which were due to its founder, Conrad Beissel, have made it, however, of greater interest than its actual influence would warrant. He who likes to lose himself in reverie over the deeds and thoughts of a cloister life of a century and a half ago will find full opportunity when reading the charming chapters of Sachse.

The book has its defects, like everything in this imperfect world. The principal title is misleading, but this, perhaps, is corrected by the sub-title. The statement that Ef-rā-taaw indicates the pronunciation of Ephrata does not agree with our experience. Errors of the printer are found on pages 354 and 414, the latter being inexcusable, as it occurs in a well-known passage of Scripture. Several statements that appear for the first time are not properly justified; for example, we should be glad to know the authority for the details of the initiation said to have been practised by the Zionitic brotherhood, as also the authority for designating the sisterhood as the "Order of Spiritual Virgins." These points will perhaps be explained in the second volume, which is to cover the period 1743-1800; in this period the Ephrata publications appeared, the community attained its maximum prosperity, then declined and died.

Text-Book of Vertebrate Zoölogy. By J. S. Kingsley, Professor of Zoölogy in Tufts College. Henry Holt & Co. 1899. 8vo, pp. 447; illustrated.

Text-books and manuals compiled from publications of original research bring the rapidity of scientific progress forcibly to mind. If at all comprehensive, as they leave the press they are behind the times, which is the more to be regretted if contents and presentation are of particular value. The present work, one of the best of its kind, is not an exception; and, beyond the unavoidable omission of many later advances, it may also be criticised for features that could readily have been changed with advantage to both author and readers. We refer to matter selected many years ago to which more recent modifications have not been applied. The classification, likewise, is not up to present demands, and will hasten displacement in favor of works better adapted to modern records. Another drawback to usefulness is the omission of bibliographical references and bibliography. Desire to examine the sources of information necessitates transfer of attention to works less chary of hints that all of vertebrate zoölogy is not included in their pages. Opportunities for fault-finding are extended by mistakes in identification, incorrect illustrations, and credits wrongfully given or omitted entirely—the last not so objectionable, perhaps, in a case like that of a skull with bisected maxillaries and obliterated lachrymals. The proofreader may be charged with slips like a "rental portal system," a "ductus curvierii," or a "See Lamprey," but a greater amount of abnormal orthography in a particular section, repeated in the index, tells of unfamiliarity with the subjects, thus: "Malapterus," "Hyperotretia," "Tutidanus," "Champosaurus," "Opoderodonta," "Telosaurus," "Sphrynidae," "Chordediles," etc. Occasional inexact statements are to be noted, as in case of the snakes, for instance.

Comparatively, the errors are few and of minor importance. Averaging the entire volume, this is a text-book of a high degree of excellence; it is better in the half pertaining to vertebrate morphology, containing the author's specialties of investigation, and less to be commended in that relating to classification of vertebrates. Prof. Kingsley's long experience as an instructor has enabled him to bring together in the best shape for teaching a great amount of material of which teachers and pupils will be glad and prompt to avail themselves.

The Wider View.

A Search for Truth. Collected and Edited by JOHN MONROE DANA. 12mo, $1.50.

"Mr. Dana's purpose in presenting this volume is to preach the religion of humanitarianism, and we think he has gone about it in a very effective way; for to his way of thinking he can bring the testimony of some of the ablest men and women the world has ever known. Mr. Dana's view—the wider view—seems to have been amply sustained by testimony which ought to pass in any court of public opinion. Excellent taste has been exercised in the make up of the volume, and Rochester ought to take due pride in the fact that one of her citizens has offered 'the testimonies of many times and lands and religions to the universal religion of divine sympathy and love toward man.'"—Rochester Herald.

The Nation.

NEW YORK, THURSDAY, JANUARY 18, 1900.

The Week.

Senator Hoar rendered an important service to the cause of human freedom by the few words of reply which he uttered at the conclusion of Senator Beveridge's speech on Tuesday week. Although he had announced his purpose to make a set speech on the subject of the debate, he saw the importance of pricking without delay the gas bag that the Indiana Senator had been so long inflating. This was done neatly and effectively by calling attention to the fact that, in the whole of Mr. Beveridge's address, so carefully prepared and printed and distributed before delivery, the words *right*, *justice*, *duty*, and *freedom* were wholly wanting. He went on to say that "practically every statement of fact in Senator Beveridge's speech was refuted by reports received from Admiral Dewey, Gen. Otis, and other official sources." This was a most sweeping statement, justifiable only by knowledge of the existence of reports from those officers which have not yet been made public. That such documents exist, or that Senator Hoar believes they exist, was made manifest by the resolution of inquiry which he at once introduced, asking for copies of all official communications to or from Aguinaldo or any other person commanding or representing the forces in hostility to the United States in the Philippines. In a subsequent letter, Senator Hoar makes more definite reference to this unpublished correspondence, saying that he has himself read some of these letters, and that they establish the fact that Aguinaldo is an honest, patriotic, and brave man, and is the chosen leader of the Philippine Islands. From other sources the report has gained currency that, at the time when the President sent his proclamation to the Filipinos which Gen. Otis altered on account of its incendiary character, peace had been practically secured. It has been rumored of late that the naval and military authorities in the Philippines, before the President's proclamation was received, were on the point of coming to an arrangement with Aguinaldo, by which hostilities would have been avoided altogether. If such are the facts, then the responsibility for all the waste of blood and treasure that has taken place since we bought or took the islands, rests on William McKinley.

Senator Beveridge has received a second lashing from the Republican side of the chamber, and from an unexpected quarter. Senator Wolcott took the same line of criticism as Mr. Hoar in a rather more picturesque manner. The immoral character of Beveridge's discourse on the wealth of the Philippines upon which we were to gorge ourselves, was held up to indignant scorn, and his highfalutin rhetoric was riddled with merciless sarcasm. Mr. Wolcott was not wholly free from highfalutin himself, but it was of a better kind that Beveridge's. He gave his attention also to the pretentious talk about the glory we were to acquire from an honest administration of the Philippine government. "With the municipal corruption that all admitted existed, it was ridiculous," he said, "to talk of appointing a lot of Indiana politicians in the Philippines and letting the reflected glory of the republic shine across the seas." It is true that Mr. Wolcott favors holding the Philippines as a matter of duty, or what he considers to be duty, but his exposure of the moral turpitude of Beveridge's plea for pelf was something for which he deserves hearty thanks.

Senator Beveridge unconsciously put a knife into the very midriff of the Administration when he declared that we must hold Manila in order thence to "command the trade of China." Then what has all the boasting been about, in connection with the "open door" in China? Are the diplomatic laurels to be plucked all green from Secretary Hay's brows? We have been assured over and over again that the Administration, by obtaining an international agreement for equality of trade privileges throughout the whole Chinese Empire, had already commanded the trade of China. Secretary Wilson was glorying in it publicly only the other day. England has been congratulating us on our great diplomatic achievement. No one said a word about Manila in the whole business. But now comes this tall talker of the Wabash and pours despite on the entire affair. If we do not hold Manila, that Chinese trade is for ever gone, he says, which the Administration had just informed us was for ever secured in quite another way. But the Indiana Senator seems to have a certain natural awkwardness in support of his friends.

The influence of the political "pull" in the relations of the national Government with the banking business of the country is clearly illustrated in the revelations regarding the selection, a few months ago, of the Seventh National Bank of this city as the depository of the post-office funds, in place of the Chase National Bank, which had long acted in that capacity. Those interested in banking observed that some changes were made in the Seventh National Bank last year, the most significant of which was the accession as a director of Perry S. Heath, First Assistant Postmaster-General, and the selection of his brother, Fletcher S. Heath, as its Vice-President. As these Indianians had never become prominent in the banking business, those who knew Perry S. Heath as a "hustler" at once concluded that he was capitalizing his political influence, rather than his knowledge or experience as a financier. This has now been proved. The statutes enable the Post-office Department, instead of the Treasury, to select the bank in which its funds shall be kept, and the First Assistant Postmaster-General soon took this privilege from the Chase National, and gave it to the bank of which Perry S. Heath was a director and his brother the Vice-President. The President of the Heath bank, William H. Kimball, was perfectly frank in explaining the matter to a *Herald* reporter on Friday. He is quoted as saying:

> "It is a case of business competition, and political influence counts. The man who can pull the most wires successfully often wins."

The bearing of all this upon the question of our expansion policy is plain and important. The spread-eagle orator from Indiana said in the Senate, the other day, that "the men we send to administer civilized government in the Philippines must be themselves the highest examples of our civilization"; that no one need "fear that our party workers will seek to fill these places without regard to fitness"; but that "I know well this most maligned and most valuable class of American citizens, the precinct committeemen and party workers in the country districts of the republic; and if we truthfully, bravely state the situation at the outset, these very politicians will insist most strenuously of all on the highest possible qualifications in the administration of our possessions." Senator Beveridge, of course, speaks of his own State. Perry S. Heath is the most prominent Republican party worker in Indiana. He has already shown that he considers it entirely proper for the First Assistant Postmaster-General to act as chairman of a national partisan committee, to "take a week off" in order to manage the Republican side of the fight for the control of Kentucky, and to get himself and his brother into the directorate of a New York bank, with a view to using his place in the department to secure favors for that bank. Was ever anything more ridiculous than the claim that the Perry S. Heaths, who insist upon having the offices at home and running them on the basis of the political "pull," will insist upon model adminis-

tration in managing the government of the Philippines?

How to get Cuba annexed to the United States with the least amount of trouble from the Cubans, and with the smallest apparent violation of the promises made by our Government, is the evident aim of the committee on colonial relations of the Senate, if we may credit a Washington telegram in the *Sun*. The committee, it says, will visit Cuba to learn from actual observation how much time will be required to bring the island under the influence of American ideas and American methods. The journey will be made in February. The telegram continues:

> "It is evidently the prevailing sentiment among the members of this committee that the annexation of Cuba will ultimately result, and perhaps at no distant day. In the meantime, the Cubans will enjoy that independence promised them in the resolutions of Congress which brought on the war with Spain. According to one member of the committee, annexation will be brought about by a perfectly natural process of transition."

It is to be hoped that the committee will include in their inquiries the question, how much time will be required to bring American institutions under the influence of Cuban ideas and Cuban methods. Under our form of government political action and reaction are equal. The "pull" which Cuba will have on the United States will be, like the pull of the planets on each other, in proportion to her mass. On this subject read the speech delivered by ex-Gov. Boutwell at the anti-imperialist meeting in Washington on Thursday evening.

The report comes from Washington that Quay's case and Clark's case for seats in the Senate are somehow joined together. If they are not joined, they ought to be. Both represent the very worst side of American politics. Quay has been known and read of all men for twenty years. His character has been established "from way back." Clark is a new comer, and it appears from the testimony taken in his case that a seat in the Senate from Montana goes to the highest bidder for cash, and is obtainable in no other way. The revelations made in this case are positively sickening. They are as bad as the stories we read of Roman elections in the last days of the republic. It is related, as the acme of corruption at that time, that a deposit was once made of 800 talents to secure the consulship. We should judge that this had been done in Montana to seat Clark, and that 800 more had been deposited to unseat him.

Mr. Kasson encounters difficulties in explaining the advantages of the reciprocity treaty with France to the Senate committee on foreign relations. He seems to have made a very painful impression by remarking that in the tariff act of 1897 many of the rates were intentionally made higher than necessary, in order to render it easier to negotiate reciprocity treaties. A number of prominent Congressmen are reported to have declared such a statement wholly unwarranted. They are shocked at the idea that Congress should have been actuated by such mercenary considerations. Mr. Kasson may have been rather blunt in his language, but really the tariff act speaks for itself. It provides that, "with a view to secure reciprocal trade," treaties may be made with foreign countries, which, in consideration of the advantages to the United States of tariff concessions by those countries, shall reduce the duties that we impose on the importation of some of their products. These treaties are to be made "with a view to the arrangement of commercial agreements in which reciprocal and equivalent concession may be secured in favor of the products and manufactures of the United States." It is preposterous to contend that the rates in our tariff were not determined with reference to this contingency. The people who settle our tariff duties are not so guileless as to have adopted rates without thinking of the possibility of reciprocity treaties. Of course they will oppose any reductions by treaty or legislation, but they need not pretend that the tariff was not framed with the prospect of "reciprocal and equivalent concessions" distinctly in view. The only tenable ground is to assert that the concessions to be obtained from France are not "equivalent" to those to be made by the United States.

The mind of the ordinary protectionist must be painfully confused by the exigencies of imperialism. The President's message bore a startling resemblance to a Cobden Club essay, and the Republican papers are filled with insidious representations of the benefits of free trade, Beyond question the mainstay of protection in this country has been the belief that the high standard of living attained by American labor was due to the tariff. Protective duties excluded the products of cheap labor and gave the American market to American labor. But here is the New York *Tribune* publishing views completely subversive of the protectionist faith. It prints an interview with a Gen. Stone, who goes so far as to ridicule the cheap-labor argument, to sneer at the tariff, and to insinuate that free trade with our new conquests is something required by philanthropy and the Christian religion. This renegade protectionist, who professes to have "stood by protection to American labor through thick and thin," says that the argument that "one-half the people in Puerto Rico live on 5 cents a day or less" is convincing only to stupid people. However correct this statement may appear from our point of view, it is evident that a sincere protectionist ought to regard it as highly esoteric doctrine. It is profaning the mysteries to give it publicity. Gen. Stone says that the American workman might like to have an orange, or a banana, or a pineapple, or a good cigar to smoke without paying the price of a Havana. "He might even like to have fresh winter vegetables without paying the hothouse price, but he finds that tobacco and vegetables are not worth raising in Puerto Rico, and delicious fruits not even worth picking because of the high tariff here, while American flour, meat, and manufactures are shut out from the island by the tariff which we impose there." It is certainly doubtful if a paper which prints such underhand attacks on the tariff as this ought to be allowed in a protectionist household.

In order to avert a suspension of building operations in Chicago, the labor unions have abandoned many of their extravagant demands. Affairs had come to such a pass that builders no longer dared to take contracts, not knowing in what losses future orders of the walking-delegates might involve them. Not only were they required to employ union labor and to use union material, but that material had to be of home production, regardless of the fact that better goods could be purchased from outside the city at less cost. On top of that, the unions claimed the right to determine the maximum amount of labor which their members should do in a day, at a price fixed by themselves. It was an attempt to arbitrarily provide work for everybody at good wages, and it nearly resulted in throwing all the building trades workers out of employment. By the agreement now made between the unions and the contractors, the latter are free to get their material anywhere, always provided that it is of union production, while the matter of unreasonable restrictions upon the amount of work done, and questions of apprentices, of sympathetic strikes, and of the usurpation of walking-delegates, are to be referred to arbitration. The unions retain, among other things, the "right" to fix the wage scale, but they have surrendered much. Even a Labor Trust has limitations, albeit it does not fear the Attorney-General.

Louisiana Republicans think that they see in Democratic disaffection over the nomination of Heard for Governor, at the dictation of Gov. Foster, an opportunity for something more than a forlorn-hope campaign. The situation is much the same as in 1896, when a coalition of the Republican factions with the Populists nearly overthrew the Democrats, and an attempt is making to renew that coalition. An agreement for united primaries and conventions has

been entered into between the Regulars and the Sugar Republicans, the line of division between which factions appears to have been nearly wiped out by the Democratic disfranchisement of the illiterate negroes. With no longer any fear of negro domination in the State, the Sugar Republicans, many of whose leaders are seceders from the Democratic party on protection grounds, and who have shown hitherto all the Southern Democrat's antipathy to the negro in politics, now argue in favor of welcoming to the party fold the intelligent negroes left on the registry lists. They have surrendered their title to the appellation of "Lily-White Republicans," the primary call just issued by their committee inviting all Republicans, "without distinction as to race or color." There are many men of character and standing in this organization, and out of it may perhaps come what some intelligent Democrats foresaw in negro disfranchisement—the creation of a strong opposition party which disaffected Democrats may join without losing caste.

The reports of the Mazet committee have been so thoroughly discounted in advance that only a languid interest is felt in the full text. The majority, of course, try to unload the full responsibility for the present misgovernment of New York city upon Tammany. The character of the administration is fairly summarized when it is styled "the most perfect instance of centralized party government yet known; government no longer responsible to the people, but to a Dictator; the central power, not the man who sits in the Mayor's chair, but the man who stands behind it; the powers of government prostituted to protect criminals, to demoralize the police, to debauch the public conscience, and to turn governmental functions into channels for private gain." But it is hardly a fair implication to give the impression that "a majority of the voters of Greater New York are satisfied with the present system, theory, and practice of government." The present administration represents a minority of the voters. More than 300,000 ballots were cast for Mayor in 1897, of which Van Wyck received only 143,666, or more than 6,000 short of half. The followers of Seth Low, Benjamin F. Tracy, and Henry George cast a total of 155,916 votes, and everybody familiar with the facts knows that the hearty support of Low by the Republican machine would have elected him.

The investigation into the affairs of the State Trust Company has revealed the interesting fact that "Lou" Payn, not a great while ago, borrowed from that institution $435,000. This loan was made to a man against whom judgments had been filed, over and over again, from his early manhood in 1859 down to within less than three years of his appointment as Superintendent of Insurance in this State in 1897. Some of these judgments had not been satisfied when he assumed office. Payn, of course, insists that the securities which he furnished as a basis for this loan were good, but the better they were, the greater the surprise that a man with such a financial record before becoming head of the Insurance Department early in 1897 should enjoy this high rank among capitalists before the end of 1899. Quite aside from any question of Payn's character and standing before his appointment by Gov. Black, what impression must be made upon the public mind by the discovery that an official occupying such a fiduciary position as that of Insurance Superintendent is engaged in great speculative schemes?

Mr. Dorman B. Eaton could hardly have made a better disposition of the sums left by him to Harvard and Columbia Universities, than by his requirement that they be used in founding professorships in the science of government and municipal administration. In this department at Harvard there has for years been a particular weakness, which has not failed to attract attention, and has led students of civics to seek other colleges for what they could not find in the Cambridge curriculum. There could be no more fitting time than the present to endow a professorship to "vindicate and strengthen" the "great principles upon which our national Constitution is based," and to point out "the obligations of the moral law and of patriotic endeavor in party politics and all official life." Nor could any better place be found than a college in the city of New York in which to found a chair to "gather municipal wisdom from the most enlightened cities," and to make good city government "the ambition and endeavor of the worthiest citizens." It is truly gratifying that the influence of a man who, from the purest of motives, devoted his life to the betterment of the governments under which he lived, should continue to be felt in institutions to which the country must look for some of its most ardent reformers and patriotic citizens.

A very desirable reform has at last been adopted by the Government in the matter of the charges of the Assay Office for gold bars. Hereafter these bars will be furnished by the Assay Office at a charge of four cents per $100, instead of ten cents. The charge was raised to ten cents some years ago on the theory that gold might thus be kept in the country. The reasoning of the Treasury officers was that, by making it expensive to obtain gold bars, the sordid bankers who wanted to export gold when it was needed here would be balked. They would find their miserable profit cut off by the charge for gold bars, while they would be kept from exporting coin by the loss from abrasion which would appear when the coin was melted in foreign mints. This petty expedient for maintaining the solvency of the United States Treasury was on a par with the device anciently resorted to in times of panic in England, of paying depositors in sixpences. There is nothing better in Adam Smith's writings than the chapter in which he examines the effect of the export duties on specie formerly imposed in Spain, and demonstrates the futility and the positive mischief of all such measures. The charge of ten cents per $100 for gold bars no doubt discouraged their export; but coin was exported instead, and the Government was, therefore, put to the expense and waste of coinage, to say nothing of the charges for transporting bullion and coin between New York and Philadelphia. It raised its charge for a service which cost it very little, and was compelled by its own act to render services which cost it a good deal. No one pretends that the movement of gold was checked by this paltry measure, and it is hardly necessary to say that it did not increase confidence in the solvency of the Treasury. When a man is found to be taking steps to stave off his obligations, his credit is not improved. We may reasonably expect that the beginning of the next century will find the Government permanently relieved from the temptation to resort to such contemptible means for maintaining its solvency.

The English Government appears to have receded from its first contention that food is contraband of war. That we take to be the meaning of its release of the cargoes of American flour, and its announcement that it will not regard provisions as contraband "unless intended for the enemy." By the enemy is meant armed opponents in the field. Food for the enemy's country is another thing. It is legitimate to try to reduce men in arms by cutting off their supplies, but not to starve non-combatants. If such is the scope of the decision arrived at, we regard it as a great gain for international law, and a wise thing for England. The status of food in time of war has been unsettled, and the present deliberate action of Great Britain in taking it definitively off the contraband list will go far toward settling universal practice. England's own interest is transparently against treating provisions as contraband. Lord Rosebery wrote to the London *Times* on December 28, referring to the "disquieting intimations" that the Government was treating food-stuffs as contraband, and calling for "an authoritative statement" on the matter of such "supreme importance." He has now got it, and it is to the effect that England does not propose to take a position which might result in her being starved in case of war with a country owning a first-class navy.

EX ORIENTE LUX.

A flood of light on the Philippine intrigue is thrown by Admiral Dewey's report to the Navy Department, dated Hong Kong, March 31, 1898. It was published for the first time on Thursday, having been sent to the Senate by special request. Dewey, like the careful officer he was, had thoroughly investigated the state of the Spanish defences at Manila, and expressed his confidence that he could reduce them and put the city at his mercy in a single day. He did exactly that one month later. It was, of course, strictly in the line of his duty to inform his Government respecting the military situation, and the Navy Department would have been inexcusable if it had not, at the time it telegraphed Dewey, been making up its mind what to do if war broke out. But the significant, the critical part of Dewey's report is this: "There is every reason to believe that, with Manila taken or even blockaded, the *rest of the islands would fall* either to the insurgents or ourselves."

Now it is not too much to say that this sweeps completely away the defence of our Philippine adventure which has been made by the President and his most ardent supporters. What is that defence? Why, that when the war began, this Government never dreamed of annexing the Philippines. Dewey was sent only to destroy the Spanish fleet. That was a perfectly legitimate operation, as both a blow to the military power of our enemy and a means of protecting our Pacific Coast. But, to the surprise and almost to the consternation of the President, he found that it would not do to recall Dewey's squadron; that he must send troops; that he must take Manila and occupy Luzon, and that then, led on strangely by Destiny and Providence, he must, with many misgivings, much against his will, and in obedience only to a lofty sense of national duty, instruct our Paris Commissioners to demand cession of the whole archipelago. This is no caricature of Mr. McKinley's account of his Philippine stewardship. Read what he said in Boston on February 16, 1899: "The Philippines were intrusted to our hands by the providence of God. It is a trust we have not sought."

In the light of Dewey's report this now sounds uncommonly like a devout explanation by Ah Sin that the twenty-four packs in his sleeves found their way there providentially. Here was the Commodore of the squadron writing three weeks before war was declared. In answer to inquiries from his Government, he distinctly foreshadowed the seizure of the whole group. "The rest of the islands would fall either to the insurgents or ourselves." This was in the hands of the Administration at the very time when it was asserting that the occupation of the islands was a pure afterthought, a dire military necessity unforeseen, an unexpected command of God. What can we say now of such talk except that it was sheer hypocrisy? There have been many hints and indications before that the annexation of the Philippines was a part of the Administration programme from the very first. People in the confidence of Admiral Dewey and Assistant Secretary Roosevelt, as he then was, have smiled knowingly over the theory that nobody ever dreamed of our taking the Philippines. But now we have the first official document proving that the thing was contemplated from the beginning. Is it any wonder that when Senator Sewell went to the President and begged him to order Dewey to sail away after the battle of Manila Bay, lest complications arise and we be compelled to take over the islands, Mr. McKinley refused to comply? Dewey was there precisely in order to make the islands "fall to ourselves," and the President knew it. He had a sure inkling of the vast designs of Providence in that matter, because he had been acting in the spirit of the old Puritan who said, when some one piously sighed, "Well, God mend all!" "Nay, we must help him to mend it!"

Only less important than Dewey's report is the official "Report of Tour through Island of Luzon" made in November, 1898, by two naval officers of Dewey's squadron, and only now given to the public. Senator Hoar succeeded in extracting this valuable document from the Navy Department, and getting it printed in the *Congressional Record*. It is endorsed by Admiral Dewey as "the most complete and reliable information obtainable," and it is no exaggeration to say that it completely snuffs out the speech of Senator Beveridge. These naval officers, Messrs. Wilcox and Sargent, travelled for six weeks in the interior of Luzon, and discovered such evidences of general intelligence and education, and good order and respect for the law, and patriotic aspiration, that the record is one, we should think, to bring a blush even to the cheek of the superior Lodge, who was again arguing last week that the Filipinos are but a set of savages, who ought to be only too happy to have us come and kill them in a civilized way.

What is most encouraging about the whole situation is that light is beginning to dawn. Whenever the cover is taken off the Philippine iniquity, a fresh set of its defenders are struck dumb. Every new document which the Administration can be forced to publish is practically a new exposure of blundering or worse. More official reports are to come. Gen. Otis's report, which so clearly convicts the President of being the one man responsible for the war with the Filipinos, speaks of naval reports or representations made from Manila in December, 1898. What were they? Was one of them a report from Dewey which, it has been alleged, the President quite disregarded and so floundered into his war? We shall soon know, for the Senate has asked for all the documents in the case, and if the Government does not give them up, its silence will be, like suicide, a confession. In any case, the policy of secrecy and suppression is evidently drawing to its end. It is a most righteous "itch to know things" which the country at present has regarding these Philippine mysteries; and the sooner we get to the bottom of the affair, the sooner we shall know whether it was Destiny, alias Providence, or an ambitious coterie of plotters at Washington, that got this white elephant of the Orient on our hands.

THE BANKERS AND THE TREASURY.

The letters from two prominent bankers to the Secretary of the Treasury, which were made public by him last week, are not pleasant reading. Probably no one who knows the authors of these letters would attribute to them any corrupt purpose. In one case the letter amounted merely to a suggestion that a delay in paying over to the Government a fund arising from the Central Pacific Railroad settlement would help the financial situation. It was accompanied with a statement that the call loans of the City Bank were at the time $56,000,000, and that the rates on the more speculative collaterals in Wall Street were high enough to force liquidation. The inference is unavoidable that if the City Bank could retain the deposits of the Government for a week, it would make a large profit from their use. It could lend larger amounts, at very exceptional rates. Moreover, if the President of the bank were assured of this money for a week, while the public knew nothing of it, very profitable operations in stocks were possible. Very likely a public service would be rendered by such action as was suggested. Panic might be checked, failures prevented, the normal and legitimate demands of borrowers be met. Nevertheless, these good results were to be produced by means that are scarcely defensible on any sound theory of government. The notion that the Secretary of the Treasury is a *deus ex machina*, whose duty it is to relieve hard-pressed debtors and to maintain prices for those who have to unload, ought to be repudiated. Many people remember the unpleasant events under Gen. Grant's Administration, and we might fairly say that scandals have attended the relations of the Treasury with the banks during a large part of the existence of our government.

The other letter is simply an illustration of the demoralization resulting from the doctrine of political spoils. It was written in behalf of a bank which was already a Government depository, and which desired to remain such. There was no impropriety in making such a statement, nor in calling attention to the financial strength of the bank. But the

letter closed with the intimation that the directors of the bank had rendered great services to the Republican party, and that on that account the bank had claims on the United States Treasury. The natural meaning of these words is that the directors had contributed a great deal of money to the Republican campaign fund, and that they expected to be repaid in some fashion and in some degree by favors of the Treasury. Very likely the author of the letter was unconscious of any impropriety in making such a suggestion. It was not intended as a request for any illegal favors. It was meant to remind the Secretary of the Treasury that in such matters of discretion as the choice of depositories of public funds, some regard should be had to the party services of bank directors.

There is nothing more in this than is involved in the claim which all our politicians believe in, and which most of them openly maintain, that the general Government is to be carried on for the immediate advantage of the managers of the dominant political party. The post-offices are to be filled with Republicans when they come into power. So are the custom-houses, the internal-revenue offices, the consulships, the departments in general. Some one must have the office, it is argued, and it is absurd to give it to a man who has done nothing for the success of the party, when those who have borne the burden and the heat of the day really need to be supported. In precisely the same way it can be argued that, as the Secretary of the Treasury is obliged to designate certain banks as depositories, it is reasonable that he should choose banks with good Republican directors. If there is any profit in these deposits, it ought to go to Republican bankers under a Republican Administration; and it ought especially to go to such bankers as paid the most money to put the Republican Administration in power. There is no question of loss to the Government; its deposits are well secured. It is simply a question of favoring Republican bankers who contribute to the party revenues, rather than Democratic bankers, or those who make no contributions. Let no one cast a stone against the bankers who wrote these letters unless he is ready to condemn the spoils system, root and branch.

We may profitably recall an episode in the political campaign of 1888. A letter from a Republican Senator was brought to light then, with very important political results. "If I had my way about it," said the author of this letter, "I would put the manufacturers of Pennsylvania under the fire, and fry all the fat out of them." He also said: "I was solicited to contribute to a protective-tariff league, and I replied that . . . I did not propose myself to contribute money to advance the interests of men who were getting practically the sole benefit, or at least the most directly important benefits, of the tariff laws." This letter opened the eyes of many people to the true nature of protective legislation. Those who are engaged in lines of business the profits of which are affected by foreign competition, pay liberally to elect Congressmen who will pass laws to protect them against competitors. When they have elected their Congressmen, they think that they own the Government. They have paid to constitute it in a particular way, for their particular pecuniary benefit. All our prominent manufacturers understand this very well, and never think of disputing it in private conversation. Bring the subject up, and they are very apt to mention some aggravated case of tariff favoritism. Bankers have until recently been more exempt from this political demoralization, but the exigencies of 1896, when their business became a political issue, were too much for many of them. Yet, in spite of the callousness of so many of our business men, there is a great volume of popular wrath at, and loathing for, the whole system of plutocracy, and had the Democrats a leader of real honesty and ability, he would be a formidable candidate for the Presidency.

REFORM BY SOCIAL STIGMA.

President Hadley's address at Denver has been variously reported, and it would be obviously unfair to pin him down to any form of words put into his mouth by a newspaper. There appears to be no doubt, however, that he did in a general way advocate social ostracism as a weapon of moral and political reform. In particular he urged social punishments for men whose wealth has been acquired by dishonorable, or at least anti-social, means. "When," said President Hadley, "it is understood that a man who does certain things cannot associate with his fellow-men, it will penetrate deeply into the social organism." Social disqualification, he added, and condemnation by public opinion, together make up the strongest force in the business and political world.

To this we heartily agree. Granted that there were in any given community an austere and high-minded and well-organized and stable social opinion, which could be depended upon to put a stigma upon the man who had heaped up riches by illicit means—especially upon a man who makes politics a matter of buying and selling—no more powerful instrument for righteousness could well be imagined. Wealth is sought for social ends. No man would live laborious days to acquire money, did he not look upon it as the thing which would throw open to him, or at least to his children, the doors of social enjoyment. To sit down as a social pariah, though cushioned by millions of bank-notes, is a wretched existence. Many an adventurer in times past has mournfully asked himself, when lying outside the social breastworks, "Was it for this that I turned such sharp corners, wrecked banks, and burst bubbles of speculation—only to find myself flung out here?" A man who has reached wealth by "rubs and doublings and wrenches" finds himself more miserable than Midas if he cannot make it minister to his social cravings. He can travel, he can buy pictures as he would cotton, books as he would cord-wood, but what can he get out of all this but vanity and vexation of spirit? What he wants is the regard and recognition of the best people; and we thoroughly endorse President Hadley's contention that, if these could be withheld from the shady capitalist, or the man who has fought his way to the top over the ruin of his own character and the wreck of other men's fortunes, it would be an unequalled power making for righteousness.

But, alas, where does this social Rhadamanthus exist? Where can we find this severe, this compact, this sensitive and scrupulous "society," ready to ostracise money that smells of blood or is tarnished by social crimes? We wish we could think that there is such a thing any more in this country—in any appreciable force, we mean. Of course, there is a remnant of it in our large cities—a few families in Philadelphia whose glances still freeze the upstart speculator; an inner circle in New York to secure entrance into which a man has to send in some other visiting-card than a certificate of deposit for $10,000,000; an intellectual élite in Boston that pours scorn upon the manipulators of gas stocks and the deities of the caucus. But is it not the truth that our society as a whole has lost the power of scourging wealth unscrupulously gained, because it has capitulated to wealth as such? As luxury has swept in upon our social life, we have ceased to discriminate too sharply. If lavish living is the sign of social standing, then the man able to squander his thousands on social joys provides his own satisfactory *cachet*. President Hadley would find it very difficult to get "society" to ostracise the successful gamblers in finance and politics when, in too many cases, its recognized "leaders" are the very ones who would first have to go. The most we could get in the way of denunciation would be an application of Clough's "Latest Decalogue":

> "Thou shalt not steal; an empty feat
> When 'tis so lucrative to cheat."

To bring this matter disagreeably home to the bosoms and business of New Yorkers, what social results may we expect to follow from the recent revelations in the financial and political world? Will anybody "ostracise" the bankers who went on their knees to Platt to get a Government deposit? Will the men who let Payn and Sheehan

have enormous loans, with a well-understood political attachment, find their fellows looking askance at them?

Even our political corruptionists we are at last recognizing socially. The moral harm that Gov. Roosevelt and President Low have done by sitting down amicably to breakfast with Platt is incalculable. He was almost as much of a social outcast as Hill, before these social eminences recognized him as an equal. But the power of discrimination in these matters seems almost gone; and our "society" will soon deserve George William Curtis's burlesque account of the rich noodle in Newport, looking about him at the ball and saying complacently and innocently, "Well, I see all the *parvenus* are here!" The churches have a terrible responsibility in this matter. Who does not remember the Presbyterian coquetting with Jay Gould? What Protestant church in this city would refuse a present of $50,000 from Platt to support a vested choir? What Catholic church would turn on Croker, bearing gifts, with an indignant, "Thy money perish with thee"? The pious Quay has founded a church in Pennsylvania, and, we do not doubt, would endow a theological seminary if necessary. At a certain stage of his career every wealthy corruptionist is said to fairly pine for a theological seminary to take his money. And what do the ecclesiastical—yes, and the educational—authorities do in such cases except to imitate the old Scotch minister who told the dying skinflint that he could not guarantee that a gift to the church would save his soul, but that "the experiment was well worth trying"?

But, when all this is said, we repeat that President Hadley is on the right track. He speaks for the ideal of society. What society should be is the great moral and reformatory power he alludes to. It should be separate and touch not the unclean thing. It should smite the evil-doer, though he be rich, with open scorn and pass a decree of perpetual banishment against him. We greatly need a quickening of our social sensitiveness, and the best way to induce it is to show what a power for good it might be made. Matthew Arnold said there could be no human perfection without society; and it is our business to make society the deadly foe of human imperfection, so that illegitimate wealth shall have the brand of social disqualification burned into it, and political tricksters, together with those who strike hands with them and hire them as bravos or panders, shall be made to lie in social outer darkness.

"THE MILLS OF GOD."

About 1880 Mr. Joseph Chamberlain was emerging from Birmingham municipal politics, making his appearance in the larger imperial arena, caucus in hand, and calling on the rich to pay ransom to the poor. I was naturally curious about his personality, and I wrote to a friend in England to ask what kind of man he was. My friend consulted a high authority, who told him, among other things, that "Chamberlain was the first politician of the American type that they had had in England, and would give a great deal of trouble."

I have been deeply impressed ever since with the acuteness of this observation. What this gentleman meant by the "American type" was undoubtedly the kind of man who considers public questions with his ear to the ground, makes up his mind about them with strict reference to the next election, and changes that mind as he would change clothes, according to the season. It was evident almost from the first year of Chamberlain's political career that he was "on the make," as we say in America—not, of course, for money, since he did not need that, but in respect to his personal political fortune. He at once took up the Irish business, which then seemed the most promising one. Home rule had not yet made its appearance, but the Irish under Parnell were threatening trouble. So they, as well as the poor, became in Chamberlain's eyes the most wronged of mankind. It was then that he made that famous "Poland speech," which bothered him so much afterwards, in which he compared the lot of the unhappy Irish to that of the Poles, ground down by Russian tyranny. He cast in his lot thoroughly with the Irish, as well as with the poor. It was current gossip in Liberal circles at that time that he wanted to be Irish Secretary, and that it was the bestowal of the place on Lord Frederick Cavendish which implanted in Mr. Chamberlain that dislike of Mr. Gladstone which burned brightly in him long before Home Rule, and satisfied him that this bad old man was not a man for him to tie to. Mr. Chamberlain, however, soon showed himself to be too adroit a politician and too powerful a debater to be ignored, and Gladstone had to give him "something equally as good." This was the presidency of the Board of Trade. I remember reading a speech of his at that period respecting the failure of a shipping bill introduced by him, which failure he ascribed to the then wicked Lord Salisbury. I read one later, after he had joined the Conservatives, in which he ascribed it to the doubly wicked Mr. Gladstone. I dare say there exists some means of reconciling the two statements, but it is not within my reach.

Every one remembers how Home Rule carried Mr. Chamberlain over to the Conservatives. I was in the House of Commons the night he made his final speech about this atrocious attempt to tear to pieces his beloved empire. His peroration, showing how much it all cost him internally, had a falsetto note, which, I observed, excited the smiles of my neighbors in the Speaker's Gallery. But he was now at the goal of his striving. He was in the best society of England, and had no longer any dealings with the wicked old Gladstone or the low Irish, and when the Conservatives should come in, he was sure of something. He got the Colonial Secretaryship.

I am recalling these events, not so much for the purpose of discrediting Mr. Chamberlain as for that of illustrating the moral government of the world. President Lincoln was not wrong in his second message in pointing out how nations and men are sure to atone some day for great errors or great crimes. Since Peel's day the English Tories have never been content with a statesman of their own order, taken from their own ranks. No one familiar with the character and prejudices and history of English gentlemen would have believed for a moment beforehand that a Jewish literary adventurer, however clever of speech, living by his wits, would have the slightest chance of a political career among them. But Disraeli had a most successful one, and rose so high in English social and political life that he had a narrow escape from being put in "orders" and made Archbishop of Canterbury. His antics amused them, and his cleverness saved them trouble. Nevertheless, it seemed unlikely that he would soon have a successor. But he was hardly dead when his successor turned up. For a literary adventurer was substituted a dealer in screws, a powerful debater, with no convictions to speak of, and a vaulting ambition. Home Rule, which turned so many English heads, and made the most distinguished public man they have had since Pitt a favorite object of the billingsgate of the upper classes, gave them Chamberlain as their man-of-all-work; and Lord Salisbury, able as he is, succumbed to him, just as he succumbed to Disraeli. He does not seem to have checked him once in his crazy colonial policy.

Who will say now that Providence has not in this way, dark and mysterious though it be, avenged the famous "wrongs of Ireland"? Could there be a more grateful topic of conversation, even among the chiefs and ladies bright in "the Halls of Tara," than the manner in which the great anti-Home-Rule Colonial Secretary had been "euchered" by a Dutch farmer into a bloody war for which he was not prepared, and in which the one "neglected estate" that he had undertaken to "cultivate" proved to be a nest of ten-pound hornets? Verily, the mills of God grind slowly, but they grind exceeding small. E. L. G.

THE WINTER EXHIBITIONS.

LONDON, January 1, 1900.

As I sit down to write, I hear drums in the street below—probably the Volunteers on their way to the Guildhall to be sworn in. I can see nothing, for London is wrapped—choked—in a thick, wet, gray fog. There could not be a more melancholy opening to the new year. It scarcely seems a moment when Englishmen are likely to spare much thought for pictures, or time for galleries. But it just so happens that the winter exhibitions at the Academy and the New Gallery have seldom been more interesting; the one supplementing the other, and both together giving as complete and representative a collection of the Flemish masters as could well be got together in one place, unless the national galleries of the world combined to arrange it. And after all, however absorbing other matters may seem at this crisis, Van Eyck and Memling, Rubens and Van Dyck, will live long after Krüger and Chamberlain, Joubert and Buller, are but names!

The idea, of course, originated in the Van Dyck celebrations at Antwerp last summer. The Academy had already been so successful in repeating the Rembrandt show of Amsterdam that the new opportunity for a good winter exhibition was not

to be overlooked; especially as it would be even easier to represent Van Dyck in London than Rembrandt. All the finest pictures at Antwerp, with the exception of the famous "Lord Wharton" that belongs to the Hermitage, came from England, where there were many more, as every one knew, that had not been trusted out of the country. This being decided upon, the directors of the New Gallery were wise enough to make their show an introduction to the Academy, by completing in it the representations of the Flemish school up to the time of Van Dyck, and also a sequel by including a few examples of the English portrait-painters who were Van Dyck's direct descendants.

The work has been done as well as it could be, I fancy, under the conditions. In a loan collection you must take not always what you want, but what you can get. The historical sequence is somewhat interrupted by the great gulf between the Primitives and Rubens, and again between Van Dyck and Reynolds and Gainsborough. But still, it suggests, if it does not follow in every stage, the development of Flemish art that led from the early immature performances of the old Guildsmen to the masterpieces of the greatest of the Flemings, and then, through their influence, to the portraits of the most distinguished group of painters England can boast. If you turn immediately from the austere, firm, uncompromising realism of the Van Eycks to the elegant, delightfully artificial conventions of Reynolds and Gainsborough, it may seem impossible to believe in any relation between them. But the two exhibitions supply many of the connecting links.

At the New Gallery the room devoted to the Primitives is most satisfactory—that is, from the historical standpoint. I do not think any pictures suffer as grievously as theirs from being seen, a great number together, in a gallery. These early painters almost always worked for a definite decorative purpose. Their Virgins and Christs, their saints and angels, were intended to serve as altar-pieces, to adorn reliquaries, to become a part of church or convent walls. They were never meant to be looked at apart from their surroundings. Did we not realize but yesterday the difference between the decorations of Puvis de Chavannes, when they hung in the Champ-de-Mars Salon, and when, afterwards, they were in their place in the building for which they were designed? The early masters lose still more, for in the gallery we are doubly conscious of their imperfections and limitations, it is difficult to judge of the decorative merit of their work, and there is no longer the sentiment of place that can make us forgive and even rejoice in their failures. Take Memling in Bruges, as the most striking example: I, for one, should not like to say how much my pleasure in him there comes from the innumerable associations of the quiet old Hospital, from the impressions of Fromentin passing through the same rooms, from (perhaps) the exaggerated melancholy of Rodenbach in his Bruges-la-Morte. But Memling in London, at the New Gallery, away from Bruges and its charm and glamour, becomes but the painter to be catalogued, classified, but a good subject for the ingenuity of the scientific critic. The pictures attributed to him yesterday are to-day labelled with some one else's name; his name to-morrow may be on a dozen pictures never hitherto claimed for him. He is a specimen to be studied, as the chemist studies his gases or the doctor his microbes.

I do not deny that a certain amount of exact classification is an excellent thing, but when it turns art into archæology, when the art critic adopts the methods of the literary critic whose only interest in Shakspere is to prove that he was Bacon, then I do not see that any good is accomplished. This is particularly true of many of the Primitives, who, to be honest, are not worth all the talk there is about them. Since the pre-Raphaelites, there has been a sort of superstition that the Primitives were, until the middle of this century, the only painters who went to nature for inspiration, when the truth is, never were painters so hampered by formulas imposed upon them. They could, I admit, in matters of detail, work with the realism of the Van Eycks. When, occasionally, they escaped from the religious subjects usually demanded from them, they did go to nature, apparently with relief, and, as far as it was possible within their limitations, with quite amazing results. Who can forget that wonderful portrait of Giovanni Arnolfini and his wife by Van Eyck in the National Gallery? And here, in the New Gallery, continually, through an open window or beyond the Christ Crucified or the Virgin and Child Enthroned, you look to a charming little landscape, or to the towers and battlements of a mediæval town set upon a hill, full of careful observation and distinctly individual in treatment. But in carrying out a religious motive certain things were expected of them by the patrons for whom they worked, and the consequence is a monotony in design and method that really is the second reason why it is a mistake to see so much of their work together. I have always felt this in the rooms full of Primitives in the great national collections—as must everybody else whose emotions have not been duly manufactured beforehand; and I feel it again in the New Gallery. There are some fine examples of the Van Eycks, Memling, Mabuse, Gheereart David, Van Orley, Quentin Matsys that I long to see back again over the altar or in the chapels or shrines where they originally belonged. However, as I have said, they have their historical value and importance in the exhibition, in any review of Flemish art; and archaic though they are, with their rich color, their careful draughtsmanship, their technical accomplishment, they seem worthy to prepare the way for Rubens.

Of all the masters, Rubens is probably the one who has the most serious disappointments in store even for his admirers. His name has become a synonym for splendor, for a flamboyant stateliness, for a voluptuous beauty, for a vigor, a vitality, simply amazing. The stories, the evidence too, of his facility take your breath away. You know the impression he made upon his contemporary, Velasquez, the influence he had upon his pupil, Van Dyck. But then, Rubens ran a shop, a picture manufactory. His assistants and students produced half, probably more than half, the work turned out in his name. The design may have been his, the painting was theirs. Compare one of his beautiful little sketches with the finished canvas, and the animation, the life, the soul has gone; only the empty swagger remains. What could be more wearisome than the acres of Rubens in the Louvre, in Munich, even in Antwerp—I mean in the Museum, not in the Cathedral, where, before the "Descent from the Cross," you can only wonder that you ever dared to criticise the master? It is not strange, therefore, when the most important national galleries do not always show you the real Rubens, that the directors of the New Gallery, borrowing where they could, have succeeded still less well. The big canvases they have collected together are mostly fine theatrical exercises, tremendously skilful *machines*, which the cleverest contributor to the Salons could not hope to rival. Of one, the "Daniel in the Lion's Den," belonging to the late Duke of Hamilton, it seems Rubens himself wrote from Antwerp: "Daniel amidst many lions taken from the life—original, the whole by my hand." But this is hard to believe, powerful as is the drawing of the lions. The Daniel, in his excess of terror, is melodramatic, and there is no splendor of composition, no glory of color, as in the "Paris" and the "Rape of the Sabine Woman" in the National Gallery. Indeed, were it not for a series of sketches, for his pictures, and for tapestry and a number of drawings, the student would have to go promptly from Regent Street to Trafalgar Square to remind himself of what good reason there really is for the fame of Rubens. The New Gallery, with the best will in the world, offers but a reminder, useful at the moment, of this greatest of the Flemings, who was Van Dyck's master.

But, if the National Gallery contains some of Rubens's masterpieces, it is far from doing justice to Van Dyck. The large equestrian Charles is there, and a fine portrait, but little else of note, while the Academy now gives such a chance to study him at his best as cannot soon occur again. It is hardly necessary for me to go very much into detail; it is only a few months since I was writing of Van Dyck in Antwerp, and all the masterpieces that were there reappear on the walls of Burlington House. Here again are the "Carew and Killigrew," the "Royal Children," with other pictures from the Queen's collections; here the Hermitage "Lord Wharton"; here the "Henrietta Presenting the Laurel Wreath to Charles," the "Earl of Arundel," belonging to the Duke of Norfolk, with several versions besides of that most generous of all Van Dyck's patrons; the painter's portrait of himself in his youth, and the other with a sunflower, still more deliciously affected, of a later period. And there are pictures not shown in Antwerp, quite as important. Only the big religious subjects, lent so reluctantly by Belgian convents and churches, are missing, but no work of Van Dyck could be spared so readily. They illustrate a certain stage in his career; they add nothing to his reputation. Altogether, the collection, which includes also a large number of interesting and characteristic drawings, is more fully representative of Van Dyck during his most distinguished periods than was the series at Antwerp.

Nevertheless, I find that the impression it makes is the same. If Van Dyck could sometimes show himself the supreme master, in a painting like the perfect "Carew and Killigrew," for instance, or a dozen others, he was far oftener content—with Rubens—to be the accomplished director of a picture

manufactory. His "Charles" and his "Arundel" and almost all his portraits of the artists and students and writers of his day prove his delight in the rendering of character when he discovered it in his sitters. But probably the expression of strong character was the one thing with which the lords and ladies who crowded to his studio could dispense, and so to him and to his assistants they became charming lay models upon which to drape a gorgeous costume, puppets to pose picturesquely. How lifeless they are, these pretty dukes and earls and marquesses, these great ladies in their silks and laces, with their pet dwarfs or tiger cubs at their sides! Van Dyck—again with Rubens—suffers from his own carelessness of his reputation, from his willingness to lend his name to all the work manufactured in his shop.

After Van Dyck, in his own country, came the decadence. But in England, the country of his adoption, there followed the growth and flowering of the first great school of English painters. The manner of this growth is not very clearly indicated at the New Gallery, excellent as is the intention. More than a century and several artists of great distinction separated Reynolds and Gainsborough from Van Dyck. The presence of Hobson and Walker, then of Lely and Kneller, who, though influenced by Van Dyck, became in their turn an influence, and of Hogarth, would have helped to bridge over the interval. It might have been wiser to limit the English work, since so little of it is exhibited, to portraits. It is always a pleasure to see the landscapes of Wilson and Constable and such a noble example of Turner as the "Walton Bridges." But these we owe to a very different influence, and they interrupt, instead of helping, the historical sequence. However, there are several fine Reynoldses, and Gainsboroughs, and Romneys; Reynolds's "Mrs. Nesbitt as Circe," with its forced, artificial, and very superficial allegory, showing how all that was most affected in the conventions of Van Dyck's latest period survived not only in Lely and Kneller, but in the English portrait-painters of the very end of the eighteenth century. Lawrence and Raeburn, who is but beginning to be appreciated as he should be, carry on the tradition to its decadence and final disappearance. For, surely, the inspiration of the few distinguished English portrait-painters of to-day comes not from Flanders, but from France. One or two men have tried to revive the old conventions, which, however, have proved empty and dead in their hands.

Until three years ago, with the Leighton exhibition, the Academy showed the Old Masters of many groups and schools, while never before this winter has the New Gallery sought to work in harmony with it. But so much has been accomplished by this joining of force, and by this representation of only one school or artist, that it seems to me the Royal Academy and the New Gallery have but to continue the present policy to make their winter exhibitions in the future still more delightful, and profitable too.

N. N.

RÉBELLIAU'S BOSSUET.

PARIS, December 25, 1899.

Bossuet will always remain one of the commanding figures of French literature and a model of style in the French language. There is in language a law of development and a sort of organic growth; Bossuet's style remains the perfection of the language of the seventeenth century. It belongs to the *grand siècle*, and cannot be separated from it; and whatever changes time may bring in the formation and expression of ideas, it will be an object of admiration for future generations. M. Alfred Rébelliau has applied himself to a special study of Bossuet's work, and has just added a valuable volume to the excellent collection of "Les Grands Écrivains Français" of Hachette. It will be read with pleasure, even after the works of Floquet, 'Études sur la vie de Bossuet,' 'Bossuet Précepteur du Dauphin,' of Gandar, 'Bossuet Orateur' and 'Choix de Sermons de la Jeunesse de Bossuet,' and the 'Œuvres Oratoires de Bossuet' published by the Abbé Lebarq.

Bossuet was born in 1627 at Dijon, at the time when a sort of Catholic revival, under the influence of François de Sales and of Bérulle, had begun. In his native province of Burgundy this revival was very marked. Bossuet's family was of humble origin; his ancestors had been drapers at Seurre, a small town of Burgundy. In 1517, one of them held a municipal office, and abandoned the old sign-board of the Bossuets, a vine with the device, "Bois boussu est bon," for the arms afterwards borne. The Bossuets became members of the parlements. The father of the illustrious Bishop was Councillor at Metz; he was a strong royalist and an ardent Catholic.

Bossuet was educated at the Collège de Navarre in Paris, and left it after the most brilliant examinations. His family had provided him, while still a child, with a canonry at Metz, but in the seventeenth century the obligation of residence admitted of many exceptions. The masters of the Collège de Navarre urged Bossuet to remain with them. He resisted their entreaties, and left for Metz, where he remained seven years, or until he was thirty-two. He arrived in a place which was in a miserable condition. The Spaniards and the Lorrainers were constantly devastating the neighborhood. Bossuet was at once appointed deputy of the chapter in the Municipal Assembly of the three orders, and was chosen to negotiate an armistice with the agents of Condé, who was at the time in the service of Spain. He left Metz in September, 1653, with a drummer to enter the enemy's lines. He thus immediately took his place as a man of action, and such he essentially remained all his life. He was always busy in directing religious communities or establishing seminaries. He was an indefatigable preacher. He was naturally eloquent, and his eloquence had always an end. He was also a great reader, and the germ of all his great works can be found in the studies he pursued at Metz and in his earliest sermons.

As soon as Louis XIV. became the real ruler of France, he aimed at the utter destruction of Protestantism in his kingdom. His predecessor, Louis XIII., had made war on it in the field; under Louis XIV. the war was carried on by the theologians. Bossuet entered the lists with ardor; his book entitled the 'Exposition of the Catholic Doctrine on Matters of Controversy,' composed in 1671 for the instruction of Turenne, of Dangeau, and of the Marquis de Lorges, made an immense sensation. In 1678, he was invited by Mademoiselle de Duras, a niece of Turenne, to confer and discuss with Claude, the most famous Protestant minister of the time. This debate recalled the famous discussion of Duplessis-Mornay and Cardinal Du Perron under Henri IV. In 1669, Bossuet was named Bishop of Condom, and soon afterwards, in 1670, Louis XIV. chose him as preceptor of the Dauphin. Putting aside sermons, controversy, funeral orations, Bossuet gave himself up wholly to his new task; he tried to make a king of France, a Christian king, who should be an honor to France and to Christianity. His pupil, alas, was a most ordinary and mediocre man, but Bossuet's time was not lost to the world, as his lessons took the shape of books which have been read by many generations.

The son of Louis XIV. and Marie Thérèse inherited from his mother a sort of heaviness almost amounting to vulgarity. A virtual king, he feared nothing so much as public life and diplomacy. He was brave and good, kind to those who lived with him, but careful to forget all that was taught him; he read only the births, deaths, and marriages in the *Gazette de France*. He spent whole days lying on his bed at Meudon, where he buried himself, away from Versailles, a cane in his hand, tapping his boots or playing with his snuff-box. What a pupil for a Bossuet! Bossuet, at least, profited by the education which the Dauphin received; he entered upon new studies. He was forty-three years old when he began to give lessons to the Dauphin, but he himself learned a great deal. He read Herodotus, Thucydides, Plato, Polybius, Strabo, Homer, Hesiod, Livy, Cicero; he became more familiar with the classics. His views on philosophy and policy became enlarged; he even opened the door to Descartes, though Descartes was denounced by the Jesuits as an accomplice of Calvin. He studied history in the original documents.

His polemical life began in 1673, when appeared the 'Critical History of the Old Testament,' by a learned Oratorian, Richard Simon. A friend sent it to Bossuet, who saw in this exegetic work "a heap of impieties," and denounced it to Chancellor Le Tellier. After a brief examination of it, orders were given to burn all the copies. Richard Simon treated the text of the Old Testament as an ordinary text, with the curiosity of a critic who means to have everything explained and verified. This scientific exegesis was a great novelty at the time, and seemed sacrilegious to Bossuet. Later, in 1680, he was much grieved at the publication of Malebranche's 'Traité de la Nature et de la Grâce." He wrote on the book "nova, mira, falsa."

In 1682, Louis XIV.'s policy was the cause of great embarrassment to him. The Pope's relations with the King of France had become very strained. In 1681, Innocent XI. excommunicated vicar-generals appointed directly by the King in two bishoprics, and an extraordinary general assembly of the clergy of France met on this occasion. The King charged Bossuet to make the opening speech in this national council. Bossuet was a Gallican, he regarded the King as a holy being, a representative of God on earth, responsible to God alone. He hoped to bring back to Gallicanism the French Protestants, who were always denouncing the Ultramontane pretensions. His position was not easy; he wished the Prince to be independent of the Pope, without being himself a lay Pope. He accepted the task which was offered him. Joseph de Maistre

considered Bossuet's sermon on "The Unity of the Church" which he delivered on opening the assembly a *tour de force*. For ten years Bossuet tried to reconcile the supremacy of the King with the supremacy of the Pope, but the Pope forced the King to capitulate. In 1693, Bossuet had, by order of the King, to compose for another assembly a form of retraction of the first Declaration of 1682—a retraction which the vicar-general had to sign in order to receive the papal bulls.

Bossuet had other battles to fight, against Jurieu, against Fénelon. The battle with Jurieu was occasioned by the publication of the famous 'History of the Variations in the Protestant Churches.' This and the 'Politique Tirée de l'Écriture Sainte' are the most important of Bossuet's works, which are still readable and are found in all libraries. As for his numerous theological pamphlets, written in answer to Fénelon or to the Jansenists, they have lost all their interest for us. In the 'Politique Tirée de l'Écriture Sainte' and in the 'Histoire des Variations' we have, so to speak, the nucleus of all the doctrine of Bossuet—*one* spiritual law, *one* temporal law. These two works are the studied code of absolute authority.

Bossuet found himself at one time in a sort of spiritual negotiation with Leibnitz. He wished to bring about a fusion of the Catholic Church and the Protestant churches, as well Lutheran as Calvinistic. A sort of written dialogue began between the great Bishop and the great philosopher. Bossuet insisted upon the necessity of a permanent doctrine and unity of belief. The Catholic doctor said: "This was believed yesterday, so it must be believed to-day"; to which the Protestant philosopher answered: "What if something else was believed the day before yesterday?" "Can you," asked Bossuet, "find a way to hinder your Protestant churches from being eternally variable?" To which Leibnitz answered in these famous words: "It suits us, Monseigneur, to belong to this moving and eternally variable church."

Bossuet's quarrel with Fénelon reminds one forcibly of Molière's verse:

"Tant de fiel entre-t-il dans l'âme des dévots?"

The very name of "Quietism" is almost forgotten, and we can hardly understand now the violence of the passions excited by the doctrine of Madame Guyon. Fénelon was condemned in Rome, but bore his defeat with admirable dignity; he was perhaps wrong in doctrine, but he struck in the heart of his contemporaries a chord of sentiment and sentimentality which was a sort of revolt against the harshness and severity of Bossuet.

Bossuet struggled to the end against what he considered the errors of the time. He preached also to the end, not only in his cathedral church, but in the smallest churches of his diocese. He began to suffer from the stone in 1700; in 1702, he bade good-by, on Easter Day, to his diocese. He continued to work hard in his episcopal palace, writing, correcting proof-sheets. He finished his 'Meditation on the Gospel,' his 'Explanation of Isaiah,' his 'Politique Tirée de l'Écriture Sainte.' When he died, on the 12th of April, 1704, Saint-Simon could write of him that "he died with his weapons in his hands."

Correspondence.

THE AUDITING OF M'KINLEY.

To the Editor of The Nation:

Sir: No historian who ever wrote has taken more frequent advantage of his position to make personal hits at the Administration of President McKinley than Tacitus, in delineating the imperialism of Rome. If I remember rightly, some of these thrusts have already been brought to the attention of your readers, but not the one which follows.

On the death of Augustus, his grandson, Postumus Agrippa, was immediately slain by a centurion detailed for that purpose. (It will be remembered that he was at the time on the island of Planasia, under sentence of banishment.) The centurion undertook to report to Tiberius, but was referred to the Senate, Tiberius disclaiming responsibility. Thereupon Sallustius Crispus, fearing the possible results of his own part in the slaughter, went to Livia, still in many respects the head of the house, as she had been during the last years of Augustus, and warned her that Tiberius should not break the force of his imperial authority by bringing everything before the Senate. "For," he added, "it is a fundamental fact of imperialism that its accounts will not balance if submitted to more than one auditor."

That fundamental fact seems to be fully appreciated by our modern imperialists, who seem determined to give the people full information on no fact of real importance until that information is wrested from them by a pressure which can no longer be safely resisted.

W. H. Johnson.

"THROW OVER BRYAN."

To the Editor of The Nation:

Sir: Believing that the *Nation* likes to know facts, I take the liberty of saying just how a sentence in No. 1801 strikes me. The sentence is this: "Why not throw over Bryan with the free-silver issue?"

I am a teacher, and take no part in politics except to vote. I want Bryan renominated by the Democrats because I believe that he is opposed to the tariff and to monopolies of all kinds; because I believe that he is not dominated by the influences that rule McKinley and Hanna. You must find us another man before you say, "Throw over Bryan."—Very respectfully,

J. H. Dillard.

Tulane University, New Orleans,
January 6, 1900.

[But we are equally ready to say, "Throw over McKinley with the imperial programme."—Ed. Nation.]

OUR NEW DIPLOMACY.

To the Editor of The Nation:

Sir: Educated opinion is, I take it, the same in all parts of our country as to the wretchedness of boss rule and the difficulty of overthrowing it because of our lazy good-nature. It does seem a little too bad, however, that those of us who are working in Europe should be hampered by shoddy politics in America. Advanced study in classics and in certain forms of art does not, at first sight, seem to be related to the question of the Italian immigrants who arrive in New York, but we here are suffering from an unwillingness on the part of the Italian Government to go out of its way to be friendly to representatives of a country by whom Italy has recently been treated with extreme discourtesy.

The story (which I have from the highest Italian authority) begins with the passing of our present immigration law, part of which was framed, as every one knows, with the sensible intention of preventing pauper aliens from entering the United States. When this law was passed, the Italian Government, in order to assist both her own people and the United States, came to an informal agreement with the authorities at Washington, in accordance with which an office in charge of authorized Italian officials was established on Ellis Island. At this office the immigrants were given whatever information was needed by them, and assisted to defend themselves from the padrone. In case question arose as to any immigrant fulfilling the requirements of the law, the officials in charge of the office were in a position to give our Government information that could be acquired in no other way.

This took place before Mr. McKinley was elected President. It was a system that worked excellently, and both parties to the agreement derived considerable benefit from it. The dullest imagination can perceive what a blessing it must have been to the immigrants. When Mr. McKinley became President, Mr. Powderly was put at the head of the Immigration Bureau. Owing to the hostility of the trades-unions to foreign immigration, Mr. Powderly did his best to get the office on Ellis Island abolished, and the Italian Government was informed that the office must be closed. Though the agreement to which the office owed its existence had been informal, yet the work done by it had been so satisfactory that the Italian Foreign Office was surprised, and begged earnestly for an adequate explanation of our action. As there was none to give, and as, being at war with Spain, we did not desire to increase the number of our enemies, the matter was dropped and the office continued its beneficent work.

Lately the affair has been taken up once more, and the Italian Government has been finally told that the office would be abolished, the reason being that other nations were asking to be allowed to establish similar bureaus, and we cannot give this right to everybody! That other European nations should be demanding this permission is an incontrovertible proof of the excellent service of the office, but apparently our Washington sages think that, like Polycrates, we had best throw some precious possession into the sea.

But greater even than the wisdom of our Solons is their courtesy, for this was the manner of their notification to the Italian Government. Early in December the Government here was informed, through the Italian Ambassador in Washington, that the office was to be done away with. The Marquis Visconti-Venosta, Minister of Foreign Affairs, asked (using the telegraph) that no final action be taken until the authorities at Washington had studied the papers he desired to send them. The papers were sent, but the reply received by cable at Rome before their arrival in Washington was that the office would be closed on Janu-

ary 1—papers or no papers. The exact language I am unable to quote, but the abruptness of the decision is evident. The exact feelings of the Italian Foreign Office were left by my Italian informant to my imagination.

Up to the present time the Italian press has scarcely commented on the subject, for the Marquis Visconti-Venosta, knowing its supersensitiveness on certain points, has kept the matter dark. One writer has, however, asked if this case is to be taken as a sample of our "new diplomacy." It is to be hoped that, before the press begins irrational attacks either against us or the Italian Foreign Office—attacks which would render the wise settlement of the affair more difficult—the matter will have been reconsidered at Washington from the point of view of common sense and not that of the next election. RICHARD NORTON.

AMERICAN SCHOOL OF CLASSICAL STUDIES,
ROME, December 27, 1899.

OUR TITLE TO THE PHILIPPINES.

TO THE EDITOR OF THE NATION:

SIR: Imperialists speak of the Filipinos as being in a state of insurrection. An insurgent is one who resists by force constituted authority and attempts by arms to overthrow an established government to which he owes obedience. That the Filipinos, who once were Spanish subjects, became insurgents against Spain by contracting an alliance with the United States, cannot be denied, but resistance to the extension of American sovereignty over the Philippines is not insurrection, as they have never been subject to the dominion of the United States. Aguinaldo's Government was the legitimate successor of the Spanish, and was organized and in control of the islands long before the pretended cession to the United States. As Spain had already lost control of the territory, and the United States had never attempted to exercise even military authority (before the treaty was signed) outside the limits of Manila, clearly the Filipinos could not be in insurrection against a power that did not exist.

By the terms of the protocol, the United States was to hold Manila pending negotiations for the disposition of the Philippines. Of course, any attempt by the United States to extend its authority during the suspension of hostilities might be a breach of the conditions of the protocol and a violation of public faith. The agreement provided that the situation in the Philippines should remain unchanged until a treaty of peace was concluded. The mere signing of the treaty by the Commissioners gave it no operative force before the exchange of ratifications. Yet on December 21, 1898, when the treaty had not been ratified and had no more legal force than a blank sheet of paper, and in defiance of the protocol, the President wrote to the Secretary of War:

"With the signature of the treaty of peace between the United States and Spain by their respective plenipotentiaries at Paris, on the 10th instant, and as the result of the victories of American arms, the future control, disposition, and government of the Philippine Islands are ceded to the United States. In fulfilment of the rights of sovereignty thus acquired, and the responsible obligations of government thus assumed, the actual occupation and administration of the entire group of the Philippine Islands became immediately necessary, and the military government heretofore maintained by the United States in the city, harbor, and bay of Manila is to be extended with all possible dispatch to the whole of the ceded territory."

The same day a cable order was sent to Otis: "The President directs that you send necessary troops to Iloilo to preserve the peace and protect life and property." Life and property were then as safe in Iloilo as in Manila. Peace was preserved and life and property protected by bombarding the town. The proclamation was a declaration of war against a people who had been organized and armed by the United States as allies in the war with Spain. It assumed foreknowledge of the fact that there were Senators who would speak against the treaty, but who would stultify themselves by voting to ratify.

It is a well-settled principle of public law that the national character of territory ceded by treaty continues unaltered until the treaty has been executed. As long as it remains executory, and there is no delivery of possession, the sovereignty is unchanged. Such a thing as sovereignty without possession cannot be conceived. This would have been the legal effect of the treaty even if Spanish power in the Philippines had not been extinguished and there had been no organized opposition to the transfer of sovereignty to the United States. The word *cede* means to yield or surrender title to something. But Spain had been divested of all title and had nothing to yield or surrender. Twenty millions were simply given as a soothing syrup to console her.

There is no analogy between a title acquired by private contract and a cession of territory. A citizen may convey property in the adverse possession of another, because the Government is the guarantor of its enjoyment by the grantee if the title of the grantor is good. In such a case the supreme power of the State provides a tribunal to try the right and execute its decree. But contracts *inter gentes* have no such sanction because there is no common political superior to enforce them. What is called international law is not law in the municipal sense of law. It is a mere ethical code, not a positive institution. Nations in their intercourse respect it, but there is no civil remedy for a violation of it. Redress must be sought by negotiation, or war. Hall, on International Law, says: "As international law is destitute of any judicial or administrative machinery, it leaves states which think themselves aggrieved and which have exhausted all peaceable methods of obtaining satisfaction, to exact redress for themselves by force." Law is defined by Blackstone as the command of a superior to an inferior. But among sovereigns there is no inferior—all are equals. Hence there can be no such thing as sovereign right without sovereign possession.

The cession of Louisiana is a case in point. It was a province of Spain, and by a secret treaty was ceded to France in 1800, but there was no transfer of possession until 1803. In the case of the *Fama*, 5 C. Robinson 107, Sir William Scott held that the national character of the inhabitants of Louisiana was not changed *ipso facto* by the treaty, and that Louisiana continued to be Spanish territory until it was actually delivered to France. There was war between England and France, and a vessel cleared from New Orleans with a cargo belonging to a merchant there resident, and was captured on the voyage. It was contended for the captors that, as domicile in war is a test of national character, it was enemy's property because Louisiana, having been ceded to France, was no longer neutral territory. The case turned upon the nationality of Louisiana. If it was French, the property was liable to condemnation as prize of war. Sir William Scott (Lord Stowell) said:

"The present question is a general one respecting the situation in which the people of a distant settlement are placed by a treaty of the state to which they undoubtedly belong, and by which they are stipulated to be transferred to another Power. The case proceeded for a considerable time without dispute as to principle on a mere inquiry into the fact of possession; under an understanding, as I apprehended, that if possession had not been taken by France, the French character could not be deemed to have attached. The question has, however, now been fully argued as to the principle of law, whether the treaty did not in itself confer full sovereignty and right of dominion, and whether the inhabitants were not so ceded by that treaty as to become immediately French subjects. The other question of law, how far full sovereignty can be held to have passed by the mere words of the treaty without actual delivery, was in the first stages of this cause not mooted. It is to be observed that all corporeal property depends very much upon occupancy. With respect to the origin of property this is the sole foundation. So with regard to transfer, it is universally held in all systems of jurisprudence that to consummate the right of property a person must unite the right of the thing with possession. I am of opinion that, on all the several grounds of reason or practice and judicial recognition, until possession was actually taken the inhabitants of New Orleans continued under the former sovereignty of Spain." Judgment for claimant.

The doctrine of this case was affirmed by the United States Supreme Court in Davis vs. the Police Jury of Concordia, 9 Howard 280. The Court said (p. 292):

"The *Fama* sailed from New Orleans in April, 1803, for Havre de Grâce with Spanish property on board. She was taken on the way by a British cruiser, and her cargo libelled, it being alleged to be enemy's or French property only upon the ground that Louisiana had been ceded by Spain to France before the *Fama* sailed. The points stated in the words of Sir William Scott are, whether the treaty did not in itself confer full sovereignty and right of dominion to France, and whether the inhabitants were not so ceded by that treaty as to become immediately French subjects. The cause was fully argued on both sides by as able counsel as were in that day or since in the admiralty courts of England, The cargo was restored to the Spanish claimant on the ground that the national character of a place agreed to be surrendered by treaty, but not actually delivered, continues as it was under the character of the ceding country."

According to these decisions, even if there had been no contest with the Filipinos until possession had actually been delivered to the United States, their national character would continue to be the same as when the treaty was signed. But the cession was absolutely void because, at the date of the treaty, Spain did not possess the sovereignty of the islands, and hence had no power to cede. She had no right to cede what she could not deliver. Spain's sovereignty in Louisiana was undisputed, but, in the Philippines, it had been wrested from her by the people she undertook to sell. The Filipinos were in actual control everywhere but in Manila. If the United States acquires possession of the Philippines, its title must rest not on cession from Spain, but on the conquest of the Filipinos. We bought nothing from Spain but a hole in the sky.—Respectfully, JNO. S. MOSBY.

SAN FRANCISCO, January 7, 1900.

THINGS ATHENIAN.

To the Editor of The Nation:

Sir: The old Greek adage, that it is not given to every one to visit Corinth, still holds good as regards Athens in modern days. The tide of American travel still flows from Italy past the peninsula of Greece on to Constantinople or to Egypt without touching at Patras or the Peiræus, and the American colony at Athens is not yet so numerous as to be promiscuous. On returning to Athens after an absence of twelve years, one is impressed with the rapid strides the capital of Greece is making towards becoming a handsome city. Private residences as well as public edifices are built of Pentelic marble in part if not throughout, and the neighboring quarries are yielding an ever-increasing profit to the English company that has purchased a large part of the old mountain. The lesser and nearer heights, such as the Hill of the Muses and Lycabettus, are scarified and mutilated by the constant demands upon them for building material, and the day is close at hand when their outlines, if not their very existence, will be wiped out, unless the Government puts a stop to this wholesale destruction. The city is also losing its semi-Oriental character and becoming more commonplace. Fustanellas and fezzes are comparatively rare sights, and one must go down into the older portions of the city, near the Tower of the Winds and the Stoa of Attalos, to see and to hear the characteristic sights and sounds of the Athens of twenty years ago.

One is surprised to notice so few traces of the effects of the late war with Turkey. Some of the Greeks speak of the affair as a mystery, more look upon it as a stupendous political blunder, and all get some comfort from the outcome, which has given to Crete a popular and intelligent Greek prince as Governor. One indirect effect of the late war is especially deplored, and that is public begging, which, before this, was hardly known in Greece. This, doubtless, is a remnant of the public charities that were instituted during the war to care for the refugees who sought shelter in Athens.

The Boulé has just begun its session. There is prospect of lively discussion, though the Government party has a good majority. One of the most important questions to come before the Chamber of Deputies is the increase of the supply of water for Athens, which is a growing necessity. There is a curious lawsuit pending on which the whole matter seems to hinge. The late Mr. Syngros, after providing for his family, left the bulk of his property to charitable objects, making a certain benevolent organization his residuary legatee, but naming the sum which he expected it to inherit from him. But it turns out that his estate is worth upwards of a million of drachmæ more than he had supposed. The widow now sues to have this surplus revert to her, with the understanding that, if the courts decide in her favor, she is to present this amount to the Government for the new water supply. The sum required will be much larger than the amount of this bequest in litigation, but the Government hopes that, with this amount in hand, the needed work can at least be initiated.

Another matter that is likely to agitate the Boulé relates to forming a closer connection with the rest of Europe. The most feasible plan is to extend the railway from Larissa in Thessaly to Salonica, and there form a junction with the line from Constantinople to Vienna. That communication by rail with Western Europe would be of great advantage to Greece cannot be doubted. The difficulty in the way is the needed concessions from Turkey, through whose territory a large part of the proposed road would run. Just now, however, the Sultan is showing a friendly disposition towards Greece, and there is reason to hope that such a concession may be obtained.

Then there are questions of constitutional and financial reform to be discussed. To be sure, such questions are always at the front in Greece, but they seem to be unusually urgent at present, and it is said that the Ministry is determined to accomplish something of note in that direction. One of these reforms is the abolition of the vexatious octroi duty between the Peiræus and Athens.

Most of the temporary residents from Northern Europe and America are drawn here by the opportunities for archæological study and exploration. There are now five schools for classical and archæological study in Athens, the latest born being the Austrian Institute. They maintain most friendly relations with one another, and all enjoy the hospitable favor of the Greek Government and its officials. The Germans, under the auspices of the Berlin Museum, are digging in Miletus, the Austrians in Ephesus, the English in Crete, and the Americans hope to resume work at Corinth. The British School has recently fallen heir to a library "bonanza." The library of the late Dr. Finlay, the historian, containing upwards of 4,000 volumes, has been presented to it. This library is especially rich in books and pamphlets on the history of Greece during the Byzantine and Frankish periods, and contains a number of personal memoirs in manuscript and letters from distinguished men that have never been published.

Our American School has entered upon the nineteenth year of its existence. Its twelve students, representing ten different colleges and universities, are at present enjoying the privilege of hearing Dr. Dörpfeld once a week talk, as only he can talk, on the recent excavations about and on the Acropolis. In addition to the exercise in epigraphy with Prof. Herbert W. Smyth of Bryn Mawr, they enjoy occasional lectures from Dr. Wilhelm of the Austrian Institute. To this is to be added the weekly visit to the rich collections of sculptures in the museums under the skilful guidance of the Director of our School, Prof. Rufus B. Richardson. If the friends and patrons of the School could see for themselves the enthusiastic work that is done here, they would value still more than they do the helpfulness of this School in training the future teachers of classical studies in our country. The desirableness of putting the School on a permanent financial basis is patent to every one who knows its history and the worth of what it is doing. The time is ripe for the completion of its endowment, which has already made so good a beginning.

The excavations at Corinth are at present suspended, partly to await more favorable weather, but also for lack of funds. The last discovery made on that site is the spring of Glaukê, not far from the old temple, which, as we have now learned, was not the temple of Poseidon, but of Apollo. It is to be hoped that the appeal of Mr. Richardson in your columns last August for financial aid to resume these interesting explorations will not go unheeded. The discoveries made by our School during the past decade at Sicyon, the Heræum, Icaria, and Corinth are acknowledged by the leading scholars of Europe to be a great credit to our country, and give American scholarship a position which it has never held before.

The work of the Greek Archæological Society on and about the Acropolis is now finished. This is not the place to recount the many important finds that have been made on this site within the past few years. The old rock and its western declivity are now denuded of all Frankish and Turkish additions. The Acropolis is again a precinct of sanctuaries, though in ruin, and stands out above the modern city more rugged and severely beautiful than when its approaches were disfigured by bastions and bulwarks of modern construction. The Parthenon has still a scaffolding on its western façade to facilitate the work of placing supports and pieces of architrave and columns where time and bombs and earthquakes had wrought most ruin. It is expected, however, that this needed work of restoration will be completed in the course of a few months.

Martin L. D'Ooge.

Athens, December 18, 1899.

SUUM CUIQUE.

To the Editor of The Nation:

Sir: Your recent appreciative and discriminating notice of 'The Methods and Materials of Literary Criticism' accidentally misstates the respective shares of the collaborators in that work. If your reviewer's epitome of authorship by chapters be, in general, retained, it should read, "Theory of Criticism, History of Criticism (mainly by Prof. Scott), Theory of Art (partly by Prof. Gayley), Development of Art, Theory of Literature, Comparative Literature (mainly by Prof. Scott), Theory of Poetry, Historical Study of Poetry, Historical Study of Poetics, and Principles of Versification (mainly by Prof. Gayley)."

But it would, in truth, be impossible for the authors themselves to indicate exactly the contribution of each to chapters that have been ten years on the stocks; and, in their inability to make more definite apportionment of their labors, they are of a mind that the best parts of the book were written by both, and the worst by neither. Each is, however, generously disposed to appropriate whatever credit may be got out of it.—Yours sincerely, The Authors.

January, 1900.

BIBLE DICTIONARIES.

To the Editor of The Nation:

Sir: What you say about a Bible Dictionary, with special reference to Prof. Davis's new book, suggests that there may be known to you some better work which would be adapted for persons "already wandering in darkness," or at least not "satisfied with the Princeton position." If such a book is on the market, will you not kindly print its title and publisher?—Respectfully,

Seth Greer.

January 6, 1900.

[Our correspondent's question is somewhat vague. If the book wanted is a dic-

tionary of the Bible on about the same scale as that of Prof. Davis (*i. e.*, a single, moderate-sized volume), we must reply that we know of none that can be recommended with any warmth. On the other hand, two *large* Bible dictionaries are being published at present, and each has excellent points. Of one of these, Hastings's 'Bible Dictionary' (Edinburgh: T. & T. Clark), two volumes out of the four of which it is to consist have appeared. Of the other, the 'Encyclopædia Biblica,' edited by Drs. Cheyne and Black (The Macmillan Co.), only one volume has appeared, but it also will consist of four. We shall publish shortly an extended review of this last. Both books can be heartily recommended. The first will be the more valuable for non-specialists; the second will appeal most to the specialist, but even he will require both. In questions of Biblical theology Hastings easily leads —from Cheyne such matters are practically excluded; in details of exact scholarship Cheyne is richer. But if what our correspondent wants is not necessarily a dictionary of the Bible, but any book which will enable a layman to find his way in the present labyrinth of criticism, and to keep his head through it all, then we would advise him to try Dr. Washington Gladden's three books, 'Who Wrote the Bible?' 'Seven Puzzling Books,' and 'How Much Is Left?' These are not intended for the student, but for the plain man who cannot be satisfied with the old formulæ, yet who wishes to hold fast to the old truth.—Ed. Nation.]

DECISION WITHOUT REASONS.

To the Editor of The Nation:

Sir: The question you put on page 37 of your last issue is answered by the following quotation from Mill's 'Logic' (8th ed., N. Y., 1881, p. 144):

"Almost every one knows Lord Mansfield's advice to a man of practical good sense, who, being appointed governor of a colony, had to preside in its courts of justice, without previous judicial practice or legal education. The advice was to give his decision boldly, for it would probably be right; but never to venture on assigning reasons, for they would almost infallibly be wrong." X.

DID PLATO ERR?

To the Editor of The Nation:

Sir: Prof. White's note in your issue of the 11th inst., which seems to indicate that Goethe was a victim of the delusion that mistakes the last year of one century for the first year of the next, brings to my recollection a passage about Henrik Steffens in Hansen's 'Illustreret Dansk Literaturhistorie.' The passage runs as follows:

"New Year's eve, the 31st of December, 1800, found him at a court masquerade in Weimar. After midnight Goethe, Schiller, Schelling, and Steffens withdrew from the ball, and in an adjoining room drank champagne to welcome the new year. Goethe was jovial, Schiller held instructive discourse, Schelling was quiet, and Steffens found joyous entertainment in noting the various effects of the wine upon these great spirits."

This account, if accurate, saves Goethe from the imputation of having thought that there were only ninety-nine years in the eighteenth century.—Yours faithfully,

William Morton Payne.

Chicago, January 13, 1900.

To the Editor of The Nation:

Sir: In spite of many provocations, I have so far abstained from writing to any periodical in regard to the beginning of the twentieth or any other century. But Prof. White's little note in this week's number of the *Nation*, which I saw a few hours ago, forces me to say that Schiller as well as Goethe soon gave up the idea of 1800 being the first year of the nineteenth century. The letters exchanged between the two poets during the latter part of that year show that, in the words of Düntzer ('Life of Schiller' [translated], page 403), "The confederates wished to celebrate the opening of a new century [1801] by theatric festivities for which Schiller was particularly active." However, "the Duke had declared against the Centenary" and "Schiller drew back in disgust." "On the last evening of the year and century they met at the masquerade got up by the Court. . . . After midnight the two poets, with Schelling and Steffens, retired into the side rooms, and had a pleasant talk over champagne."*

As to Heine's jest, it is, of course, as well known to Prof. White as to me that the poet did not state, in so many words, that he was born "on the *first of January*," but "in der Neujahrsnacht Achtzehnhundert," that is to say, as it were, between the 31st of December and the 1st of January. I should not speak of this in particular if I did not think that Heine got this century joke from the real date of his birthday, January 13, which, turned about, gives 31, so that originally the December day was uppermost in his mind. Hence, the wrong date of his birth, equally familiar to Prof. White, which was formerly found in so many books.

While I was writing these lines there reached me (irony of fate!) one of the new German century postal cards with a radiant sun and a big 1900 on it, besides the Germania on the embossed stamp, stamped, "1.1.00 2-3V," that is, freely to quote Heine, "in der Neujahrsnacht Neunzehnhundert." I need scarcely mention that the authors inform me of their being gathered "das alte Jahr scheiden zu sehen und das *neue Jahrhundert* zu empfangen." Of course, when we give up the 18.. in our correspondence, we have the *feeling* that a new century begins. But, notwithstanding this, it is acknowledged by the serious writers of Germany (*e. g.*, Brockhaus's 'Konversations-lexicon,' *sub* "Jahrhundert") that the new century begins with 1901. On pages 13 and 14 of Kürschner's well-known 'Jahrbuch' for this year is to be found a reprint from 'Der Bote aus Thüringen' (Schnepfenthal, 1800), entitled, "Wann beginnt das neue Jahrhundert?" This should be sufficient to enlighten the Pope of Rome and the Emperor of Berlin.—Very truly, E. Leser.

Bloomington, Ind., January 13, 1900.

*Compare Düntzer, Goethe's Life II. 181, note on Schiller's New Year letter of 1800; also, Karl Heinemann, Goethe, II. 228, and the Schiller biography by Wychgram.

Notes.

The Macmillan Company's spring announcements embrace 'Democracy and Empire,' by Prof. Franklin H. Giddings; 'Politics and Administration,' by Prof. Frank J. Goodnow; a 'Dictionary of Philosophy and Psychology,' edited by Prof. J. Mark Baldwin of Princeton; a 'Cyclopædia of American Horticulture,' by Prof. L. H. Bailey of Cornell; a second series of 'Studies in Literature,' by Prof. Lewis E. Gates; 'Makers of Literature,' biographical essays by Prof. George E. Woodberry; 'The Evolution of the English Novel,' by Prof. Francis H. Stoddard of New York University; 'The Men Who Made the Nation,' by Prof. Edwin E. Sparks; 'The Golden Horseshoe,' the story of American expansion, by Stephen Bonsal; "Source Readers of American History," volume i., 'Colonial Children,' by Prof. Albert Bushnell Hart; 'Extracts from the Sources of English History,' by Elizabeth K. Kendall of Wellesley; 'European Travel for Women,' by Mary Cadwalader Jones; 'Highways and Byways in Normandy,' by Percy Dearmer, illustrated by Hugh Thomson and Joseph Pennell; 'A History of Gothic Art in England,' by E. S. Prior; the first volume of a 'Dictionary of Architecture,' edited by Russell Sturgis; 'Dante Gabriel Rossetti,' an illustrated memorial of his art and life, by H. C. Marillier; 'The Life of Edward White Benson, Sometime Archbishop of Canterbury,' by his son Arthur Christopher Benson; 'More Letters of Edward FitzGerald,' edited by W. Aldis Wright; a 'Concordance to FitzGerald's Omar Khayyám,' by J. R. Tutin; and 'The Welsh People: Their Origin, Language, and History,' by Prof. John Rhys.

D. Appleton & Co.'s January announcements include Maspero's 'The Passing of Empires,' translated by M. L. McClure and edited by Prof. Sayce; the late David A. Wells's 'Principles of Taxation'; the fifth volume of Prof. McMaster's 'History of the People of the United States'; and 'The Comparative Physiology and Morphology of Animals,' by Prof. Joseph Le Conte.

Harper & Brothers will speedily publish 'Thackeray's Hitherto Unidentified Contributions to *Punch*,' by M. H. Spielmann, in a volume uniform with the recent "Biographical Edition" of the novelist.

'Three Men on a Bicycle,' by Jerome K. Jerome, will be published early in the spring by Dodd, Mead & Co., and Tolstoy's 'Resurrection' probably before next autumn.

The Abbey Press, No. 114 Fifth Avenue, announce 'Danger Signals for New Century Manhood,' by Edward A. Tabor.

A book will be made, by the Century Company, of Ernest Seton Thompson's 'Biography of a Grizzly,' already published in their magazine.

Henry Frowde will soon issue four volumes of classical texts in the projected series "Scriptorum Classicorum Bibliotheca Oxoniensis," viz., Thucydides, edited by H. S. Jones; Plato, by J. Burnet; Lucretius, by C. Bailey; and Tacitus, by H. Furneaux.

'Hazell's Annual for 1900' (London: Hazell, Watson & Viney) will be prized for reference on no account more than for its succinct chronicle of the Transvaal imbroglio, in its several stages, often with textual quotations from the dispatches. A small map accompanies the article. Useful sum-

maries, too, are those of the Commissioners' report on the Newfoundland French treaty shore question, and the report of the Royal Commissions on the licensing laws and local taxation. Other momentous subjects similarly illustrated are the Conference at The Hague, the Venezuelan arbitration, the Dreyfus affair, etc. The Annual is kept remarkably up to date. It notes the "all-well" condition at Ladysmith on December 1, and, under United States, tells of the Samoan agreement, the "open-door" negotiations with other Powers for China, and the death of Vice-President Hobart. The editor, in his preface, lays stress on the extension of the biographies which are one of the features of this publication; but we fail to discover in the American portion any of the new war lights of the past two years. All are eclipsed by Bryan—his wind power proving a better title to fame even than Capt. Mahan's sea power.

A portrait of President Eliot, etched by a foreign hand not unfaithfully, is the frontispiece to the ninth issue of the "almanac of the learned world," *Minerva* (Strassburg: Karl J. Trübner; New York: Lemcke & Buechner). A very handsome tribute is paid him by the editors, in an apology for deviating from their custom as to the choice of subjects for portraiture (among professors). They speak of the power, authority, and responsibility of American college presidents, among whom Harvard's head is "der hervorragendste und der Führer." The other new feature of this ever growing annual is a list of significant scientific congresses scheduled for the current year. These are arranged alphabetically according to the place of meeting, Paris being preëminently the common ground, with forty-three congresses (out of some hundred, we believe, appointed there during the Exposition), while only six are held elsewhere. Sometimes the programme and usually the chief officers are given.

It is a pity when a master makes sport for the Philistines. Dr. Green of Princeton is a Hebraist such as there are few in this country. He has upheld a lost cause with loyalty and ability; but he would have been well advised either not to publish his 'Introduction to the Text of the Old Testament' (Charles Scribner's Sons), or to subject it before publication to an exhaustive revision. As it is, it evidently consists of lectures compiled some considerable time ago and very inadequately brought up to date. It is, presumably, accidental that there is no reference to Driver's 'Introduction,' though his earlier views on some points which were afterwards modified in the 'Introduction' are given at length. Yet why the great plan of the Cambridge Septuagint should be ignored; why Tattam should be the latest Coptic scholar mentioned; why the elder Hoffmann (who wrote in 1828!) should be the authority quoted for the history of the Hebrew script; why Gesenius (*clarum et venerabile nomen*, but undoubtedly antiquated) should often be the leading and only authority—these all be hard questions. The book as it stands is a most grievous mistake.

The prospectus of a magazine to be "conducted on Twentieth Century ideas" by the Press Biographical Company, New York, is before us.

Mr. Charles F. Lummis may take a solid satisfaction in putting on his shelf the eleventh volume of his pictorial monthly *Land of Sunshine* (Los Angeles), both as one more triumph over the difficulties of establishing such a magazine on the Pacific Coast, and for its intrinsic return to his subscribers and readers. Besides the unfailing exhibition of the attractions of the Coast, and the literary articles in prose and verse, and the editor's own frank utterances on politics and books, we find in the half-year embraced in this volume a translation (never before made) of the whole of the Viceroy Revilla-Gigedo's Report on California, 1768-1793, and the beginning of a translation of Fray Zarate-Salmeron's Relacion concerning the "New Mexico" of his time, 1538-1626. This is the third in the important series of historical sources with which Mr. Lummis has freighted his pleasure-craft. Nor should we omit to mention his trenchant discussion of our treatment of the Indians, under the caption, "My Brother's Keeper." The note of industry implied in all this personal editorial contribution is striking indeed.

The movement of population in France continues to arouse discussion, and at the annual meeting of the Society of Social Economy, in December, M. Fournier de Flaix presented an elaborate essay on the subject. He attempted to show that the situation was not so grave as was commonly believed, but he was obliged to resort to arguments of the most recondite and even absurd character. He made the paradoxical statement that, during the nineteenth century, the population of France had increased more rapidly than at any other period; but this increase occurred almost wholly during the period of repose which followed the cessation of the wars of Napoleon, and since 1871 population has been either stationary or declining. M. Bertillon criticised the essay severely, but had nothing positive to suggest except the fantastic measures advocated by the National Alliance for the Increase of the French Population. This Alliance maintains that it is the patriotic duty of every Frenchman to marry and beget at least three children, and relies, in effect, on a system of bounties for large families. But it must be admitted that in so far as its measures contemplate a reduction of taxes, they are well conceived. There is some evidence that not only the population but also the wealth of France is declining, and unless the burdens of industry are lessened the decadence may become serious.

The introduction of the study of the Russian language in the continuation schools and in one of the gymnasia in Berlin has, of course, a more than purely educational significance, especially as this new departure coincides very closely with a movement among German manufacturers of machinery towards the establishment of permanent exhibitions of their products in Russian trade-centres. The young men availing themselves of this new opportunity are sons of high military and civil officers, and technical students, discerning in the land beyond the Vistula and the distant regions beyond the Obi a promising field of activity. The instruction is given by the official Russian interpreter at the Prussian courts and offices of state. The linguistic training of young Germans has long been recognized (by English chambers of commerce and other interested parties) as one of the principal causes of their successful careers in foreign parts, and, in consequence, of the rise of German trade and industry. Our own young men may as well take the hint.

The fourth annual meeting of the American Academy of Political and Social Science will be held in Philadelphia on April 19 and 20, with Corporations and Public Welfare for the general topic—*e. g.*, governmental control over public-service corporations (gas, street railways, water); the influence of corporations on political life; combination of capital as a factor in industrial progress; the future of protection.

The Secretary of the League of Social Service, No. 297 Fourth Avenue, New York, will, on application, furnish particulars regarding the proposed "Paris International Assembly" to be established in connection with the great Exposition. Its main feature, we are told, will be "the largest application yet conceived of the summer-school idea," and it will "help bring the right people to the various departments of the Exposition and to the Congresses," and provide the more serious-minded visitors with "expert guidance, rendezvous and information bureaus," lecture courses, excursions, and even private hospitality.

—In vols. lv.-lviii. of the 'Jesuit Relations' (Cleveland: Burrows Bros. Co.) we receive a premonition of the fact that this great series is drawing to its close. The formal Relations, which began in 1632 with LeJeune's vivid description of his first efforts among the Montagnais, end, in vol. lvi., with the second instalment of Dablon's Relation for 1671-72. Henceforth, we shall see no more of the carefully prepared reports which were either written or edited by the local superior at Quebec, and sent home to the French provincial to be printed at the press of Cramoisy. With the extension of the sphere of Jesuit influence, it has evidently become impossible for any one so to coördinate the dispatches from widely severed fields as to give the effect of unity. Accordingly, a new practice establishes itself, and the compact Relation of the year gives way to a collection of letters, which, however, as a rule, reaches the printer by the same stages which have been already noted in the case of the Relation itself. This change in the form of the reports is coincident with and represents the final broadening out of Jesuit missions. The characteristic feature of vols. lv.-lviii. (which cover the four years, 1671-1674) is transition from the dominating interest of Iroquois topics to matters connected with the Far West and the Far North. The names of Albanel, Allouez, Joliet, and Marquette all suggest new regions which the French were developing at the moment when Dablon sent in the last of the Cramoisy Relations. Of these four explorers, Albanel is probably the least known, and we shall accordingly refer to his journey in the Hudson's Bay country. Dablon says, in editing Albanel's journal, that "the famous bay to which Hutson gave his name," had long stirred the curiosity of the French and made them wish to know the land route thither. In 1671 purely geographical motives received an impetus from the report that foreign ships had arrived in the bay, and had opened up the peltry trade in regions where all fur-bearing animals abounded. Talon, the Intendant, accordingly thought it his duty to act promptly on behalf of the national interests, and the expedition which started from Tadoussac in August had more than his sanction; it owed its origin to his suggestion. A missionary, Albanel, was put at its head because, from

his intercourse with the Montagnais and Attikamagues, he could best converse with the northern tribes and explain to them the virtues of Onontio, besides the advantages which would result from trading with the French rather than with any other European race. Albanel, after a hard journey, reached Hudson's Bay only to find the English there before him. His narrative effectively disposes of the claim that the French were the first to establish posts on this northern sea.

—'How England Saved Europe' (Scribners) is the picturesque title of a work in which Dr. W. H. Fitchett rehearses the events of the Great War, 1795-1815. "England has saved herself by her exertions, and will, as I trust, save Europe by her example"; these last public words of Pitt are here forced to furnish both a title and a motto. We have only the first volume before us, but it can easily be seen that the three succeeding parts will also have a military character, and will be written in a spirited way from the British standpoint. " 'I have made war upon you for twenty years.' Napoleon, with somewhat vague arithmetic, condenses into that brief sentence the chief aim of his great career as a soldier, the whole policy of his Empire. And the satire of history is illustrated by the fact that these words were spoken as a prisoner in the cabin of a British man-of-war, and to a couple of British officers by the greatest military genius the world has known since Hannibal, and who had fought against England as Hannibal fought against Rome; 'the man of a thousand thrones,' who had made and unmade kings, and entered well-nigh every capital in Europe in turn as a conqueror. His twenty years of war with England had landed him there!" There is a certain ring about the allusion to Hannibal which reminds one forcibly of the most famous paragraph in Dr. Arnold's 'History of Rome,' but we have quoted this passage to disclose the tone which Dr. Fitchett uses. He views the long duel as an epic struggle with a clearly defined Nemesis. From the moment when, "at half-past six on the morning of February 25, 1793, three battalions of the Guards, equipped for foreign service, were drawn up on the parade-ground in what is now the rear of the Horse Guards," a great catastrophe was preparing. From the very beginning Dr. Fitchett does not once lose sight of the end. He presents us with the spectacle of Napoleon standing on the deck of the *Bellerophon* even before he has described the main conditions of the contest. His first volume extends from the French regicide to the defence of Acre by Sir Sidney Smith. Thus the record is largely one of sea-fights, and the period has already been covered by Capt. Mahan. However, as Dr. Fitchett does not write for specialists, any profit which he may have derived from a study of the "Sea Power" series is in the nature of gain to his audience. Apart from the description of manœuvres at sea, where he can hardly escape following Mahan, he goes at some length into the state of the service, and discloses the spirit of mutiny and disaffection which existed at the very time when the most brilliant victories were being won. 1797, the year of St. Vincent and Camperdown, witnessed an almost incredibly large number of trials for mutiny and sedition. Dr. Fitchett is sympathetic towards ability wherever he finds it, and his entertaining style should give him a wide circle of readers.

—The late Dr. James Martineau, who died on January 12 in the ninety-fifth year of his age, was easily the first of English Unitarians for a period of more than fifty years before his death. Dr. Priestley is the only other of them whose fame is at all likely to rival his in the historical perspective. Martineau was not a good sectarian, and his coreligionists were often grieved because he lent himself so grudgingly to their sectarian organization. He was always glad to call himself a Unitarian, but unwilling to connect himself with organizations carrying a theological distinction in their names. On the eightieth anniversary of his birth, in response to the greetings of the National Conference of English Unitarians, he declared his "conviction that the true religious life supplies grounds of sympathy and association deeper and wiser than can be expressed by any doctrinal names or formulas; and that free play can never be given to these spiritual affinities till all stipulation, direct or implied, for specified agreement in theological opinion is discarded from the bases of church union." He did not hope for the disestablishment of the National Church, but for such reformation of it that it might include all aspects of sincere belief and earnest life. His influence was not confined to the Unitarian body. He had many readers and disciples in the National and dissenting churches, and the religious literature of England has had many clear reflections of his thought. A prominent writer in the Reviews for sixty years, contemporary with Carlyle and Newman and Mill and Darwin and Spencer, he had a leading part in all the greater controversies of the time, and the sweep of his learning and the keenness of his dialectic made him an antagonist whose youth nor manhood no man could despise. The most painful episode of his career was his misunderstanding with his sister Harriet, who enthusiastically adopted the philosophical and ethical opinions from which he had turned away. He maintained a rigid silence when assailed by Harriet's friends until the appearance of Mrs. F. Fenwick Miller's life of his sister in the "Famous Women Series." Then the superfluous assault upon his mother's memory elicited from him a sharp rejoinder. Harvard College gave him the degree of LL.D. in 1872, the University of Leyden the degree of Doctor of Theology in 1875, and Edinburgh University the degree of D.D. in 1884.

—Mr. Oliveira Lima, Secretary of the Brazilian Legation at Washington, has published a volume ('Nos Estados Unidos') of political and social impressions derived from a three years' sojourn in this country (Leipzig: Brockhaus.) His eleven chapters must not be judged as a symmetrical essay, for they are composed of articles contributed to the *Revista Brazileira* and of letters to the *Jornal do Commercio*. Mr. Lima gives us, therefore, first and current impressions, and is not concerned with proportion or closeness of texture. His review of American writers, for instance, filling some forty pages, devotes seven pages to Mark Twain and sixteen to John Fiske, who has seldom been praised by a more hearty admirer. Illustrative of his discursiveness is the occurrence, in the chapter entitled "Effects of Immigration," of a summary account of the contents of the Metropolitan Museum of Art in this city. Boston's Public Library, park system, and historical associations are also here touched off, in paragraphs which end with a parable of G. W. Steevens's about a Bostonian's likening Irish rule in his city to negro electoral supremacy at the South. A really pertinent fact, had it been known to Mr. Lima, would have been that the Irish citizens of Boston had far more to do with saving the old State-House from demolition than the blue blood of Beacon Hill. "Woman's Influence" is discussed with but incidental mention of woman's suffrage, and with no apparent knowledge of the origin of the agitation in favor of it. Similarly, lynching is little dwelt upon in the opening chapter on "The Negro Problem," nor is any notice taken of the tendency towards caste separation of the races in the new Southern industrial development. In that constant comparison of the two republics which is one of the writer's motives for publication, he remarks, on page 52, that such a law as that which prevails at the South, prohibiting intermarriage of white and black, could never be enacted or executed in Brazil. The peculiar form of crime which incites our Southern lynching, he adds, is not on the increase in Brazil since emancipation; but he stops short of suggesting that the abrogation of our Southern statutes against intermarriage would perhaps tend to reduce the frequency of the offence so much feared and so savagely avenged.

—The latest issue of the Berlin Royal Ethnological Museum's publications is again brimful of the best scientific matter. The first half of the sixth volume, just out, is taken up entirely with contributions to Mexican archæology made by Dr. Edward Seler. Of his "eighteen annual festive periods" of ancient Mexico the first section is presented in the last number, his principal authority being Bernardino Sahagun, a Franciscan clergyman who arrived in Mexico from León, his natal province, in 1529, and died in 1590. The circumstance that this author wrote but shortly after the conquest renders his descriptions especially valuable. Sahagun composed the twelve books of his 'Historia General de las Cosas de Nueva España' in the Nahuatl language. The two parts of it are now kept in two different libraries at Madrid, but the whole also exists in an ancient copy with fine illustrations, in part translated into Spanish. This manuscript was recently discovered in the Biblioteca Laurenziana in Florence, Italy, by Zelia Nuttall. What has been hitherto published of Sahagun's archæological work gives only a faint idea of the contents and the high value of the whole. The eighteen annual feasts discussed by Dr. Seler are based on the calendar which was common to the Mexican and Maya nations, and counted, to make up the year, eighteen sections of twenty days each. In Mexico a section was called *compoualli*, from the word for *twenty*, and each section had its own name, ceremonies, and sacrifices. In Seler's article the ceremonies attending every section are described by prefixing Sahagun's Nahuatl text, and then adding his own German translation with extensive comments, by which a full understanding is made possible.

—The subjects discussed in the two other papers of vol. vi., part 1, are of equal interest. One of them, "Pictorial Images of the Mex-

ican Annual Celebrations," describes the feasts, ceremonials, pageants, and mummery attending these popular demonstrations, and may be regarded as a sort of abstract or recapitulation of the former article. The accompanying pictures are taken from various Nahuatl codices, but without the gaudy coloring of the originals. "Sorcery and Wizards in Ancient Mexico" is the title of another erudite article in the same fascicle. For ethnologic science the beliefs and symbolism of witchcraft are always instructive, and among primitive nations like those of Mexico the practice of medicine (or say of healing) is intimately connected with sorcery and jugglery. As among our northern Indians, the members of the "faculty" belonged to several classes, and for Mexico Dr. Seler establishes four—the medicine men (*titici*), the soothsayers (*tlahpouqué*), the jugglers (*teixcuepanimē*), and the wizards or sorcerers proper (*nanualtin*), who were also forecasters or prophets, rainmakers, and producers of hallucinations. Many of them were doing their best to benefit the race, but others, probably the majority, were intent upon inflicting injury upon their fellow-men.

SEA-POWER ETHICS.

Lessons of the War with Spain, and Other Articles. By Alfred T. Mahan, D.C.L., LL.D., Captain United States Navy, etc. Boston: Little, Brown & Co. Pp. 320.

We have here a new volume in which are collected the essays that Captain Mahan has published in the past year. Five of them make a series which gives the title to the book. The other four treat of subjects more or less closely allied to the imperialist expansion, of which the author is a leading advocate. The essays upon the war with Spain are a very instructive and interesting analysis of the naval operations in the West Indies, and, considered as a discussion of the war as actually conducted, could not easily be improved. The author's professional knowledge and his study of the broader problems of naval strategy give lucid expositions of the recurring critical situations in the Caribbean Sea, while his position as member of the strategy board at Washington makes his explanation of the reasons which controlled the naval conflict authoritative. The efforts to advocate his imperialist theories are kept subordinate to the historical presentation, and do not challenge much debate. In the essay on Distinguishing Qualities of Ships of War we find also good professional treatment of the subject, skilfully adapted to popular comprehension.

The other papers may properly be treated as a politician's partisan advocacy of the imperialism which builds upon conquest the policy of assuming the rôle of a "great Power," in the European sense, asserting a potent influence in every world-controversy, and taking a hand in every scheme for the spread of empire. The essay on our Relations to our New Dependencies is a statement of principles of government, by a conquering Power, over dependent peoples, for their own good (from the conqueror's point of view). It is a summary of the policy which Great Britain has evolved from much painful experience, and, if rights of weaker communities to self-government are put among the exploded whimsies of our youth and the discarded "swaddling-clothes" of our infancy, the author's exhortations to be guided by "beneficence," as well as self-interest, do credit to his heart. If we must have despotism, by all means let it be the maternal despotism which Captain Mahan describes.

In the essay upon the Peace Conference and the Moral Aspect of War, we reach the discussion of fundamental principles of ethics as the basis of law, whether municipal or international. As to what the Conference of The Hague actually did, the author expresses a mild approval, when it is limited to the affirmation of the decision "that it is to arbitration men must look for relief [from the evils of war] rather than to partial disarmament, or even to an arrest in the progress of preparations for war" (p. 208). He sees, however, "cause for serious reflection when this most humane impulse is seen to favor methods which, by compulsion, shall vitally impair the moral freedom and the consequent moral responsibility which are the distinguishing glory of the rational man and of the sovereign state" (p. 209). He seems to have found in the Conference, and in the friendly discussion of the proposals before it, this tendency to put the duty to arbitrate international disputes among the agreed principles of international law, so that the conferring Powers consenting thereto might apply to future disputes that moral coercion to arbitrate which is now found in the other agreed principles, such as, for instance, the rule that you shall not slaughter your prisoners. This tendency, though it resulted in no action in the Conference, he finds it his duty to combat vigorously, lest the distinguishing glory of the sovereign state should be eclipsed. The philosophy upon which the contention is based is presented with formidable sea-power.

The first postulate laid down is that "one of the most unfortunate characteristics of our present age is the disposition to impose by legislative enactment—by external compulsion, that is—restrictions of a moral character which are either fundamentally unjust, or at least do not carry with them the moral sense of the community as a whole" (p. 209). The argumentative use of this is to create in the reader a readiness to rebel against legislative control. But in truth no period of the world's history has been so free from such an "unfortunate characteristic." Never has the tendency been so strong towards local and individual autonomy; towards freedom of thought and of action; towards liberty of speech and untrammelled locomotion; towards easy bonds of allegiance and liberal practice of expatriation. The postulate is a false assumption in fact.

The next step is to assert the right and the duty to follow one's own conscience, in obedience or disobedience to public law. One need have little quarrel with the proposition if enlightened conscience were properly distinguished from ignorant or ill-educated impulses; if the anarchical tendency of denying authority were fully weighed; if the obligation to preserve and respect human society were measured; if the presumptions in favor of law were not casually named, but soberly analyzed. So far from this being done, the author states, as the thing to be "carefully kept in mind," that it is not the "absolute right or wrong of the particular act, as seen in the clearer light of a later day," that justifies men in disobedience. "The saving salt which has preserved the healthfulness of the body politic has been the fidelity to conscience, to the faithful, if passionate, arbiter of the moment" (p. 212). To call such hasty, passionate action on the impulse of the moment conscientious, is a simple abuse of language. When a man is face to face with the choice between obedience to law or rebellion against it, passion and haste are the opposites of conscience, and most commonly used to silence its judgments. By such inversions of the meaning of terms, the absurd logic is easy by which the author concludes that making war for slavery is as conscientious as making war to resist it, and, after a holocaust of human lives and the desolation of half a continent, not only is nobody morally responsible, but the aggressors "made no small contribution to the record of fidelity to conscience and to duty which is the highest title of a nation to honor" (p. 213). To cap the paradox, he affirms, in the same paragraph, his agreement with Lincoln that "if slavery is not wrong nothing is wrong." His stunning conclusion is that the Slave Power would have been wicked not to make the war, because, "be it by action or be it by submission, by action positive or action negative, whatever is not of faith—of conviction—is sin." He omits to draw the final conclusion which his logic demands, that Nothing *is* wrong.

One would naturally suppose that the conclusion that men and nations may be equally conscientious on either side of the most bloody conflicts, nay, that they would "sin" if they did not fight on the side of the most plain and demonstrable of wrongs, would find its most evident corollary in the doctrine of general arbitration. In such a muddle it would seem wise beyond dispute to submit our differences to disinterested tribunals guided by standards of right which are based upon the assent of the ages, and so escape from the wars that must follow the imaginary dictates of a bogus conscience which may approve either side of a conflict between liberty and slavery, and which decides passionately and on the moment. Far from it. The logical stress only nerves the ethical philosopher to the dialectic feat of asserting that this conscientious judgment that right is wrong makes it wrong, and that "even the material evils of war are less than the moral evil of compliance with wrong" (p. 215). How consoling to the anarchist who threw his bomb into the French Assembly, and what a noble justification to our compatriot in Sulu who runs amuck that he may win the Moslem paradise! The final word of Jingo philosophy is, "It is not the accuracy of the decision, but the faithfulness to conviction, that constitutes the moral worth of an action, national or individual" (p. 216). The Sulu *juramentado* is faithful unto death, and Captain Mahan, if consistent, must echo the voice of Allah, Come thou blessed!

As is usual in self-deluding fallacies, having made an absurd definition of conscience, having divorced it from all criteria of right as recognized by the common judgment of mankind and left it to the impulse of the individual, true or false, strong or weak, wise or foolish, the author now slides back to the common notion of conscience as a God-given judgment in real accord with unselfish ideals and love to our neighbor. The

"passionate arbiter of the moment" again becomes the diligent searcher of his own bosom, its motives and its standards, and the authority of such a deliberate, altruistic judgment is coolly transferred to the counterfeit. "Between God and man," he tells us, "no other arbiter comes; and if this be so, a pledge beforehand [to arbitrate] is impossible" (p. 220). He thus reaches the sad conclusion that a treaty agreeing to arbitrate future disputes is contrary to conscience, and, of course, wicked. He is willing to concede that there may be some mere interests, not involving conscience, which may be submitted to arbitration; but the door is so wide open to making anything a point of conscience that, even as to past differences, the field of arbitration is too narrow to waste time upon. The ancient, authoritative maxim of law, that "no one is a rightful judge in his own cause," is thus deposed in favor of the truly imperialistic one that everybody is his own sole judge, by divine right. If general war shall follow, the universal conflagration will only illumine and bring into stronger relief the moral grandeur of the resistance to coercion even to keep the peace; for compulsory arbitration assumes "a moral obligation to do or to allow a wrong" (p. 224).

From such a point of view it is not strange that peace should seem ignoble, and war rise to the dignity of a world's benefactor. "Step by step, in the past, man has ascended by means of the sword, and his more recent gains as well as present conditions show that the time has not yet come *to kick down the ladder which has so far served him*" (p. 230). We italicize the phrase which so charmingly characterizes the base ingratitude to War which is a crying sin of the present age. If any of us are so belated in progress as still to hold that the *gradus ad Parnassum* is found in peaceful education, developing ideas of the true, the beautiful, and the good, leading on to standards of justice heartily respected, and good will to our neighbor spontaneously exercised, we here find our deserved condemnation and correction. Swords, not ideas, are the rungs of the ladder of human progress. We are now taught that it was the sword, and not the vigorous growth of law, of letters, and of free religion, that made the land of Grotius the enlightened country it is. It was Philip's remorseless war upon its advanced notions in intellect and private conscience that was the praiseworthy cause of great good. If we have foolishly supposed that progressive enlightenment was the precedent condition of the high position the Dutch nation attained, and the sword was Philip's wicked instrument of oppression, let us hasten to correct our ignorance. If we have imagined that Philip and Alva were foiled, and that noble enlightenment survived in spite of (not by reason of) the Spanish bigot's war, though the sword was backed by the gibbet, the rack, and the stake, let us recant our misjudgment of the conscientious king, and glorify not only the sword but his other pious instrumentalities. If we have weakly thought that when the Ruler of the Universe "maketh the wrath of man to praise him," he does not thereby sanctify the wrath and transmute it into holiness, let us confess our error and be humbly thankful that, even at this late day, we have enjoyed the teaching of a professor emeritus of Jingo ethics. In our wicked effort to overturn the ladder of swords, we have only been "kicking against the pricks."

SMITH'S NEW TRADES COMBINATION.

The New Trades Combination Movement; Its Principles, Methods, and Progress. By E. J. Smith. With an Introduction by the Rev. J. Carter, M.A., Bursar of Pusey House, Oxford. London: Rivingtons. 1899.

During the last seven or eight years a most significant movement has been making headway in business circles in England, especially in the Midlands, around Birmingham—a movement which has hitherto hardly attracted in this country all the attention it deserves. A certain Mr. E. J. Smith, evidently a man of original and masterful character, who had made his way up to the position of an employer through all the grades of journeyman, foreman, manager, and traveller, has managed to induce almost all the manufacturers in his own line of business, the metallic bedstead trade, to form a close combination of an altogether novel type. So successful has this "Alliance" proved, and so persuasive has been Mr. Smith's advocacy of his plan as applicable to any industry and a blessing to all concerned, that he has been invited to organize some half-a-dozen others among the smaller trades on the same lines. Now every few months some fresh combination or other is launched under his auspices.

All this has not happened without a great amount of opposition from recalcitrant manufacturers, and also of sweeping and bitter criticism in the public press. The editors of the English *Economic Review* were quick-sighted enough to perceive the possible significance of the movement. Mr. Smith was nothing loath to appeal to economists, and contributed a series of articles in explanation of his plan, the first on its general principles, the others on its relation to the workman, to the foreign competitor, and to the consumer, respectively; and it is these articles which have now been collected in a handy little volume, with an introduction by the Rev. John Carter, the able and energetic secretary of the Christian Social Union.

Mr. Smith is of opinion that the main cause of business distress in all its forms, and of the effort to reduce wages to make up for falling profits, or to ward off bankruptcy, is to be found in the temptation, to which manufacturers are exposed by the pressure of competition, to sell below cost. He asserts that, absurd as it may seem, a large number of manufacturers have in fact no definite and accurate notion of the cost of producing the articles they deal in. The first principle, therefore, on which he insists is the necessity of correctly "taking out costs." This is largely a matter for the accountant, though it involves several interesting questions to be referred to later. The next step is to induce all the manufacturers of a particular trade, after following certain common rules of cost-taking adjusted to the average business, to agree to fix the price of each article by adding a certain definite percentage of profit. So far there is nothing particularly new in the scheme. The difficulty has always been to hold the members of the association to the agreement: it has never seemed possible to get out of them a guarantee payment sufficiently large to make its forfeiture a serious consideration. One of the expedients to which similar combinations have had recourse in this country, namely, a compact with the transportation agencies, is impracticable in England; another, to wit, a system of discounts to buyers, is commonly inadequate. Mr. Smith's invention to overcome the difficulty is nothing more nor less than an open and avowed coalition with the workmen in the trade. He insists that where the men are not already organized they shall be formed into a union, and that the masters shall engage to employ no non-unionists, in return for the agreement of the union to work for no employer not belonging to the Alliance. Accordingly, a manufacturer who breaks away from the Alliance has to reckon, at the very outset, with a strike of his employees.

The assistance of the men is not obtained for nothing. The bargain between the two associations of employers and employed contains elaborate provisions for a bonus on wages in proportion to an increase in prices, and for a Joint Conciliation Board to settle all possible matters of dispute. According to a late Lord Mayor of Birmingham, the increase in remuneration has amounted in the bedstead trade to 25 per cent. The general results have been thus summed up in a characteristic speech by Mr. Joseph Chamberlain:

> "In a trade in which every one, whether workman or employer, was dissatisfied, he has brought contentment. Wages, I believe, have been increased, profits have become larger, and, curious to relate, the demand and the production have increased at the same time. This experiment, I believe, is capable of great development. I understood, when I was last in Bradford, that a great trade in that city has agreed to adopt the principles upon which Mr. Smith has secured success. . . . I am always glad that a new light should proceed from Birmingham."

Even the Bedstead Alliance, however, is not yet out of the woods. It is true that the outcry against it would seem to have proceeded, not from the general public, but from the ironmongers and other middlemen who have hitherto been able to play off one manufacturer against another. For months there has been talk of the establishment of an opposition factory at Antwerp; but it is probably only talk. Yet it would be strange if a neighborhood so characterized by individual initiative as the Midlands submitted without a murmur to so singularly complete a system of regulation. And as it is, two manufacturers, one in Birmingham and the other near Manchester, were holding out at the date of our last advices.

Without speculating as to the distant future, it may be recognized that the new movement has hitherto enjoyed a very considerable measure of prosperity. Moreover, no one can have moved in English business circles of late, especially in Yorkshire and Lancashire, without realizing that combination is in the air. And as there are many masters who really value trades-unionism, and still more who feel they cannot get rid of it, it is very probable indeed that the early decades of the coming century will witness in England a whole series of attempts to create what may be called a vertical organization of the industrial field—to harmonize and formally associate all the interests in particular industries, from top to bottom, in the face of the rest of the world. We see no reason to question Mr. Smith's genuine regard for social welfare, and especially for the workingmen; we are ready to allow that the consumers affected by his alliances have suffered inappreciably; but the

plan is so full of potentialities that he must be patient with us if we insist on its weak point.

That weak point is the interest of the consumer. Mr. Smith is perfectly right in saying that the older school of economists paid too exclusive an attention to the consumer; he is right in urging that the workmen are themselves consumers. What is even more to the point, he is justified in his contention that in unrestricted competition there is no necessary safeguard for the consumer, inasmuch as recent experience goes to show that competition itself tends to the creation of monopoly. But the moral of all this is neither that the consumer can be disregarded, nor that the alliance plan is to be condemned. It is rather that the public should be given a good deal more definite information than they have yet received as to the details of the mechanism. What is the way in which the consumer tends to be protected under competitive conditions? It is that when the profits of a particular business are noticeably higher than in other industries, new men and new capital are attracted to it; and if prices continue too high, overproduction ensues, and then prices fall. This would be cold comfort in the case of many industries where only large capitals find an opening; but with the Birmingham trades, where businesses are still comparatively small, where there is a great deal of enterprise and money always on the watch for fresh opportunities, and where exceptional men can still rise from the ranks, it is a solid satisfaction. Will not Mr. Smith convince us of the persistence of this salutary check on excessive prices, in the bedstead trade for instance, by telling us the exact financial conditions of membership in his Alliance? Is it easy for a new man to enter the association? In order that the equalizing forces of individual enterprise should work at all rapidly, it must be possible to find out what profit is actually being made in the several trades. Will not Mr. Smith tell us what is the "fair interest" which must, in his scheme, be reckoned among costs of production? Will he not tell us how he reckons the "wages of management" which are similarly counted in? Will he not say what is the profit the Alliance adds to the production-cost of each article? As a bedstead-maker, Mr. Smith may hesitate to satisfy our curiosity; as a social reformer, we are convinced it would be his best policy in the long run. Certainly, if combinations continue to flourish, publicity of accounts will be the only alternative to state interference; and if it is not voluntary, it will be compulsory.

Memoirs of a Revolutionist. By P. Kropotkin. Boston: Houghton, Mifflin & Co. 1899.

It may be truly said of Prince Kropotkin's Memoirs that they offer a better all-round picture of a certain type of Russians in particular, and of the genuine aristocratic socialist and anarchist in general, than any other record in existence. The first part of the autobiography is not a whit inferior to Count L. N. Tolstoy's famous 'Childhood, Boyhood, Youth,' in its vivid limning of family and social life sixty years ago in Russia; indeed, it far surpasses Tolstoy's work in actual details, though the plucking up his thoughts and feelings by the roots to inspect their state of growth, preparatory to replanting and reinspection, is suggested, not minutely recorded as in Tolstoy's case. Many people, no doubt, will be shocked at the account of the treatment frequently dealt out to serfs, under the old régime, as intelligent Russians might be shocked at many occurrences during the old slave days in our Southern States; but the instances of good temper, fine feeling, and faithful affection narrated by the author offset the horrors, in that they furnish data for judging the general character of the peasants who (when properly educated) are destined to exercise a decisive influence upon the world. What is absolutely new is the description of life in the crack military school and the suggestively thorough training of Russian officers, which is of interest to foreign nations at present, especially to those which have too hastily taken universal ignorance for granted in that greatly misunderstood empire.

The author states, in his prefatory note, that he has added considerably to the original text (as it appeared in the *Atlantic Monthly*, September, 1898-1899), in the parts dealing with his youth and his stay in Siberia, and especially in the part where he has told the story of his life in Western Europe. Such is the intense interest of the book that it is to be regretted he did not make two volumes, at least, and deal with the two halves of his life in a wholly satisfactory manner. As it is, we should be very glad to have an unstinted quantity of social pictures from so clever a pen, while more fulness of psychological study and of practical detail are certainly needed in the socialistic-anarchistic division to enable the reader to comprehend and pass just judgment upon Prince Kropotkin's aims and methods. For example, he mentions that, on his father's death and his inheritance of a large landed estate, he meditated putting in practice there the socialistic theories to which he had already dedicated himself; but, on being warned by competent persons that this would be impossible, he refrained. There the incident ends, so far as we are informed. He does not mention whether he left the estate to be administered on the usual plan, condemned by him, shifting the responsibility to a hired steward, or whether he sold it, and thus shifted the responsibility in a still easier manner; or what he did with the proceeds. Later on, when he records the efforts of himself and his fellow-anarchists to found a newspaper—an "organ"—he says that their combined funds amounted to about four dollars; and he constantly refers to some handicraft exercised by himself (nowhere specified), as a means of livelihood. Inevitably, the reader demands: "What had become of your estate? Why did not you remain in Russia and superintend the welfare of the peasants there resident, as many Russian landed proprietors actually do, even if you were unable to raise them to your level or lower yourself to theirs? And if manual labor is the sole means of salvation, why did you waste your time upon scientific work, however important to the world, however profitable to yourself?" There are many other questions that occur to the non-anarchist public, which does not clearly understand what aim the anarchists propose to themselves, unless it be to usurp the authority of the present powers, and dictate terms themselves in a more arbitrary manner.

It is a disappointment that Kropotkin has not seized the opportunity to elucidate this point, for it must be conceded that he possesses one incalculable merit over his late friend and ally, "Stepniak"—he is straightforward and convinced, he carries the tradition of his good birth and breeding into his revolutionary propaganda. Stepniak was plausible and convincing, to the uninitiated in Russian affairs. But his books would not bear careful reading, and too frequently contradicted in one chapter the specious arguments of a preceding chapter, or an ordinary knowledge of chronology sufficed to annihilate his most powerful anecdotes of illustration. In conversation he would state a matter strongly, with entire conviction, to all appearances, and announce plans of future action with the calm confidence of a mathematical professor. But if his interlocutor happened to understand Russia, her people and problems, and objected, "But that is not so, because," or, "You cannot work on that plan, for such and such reasons," Stepniak would yield, frankly and promptly, with a smile that was the apotheosis of the child-like and bland, with the remark: "No, we cannot; I see that you understand." Thereupon he would calmly proceed to repeat the manœuvre, as long as the time and the understanding (or ignorance) of his interlocutor permitted. Under such circumstances, belief in Stepniak's sincerity was difficult, to say the least. There is nothing of that sort with Kropotkin. We may trust his sincerity. He has proved it; he has abandoned his advantageous social position and revenues in Russia, and done actual labor, unlike some members of the British aristocracy who write socialistic articles and books on hearsay knowledge, because the topic is popular, and receive for their amateur efforts—plus their title—excessive payments, which are diverted from the pockets of genuine literary workers toiling for their bread.

As the best example of a non-introspective but intensely interesting life-story of a highly gifted and sincere man, Prince Kropotkin's volume merits a place in every library, even though it be not very convincing in its socialistic doctrines and attempted propaganda.

Elizabeth Pease Nichol. By Anna M. Stoddart. With portraits and other illustrations. London: Dent; New York: E. P. Dutton & Co. Pp. xi, 314.

This Life of Mrs. Elizabeth Pease Nicol fitly commences a proposed series, under the editorship of Robert F. Horton, of "Saintly Lives." We read (p. ix):

"It was a saying of Jowett, the late Master of Balliol, that more good would be done in the future by writing the lives of men and women who have deserved well of their kind, than by set treatises in theology and morals. The present series aims at being a contribution to such a service."

We agree with the editor in the suggestion that Protestants have, in the lives of passing and present humanity, more zeal and higher incentives to purity of thought and action than have other religionists in the lives of those whom, it is supposed, the Deity has been moved to set apart above ordinary conditions of life and death.

If to many who knew the late Mrs. Nichol some of Mrs. Stoddart's chapters may appear heavy, and if more personal incidents might have been looked for, it must be allowed that it would be difficult in print to give any real conception of the richness and

loveliness of this Englishwoman's character. The reviewer's endeavor would be even more difficult than the biographer's. Born in 1807 of the best Quaker blood in England, Miss Pease married in 1853 Prof. Nichol, Astronomer Royal of Scotland. She was widowed in 1860, and survived until 1897. We are given three portraits of her. That which pleases us most is at the age of seventy, showing her still in the plenitude of her powers. Her features, seventeen years later, in their almost leonine nobility, might well be taken for those of Mr. Gladstone. From Quakerism—at its best, as we have said—her mind expanded, mainly under the influence of the anti-slavery movement, to the broadest Christianity. She was actively engaged in all the liberal philanthropic movements of her time. Either as guests at her father's house in Darlington, at her married home in Glasgow, or her final retreat at Huntly Lodge, Edinburgh, or in correspondence, there stud the pages before us the names of such men and women as Wilberforce and Clarkson, George Stephenson, O'Connell, Garrison, Phillips, Thompson, Harriet Martineau, and all the anti-slavery set; Cobden and Bright, W. E. Foster, Gladstone, John Dillon; Mazzini, Kossuth, and Garibaldi.

For American readers, the chief interest in Miss Pease lies in her intimate relations to the American abolitionists, and especially to their leader; and these have been set forth on an ample scale in the Life of Garrison, to whom she was in England what Mrs. Chapman was in America. Before his first visit abroad, however, she was already schooled in the cause by assisting her father and his associates in abolishing slavery in the British West Indies, as later in terminating the apprenticeship system imposed by the half-hearted emancipation act of 1833. The methods of agitation and information of the public mind then employed were most sagaciously and industriously used for the overthrow of slavery in the United States by casting the moral weight of Great Britain into the scale against the power which was on the side of the oppressor. They were equally available on behalf of the natives of India as against the East India Company; or against the corn laws and in support of the Chartists; against male monopoly of the higher education; against the Contagious Diseases Acts; against cruelty to animals. No humane interest was foreign to her as Miss Pease or Mrs. Nichol, and she brought to each a rare degree of business and executive ability. Her old age was beautiful in the extreme, and, even when sightless, she was all alive to the politics and the philanthropy of the hour, as well as to her numerous friendships on both sides of the Atlantic.

A perusal of this biography suggests a consideration of how much the world has lost in the practical abandonment by Quakerism—by British Quakerism, at least—of its most moving peculiarities (which, however, Mrs. Nichol never lost). Apart from church government and forms of worship, and as yet a lingering greater simplicity of social life, there is little now to distinguish Friends from members of other religious bodies. The scruples have mostly vanished. We have seen the list of a Friend stock-broking firm, one of whose members preaches in meeting, in which shares in taverns, breweries, and theatres are advertised. We are not aware of any collective protest having been made by the Society against the Transvaal war even as war. On the contrary, more strenuous individual testimony against it has been borne by individual members of other bodies than by individual Friends. Friends now without objection don the military garb of Deputy-Lieutenants of counties. Entering the civil service and professions, they have lost their old independence of thought and action, and compound for (in the main) abandoning their old humanitarian rôle at home and abroad by principally devoting themselves to foreign missions, in which sphere they run no chance of endangering personal interests. It was not so when Quakerism gave birth to spirits like Elizabeth Pease Nichol.

The Family of William Penn. By Howard M. Jenkins. Philadelphia: The Author. 1899.

In this considerable work Mr. Jenkins has collected all that he could gather on the genealogy of the Penn family. He has not undertaken to make it a history of the Penns, for that would have led him far into the rise and position of the Quakers in England and the founding and early records of Pennsylvania. Confining himself as he does to the immediate family, he has been obliged to omit much of a more general interest bearing upon the intentions of the colonizers and their relations to state policy. As it is, the record was not a simple one to compile, for authorities have been contradictory, and the loss or absence of important links in the chain of evidence has given occasion to conjecture. The name and tradition point to a Welsh origin for the family, but the first authentic records begin with the fourth generation from William Penn, and locate his ancestor in the County of Gloucester. It was Admiral Penn who gave the family prominence, and he would not be so well known but for the many references, complimentary and otherwise, given to him and his doings by Pepys. The son of the Admiral was William Penn, whose religious experiences and the hardships and reputation gained through them, are too familiar to need summarizing. Mr. Jenkins refutes the story that Penn died insane, but shows him embarrassed in means, in spite of his American principality. His widow was at times hard pushed to obtain so small a sum as ten pounds.

Among the original documents printed by Mr. Jenkins are some interesting letters of Hannah, the wife of William Penn. They throw light upon the household of the founder, and incidentally point to her struggle to obtain the means to meet the current expenses of her family. Some slaves were included in the estate, and she wrote: "The young Blacks must be dispos'd of to prevent their increasing Charge. I have offer'd my Daughter Aubrey one, but she does not care for any. I would, however, have ye likelyest Boy reserv'd, and bred to reading & sobriety as intending him for my self, or one of my children." The worthless son, William, sought to overthrow his father's will, and laid claim to the proprietorship of Pennsylvania, but was defeated in the attempt, and died soon after. His half-brother, Thomas, became principal proprietor, and held the trust for nearly thirty years, although residing in America only nine years. It was his nephew John who was Governor of Pennsylvania when the Revolution caused the collapse of all the Penn interests in the colony, with a loss amounting to nearly $7,500,000, the larger part of which was represented by unsold lands. Pennsylvania voted him a large sum after the peace, and a royal pension was given to him for his loyalty. The early marriage of John is lightly touched upon, but not explained, and the family history of the brothers is given.

Mr. Jenkins has drawn largely from the manuscripts of the Pennsylvania Historical Society, and has made an interesting compilation, of which the general accuracy is very high. The book has many portraits.

A Political History of Europe since 1814. By Charles Seignobos. Translation edited by S. M. Macvane. Henry Holt & Co. 1899.

Whenever translation renders an important work accessible to a large audience which would otherwise be deprived of its use, the translator's services should be swiftly recognized and defined. Prof. Macvane says, with studied moderation: "'The Histoire Politique de l'Europe Contemporaine,' by Prof. Seignobos, seems to me to merit larger use among people of English speech than it is likely to receive in the original French"; and, in fact, the book in question is one of very high importance to all who read history, and especially to such as are not engaged in its professional study. If a reader is prevented by circumstances from making his own investigations, he is a good deal at the mercy of his author, and, accordingly, the latter's fairness or unfairness becomes of the first consequence. Most of all is this true where recent history is concerned.

Now Prof. Seignobos, apart from his splendid store of knowledge, both mediæval and modern, his skill in putting a statement clearly, and his general cleverness, yields to no one in sincerity of tone. Prof. Macvane counts among his author's various good qualities a "thorough freedom from national or other prejudice." The praise is just, and carries a special meaning when elicited by a work upon the present subject. For instance, if one were comparing Seignobos with Fyffe in the matter of impartiality, the Frenchman would be called quite the more impersonal of the two. Prof. Macvane found the English chapters of the book less satisfactory than the others, but none of their shortcomings can be ascribed to a polemical spirit. Seignobos is learned, accomplished, clear, and the appearance in our language of his 'Histoire Contemporaine' must be a source of satisfaction to others besides college teachers and their classes.

The translation, with its index, contains more than 880 pages (or about four-fifths of the number in Fyffe), and is accordingly so long that we are unable to analyze the body of contents; but, with the aid of the author's preface, we shall try to explain the purpose which the work contemplates. Seignobos begins with a query. Having admitted his rashness in publishing a one-volume history of contemporary Europe, he proceeds: "The question is, not whether this history be worth reading, but whether it can be written." An overwhelming sup-

ply of material blocks the way, for since vigorous historical method demands the direct study of the sources, the conscientious inquirer is brought to a halt. "The life of one man would not be long enough, I do not say to study or to criticise, but to read the official documents of even a single country of Europe." A modern author must yield to practical necessities, and make his attempt under limitations which are none the less strict because inevitable and clearly defined.

Thus beset, Seignobos falls back on "monographs, special histories, and annual publications, all made at first hand." These furnish a solid framework of fact, and, where doubt arises over their accuracy, they can be easily controlled by comparison and other simple tests. A second difficulty, that arising from the citation of authorities, is partially met by frequent reference to selected bibliographies. The chapters are short, and at the end of each a list of sources and works is given. By avoiding the establishment of disputed facts and the discovery of new ones, the text is still further compressed. Lastly, the author has renounced "all attempts at full narrative, all descriptions, character-sketches, and anecdotes; such things being nearly always matters of dispute."

We dwell at length upon the method which Seignobos employs because his book is extraordinarily useful and its scope should be fully outlined. Erudition, controversy, and picturesqueness he eschews in order to accomplish one end. "My aim has been to enable my readers to comprehend the essential phenomena of the political life of Europe in the nineteenth century, by explaining the organization of the nations, governments, and parties, the political questions which have arisen in the course of the century, and the solutions they have received. I have tried to write an *explanatory* history." Social, intellectual, and artistic phenomena are strictly excluded, and if any non-political facts are used, it is simply in a context which connects them with politics.

Seignobos's 'Contemporary Europe' is, then, a masterly explanation of political movements. It begins at the Congress of Vienna, and reaches a very recent date in the case of each country or of each episode considered. The author does not commit himself, hands bound, to any special form of treatment, whether comparative, chronological, or geographical. Throughout the greater part of the work he follows a geographical line of division, beginning with England, "which furnished the model of political organization for all Europe," and ending with "the group of eastern states, Ottoman and Russian, which have longest retained the political forms of the eighteenth century." When he wishes to consider the material conditions of political life, the state of the Roman Church, and the international parties of revolution, he uses a comparative method. And when he passes the external relations of states under review (*e. g.*, the System of Metternich, Rivalry between Russia and England, the Nationalist Wars, and the Armed Peace) he observes the order of time. Each passage is carefully wrought, and the combination of passages forms a luminous whole.

Prof. Macvane is responsible for the quality of the translation, but it will be noticed that on the title-page he speaks of himself as an editor. "Most of the actual labor of translation has been done by another." The English version is correct and smooth, and a good index has been added. Prof. Macvane, however, has not limited himself to contributing the preface. He has "freely revised and partly rewritten the chapters on England" because they seemed not quite to equal the remainder of the volume in excellence. We need only say of the changes that they have not reached the point of structural alteration, and are an improvement upon the original.

We have described the character of this treatise so far as possible in its own words and from its own standpoint. Its value is so great because it represents admirable knowledge and discernment, together with skill in the rapid explanation of large questions. For the early stages of university work it is too advanced, but for maturer undergraduates as well as for adults it must prove an invaluable guide.

Under Three Flags in Cuba. By George Clarke Musgrave. Boston: Little, Brown & Co. 1899.

This narrative purports to be "a personal account of the Cuban Insurrection and Spanish-American War." According to his story, the author joined Ruis Rivera's western army, as a newspaper correspondent, just after Maceo's death; made his way into the Spanish lines; went familiarly about Havana, attended executions at Cabañas, chatted with Weyler and had some thought of kidnapping him; worked eastward again among the insurgents, meeting Gomez, Garcia, and the insurgent Government in Camaguëy; saw a number of fights; returned to Havana, was imprisoned as a spy, transported to Spain, and released as a British subject in time to witness the Santiago campaign.

An author with such opportunities should have written a memorable book. Perhaps the seizure of his original manuscript, "together with three hundred photographs of Weyler's régime in Cuba and some historical letters that had passed between the Captain-General and Premier Cánovas," accounts for his failure to do so. Barring his picture of the horrors of a Spanish transport and the common ill-treatment of Spanish conscripts, there is nothing new in the whole volume. Moreover, the writer's chronology is so incoherent that one follows his wanderings with difficulty; and his personal story is lost in a jungle of hearsay and extraneous matter. Even in what he describes as an eye-witness, the "journalistic" habit distorts his vision. The "swells of the organ" and "the voices of the choir" "wafted across the bay" from the Cathedral, steal upon the ears of the dying patriots at Cabañas. From Marianao (which he calls "Mariano") just beyond the River Almendares (which he calls "Almanares"), he notes the moon's "pure radiance lighting up the distant spires and domes of Havana," resting on "massive guns" where "the great Santa Clara and Vedado batteries loomed grimly in the distance," "making them gleam like polished silver," etc., etc. This is a sublimation of hearing and eye-sight—like listening to the choir of Trinity from Columbia Heights, and watching the ferry-slips at Cortlandt Street from Spuyten Duyvil! The book is characterized throughout by such loose and bombastic writing, by misstated facts of common knowledge, and misspelled names in common use. The author claims a part in the rescue of Evangelina Cisneros, and betrays in an unconscious note (p. 104) how far the irresponsible vagaries of "yellow journalism" may go for mischief: "Mr. Decker, during the winter, formulated a plan to rescue Capt. Dreyfus, which Mr. Hearst wished to effect without causing international complications, . . . but the *Maine* disaster and the war diverted this unprecedented journalistic enterprise."

Sextus Empiricus and Greek Scepticism. By Mary Mills Patrick. Cambridge, Eng.: Deighton, Bell & Co. 1899.

The movement called Scepticism—for it cannot be called a philosophy—has never laid strong hold of the imaginations of men. There is in the human being an ingrained love of dogmatizing; and a method which is entirely negative and offers nothing in place of the belief that it destroys, has little chance of taking root. The very name of the founder of the sceptic school, Pyrrho, is a secret of scholarship; for the agnostics of Greece, like their modern imitators, were not represented by any figure so commanding as to compel the attention of the ignorant. Pyrrhonism and Pyrrho are mere shadows. What layman off-hand could come within a century of the date of Sextus Empiricus, perhaps the greatest of them all? Yet, with these two men, Scepticism was much more than the mental laziness that is often the only basis of agnosticism.

When we call a man a sceptic, we imply merely that he does not hold certain conventional beliefs. The followers of Pyrrho so directed their reasoning powers to suspend their judgment that they saw both sides of every question with perfect impartiality. Absence of dogmatism was their aim; but what actually resulted was a state of mental equilibrium that cannot be distinguished from the *æquus animus* of the Stoic dogmatist. Apathy follows this sort of agnosticism as if by chance, as a shadow follows the body; and this is the most positive side of a philosophy that was unique in that it drew no moral conclusions, had no criterion, and could never state the grounds of its negations. To do so would be to dogmatize.

We fear that Mrs. Patrick's volume will never reach those whose ignorance of Sextus Empiricus it is intended to dispel. Her thesis is admirable for its purpose as a doctor's dissertation (accepted at Berne in 1897), and, as a supplement to Zeller, will be read with interest by students. Sextus Empiricus was a sceptical doctor who lived (probably) at the close of the second century A. D. He spent his life in attacking Stoic dogmatism and, in general, all the sciences that men have labored to construct. We have the "Hypotyposes," the public lectures in which he tried to demolish dogmatism, and not the least valuable part of the present work is the translation of these by the authoress. There is an interesting chapter on the relation of Pyrrhonism and the Scepticism of the Academy.

If we had thought that the English of the President of a college must be above suspicion, the writer's style would be a disillusion. On p. 29 we encounter this curiously compounded sentence: "He threw the sponge at the picture that he had used to wipe the colors from the painting with." The fol-

lowing positively defy analysis: "He states that a philosopher himself is a part of the discord, and to be judged, rather than being capable of judging" (p. 45); "Saisset is correct in saying . . . but it is not correct when we consider" (p. 57). A thesis which is published in book form invites criticism and should at least be free from bad grammar. On p. 82 the phrase Antigonus of Carystius is presumably a slip.

A World in a Garden. By R. Neish. London: J. M. Dent & Co.; New York: Macmillan. 1899.

It is the hard-won Scotch garden which, in its owner's esteem, surpasses all others, and the enthusiasm with which this author writes of his brief northern blooms would seem exaggerated to the South, where flowers are matter of course the whole year through, and no long winter sleep adds intensity to the common joy in spring's awakening. But the "world" held by this garden is more than a collection of vegetable life. Poetry, religion, and philosophy are discussed with the plants, which our author finds appreciative, perhaps instructive, interlocutors; even doting upon the absence of more disputatious human neighbors. Why, then, should he seek the audience he professes to scorn, or at least disregard? The assumption that his personality is of general interest is, of course, necessary to the man who sits down to write a personal book; but when we are led into a garden only to talk about its owner, we feel a little tricked, and inclined to doubt the genuineness of his enthusiasm as a gardener, and to wonder if in other circumstances he might not have unfolded himself just the same on the text of carpets and furniture. "I have always loved Chippendale chairs," tells as much of a man's character as, "I have always loved lilies"; and equally invites the reply, "Lucky dog, to have some to love."

By MINOT J. SAVAGE, D. D.

Life Beyond Death

Being a review of the World's Beliefs on the Subject, a consideration of Present Conditions of Thought and Feeling, leading to the Question as to Whether it can be Demonstrated as a Fact.

Third Impression. 8vo, $1.50.

"The book is a sane, wholesome, sunny view of human nature and religious thought, and whether a man is very religious or not he will enjoy reading it, if he is a thinking man. It is a book which will help a great many people, and it ought to have a wide sale."—Washington Times.

"This volume is dedicated to the son who was suddenly called last spring from a life of promise and usefulness into the great beyond; and Dr. Savage pours out his soul in the mingled language of sorrow and faith, which puts into his hope the emotional temper of Channing and the intellectual spirit of Parker. It shows the strong inspiration that governs the work, and which balances all the moral, religious, and scientific forces in the world between the claims of scientific method and the ideal of religion. The book unquestionably marks a tremendous reaction against the materialism of the past."—Christian Register.

The Nation.

NEW YORK, THURSDAY, JANUARY 25, 1900.

The Week.

The agreement reached in the Senate fixing the 15th of February as the day to vote on the currency bill is the most encouraging event that has taken place in Congress since the bill was first reported to the House. This agreement is an assurance that the bill will pass; but that assurance has been given in other ways, and more especially in the manifest indifference of the Democrats to the whole subject. Their opposition has been growing fainter and fainter all the time. The Democratic newspapers throughout the country treat the bill for the most part with silence. Even the speech made by Senator Teller on Wednesday week was much less forceful and energetic than his former efforts. It betokens clearly that he, for one, has thrown up the sponge. If we contrast this vapid and spiritless behavior of the silver men with their fight against the repeal of the Sherman law in 1893, when it seemed as though we were on the eve of a revolution because the Democrats would not allow a vote to be taken, it needs no oracle to tell us that the end has come, that the question of the monetary standard is at last definitively settled, and will vex the hearts of the business men no more. The Democrats are trying to retire under cover of the national-bank question, and it is well enough to let them do so. The maxim which says, "Build a bridge of gold for your retreating enemy," here has a double meaning.

The fate of the Samoan Islands is too small a matter to interest a public having to consider the Philippine situation, and the treaty disposing of them was ratified by the Senate without consideration. But a report that the President regarded the treaty as giving him sovereign powers over the island of Tutuila aroused Senator Jones of Arkansas to somewhat belated opposition, and the treaty has been recalled from the President. The statement is made that the President contemplates no such action. Possibly we may be assured that he would regard it as criminal aggression. But, in view of the events of the last few years, Senator Jones's suspicions are not unjustifiable. Very little attempt has been made to rebut the evidence that the President did plan to establish his sovereignty over the Philippines while he was denying such an intention. The proposed treaty has the very great merit of extricating our Government from an entangling alliance with Great Britain and Germany; but if it is to have the effect of annexing more territory to the United States, and possibly of admitting a number of Samoans to citizenship, it should be carefully scrutinized. We all know that the principle is vital to the imperialist theory, that when the Flag has been raised on any part of a Pacific island, the sovereignty of our government at once extends over the whole of it. The inhabitants of Tutuila may be very insignificant human beings; but the disposition of their future may involve principles of transcendent importance.

According to Senator Morgan, it is extremely important that immediate action should be taken to construct the Nicaraguan Canal. Like some of the newspapers that insisted on hurrying the country into war with Spain, he thinks it will be time to deliberate after we act. It is true that our Government has a commission of eminent men engaged in selecting the best route for the canal. It might seem the proper course to await the report of this commission before committing ourselves to any particular scheme. By no means, says Senator Morgan. Should the Commission pronounce in favor of the Nicaraguan Canal, we shall have gained time by anticipating its action. Should it declare against the Nicaraguan route, it will demonstrate the insufficiency or error of the proposed immediate action "in time to prevent any possible harm to the country." If the strength of Senator Morgan's case is to be measured by the strength of his argument for it, Congress may well hesitate to yield to his demands. His reasoning would dispense altogether with the service of trained engineers in laying out the canal; if we found we were going wrong at any time, we could reflect that the country would survive it, and that it might be all the same a hundred years hence. Of course, Senator Morgan knows, as well as every one else, that if he can succeed in embarking our Government in the Nicaraguan enterprise, any report against its feasibility would be entirely disregarded. In fact, Senator Morgan himself would talk loudest and longest against paying any attention whatever to such a report.

Congressman McCall of Massachusetts has introduced a bill to put the personal baggage of travellers arriving in the United States under the same regulations that existed in the McKinley tariff of 1890. The present law restricts the total amount of such articles purchased abroad and brought in by residents of the United States to the value of one hundred dollars. This restriction does not apply to foreign tourists or to immigrants. It will be remembered that, when the new law went into effect, an attempt was made to execute it by private enterprise—that is, by placing unofficial persons on the steamer docks to inspect the baggage of arriving passengers—and that passengers were subjected to such insult and outrage that the Treasury Department issued an order forbidding anybody to take part in the inspection except the regularly appointed customs officers. Since that time there has been no complaint of the ill-treatment of the public on the docks. The business of baggage inspection goes on as before. It is more rigid than in any European country, but it causes no unnecessary delay or friction. The danger of political consequences disastrous to the Republican party, at one time imminent in consequence of the indignities put upon passengers, was averted. A movement to restore the law which was in force before the passage of the Dingley bill was started in New York, Boston, and Chicago simultaneously, and Mr. McCall's bill is the outcome of it. It ought to be passed without opposition. The amount of goods which one person can bring in being restricted to articles necessary to his journeying and his present comfort and convenience, it is not likely that any more would be brought in than comes in now. As regards the revenue, it has been shown that the baggage tax yields only $140,000 per year, although the wise Dingley estimated it at $10,000,000. The objection may be raised to the McCall bill that it reopens the whole tariff controversy, but, in fact, that controversy has already been reopened by the Administration's policy of free trade with Porto Rico.

The damage heretofore done by Appraiser Wakeman to the commerce of New York cannot be repaired, but his powers in this department of human activity are somewhat curtailed by the decision of the Board of General Appraisers adverse to his ruling on paragraph 313 of the present tariff. This paragraph is too technical to be explained to the general reader. It relates to the method of introducing figures into certain cotton goods in the process of weaving. Wakeman, in his search for ways and means to harass importers, ordered his subordinates to change the classification of the goods in question, so as to make them subject to an increased duty of two cents per square yard. This order inflicted a heavy pecuniary loss upon the houses which were importing such goods, since it increased their expenses by the amount of the new duty; and in cases where they had made contracts or booked orders ahead of arrival, they

could not charge the additional cost to the buyers. They might possibly, after some years and at the end of a lawsuit, get their money back from the Government, but they would lose the interest on their capital meanwhile, and would have heavy bills to pay for legal services. If Wakeman had any sense of shame, he would now resign, and if the Government had a proper sense of its duty to citizens engaged in an honorable and lawful vocation, it would eject him from office at once.

The true animus of the attacks on Commissioner Evans was revealed the other day in the debate on the passage of the pension bill. In 1898, the first year of Mr. Evans's administration, he paid out to pension attorneys, more than half of them in Washington, the sum of $730,000. Last year he paid them but $477,000. These attorneys, as was observed by Mr. Mahon of Pennsylvania, created the agitation among the old soldiers in order to make business for themselves, and a reduction of their fees by one-third is sufficient to produce a tremendous crop of complaints against any Commissioner. Fortunately Congress has not yielded, on this occasion, and Mr. Evans's hands have been strengthened, rather than weakened, by the debate. As might have been expected, the decrease in the pension rolls, which had been hopefully reckoned upon by some statesmen, is to be postponed on account of the claims of the veterans of the Spanish war. As the war with the Filipinos is a much more serious matter than that with Spain, an increase in the pension payments may reasonably be anticipated.

The strongest point made in the majority report of the committee of the House of Representatives on the Roberts case is that the State of Utah, in his election, violated an "understanding" by which it secured admission to the Union. The legal and constitutional effect of such an understanding, however, is somewhat obscure. It may have been violated "explicitly and offensively," but was there any penalty for such violation provided in the understanding? If not, it does not appear where the power to inflict the penalty resides. During the reconstruction period, Congress made repeated attempts to regulate the behavior of the Southern States by "conditions subsequent." These States were admitted with certain constitutions, not merely on the "understanding" that these constitutions were not to be altered, but, in the case of Mississippi at least, with that express provision. But it was found impracticable to maintain this position, and the fifteenth amendment was finally resorted to in order to accomplish the purpose of Congress. It would no doubt be correct to say that, when the reconstructed States were admitted, it was in pursuance of an "understanding" that they should not deprive the negroes of political rights. If the violation of such understandings is a ground for excluding Representatives from the House, the numbers of that body might be greatly depleted, and some States would not be represented there at all.

Statisticians will read with sinking hearts the debate in the House of Representatives on the passage of the supplementary census bill last week. The returns of the census of 1890 were deprived of much of what value they ever would have had by being delayed for years in publication. The complaints on this account were so loud and so well founded as to lead to an attempt to save time in completing the next census by business-like arrangements for printing. Nothing more revolutionary was proposed than an amendment to the bill authorizing the Director, if the reports could probably not be published by the Government Printing-Office within the period prescribed by law, to contract for their printing and binding by private parties. In support of this amendment, it was stated that the Public Printer would require 300 full working days, with the present force, under the most favorable conditions, to do the work projected by the Director of the Census. To propitiate the politicians, the chairman of the census committee offered to accept an amendment that the printing should be done by union labor. Nevertheless the whole scheme was rejected by an overwhelming majority. This is attributed to the influence of the typographical unions, which are opposed to having any Government printing done outside of the Government Office, administered as it is according to their exactions. Congress has passed a bill requiring the publication of the census returns to be completed by June 30, 1902. It is a safe prediction that an extension of time will hereafter be granted, for it is hardly possible that the Government Office can discharge the duty now laid upon it.

Coming immediately after the imprisonment for life of two Texas lynchers, the denunciation of mob violence by Gov. Longino, the new executive of Mississippi, gives added reason for believing in a change in Southern feeling upon this vitally important matter. He not only called attention in his inaugural last week to the economic dangers of mob law in driving capital and investors out of the State, but laid stress upon the lynching of suspects for many other crimes than rape, to punish which it was first employed. But the Governor had a remedy to propose, as well as scathing words for the increase of lawlessness in the State. He called upon the Legislature for a law giving a large sum of damages to the family of any one lynched hereafter, to be paid by the county in which the lynching occurs. Another law recommended provides that the office of a sheriff or constable who allows a prisoner to be taken from him shall become vacant. These are all admirable suggestions. Should they become law, Governor Longino will be entitled to the thanks of the whole country.

The battle of the breakfast-table in this city on Saturday ended most ingloriously for both combatants. Neither Roosevelt nor Platt showed a scratch when he emerged from the room in which the well-advertised contest was to take place. More remarkable still, the historian of war, the man who celebrates the martial achievements of the English Cromwell in a past century, and of an American Cromwell in Cuba during this century, had "nothing whatever to say." Most remarkable of all, the exponent of "a strenuous life," though apparently unscathed, admitted that he had consented to an armistice, and allowed his antagonist time to strengthen his lines of battle. Was it only for this lame and impotent conclusion that a Governor came to the metropolis from Albany and a United States Senator from Washington? Wherein does either party cut a better figure than a member of the Peace Society? Everybody else sees, even if the Governor does not, that the cause for which he stands is weakened by such dilly-dallying. The principles which Platt and Roosevelt represent in this matter are irreconcilable. Platt wants to avoid the contest over Payn's successor altogether, if possible. If Payn must go, the boss desires that his successor shall come as near as decency will permit to the Payn level. "The organization" showed its hand clearly on Saturday when it brought forward as its first choice the deputy superintendent. Of course Roosevelt saw in a moment that he might almost as well let Payn stay. What he does not seem to see is, that the machine will not name anybody as a compromise candidate of whose loyalty to itself, rather than to the interests of the State, it does not feel thoroughly assured. The organization regards the Insurance Superintendency as a place to be "worked" for the Republican politicians. The Governor is bound to treat it as a trust, to be administered in behalf of the people.

Payn's begging letter to Mr. Whitney would constitute an absolute disqualification for the office of Superintendent of Insurance, if he were not already disqualified for it by a thousand other considerations. For a man in his position to be exposed as a Wall Street speculator, on "margin," would be simply fatal in any system of government

where ordinary morality and business principles held sway. Furthermore, Payn is caught in this letter using the servants of the State to run his private errands. "The bearer, Mr. Henry D. Appleton, is my chief deputy." Just the man to be rushing around to save his superior from personal bankruptcy. And if any little arrangement about "inspecting" at times convenient to the inspected were to be made, who so fit and handy as the chief deputy? Payn's letter, says the President of the State Trust Company, who gave it out for publication, "tells its own story." It does, and the story is one of reprehensible conduct in office and of unfitness to hold it one hour after a successor can be confirmed. Gov. Roosevelt is under renewed obligation to nominate an honest man for the Superintendency, and to keep on sending in names, if the first is rejected, until the Senate is shown to be as worthy of suspicion and contempt as Payn himself.

Mr. Whitney's display of the finest qualities of our poor human nature is the one redeeming feature of a sad affair. Payn had no claim upon him. There it stands in the letter: "I have no right to ask so great a favor of you." So there could be no possible question of duress or blackmail. Many men in Mr. Whitney's position would have turned away the suppliant. But that pathetic story of a sick wife and impending ruin was too much for his tender heart, and he instantly put his hand in his pocket—that is to say, the Metropolitan Company puts its hand in *its* pocket—and drew a check to Payn's order for $100,000, marked "Construction account." Was this with an eye to the construction that might be placed upon the transaction? We cannot say, but we are sure the community has been deeply touched by this revelation of Mr. Whitney's melting charity. We only hope that his impulsive philanthropy will not be taken advantage of by other designing men.

The death of Theodore Bacon of Rochester will sadden the hearts, not only of his personal friends, but also of many who knew him only by reputation. Nothing was so characteristic of him as his unswerving devotion to principle. No considerations of personal advancement, none even of political expediency, could make him deviate from the path prescribed by conscience. And his was an enlightened conscience. He was of the generation which felt the stimulating influences of the anti-slavery struggle and of the civil war; but he was no mere enthusiast. To the education received in college he added the culture of foreign travel, acquaintance with statesmen of other countries as well as his own, and a profound appreciation of those fundamental principles which have made the common law so great a bulwark of the liberties of the people. With these qualifications, with brilliant gifts, both as a speaker and a writer, and with an unsullied character, no position might have seemed too high for him. Yet he received no office from the people; not because it was not tendered, but because he was by nature and principle utterly incapable of practising, or even tolerating, the arts of the demagogue. When he became, as he sometimes did, a candidate for elective office, he defined his attitude so clearly and stated his principles so sharply as to make success—in the ordinary sense—hopeless. It might have been said of his public declarations on these occasions, as of John Stuart Mill's when he stood for Westminster, "The Almighty could not be elected on such a platform." So it will perhaps be said that his life was a failure; that he threw away his opportunities for doing good, and that those who voted for him threw away their votes. In that sense the life of every one who fights a losing battle, who struggles for an unsuccessful cause, is a failure. But to those who draw inspiration from such defeats and firmer courage from such struggles, such lives are not failures. They form the very substance of the faith and hope that stay us up, and without the help of such examples no reform could command true devotion.

The incorporation of Barnard College into the educational system of Columbia University, with the consequent alteration in the relations of its officers and students to the larger institution, is an event of marked importance in the educational world. By this change the President of Columbia becomes, ex-officio, the President of Barnard, his duties being the same in both instances, while the dean of Barnard is given a seat and a vote in the University Council. Hereafter the Barnard instructors will be on exactly the same footing as those teaching in Columbia, though selected by their own institution. Most interesting of all is the announcement that, in the future, the women graduate students of Columbia University will be subject to the same terms as the men candidates for the higher degrees. Not even Radcliffe has progressed as far as this in its relation to Harvard University, for it still has its separate President, and is without representation on any governing board of the University except the committee which deals with graduate students. It is true that President Eliot's signature is to be found on Radcliffe degrees, but only as an assurance that the documents which bear it represent fully as much as those issued to men in the other institution, a few yards away. It is to be hoped that Columbia's step forward will not be without its effect in Cambridge. Meanwhile, it is gratifying to note that the throwing open of Columbia to women graduate students is taken almost as a matter of course, and that it will be the cause of very much less unfavorable comment than the original proposition ten years ago to add an annex to the University.

The feeling of sympathy with the Boers is reaching considerable dimensions in this country, and we are glad to see that in some quarters it is accompanied with a corresponding sense of shame for our own slaughter of a people struggling for liberty on the other side of the globe. In the pro-Boer meeting at Washington City on Sunday evening, two of the speakers made pointed reference to our Government's course in the Philippines. Senator Allen of Nebraska said: "A man cannot believe in the cause of the Boers, and at the same time uphold our Government's course in the Philippines." Congressman Clark of Missouri said: "Wherever people are struggling for liberty, they should have the friendship of all Americans." Senator Allen and Champ Clark may be a pair of demagogues—we have had occasion to take note of them as such aforetime, and may have to do so hereafter; yet they shine by comparison with other speakers at this meeting, who could only pour out vials of wrath on Great Britain.

Count von Bülow's statement in the Reichstag on Friday puts an end to the talk of strained relations between Germany and Great Britain. The German Government, he showed, had very properly stood up for the rights of neutral trade, and the English Government now admits that its naval officers were, in certain cases, guilty of excess of zeal in detaining German steamers. These have been released with apologies and offers of full indemnity. Nothing could be more satisfactory, or speak better for the firmness of the Berlin Foreign Office and the tact and good sense of Lord Salisbury in adjusting the controversy. But there is in the incident promise of still more important results than the mere removal of one cause of international friction. Count von Bülow said, with perfect justice, that the happy settlement would go far toward introducing order into what is now a somewhat chaotic department of international law. The whole matter of the rights of neutral trade, the definition of contraband of war, and the exercise of the right of search will be greatly cleared up by this amicable agreement of these two powerful nations on certain principles and rules. As the German Foreign Minister remarked, an international Congress might well be called to pass upon the entire subject; but, even as it is, a great step in advance has been taken. It is, in fact, by the accumulation of such peaceful agreements between great Powers that international law is made.

SHIPPING SUBSIDIES.

The magnitude of the fraud sought to be perpetrated on the taxpayers of the United States by the shipping-subsidy bill can be best understood by making a comparison of the sums actually appropriated by Great Britain, for example, and those proposed by the Hanna-Payne bill. By reference to recent reports of the British Postmaster-General and the admiralty records, it will be found that the ships to which subvention was paid by the British admiralty as reserve merchant cruisers during the past year were as follows:

Himalaya, P. & O. Co.	£3,375
Australia, P. & O. Co.	3,375
Victoria, P. & O. Co.	2,438
Arcandia, P. & O. Co.	2,438
Campania, Cunard Co.	7,500
Lucania, Cunard Co.	7,500
Teutonic, White Star Co.	7,265
Majestic, White Star Co.	7,396

To these may be added the three steamers of the Canadian Pacific Railroad Company:

Empress of India, Empress of China, Empress of Japan — for the three	£7,313
Aggregate for the eleven steamers	£48,600

For these payments the admiralty have the first call on the ships, at much lower rates than they would have to pay if the boats were chartered in times of emergency, and they have also the first call on other ships belonging to these companies for which no subvention is paid. In consideration of this payment, the ships were constructed under admiralty survey, and fitted with gun-decks and the necessary adjuncts to enable them to be readily utilized as armed cruisers in case of need; the subvention being paid, not only for the privilege of a call upon the lines for the boats so subsidized, but as compensation for the additional expense in construction, and for the additional weight and bulk which they are obliged to carry in the shape of gun-decks and other fittings. In addition to the subvention, according to the forty-fourth report of the Postmaster-General of Great Britain, the total amount paid for the carriage of mails from the United Kingdom to New York during the year ending March 31, 1898, was £107,694, or say about $500,000, which, added to the amount paid for subvention, would aggregate a sum total of about $750,000.

In the Hanna-Payne bill, provision is made for the payment of subsidy to American-owned steamers under the British and Belgian flags, which is estimated to amount in the aggregate to more than $658,000 annually. It is also an open secret that various foreign residents doing business in New York within the prescribed time have filed notices which will enable them to comply with the stipulations of the bill and secure subsidy payments on a still greater amount of tonnage now in course of construction to be put into the American trade later. Thus the estimated $9,000,000 for subsidy appropriation is likely to be fully used, the lion's share going to the International Navigation Company and other owners of vessels which are foreign built, though possibly under the American flag, while the Pacific Mail, Ward Line, and other coastwise lines, strictly American, will divide among them what is left by the more greedy claimants for the public money. If this Hanna-Payne bill, as has been so frequently announced, is for the purpose of reviving shipbuilding interests in this country and the building up of an American merchant marine, why not confine the payment of the subsidy to strictly American-built ships?

Now let us inquire what would have been the subsidy payments under the Hanna-Payne bill for the fiscal year 1897, if it had been in force at that time. Following the actual course of every ship during that year, the amount paid from the Treasury would have been the following:

International Navigation Co. (under American flag)	$1,303,331 57
International Navigation Co. (under British and Belgian flags)	658,701 44
Ocean Steamship Co.	117,390 37
Pacific Coast Steamship Co. and Oregon Improvement Co.	61,209 12
Atlantic and Caribbean Steamship Co.	113,132 28
Pacific Mail Steamship Co.	213,387 80
United States and Cuba Mail Co.	300,601 97
C. H. Mallory & Co.	7,256 87
H. B. Plant Steamship Co.	12,665 32
W. P. Clyde & Co.	25,069 83
Southern Pacific Co.	21,898 57
Charles W. Hogan	8,438 10
T. Hogan & Son	11,225 74
Alfred C. Bedford	31,300 13
L. and N. Railroad Co.	381 09
Saginaw Steamship Co.	1,497 96
Pacific Steel Barge Co.	9,592 85
Progreso Steamship Co.	480 13
International Steamboat Co.	409 53
Boston Towboat Co.	1,254 43
Total	$2,899,225 10

In addition to this the following extra subsidies would have been earned by reason of ships of greater speed and larger tonnage:

International Navigation Co. under American flag	$1,220,512 20	
Under British and Belgian flags	486,768 64	$1,707,280 84
Oceanic Steamship Co.		117,390 37
Pacific Coast Steamship Co. and Oregon Improvement Co.		20,066 76
Atlantic and Caribbean Steamship Co.		94,643 06
Pacific Mail Steamship Co.		95,281 38
C. H. Mallory & Co.		2,262 33
Total		$2,036,924 74

This makes a total of nearly $5,000,000, against about $750,000 paid by Great Britain for like purposes. An interview appeared in the morning papers, a few days ago, in which the President of the International Navigation Company was made to say that the mail contracts which now give the International Navigation Company some $1,000,000 per annum do not compensate for the extra expense involved in sailing under the American flag. Such statements may deceive the average member of Congress, but cannot deceive merchants who are familiar with the subject. We are informed that the subsidy which would be earned by the International Navigation Company under the proposed bill would in itself amount yearly to more than the gross earnings that can be made by either of the largest steamship companies now employed in the trade between England and America from the income of their regular business.

It is an open secret at Washington that a combination has been formed between the Hanna-Payne subsidy and the Nicaragua Canal. Senator Hanna had agreed to await the report of the Isthmian Canal Commission, and the President had accordingly recommended delay on the canal bill for that purpose, but there has been a sudden change in both quarters. Mr. Hanna has put his name to the report for immediate action on the canal bill, and he thinks that he has secured a sufficient number of votes for the shipping-subsidy bill. It may be so, but it is not yet certain. The debate in the Senate is yet to take place, and it is scarcely credible that the bill should fail to be exposed in its true character as a brazen scheme for filling private pockets at the expense of the people.

FREE TRADE WITH THE COLONIES.

The imagination of man could not have conceived a more bizarre termination of the late war, and the acquisition of territory which followed it, than the present controversy in the Republican party over the question of free trade with Porto Rico. It should be remarked in the first place that there never was any need of our taking Porto Rico. Its inhabitants were not complaining of oppression. They had never asked our assistance. It is true that they welcomed us when we came. There is hardly an island in the West Indian group, British, Danish, or other, that would not welcome a change. They are all so desperately poor that they want to try something new, and they all feel instinctively that free trade with the United States would be good for them. This was the feeling of the Porto Ricans when President McKinley decided to carry the war to that island. They manifested their joy in such an exuberant way that the only glory gained by Gen. Miles came from his excellent choice of a landing-place. When once on terra firma, he found his pathway was strewn with flowers. We had never been asked to go there, but, when we had once come, the inhabitants threw their arms around us because they believed that free trade with the United States would be one of the results of the embrace.

The time has come for sitting down to this marriage feast, and now a skeleton appears and takes the leading place at the banquet. Its name is Protection to Home Industry. It comes to forbid the banns. It says that the tobacco and sugar and tropical fruits of this new possession and of the other islands that we have grabbed shall not come into the United States duty free. Coffee may come in, because

coffee is already on the free list and is not grown by us. So the Porto Ricans are advised to grow coffee. But coffee, like confidence, is a plant of slow growth. It takes years to bring a plantation to a productive state, and, after this is accomplished, Porto Rico will have no advantage in our market over Brazil, or Venezuela, or Mexico. The advice given to the inhabitants of our new insular possession, even if followed, would not help them for a long time to come. They might starve to death first. What they want and must have is either free trade with the United States, or donations from our Treasury or from private subscriptions until they can adapt themselves to their new conditions.

When the plan of free trade was proposed last month by the President and the Secretary of War, it was so warmly espoused by leading Republican newspapers that it seemed likely to go through Congress with a rush. But there has been a change of atmosphere, and this has been manifested nowhere more strikingly than in the columns of the New York *Tribune*, which has made a complete *volte-face* on this question inside of one week, and which now tells the Porto Ricans that they have not been annexed to this country and will not be, and that "Porto Rico has no concern with the laws of the United States." The fight has now been transferred to the committee on ways and means, with the hope of finding some middle ground between free trade and protection as regards the new possessions. We do not see any possible chance of compromise. It is evident also that the new reciprocity treaties have been put in jeopardy by the Porto Rican question.

Another complication is looming up in the distance, which must have been foreseen by the Administration long ago. It is found in our demand for the "open door" in China. The Philippine Islands are in the same situation, legal and constitutional, as Porto Rico. Whatever principle applies to one applies to the other. If any rule of law requires that the tariff system of the United States shall be extended over Porto Rico, it applies with equal force to the Philippines. But our tariff system is in absolute conflict with the "open door" policy. It forbids the admission of German, British, and French cotton goods, for example, except at the Dingley rates, which cannot be considered an open-door policy. It was reported from Washington the other day that one of the foreign Powers, with which Secretary Hay has been negotiating, while giving its assent to the "open door," has replied that it would expect the same principle to be applied by the United States to the Philippines.

This report was almost immediately contradicted, but, whether it be true or not, we may be quite sure that it will come true very soon. The foreign Powers that have made lodgment on Chinese territory will not keep the door open to our trade if we close the Philippines to their trade. Moreover, we have made a treaty with Spain by which we agree to keep the door open to her trade with the Philippines for ten years. How this treaty can be reconciled with the clause of the Constitution which says that all duties, imposts, and excises shall be *uniform* throughout the United States, is a nut for the Attorney-General to crack. How this treaty can be reconciled on principles of equity and fairness with differential duties in favor of Spain and against England, Germany, Russia, etc., is a nut for the Secretary of State to crack. The conclusion cannot be avoided that the Administration has involved itself in a tremendous tangle, legal, commercial, and political. Its policy of Imperialism, or Expansion, has brought it at loggerheads with the protectionists and in conflict with the Constitution of the United States. It contains also the germs of a quarrel with European Powers over trade regulations in Eastern Asia.

DOMESTIC FREE TRADE.

The alarm of some of the Connecticut farmers who grow tobacco over the possibility that free trade may be established between this country and Porto Rico, illustrates once more a perennial characteristic of protected industries—their timidity. The acuteness of the alarm in the case referred to may be gauged by the fact that the value of the tobacco crop of the United States, according to the returns for 1896, was $24,258,070, taking as approximately correct the returns of the Agricultural Department; while the average export of tobacco from Porto Rico for the years 1893-97, inclusive, was only $450,485. To put it differently, after free trade with Porto Rico, the $1,325,668 worth of tobacco produced in Connecticut would find $450,485 worth added to the $22,932,402 of domestic tobacco with which the Connecticut product comes into competition.

One of the most destructive arguments against the theory that an industry must suffer "ruin" from increased competition is furnished by the figures of our own country's increasing industrial growth. At any period of its existence a protected industry is ready to cry out that a change in the tariff which will let in a few pounds more of raw material, or a few thousand dollars' worth more of manufactured products from any foreign port, will "ruin" it. All the time, however, in a large country like the United States, a growth of internal competition is taking place which exceeds in many instances any possible rivalry that could spring up from abroad.

An article printed very recently in the *Evening Post* called attention to the increasing competition which the East meets from our Western States. The Eastern farmer met this same competition as soon as the transcontinental railroads were opened, and succumbed to it. He no longer expects to raise wheat to sell; but he produces more milk, raises more potatoes and more fruit, and, although, like his Western farm brother, he has gone through some trying years since the war, he is not "ruined." The Eastern iron-miner next felt the competition, and the opening up of the rich product of Lake Superior for a time closed nearly every iron mine in New Jersey. That State, however, continued to increase in wealth, and the turn in trade during the last year has seen a reopening of Eastern mines and a rekindling of Eastern furnaces, without any falling off in Western production. Now it is noted as nothing uncommon to see a New Hampshire farmer using a cart stamped with the name of an Illinois or a Michigan maker, or a stove cast in Iowa, or a washing-machine made in Indiana. Michigan furniture makers have opened salesrooms in the fashionable district of this city, and Indiana-made carriages challenge comparison with the daintiest output of popular New York makers.

The recent domestic competition of our Southern States has been still more noticeable. The coal product of these States went from 1,963,574 tons in 1880 to 14,672,520 tons in 1896. The pig-iron produced there increased from 559,400 tons in 1885 to 1,646,410 tons in 1896. Pennsylvania felt the effects of some of this competition, but, instead of being "ruined," it nearly doubled its tonnage of coal and pig-iron produced in the same period. In very recent years an industry entirely new to the South has been established there, cotton-manufacturing. This has made wonderful progress, and in doing so has caused a good deal of nervousness among New England millowners. But the situation seems to be adjusting itself quietly, and a not improbable result of the competition will be a better acquaintance and a better feeling between the business men of the two sections.

If secession had carried the South out of the Union, and an independent republic had also been established in the West, it is easy to define the tariff laws that Eastern protected industries would have been demanding in establishing our relations with these neighbors. Pennsylvania iron would have had to be protected against that of the Mesaba Range, and against the coal and iron of Alabama and Tennessee; New Jersey and New York would have asked a duty on Western wheat and corn, while New England would have rushed to Washington with a pallid face to beg that the cotton products of the worse than pauper labor of the Carolinas be stopped at Mason and Dixon's line. These demands would doubtless have been listened to.

We may smile now at the industrial chaos which such a tariff system would have produced; but the history of attempts to regulate production and prices by Government does not lack chapters devoted to that exploiting of protection wherein the state attempts to control its internal trade. In the days of Colbert it was an accepted principle in France, not only that her farmers should not be permitted to export grain at their pleasure to foreign countries, but that there should be restrictions on its movement from one province of France to another. The question whether grain could be exported formed every year one of the gravest subjects of cabinet discussions. The result of this attempt to prevent famines was that in those days a famine might be counted on to occur on an average once in nine years, and that the internally protected home market, which now grows almost enough wheat to supply 40,000,000 people, could not in the eighteenth century keep half that population from starvation. Along with this attempt to control the food supply were other trade regulations, such as the one which made it a galleys offence to manufacture a piece of linen except in a certain way, to give it more than a certain length, or to dye it except as the law required. "They do for us," said one complainant, "what the Chinese do for the feet of their women: we are bound so tightly in rules that we cannot grow." But we are told that the least relaxation of these restrictions for many years called out a complaint from some monopoly, which restored the abuse, while their final abolition gave real life to French trade.

Tariff reform is subject to many discouragements. The simple fact that tariff laws are only one of the elements which enter into business prosperity or stagnation, renders it easy to blind the eyes of the people to the real bearing of our tariff laws on trade. If, however, we are to add outside territory like that of Porto Rico to our national domain, it will eventually have to share in the trade of the country as the States do now, and if the competition does not "ruin" anything, one more protective argument will be overthrown.

THE JUSTIFICATION OF WEALTH.

The persistent way in which the rich insist upon bestowing their wealth on educational and philanthropic enterprises, is a social phenomenon of great significance. One can hardly take up a newspaper nowadays without reading about the gift of a hospital, a library, a workingmen's institute, a scholarship, or a substantial addition to some existing endowment. Most striking of all, perhaps, is the fact that the donors are, in many instances, men and women hitherto unknown—persons with hardly more than a local reputation for wealth, and whose names come to public notice only when their gifts are announced.

The administration and direction of this volume of benevolence call, as a rule, only for admiration. Time was when a man of large means, especially if his philanthropic bent came late in life, might almost be expected to do some questionable thing—to found a charity of doubtful serviceableness, or establish a superfluous college hedged round with vexatious restrictions, or put his money where he or his heirs could get some personal advertisement out of it, while at the same time keeping the virtual control of it in their own hands. There is little of that sort of thing now. The day of indiscriminate and unintelligent giving in any form is rapidly passing. So far as the poor are concerned, the larger proportion of gifts now flow through organized associations, where the relief of want and distress is a matter of scientific study and business management. Men have rather got out of the way, too, of starting new universities on slender endowments, and are much more disposed to strengthen institutions long established, and whose skilful financial administration and high reputation for scholarship give promise of permanence. Our rapidly enlarging equipment of industrial schools, again, is a fine example of well-directed giving; while every one knows that colleges, hospitals, libraries, and missions live, move, and have their being in the bounty of the well-to-do.

One cannot avoid the conclusion that this spread of unsolicited philanthropy testifies to a broadening and deepening sense of responsibility for the common welfare on the part of those who command large resources. The day has gone by when a rich man may keep his money to himself, or leave the whole of it to his relatives at his death, and escape severe censure. Public opinion has come to expect, if not to demand, something different. The well-known saying that no citizen of Boston would dare to die without leaving something to Harvard College, is only a localized expression of what has come to be, for numberless communities, a recognized social obligation. The first thing we ask, when the death of some wealthy citizen is announced, is, What are his public bequests? and if, perchance, there be none, the knowledge that the public interest has been ignored never fails to come as a distinct disappointment. The Rev. Dr. Richard S. Storrs of Brooklyn remarked humorously in a public address, two or three years ago, that he had resolved not to preach the funeral sermon of another rich man until he knew what his will was. Certainly, in this feeling of obligation for the well-being of the community, and of individual accountability to public opinion, we may find one of the best assurances of the health and soundness of our American society. We may be very material in our aims, and very matter-of-fact in our ordinary views of things; but so long as those who reap the largest rewards of ability and industry share their earnings generously with their neighbors, the oft-heralded dangers of accumulated wealth can hardly fail to seem still remote.

It is curious to see, too, how the increasing flow of benevolence has helped to dull the edge of some of the difficulties which much social speculation has, in our day, raised up. It goes far, for example, towards reconciling us to the presence of the rich among us. There is an obvious incongruity in denouncing great fortunes when the possessors of them support our hospitals and asylums, maintain our free public libraries, endow our manual-training schools, feed the hungry, clothe the naked, and bring sunshine and pleasure to the children of the slums. The wild tirade of anarchism and the dreams of a socialist state in which all shall share alike, lose appreciably in both effectiveness and charm in the presence of men and women who seem to gather only that they may later scatter abroad. It is not even easy to be very vindictive towards the Trusts, so long as the few who profit by them do not hoard their gains.

That the rich in this country are still, to some degree, on the defensive, and bound to demonstrate their right to keep permanently what they have honestly earned, is, of course, clear enough to any one who follows current social discussion; but it is even more clear that they are justifying themselves in our day as never before, and that, too, before the very ones who have been their most bitter, because their most ignorant, critics. It is significant that in the United States, where individual accumulation of wealth has gone on most rapidly, and where the "money power" has been most in evidence, this sense of personal responsibility, of which we have spoken, has most developed. No European country can begin to compare with our own in the private benefactions of its citizens.

JOHN RUSKIN.

The success of 'Modern Painters,' the work in which the late Mr. Ruskin made his début in 1843, was most remarkable—both in the rapidity with which it followed publication, and in the extent of it, among English and American readers. The audacity, the novelty, and the supreme self-confidence of its opinions disconcerted the more deliberate and hum-drum or conservative art critics of the old school; while the enthusiasm and pyrotechnic style with which the Oxford graduate attacked all the traditions of art criticism, involving in one wide sweep of rhetorical iconoclasm all the ideals of landscape art—Claude, Poussin, all the Dutchmen except Ruysdael, who was allowed the limbo of the innocents—were so attractive, so convincing to the unreason of the mass of readers that all opposition was for the moment overcome. The author of 'Modern Painters,' having demolished all the sovereigns of landscape art hitherto recognized, put Turner on the vacant throne and installed himself as his chief minister and

interpreter. In this office, speaking as one having authority, and believing absolutely in his vocation, he silenced for years all public dissent, established Turner in the English mind not only as the greatest of all landscape painters of all time, but as the true, sincere, and consistent limner of Nature, and her most faithful adorer. The public, possessed of no definite knowledge of the true principles of art or art criticism, not only accepted the new doctrine, but really believed that they saw in Turner's pictures a faithful, naturalistic interpretation of nature; and as the number of those whose artistic education qualified them to compare the new standards with the old, and strip the rhetorical wrappings from the new ideas, was, as it always is, very small, and mainly not given to words, Ruskin long held the field. His influence over art cultivation and art encouragement in England was most extraordinary, and to this day has not lost all of its force. The artists in general, and the few men who by special education were qualified to weigh his dogmas, were almost without exception against him, and, in the way they could, denounced his system of advocacy as false in premise and conclusion. Nevertheless, with the unsound teaching as to art there was mingled so much and so splendid preaching of the beauty of nature, such new and startling advocacy of our allegiance to the universal mother, that it seemed cynical and ungrateful to enter into conflict with a man who was opening the eyes of multitudes to things they had never before seen, and urging the power of nature over human happiness as no one had ever urged it. It was this feeling that Ruskin's moral aim was more correct than his artistic, which won the sympathy of true students of art proper, while the power of his rhetoric made it hopeless to controvert him with the general public.

No mistake, however, could be graver than that with which the young critic set out (he was twenty-four when the 'Modern Painters' was written). He was a lover of nature, with the nearest approach to passion of which he was capable, and his religious bent was so strong that he was long in suspense whether he should go into the Church or devote himself to art. Unfortunately for both, he chose the latter, for, with his intense moral earnestness and his rhetorical power, he certainly would, as his father said, have become a bishop; but, more than that, he would probably, under the influence of the strong humanitarianism which became the dominant influence of his later life, have quickened the religious sentiment as it has not been quickened in educated people in our day. On the other hand, the cardinal doctrine with which he started, erred in setting up the closest possible representation of nature as the truest (not necessarily, however, the highest) art; and the education of the artist which he prescribed was the most rigorous and literal study of nature in detail and in general. He taught people to look at nature, and many to think they saw in it what he described; and as his teaching came at the moment of the great naturalistic movement which led men to science with unusual interest, and coincided with the development of photography, which taught people how the facts of nature could really be shown, the public caught gladly at the new doctrine of æsthetics, that all that was needed to become a connoisseur was to know what was like nature. Another equally earnest and equally mistaken movement—so far, at least, as art education is concerned—which helped to foster this naturalistic movement, was that known as the pre-Raphaelite school. It is still to a certain extent supposed that this was a result of Ruskin's teaching, but this is entirely erroneous. Not one of the founders of the school had ever read ten pages of Ruskin's writing when they formed the association known as the P. R. B. It was a coincidence which met photography by the way.

The 'Modern Painters' will always be the book which will mark Ruskin's place in reference to art literature, and it shows all his strength and all his fallacy. In the reprint of the entire work, dated in 1873, he says: "Of the art teaching and landscape description it contains, I have little to retouch and nothing to detract." And, in fact, throughout the entire series of his works we find no essential departure from this doctrine, formed more from poetic fervor than from artistic acumen. His art teaching was always based on the purely objective methods—literal, and as far as possible photographic, rendering of nature, with the distinct recognition of the devotional element as an imperious necessity in the purpose of art. "I assert, with sorrow," he says, in the preface to the second edition, "that all hitherto done in landscape by those commonly conceived its masters has never prompted one holy thought in the minds of nations. It has begun and ended in exhibiting the dexterities of individuals and conventionalities of systems. Filling the world with the honor of Claude and Salvator, it has never once tended to the honor of God." And the dishonor of God was the "painter's taking it upon him to modify God's works at his pleasure, casting the shadow of himself on all that he sees. . . . Every alteration of the features of nature has its origin either in powerless indolence or blind audacity; in the folly which forgets or the insolence which desecrates works which it is the pride of angels to know and their privilege to love." This view of art has always, then as now, been repudiated by all thoughtful artists and mature critics; but Ruskin was then in the flush of a wordy and self-satisfied youth, mistaking sensations for conviction, and what he conceived for absolute truth. He was too young to have given due comparison, too ardent to respect any opinion differing from his own, and too rhetorical to sacrifice his style to the truth he preached, or a telling alliteration or glowing image to scientific accuracy in his statements.

Ruskin's definition of art always lacked precision because he never went to the root of the matter. When he says, "The art is greatest which conveys to the mind of the spectator by any means whatsoever the greatest number of the greatest ideas," he only shows that he confounds the intellectual quality of the artist with the artistic, while they are really utterly distinct; the former consisting entirely in the subject-matter of the conceptions which he begins with, the latter in the manner of embodying them.

In the chapter on the "Truth of Color," in connection with the commentary on Poussin's "Aricia," there occurs a famous passage which must be quoted here:

"The noon-day sun came slanting down the rocky slopes of La Riccia, and their masses of entangled and tall foliage, whose autumnal tints were mixed with the wet verdure of a thousand evergreens, were penetrated with it as with rain. I cannot call it color—it was conflagration. *Purple and crimson and scarlet, like the curtains of God's tabernacle, the rejoicing trees sank into the valley in showers of light, every separate leaf quivering with buoyant and burning life; each, as it turned to reflect or to transmit the sunbeam, first a torch and then an emerald.* Far up into the recesses of the valley, the green vistas arched like the hollows of mighty waves of some crystalline sea, with the arbutus flowers dashed along their flanks for foam, and silver flakes of orange spray tossed into the air around them, breaking over the gray walls of rock into a thousand separate stars, fading and kindling alternately as the weak wind lifted and let them fall. *Every glade of grass burned like the golden floor of heaven*, opening in sudden gleams as the foliage broke and closed above it as sheet lightning opens in a cloud at sunset; the motionless masses of dark rock—dark, though flushed with scarlet lichen—*casting their quiet shadows across its restless radiance*, the fountain underneath them *filling its marble hollow with blue mist and fitful sound;* and over all the multitudinous bars of amber and rose, the sacred clouds that have no darkness and only exist to illumine, were seen in fathomless intervals between the solemn and orbed repose of the stone pines, passing to lose themselves in the last, white blinding lustre of the measureless line where the Campagna melted into the blaze of the sea. Tell me who is likest this, Poussin or Turner?"

We believe that in this passage, one of the most brilliant ever written by Ruskin, will be found the epitome of his entire system of thought and criticism, the secret of his popularity and of his failure—for so far as permanent influence on the tendencies of art is concerned, or the establishment of a true system of art-culture, Ruskin has utterly failed. Space forbids our following through all its fallacies his system of teaching or exhortation, and an analysis of the foregoing passage must suffice. The reply to the question, "Poussin or Turner?" should be simply, Turner rather than Poussin. but not in the least nature. No one but a madman could conceive that the description of La Riccia resembled the actual scene either as a whole or in many of its details. As language it is magnificent, but it is not criticism or description. We have passed more months in Aricia than Ruskin hours; and never, in rain or sunshine, was there to be seen what 'Modern Painters' contains. There is not a single detail true to the scene. The arbutus does not grow at Aricia, and its flowers have no such value in a landscape, while of all landscape in the world that of Italy is the least disposed to the extravagances of color—"scarlet lichen," "purple, crimson, and scarlet"; and every landscape painter in Rome knows that Poussin's picture is more like nature in its general impression than Turner, and beyond any comparison more than Ruskin, whose poetic magniloquence is rather apocalyptic than scientific.

Ruskin's judgments in art were as partial and inaccurate as his descriptions of nature. His criticisms were in general, if not always, prompted by matters of detail. His sense of color, as may be inferred from the abuse of color epithet in the above description, was deficient, although his susceptibility to color impression was great—as we sometimes see a man morbidly subject to the power of music, but incapable of sounding a note correctly himself. He persuaded himself that Turner's color was right because he liked it, and he could account for its power over him in no other way than as due to its naturalism. In his own painting, he could never hit the color of any natural object, except as simple local color removed from all complications of effect. In landscape study he seemed always to be seeking for the color which Turner gave, and he seriously argued that it was relatively true to the actual tints of nature. In all the strictly artistic faculties he was as singularly deficient as he was gifted in language. What most excited his admiration in the work of an artist at first acquaintance was, that he should find in it something which he himself had attempted to do and failed in; and many were the young artists whom he possessed himself of in the attempt to lead them to do for him what his own hand was incapable of, failing which they lost all interest for him. He was always wanting, to use the expression of an artist who knew him well, to find somebody who would hold the brush while he himself painted.

The five volumes of the 'Modern Painters' are the embodiment of an art system which is his own, and which is not art but a kind of refined and poetic naturalism. The 'Seven Lamps of Architecture' is a fascinating apology for mysticism in art, and the 'Stones of Venice' a contribution of high and permanent value to the history of architecture and of Venice—yes, more than this, a splendid defence of the distinctive character of Venetian architecture as against the classical. The latter, however, in its pure form, the true Greek Temple, Ruskin never appreciated or understood. He never could draw the figure, and had no sympathy with it in art. Watts relates his wondering what he found to interest him in the Oxford Venus, of which a cast was in the artist's studio, and which Ruskin regarded as simply an ugly thing. He could never see any beauty in the horse, and naturally never comprehended the Greek ideal.

We are inclined to think that of the minor and later works the 'Fors Clavigera' will remain that which possesses most interest for the public, embodying as it does for the longest period the personal character and peculiarities of

thought and style of the author, although in this, as in the 'Præterita,' an exaggerated estimate of the value of his opinion and his position in the great world of thought is strongly developed throughout. His opinions, he held, were not opinions but positive knowledge—a claim to infallibility which the absurd adulation he received all his life from a part of the world around him easily explains. His intellectual character always inclined rather to the devotional than the rational. With all the weaknesses of the evangelical temperament, he had all its exaltation, and, grounded in the most orthodox Calvinism, he never faltered in it until he was nearly forty, when, being shaken in his faith in the doctrines in which he had grown up, he went rapidly over to conscientious scepticism, remaining in that condition for some years, and finally swinging back, as most men will as they grow old, towards the faith of childhood.

Ruskin's genius was of that order which is closely allied to madness; and overwork, undertaken with the noblest intentions, the perplexities and disappointments of an apostolate voluntarily and self-sacrificingly engaged in, but unproductive of any visible results, and the natural drift of such an eccentric and contradictory intellect, contemptuous of all criticism or comparison, led, perhaps, to the attacks of cerebral disorder and partial insanity which darkened his later life. His practical experiments at beneficence failed, owing to his total incapacity to read human nature and his ignorance of or contempt for the actual conditions of life in his own day. His benevolence towards the working classes was unbounded, but he never knew in what they differed from himself except opportunity. He desired the influences of nature for the poor as for the rich, and yet bitterly assailed railroads, which alone could enable the workingmen to see the remote and new; was the implacable enemy of labor-saving machinery, and could not comprehend that it frees the toiler from the most servile of his labors, or see that in the country where it is most used the position of the workingman is the highest.

The circumstances of Ruskin's married life are too well known to need mention, but the secret of its failure was possibly in the unmasculine character of his mind. He was a succession of impulses, incapable of purely personal attachment, and cherishing individuals either as embodying his ideas, supplying his craving for admiration or reverence, or as grateful recipients of his protection. When these failed even in tried friends, he dropped them as completely as if they had never existed for him. He cannot be compared to a meteor in our intellectual firmament, but rather to one of those blazing stars which burst out in startling brilliancy, and then subside to permanent but unobtrusive light. He will never be forgotten, but his effect on the development of human thought is not likely to outlive him by much, and his influence on art is practically at an end.

IMPRESSIONS IN THE MEXICAN HIGHLANDS.—IV.

CHIHUAHUA, September, 1899.

Virtue is always so modest and vice so obtrusive that a foreigner is almost certain, in taking account of his impressions of a new people, to find that his acquaintance with their weaknesses is more noteworthy than his knowledge of their better traits. To pass judgment, and estimate the character of a people, on such a basis of partial information would inevitably lead to injustice. It is far safer, and apt to approach more closely to the truth, to assume that the best one sees is typical, for the aims and aspirations of a nation that is not decadent and moribund are ever towards the nobler qualities which their social system has been capable of calling into being. The wholesale condemnation of the Mexicans, and contempt for their ways of doing and thinking, which one finds among the English-speaking communities in their country, are unworthy of a race which by nature is generous and just.

To be sure, there are customs among the Mexicans which are abhorrent to our sense of propriety and morality. Any one who has travelled extensively in Spanish America knows that these are not peculiar to Mexico. Our contact with Cuba and Porto Rico has brought us into closer touch with these practices, and has taught some of our people to look upon them with a larger modicum of charity than has been our wont in the past. The taking of a wife without regard to the sanctions of law and religion is not commendable, but the desertions which are rendered easy by this loose bond are so much more common on the part of members of the foreign colony, who have taken advantage of the system, than among the natives, that the evil of it has been worked out more especially by the Gringo. Why and how it happened that these unsacramental unions came to be accepted in Spanish America as practically blameless, so that no great loss of respect follows upon those who contract them, is not easy of explanation. There were difficulties in impressing upon the minds of the native races the importance of marriage according to the usage of the Church; and the itinerancy of the missionaries, who early submitted to the establishment of the precedent of confirming wedlock which had been entered into during their periods of prolonged absence from a community, may have had much to do with it. The practice, however, is slowly dying out, and is not countenanced at all by the better classes in Mexico, while the fierce jealousy which one sees and hears of among those who live in this condition is a sufficient argument against that licentious disregard of the proprieties which is so commonly imputed to them.

That bull-fighting is a favorite amusement of the people is well known, and the passion for it is by no means exaggerated. It is the complement of northern pugilism, and doubtless less degrading to both spectators and participants. It certainly requires equal skill and more courage. But even this sport is declining, and becoming relegated to the coarser portions of society. It is averred, by those who ought to know, that Chihuahua is cruder than many other States in Mexico, but to-day one will see very few of the higher classes at the bull-fights, and the absence of ladies is conspicuous.

The Spaniard has ever been devoted to gaming, and when one considers that it is the curse of all the Indian races of America, there is little cause for wonder that among their mixed descendants it has become the supreme vice, the all-absorbing passion of the masses. The roulette table is conducted in the open; gambling games at cards are universal; and the cock-pit flourishes on every hand. Wherever one goes, he meets these pampered fighting-cocks, tied by one leg to a stake with a yard of string; carried tenderly in the arms of young sports who will expatiate endlessly on the prowess and physical perfection of the wretched fowls; or bundled up in big straw hats, fastened in with the baggage on the stage-coaches, and cackling with astonishment at every lurch of the vehicle. The itinerant cock-fighter is invariably the most popular traveller on the road, meeting with distinguished consideration at every post station, in spite of the fact that he usually sweeps into his own wallet most of the pocket money from the communities he honors with a visit.

The drinking habit, mankind's universal vice, is here rampant, producing its inevitable harvest of crime and poverty. That it is worse in Mexico than in the United States would be unfair to say, but it certainly seems to be more constantly in evidence. The destructive effects upon the constitution of the use of mezcal, that fiery distillate from the pulque, are very terrible. Its devotees fall into something worse than mere alcoholism. Like a narcotic, it appears to shatter the nervous system, destroying the capacity and the will for continuous labor. In view of the ravages it has wrought, the introduction of beer by foreign companies which have established extensive breweries in Chihuahua, Monterey, and other places, may be regarded as a blessing. The popularity of the domestic beers has become so great that they are carried in large quantities throughout the country, and even far into the mountains, hundreds of miles from the railroad. The use of the original corn-beer, or *deshuino*, has largely been superseded by other beverages, to the detriment of the lower classes. It is exceedingly mild, and has important food qualities, and is the least harmful form in which the natives could indulge their craving for intoxicants. For the making of *deshuino*, the common white corn of the country is soaked, and then packed in baskets with a covering of pine sprays weighted with stones, until it has begun to sprout. It is then dried in the sun, after which it is ground to a pulp on one of those hollowed stone *metates* which still form one of the essential culinary utensils in nearly every Mexican household. The pulp is now boiled for twenty-four hours, and fermented for three days. It thus contains the nutritive qualities of the corn but very slightly impaired. If prepared in a more scientific manner, its pungent taste and rather disagreeable odor could doubtless be reduced, and its reintroduction as a native beverage would be a distinct advantage to the common people as a substitute for the harmful potions which they now imbibe so freely. Although the lower classes are ever too ready with their daggers and pistols, the most of the sanguinary affrays which are perpetually occurring are the direct results of strong drink, and the evil is a menace to the growth of the country. Whatever will tend to the amelioration of this condition will be a gain for the entire commonwealth.

One characteristic of the Mexicans, which is very striking to a person familiar with the other Spanish-American republics, is their brusqueness of manner. Good-hearted and obliging though they are, one misses regretfully that suavity of manner, that overflowing courtesy and politeness, which are instinctively looked for in those of Spanish blood. In South America even your servant is apt to display the finished breeding of a diplomat. Here, however, he brushes rudely against you, holds his position stolidly in a doorway, letting you crowd past him as best you can, and evinces an indifference toward you on all occasions that is often irritating. The same spirit is man-

ifest, also, among those of high degree. They are cold, not from haughtiness, but from lack of spontaneous gallantry of nature. This affects a newcomer unfavorably at first, until he learns that beneath it all there is a warmth of feeling, a generosity and kindliness, which can be counted on when needed. On direct appeal it comes forth promptly, though it might never have been volunteered. They will render you every possible assistance if you only ask it, will discommode themselves, will share the best they have with you, and will accept remuneration only under pressure, if at all. The traveller need never fare worse than the natives themselves if he will make his wants known. But it counts for much if he can address them in the vernacular. The boast of the English-speaking public that the Spanish language is not necessary, and that the English tongue is triumphing even in Mexico, is vain and foolish. The cultured Mexicans are, indeed, quite generally able to speak English, but they regard it as a compliment to be spoken to in their own beloved *Castellano*, and it wins astonishing favor with the masses. More than this, it brings contempt upon one not to be able to use it. The sufferings of a foreigner in this country, particularly in the remoter districts, are in inverse proportion to his linguistic attainments.

The comforts obtainable are few at best, but the difference between getting these, and putting up with what falls in the way of the helpless tourist, is enormous. The wayside inns are simple and crude. A single small, square room, with earthen floor, a fireplace, whose chimney quite as often draws downward as upward, a home-made bedstead innocent of springs—this is all one finds. You are expected to carry your own blankets and mattress, but a word to the keeper of the hostelry will provide you with sheets and pillows, a wash basin, and a pitcher of water. A little fanning of the fires of human sympathy by an exchange of compliments with your host will open up the way for increasing your supper with fried chicken, milk, and eggs. Except for this you would fare on brown beans, tortillas, and tough meat volcanic with *picante*. These are tortures which it is worth while to acquire the Spanish language to escape. The indigestible, leathery character of the tortilla is beyond anything one would imagine could be produced by simply baking a cake of cornmeal dough on a hot stone, while the scorching fury of *picante* sauce is an agonizing torment. It is fiery even to the sight with its flaming red color, and the wonder is that the hands of the women, plunged up to the wrists in this terrible condiment while making it, are not withered to the bone. The Mexican housewife, however, makes amends for these offences against a delicate taste by manufacturing a mild and savory cheese, and by preparing cocoa in her little earthen pot with a wooden *molinillo* as no other cook in the world has learned to make it. The only fault with this delicious beverage is the cinnamon, which, in obedience to universal demand, is incorporated in all the cocoa and chocolate made for the Mexican trade. But if you carry your own supply of the raw material, your hostess will produce a cup which no New York restaurant can equal.

If you are courteous and affable, and show that you know a good steed and are competent to ride him, your host will even loan you his saddle-horse, a proof of respect remarkable in any country. The fine gentleman is still the horseman, the *caballero*, the gracious and accomplished knight, in Mexico. It is a joy to sally forth for a canter on the mesa with such splendid animals as are found here, with companions who are never so much at ease as when in the saddle. There is no ostentation, no conspicuous habit nor showy manner in these Mexican cavaliers. They may wear *chaparreras*, leather trousers, but these are for a purpose. Without them one would suffer hardships in pushing through the scrubby growth of chaparral. But the gaudy costumes we have been accustomed to associate with the Mexican horsemen exist more in travellers' tales than in real life.

After a ride with one of these rural Dons, if you have acquitted yourself creditably, and proved your title to *caballero* in all its breadth of meaning, the door to familiar friendship stands open wide. Then you begin to see something of the home life, the tender affection which binds the family together, and the imperial status of woman in this select circle. Though she will not assume responsibility without consulting her husband, he defers to her in everything. Her wish becomes his will. She is cognizant of all that occurs, guides and directs it all, is familiar with all the business affairs of the hacienda. She invariably looks after the store, she and her daughters. Perhaps she might do more to make the home attractive to the eye, but she is the true helpmeet and often the mainstay of her lord. For this we can forgive large lack of taste. Æsthetics have so far taken no important place in the culture of these people. There is almost no effort at decoration, beyond a few flowers in the patio, and the cultivation of musical attainments is in its infancy. The Mexicans are songless as compared with other Latin races; the twang of the guitar and the plaintive melodies of the *canciones* are almost never heard. One would suppose them insensible to the charms of music, but it seems to be only a dormant faculty. In the plaza and on the alameda at Chihuahua, as well as in many of the smaller towns, the population turns out in force to hear the bands, whose performances are often of a high order. Moreover, it is when the classic compositions of the great masters are played that the enthusiasm and applause of the crowds are greatest.

Still, it is plain that their advance in art is slow. They are a practical people. They do not imagine that they are all born poets, and musicians, and painters. No restrictions would have to be imposed by the press here upon aspiring poetasters, as editors so often find necessary for self-protection in South America. Their schools display the same practical turn of thought. They afford a simple but solid groundwork for future growth. In a feeble manner, but not without value for the oncoming generations, they give manual training to both boys and girls. They are laying foundation stones for political strength by including, even in the common schools, instruction in the Constitution and system of government of their country. Rather curiously, the Church is not ever-prominent with its functions and demands upon the people, as it is in the countries farther south. The hold of the Church is powerful, no doubt, but the people are not bond-slaves to a grasping priesthood. The fanaticism one reads of is seen most commonly in the distant interior, where it is wholly spontaneous, and, far from being incited by the clergy, breaks through the restrictions which they impose, inducing conflicts with both ecclesiastical and civil authority; in some instances having led to serious disturbances of the peace.

I speak of the State of Chihuahua only. Conditions here are different from those obtaining in many other parts of Mexico. It is a border State, a frontier State, but recently rescued from the savage, accustomed to outlawry and that exaggerated independence of the individual pertaining to pioneer life throughout the world. There is in consequence a mingling of the extremes of good and bad. But everywhere is found a veneration of that one superb type of manly strength and excellence, President Porfirio Diaz. The impress of his splendid personality is stamped upon the people, and from him they draw an inspiration which has done more, perhaps, than all else combined to stimulate civic virtues and a spirit of progress among the inhabitants of this highland region.

THE EDUCATIONAL CRISIS IN FRANCE.

NEW YORK, January, 1900.

France is at this moment, among other crises, passing through one of education. At least it is under the title of "une crise de l'enseignement" that publicists and teachers are ventilating their consultations and plans for reforming the lycées and the colleges. Virtually, secondary instruction alone is in question—the system, namely, intermediate between the public school and the university, which prepares the young French bourgeoisie for the "liberal careers" of physician, magistrate, advocate, military officer, or professor. The primary education regulated by the Jules Ferry laws of 1881-82 that founded obligatory, gratuitous, and lay instruction for the people, is solidly established, and is the pride of the republican party, which has swelled its budget from three millions under the July monarchy to a hundred millions. The higher education, on the other hand, likewise more and more enriched by state endowments and strengthened by the recent law concerning the universities, grows steadily in numbers and in influence. The secondary education alone is still in process of transformation, and, owing to its vicious methods or its insufficient adaptation to modern needs, has for twenty years provoked innumerable criticisms. A committee formed with reference to an international congress to be held during the Exposition, explained in its circular the importance of this question, which is, it says, "closely allied to the transformations of society at the present time." "Formerly reserved for a very select few, secondary instruction is constantly being opened to more numerous majorities, who seek in it the advantages of a higher intellectual culture." Accordingly, for some years, countless attempts at reform have been essayed, abandoned, and renewed. The baccalaureate has been so diversified as to assume six or eight different forms. But the problem still awaits solution.

Everybody knows the place which the lycée or college holds in French life. It is a sort of boarding-school established by the State in all towns of 10,000 inhabitants or thereabouts, and which children enter

at ten or even eight years of age, remaining till they are eighteen, and learning Latin, Greek, German, English, mathematics, and philosophy, in order to obtain the bachelor's degree. Without this, a Frenchman can be neither lawyer, doctor, nor officer, nor fill any of the thousand positions which the State bestows on the citizens of a country in which the love of functionarism is a national and hereditary evil, going back, as M. Lavisse has proved, to the seventeenth century, when the King created places to sell to the bourgeoisie as a mode of raising the wind. As for the colleges themselves, to know one is to know all. The uniformity fixed by the Napoleonic system which bounds centralized France on every side, is such that a Minister of Public Instruction once boasted that he could tell what lesson all the pupils in the country were engaged upon at a given hour. French colleges all rest on the system founded by the Jesuits, and the greater number are still installed in old ecclesiastical edifices of the last century. What this system is, with its monotonous regimen, from the morning drum-beat that rouses the pupils in the great dormitories where they sleep all together, and summons them hour by hour to the class-room, to recess, to commons, until the evening call which brings them back two by two, under surveillance, to their beds, to begin over again the next morning—all this has been described and cursed a thousand times, and there is not a Frenchman in whom it does not evoke melancholy recollections. I remember, for my part, the time, not very remote, when pupils were obliged to eat in silence, and when the least infraction of this rule was punished with forfeiture of walks and recreation. In many aspects this life suggests that of a prison, and more than one writer has compared it to the hulks. Alphonse Daudet, who in his youth held the unpleasant post of usher (*pion*) in one of these barracks, has left a graphic and pathetic picture of it in 'Le Petit Chose.'

As for the inconveniences of all kinds, intellectual and moral, resulting from these agglomerations of youths of different conditions, brought up by ushers, far from their parents, they can easily be guessed. But, side by side with these barrack dangers, which have been largely remedied, there continues in force the pedagogical system which imposes on every boy whose parents wish to give him a liberal education the uniform instruction in Greek and Latin, crowned by the uniform examination for the baccalaureate. In this formidable test good students often fail, while mediocre ones succeed, and its exaction of a superficial and encyclopædic knowledge distorts studies, fetters all progressive tuition, and paralyzes all original initiative.

For ten years some of the most eminent French professors have raised the war-cry, "Death to the baccalaureate." In 1885 a brilliant writer, Raoul Frary, who had had the strictest classical training, published, under the title "The Question of Latin," a violent and plausible arraignment of the teaching of dead languages. M. Lavisse, unquestionably one of the boldest spirits and most intelligent innovators in the French universities, has for a decade past incessantly denounced the mischiefs of the baccalaureate. M. Gebhart, a witty professor at the Sorbonne, who avows having made more than 1,600 bachelors in his lifetime, has written in these terms: "The baccalaureate has killed good study." M. Boutmy, the liberal Director of the School of Political Sciences, has firmly called for the abolition of instruction in Greek, and has joined the resolute adversaries of the baccalaureate. Two years ago, Jules Lemaître, before he became a demagogical "nationalist," delivered at the Sorbonne one of his cleverest discourses against the superstition of classical study, and pitilessly made game of the bourgeois respect for the young bachelor, whom he called a "monster of nothingness."

All this agitation of opinion ended by coming up before the Parliament. A grand committee was formed, presided over by the former Prime Minister, M. Ribot. The inquiry it entered upon lasted from the 17th of January to the 27th of March, 1899. It received 196 depositions from all the professors, writers, pedagogues (professional or amateur) who had anything to say on the subject. Even ecclesiastics, like Père Didon, a director of large schools, were asked to give their advice. M. Fouillée, who so actively combated M. Lemaître's theories and defended classical instruction, was listened to as well as M. Lavisse. All these conferences have been gathered into two great volumes of 600 pages, which constitute the fullest and most profitable inquiry ever made concerning education in France.

But along with the question of reforming the baccalaureate, of suppressing the barrack, of the place to be assigned to classical studies, of the necessity of opening certain careers (like medicine, or even the law) to young men ignorant of the dead languages—along with these purely pedagogic questions, which have a wide social bearing, another has just been raised much more burning and wholly political. It is whether the State should continue to let the instruction it gives be undermined by the confessional instruction of the Roman Catholic congregations. Now the congregations—Jesuit, Marist, Eudist, and others—compete powerfully with the State. In every city, opposite the lay college is set up an ecclesiastical house which also fits for the baccalaureate. For various reasons, partly from religious conviction, but especially out of social snobbery, the rich bourgeoisie prefers to send its children to the religious. Their instruction, however it may have improved, cannot be compared with that afforded by the admirable corps of professors which the École Normale Supérieure and the French universities send to the State colleges. But the *education* is supposed to be better. Hence all the *Monsieur Jourdains* and the *Monsieur Poiriers* of the bourgeoisie are proud to see their sons in the same school with the sons of the reactionary aristocracy, just as Mme. Worms Clavelin, Anatole France's wife of the Jewish prefect, was delighted to visit her daughter in the convent of the Dames du Précieux Sang where she was having her brought up.

The first material result of this competition is, that the number of lycée pupils has diminished while that of the religious schools has gone on increasing. The statistics of the past year show 86,321 pupils for the lay colleges, as against 91,140 for the Catholic. Another consequence is, that a large number of the functionaries of the Republican state—magistrates, officers, etc.—are recruited from schools of which the spirit is implicitly if not violently hostile to every idea on which the Republic rests. French Radicals, in their morbid distrust of the Church, have always regretted the law of 1850, known as the Falloux law, that authorized the congregations to compete with State instruction. When it was under discussion, Victor Hugo attacked it with his customary emphasis, saying to the clerical party: "This is your law, and, to be frank, I do not trust you. To instruct is to construct, and I distrust what you construct."

This anti-clerical distrust ended in the bill introduced by the Waldeck-Rousseau Ministry, and which, without suppressing liberty of instruction, takes certain precautions, not to be called liberal, against the competing schools. It is styled an "Act respecting the Recruitment of Functionaries," or "the Scholastic Probation," and decides that no one can become a functionary if his three last years of study were not pursued in a State lycée. It has already encountered lively opposition among many republicans, by no means clerical. Those who uphold it and inspired it, like M. Aulard, the well-known historian of the Revolution and professor in the University of Paris, assert its necessity for combating Catholic instruction, which deforms the mind, warps the character, and renders youth incapable of reasoning justly, pliant to external authority, unfitted to furnish good citizens of a free country. M. Aulard recently affirmed that, at the examinations for the baccalaureate, he always detected the Jesuit pupils by their parrot-like recitation of lessons learned by rote, and by their inability to display either personal judgment or intellectual independence.

Whatever opinion be held on this point, and granting that these criticisms are well founded, it does not seem as if the State had a right to attack individual liberty even in the slight degree in which this bill attacks it. For my part I regret that a mind so judicious and liberal as M. Waldeck-Rousseau's has made such a concession to the Radical party. Besides, the theory on which the bill is based is singularly risky and liable to many exceptions. The instruction received at school does not always constitute the principal element in the formation of character. Not every pupil graduated from the French State schools has become a Liberal. M. Drumont, for example, who has the soul of a monk of the League, was a pupil of the Lycée Charlemagne at Paris. On the other hand, not only have the ecclesiastical schools produced many republicans, but the most fanatical anti-clerics are pupils of the Jesuit and other congregations. Voltaire was educated by the Jesuits at the Lycée Louis-le-Grand, and, in spite of all his subsequent digressions, they cherished a certain pride in having had such a pupil. Gambetta, who invented the cry, "The enemy is clericalism," was a brilliant pupil of the little seminary at Cahors where he composed pious verse in Latin. A recent Radical Minister of Public Instruction, M. Combes, was formerly not only a seminary pupil but professor. M. Loubet himself was pupil in a small Catholic establishment in La Drôme. Twenty less-known personages might be cited who had derived from their clerical education only a savage anti-religious fanaticism. M. Urbain Gohier, the violent publicist, who wrote the other day for the *National Review* an exaggerated and unjust article against French Catholicism, was a pupil of the con-

gregation of the Marists, who direct the Collège Stanislas at Paris.

Undeniably the two-fold education received by French youth creates two hostile currents, and excites between two halves of one people a sorry antagonism. But that is a natural result of French historical evolution, and no law can at one stroke extinguish it. For the rest, even if we could purchase the moral unity of the country in this manner, the cost would be too dear at the expense of freedom, which is a republic's excuse for being and its most precious possession. OTHON GUERLAC.

Correspondence.

A PERPLEXED REPUBLICAN.

TO THE EDITOR OF THE NATION:

SIR: The perplexities which I have at this time as to my political duty are doubtless the same that occur to many who wish to support that party which will do the least wrong when in power. I am a native of Kentucky, and was in the Union Army during the civil war. I was a Republican until Mr. Cleveland declared for a "tariff for revenue only"; then I voted with the Democrats. I was strongly repelled by Mr. Bryan's doctrines, and believed him a dangerous man, and his platform wrong from any point of view and revolutionary in its principles and tendencies. Hence, I voted for Mr. McKinley for President, and have since voted with the Republicans, although opposed to their tariff doctrines.

However, if they persist, as I believe they certainly will, in the policy of expansion and the disregard of what so many revere as the fundamental principles of freedom, what can we do? Mr. Bryan and his party are guilty of dangerous financial principles, yet they may possibly not be absolutely destructive of our government; but their doctrines as to law, courts, and constitutions are so fearful that we should not risk them under any conditions heretofore experienced. On the other side, Mr. McKinley and party have forgotten our country's most sacred traditions and history, and are seeking to establish precedents and adopt a foreign policy that will identify our Government's future action with that of Germany, Russia, and other monarchies, substituting as guiding principles pride as a world power, and faith in strong navies and large armies, in place of faith in natural justice and right, and so destroying all present hope of free institutions.

If there were a Democratic party such as was known prior to 1896, with a nominee on a platform in accordance with its principles, we could vote for him. But there is now no such party, and no proper place for many good and true men—as heretofore defined—to go. Must they, then, be forced to choose between McKinley partisans and Bryan partisans as we now know them? In such case, as for me, I cannot yet say with certainty what would be my decision, but I fear it is a much more portentous question to Mr. McKinley than his friends yet believe or realize. It will probably be decided by many in a way very dangerous to his hopes of success. Many who voted for him at the last election, and expected to do so again, now think Mr. Bryan the less of the two evils, and will support him. The problem is, How many are there of that mind? Are there enough to change the result? Judging from the condition of my mind, as an independent with Republican antecedents, I think there is a very grave danger here to Mr. McKinley's success, from which I can see no prospect that he will try to escape, and which may turn the scale against him at the election next year. JNO. H. WARD.

MICCOSUKIE, FLA., January 11, 1900.

THE VICE-PRESIDENCY.

TO THE EDITOR OF THE NATION:

SIR: Your article on the Vice-Presidency, in your issue of November 9, is interesting. Likewise John Adams's sarcasm describing his office as the most insignificant "that ever the mind of man contrived or his imagination conceived," is amusing. There is, however, another view of the question, whether the Vice-Presidency is a superfluous office, which I do not remember having seen in print.

All thoughtful observers of our political history are one in thinking it of great importance to maintain the prestige of the United States Senate—in fact, to keep it at the highest attainable standard. The dignity of its presiding officer, and thereby of the Senate itself, is greatly enhanced by his being elected by the whole people, at the same time and in the same manner and for the same period as the President, and through his being his heir apparent. No one as yet has suggested so good a way of choosing this dignitary as that provided by the Constitution. Meanwhile, the danger in diminishing the halo which now undoubtedly does surround the head of the permanent President of the Senate, is perhaps as great as the danger of having an occasional mediocre President arising from the existing method of selecting him. This, of course, only makes it, if possible, the more important that the Vice-Presidency should be filled, as you very properly say, with a strict view to the possible succession.—Yours truly,

E. C. DU BOIS.

CHORRILLOS, PERU, December 29, 1899.

THE CENTURY ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: While examining newspaper files in the Wisconsin State Historical Library yesterday, I found, in the *Connecticut Courant* for January 5, 1801, two and a half columns of verse entitled, "The Triumph of Democracy; A Poem. Addressed to the readers of the *Connecticut Courant*." At the end of it are a number of explanatory notes and the date, "Hartford, Jan. 1, 1801"; but nothing more to indicate the author. I find it again in the *New England Palladium*, duly accredited by the full title, but only one day later. Hence it must have been sent to Boston also before its publication by the *Courant*.

The vote for the President, just in from the critical State of South Carolina, has assured the election of Jefferson (or Burr). The poem fiercely derides the victors, and is an interesting Federalist lampoon. The introductory stanza, however, treats of a troublesome question of these days in so appropriate and satisfactory a way that it should be republished. It is as follows:

"PRECISELY twelve o'clock, last night,
The Eighteenth Century took its flight.
Full many a calculating head
Has rack'd its brains, its ink has shed,
To prove by metaphysics fine
A *Hundred* means but *Ninety-nine;*
While at their wisdom others wonder'd,
But took *one more* to make a hundred.
Thus, by an unexampled riddle,
The world's divided in the middle.
The Century, waking from its bed,
Finds half mankind a year a-head;
While t'other half, with lingering pace,
Have scarcely started in the race.
Strange! at "*the Eighteenth Century's close,*
When light in beams effulgent glows,'
When bright "*Illumination's*" ray
Has chas'd the Darkness far away,
Heads fill'd with mathematic lore
Dispute if *two and two make four.*
Go on, ye Scientific Sages,
Collect your light a few more ages;
Perhaps as swells the vast amount,
A century hence you'll *learn to count;*
Whilst we more usefully employ'd
Will traverse back the mighty void,
With keen, researching eye discern
Some lessons for the world to learn.
Nor will we venture far to stray,
Lest *in the Dark* we lose our way;
A single year, perchance, or so,
Is all the length we mean to go——
. . . . . .
A year, that nowhere does belong
Shall be the subject of our song."

Respectfully yours, F. G. FRANKLIN.

MADISON, WIS., 915 UNIVERSITY AVE., January 16, 1900.

THE STRENUOUSNESS OF SOUTHERN "DIFFICULTIES."

TO THE EDITOR OF THE NATION:

SIR: The appalling tragedy at Frankfort last Tuesday was without political significance, the chief actors being of one party. Colston (ex-Congressman) and Lieut. Scott, formerly officers of the Third Kentucky Volunteers, quarrelled in camp at Anniston, Ala., over military and personal matters, and there engaged in a pistol duel. Of course, under the example of war, and in the spirit of that "strenuous life" of which your Governor is the chief apostle, the quarrel was pursued to its desperate conclusion. Kentucky bows her humiliated head, but asks, Is the spirit of that conflict hers alone? Is not fighting now advanced to be one of the noblest incidents of life? And, if so, have we not furnished a splendid spectacle for the approval of those who favor fighting to develop manhood, courage, and virtue? Let Gov. Roosevelt answer. ****

LOUISVILLE, KY., January 18, 1900.

Notes.

Mr. Edwin L. Godkin's Reminiscences, which recently appeared in the *Evening Post*, are to be elaborated for publication in book form by Macmillan Co., in the coming autumn.

The same firm has actually in press a translation of some twenty chapters by as many German officers on 'The Franco-German War,' with portraits and battle-maps, and 'Monopolies and Trusts,' by Prof. Richard T. Ely, the first volume of a series called "A Citizens' Library of Economics, Politics, and Sociology."

The third volume of Lady Randolph Churchill's *Anglo-Saxon Review* (John Lane) will be ready for delivery early next month. It has been delayed by fire. Among the portraits are those of Bonaparte, the Shelleys, Paderewski, and Canning; among the contributors, one American at least, Stephen Crane.

A new and amended edition of Prof. A. Campbell Fraser's 'Life and Works of Bishop Berkeley,' originally issued in 1871,

is now in preparation, and will probably be ready for publication by the Clarendon Press before the end of the present year; the 'Works' (including the posthumous writings first published in 1871) being now arranged in chronological order with additional material since discovered, and with the dissertations and annotations carefully revised and to a great extent rewritten. The life will be curtailed. Prof. Campbell Fraser will be glad to receive any fresh biographical or bibliographical information, or corrections of errors in his first edition, and communications may be addressed to him at the University Press, Oxford.

The Lothrop Publishing Co., Boston, will shortly issue 'The Story of the Nineteenth Century [in round numbers],' by Elbridge S. Brooks.

A memoir of the late Charles Albert Berry, D.D., of Wolverhampton, England, by the Rev. James S. Drummond, is about to be brought out by Cassell & Co.

A. C. McClurg & Co. will soon issue a new volume of essays and addresses by Bishop Spalding.

From Macmillan Co. (London: A. & C. Black) we have the fifty-second issue of the annual biographical dictionary known as 'Who's Who,' for 1900, and the twentieth of 'The Englishwoman's Year-book and Directory' for 1900, edited by Emily Janes, Secretary to the National Union of Women Workers of Great Britain and Ireland—both works being in a series of new issues. Of 'Who's Who' it is needless to speak; its praise is reflected in the excellent imitation, 'Who's Who in America.' The fact that the present edition had to go to press early in November, accounts for the omission of the employment of British officers in South Africa; but we note that the late Gen. Symons is dropped. Attention should be called anew to the convenient preliminary lists and tables concerning the Royal Family, Parliament, the Government, the London School Board, the fleet, public schools, societies, etc. 'The Englishwoman's Year-book' is broadly occupied with furnishing all needful information about Education, Employments (a list suggestive outside of England), the Medical Profession, with a list of medical women; Science, with a record of woman's work in 1899; Literature, Fine Arts and Music, Sports, Clubs, etc. There are sections for Housekeeping, Travelling, and Thrift, for Public Work and Philanthropy. A list of charitable homes for women and children, and a first "directory of the names and addresses of women who are well known to the world and to workers," are still other features of this useful publication.

The Harpers proceed with 'Shirley' and 'Villette' in the "Haworth Edition" of the Brontë sisters. Mrs. Humphry Ward furnishes an introduction to each volume. Her praise of 'Shirley' is necessarily dimmed by her final remark that "it contains none the less the promise and potency of higher things than 'Jane Eyre'—of the brilliant, the imperishable 'Villette.'" Passing on to 'Villette' itself, we find Mrs. Ward certain that "it is the writer's masterpiece." This, in spite of the fact that it has never been so widely read as 'Jane Eyre,' and that the "majority of English readers prefer 'Shirley.'" The reason for the comparative neglect of 'Villette' Mrs. Ward discovers in the consideration that "the narrowness of the stage on which the action passes, the foreign setting, the very fulness of poetry, of visualizing force, that runs through it like a fiery stream, bathing and kindling all it touches down to the smallest detail, are repellent or tiring to the mind that has no energy of its own responsive to the energy of the writer."

All of Jane Austen in the pocket "Temple" output of first editions (London: Dent; New York: Macmillan)—the six works making ten volumes delightfully bound in olive leatherette, the whole encased in a neat box, at a moderate price—is something to tempt the booklover. Each dainty volume has a colored frontispiece illustration in the fashion of the beginning of the present century. There is no apparatus of any kind except what accompanied the original issue. The type is clear, the form most companionable.

The number of good State atlases of the United States is wofully small, corresponding to the backwardness of definitive surveys. That of New Jersey, prepared by its own Geological Survey, led in time and is still the best of its kind, and, as we lately reported, is undergoing revision. New York lacks the basis for a similar work, but what could be done with the materials at command, and by special surveys, was handsomely published five years ago by Julius Bien & Co. of this city. In the interval the same firm has undertaken an Atlas of Pennsylvania, on a smaller scale and therefore of somewhat handier size. Besides the several county maps with roads, "the names of all places," however insignificant, with indication of population, etc., there are fine folding maps (1) of the United States, reduced from that of the United States Geological Survey, showing every county and county-seat, and the entire railroad system of the country; and (2) a railroad and post-office map of Pennsylvania, on which, the railroads being delineated in red, it is curious to see to what an extent they hug the water-courses and in appearance form a fluvial system. There follows an economic and geologic map of formation and mineral resources, Harden's striking Centennial relief map of the State, rainfall and temperature map, and statistics in diagrams. Add to the foregoing a dozen maps of cities and a general index, and some idea will be had of this most welcome addition to works of reference for school, library, and office.

'Famous Actors of the Day,' by Lewis C. Strang (Boston: L. C. Page & Co.), is a companion volume to 'Famous Actresses of the Day,' by the same author, of which due notice was taken a few weeks ago, and is of the same general description. It is pleasantly written, and contains a quantity of biographical information for persons interested in the personality of more or less well-known theatrical performers. The word "famous," of course, is rather grotesquely misapplied in a good many cases, and the critical estimates are often, as is common in publications of this kind, pretty reckless, although not much fault is to be found, in this respect, with the notices of such performers as Joseph Jefferson, John Drew, Richard Mansfield, and two or three others of assured position. The photographic illustrations are generally very good, and the book is attractive in print and appearance; but the typographical errors are altogether too frequent.

The Rev. S. P. H. Statham's 'History of the Castle, Town and Port of Dover' (Longmans) will do little to remove the discredit which attaches to local histories as a class. Externally it is substantial enough; and its compilation has doubtless involved a great deal of labor. But it includes a large amount of matter that is altogether unnecessary (take, for example, the account of the Druids); it contains an infinite number of details of no interest at all except to the genealogist; the author shows little power of grouping his facts and bringing out their significance; and the style throughout is dull, and often enough incorrect. Mr. Statham makes a great parade of his use of the rolls in the Record Office and of unprinted authorities in the British Museum, but he nowhere gives any exact reference, so that the volume can be of little service to serious students. There are abundant indications that it would be unsafe to rely on Mr. Statham's version of his authorities, as where the conflict with the Spanish ships in 1350 is converted into "a victory over the French in a battle named *Lespagnols sur Mer*"! Still, the book will look well on the tables of "the good folk" of Dover, and when they take it up on Sunday afternoon they will probably learn something from it.

As a contribution to the history of communistic experiments 'The Oneida Community,' by Allan Estlake (London: George Redway), has a certain value. The author, who was a member of this community, writes with evident sincerity; but his earnestness is not sufficient to overcome the disgust with which, in a monogamic society, reversions to polyandry will be regarded.

It is reported by German journals as more than probable that the third volume of Bismarck's 'Gedanken und Erinnerungen' will never be issued, as the sons of the Iron Chancellor have forbidden its publication. The house of Cotta, which contracted for the whole work, will go to law in the matter and sue for damages, as it has suffered considerable pecuniary loss by the suppression.

The Philippines is the subject of the opening article, by the Hon. John Barrett, in the *National Geographic Magazine* (Washington) for January. It contains nothing beyond the familiar statements of the importance of the position of Manila, the great natural resources of the islands, and the possibilities of trade with Asia. The only personal touch is the characterization of Aguinaldo. Of greater interest is Mr. F. C. Schrader's account of the Cape Nome gold district, which he visited last October. The beach diggings, from which it is estimated a million dollars were taken last season, have this advantage over those at the opposite extremity of America, at Cape Horn, in that they are above the high-tide level, but otherwise the conditions are very similar—the open sea without safe anchorage, a beach without shelter or fuel except driftwood, and a barren country behind. Yet Nome is a town of from three to five thousand inhabitants, with three newspapers. The beach gold is extracted by rocking, and, the supply of copper-plate having given out, in many instances "the bottom of the rocker was covered by United States silver coin, principally one-dollar pieces, and these coated with the mercury which caught the gold." The article is accompanied by an excellent map and some illustrations. Mr. R. U. Goode describes the methods employed by the Geological Survey for marking the boundary line between Idaho and Montana, and there are also notes descriptive of the

Copper River delta, upon the census of 1900, and the total eclipse of the sun.

Petermann's Mitteilungen, number eleven, contains the conclusion of Gen. Krahmer's interesting account of the Province of Anadyr in the northeastern extremity of Siberia. He describes with some detail the methods of journeying between the settlements at the different seasons of the year, the traffic, the condition and manner of life of the Cossacks in the Government employ, and the general outlook for the future of the people, closing with a reference to the American whaling industry. After giving some statistics to show the value of the fish annually taken by our ships in Russian waters, he proposes as a remedy, since Russian war-ships could not be spared to patrol these coasts, that a monopoly of the fishing should be granted to a company furnished with the power to protect its rights. Some such measure he regards as essential, not merely to the well-being, but to the very existence, of some of the tribes.

Semitic epigraphical research has been so vigorously and successfully advanced of late years, and the mass of new materials, especially in the shape of inscriptions, has grown to such an extent, that an organ for the purpose of systematically utilizing these new finds has seemed necessary. Such an organ is now to be published by the house of J. Ricker, in Giessen, *Ephemeris für Semitische Epigraphik*, edited by Dr. Mark Lidzbarki. A leading purpose is to publish new inscriptions and foster special discussions and investigations. The size of the "hefts" will depend on the material requiring attention, and the annual volume is to cost about 15 marks.

According to the Berlin *Börsen-Courier*, the capital of Germany is the most "monumental" city in the world, boasting of no fewer than sixty-three such memorials. As soon as the Siegesallee is completed and other monuments now projected are a reality, the "Athens of the Spree" will be able to boast of at least one hundred. The *Rundschau* adds that this is a little too much of a good thing, as the why and wherefore of not a few of these monuments is not exactly apparent. It is noticeable that, in this centre of the greatest military state of the age, the number of civilians who have thus been honored exceeds the number of military men, there being only twenty-nine of the latter represented, as against thirty-four of the former.

The contents of the Report of the Commissioner of Education for 1897-98, of which volume i. has just been sent out, though naturally in the main informatory and statistical, are not lacking in stimulating matter. What citizen of Kansas, for instance, can fail to be aroused by the statement that there are "practically no requirements" for the practice of medicine in his State, when even of the doctor among the Creek Nation in the Indian Territory "a good moral character and payment of $25 is required"? Dr. Harris's criteria of civilization, in his introductory remarks on Cuba, Porto Rico, and the Philippines (pp. xl, ff.), are interesting and to the point. "If we cannot come into contact with lower civilizations," he says among other things, "without bringing extermination to their people, we are still far from the goal. It must be our great object to improve our institutions until we can bring blessings to lower peoples and set them on a road to rapid progress." The chapter on Education in the Philippines (pp. 968-983) is not a masterpiece of composition, but we wish it might be read by every man and woman, young and old, in the country. It would be news to many that "all travellers state that there are schools in every village"; that "the instruction among the Indians [*i. e.*, the Tagals] was far from being backward when compared with that of the lower classes in Europe. Nearly all the Tagals can read and write. . . . The Indians play from memory the overtures of Rossini and Meyerbeer," etc. An article by the German ethnologist Blumentritt is quoted from and referred to as being given in the Report (p. 971), but other counsel must have prevailed and prevented its insertion, for it is not there. The article appeared in the *Rundschau* for July, 1898, and, together with another by the same scholar. "Völkerpsychologisches in der Philippinenfrage" (*Rundschau*, May, 1899), is well worth reading. Of several other important chapters in the Report we must mention at least that on Foreign Influence on Education in the U. S. (pp. 591-629). As to the condition of education in this country during the year covered by the Report (ending June 30, 1898), it is encouraging to notice progress and improvements along the whole line from the common school to the university.

A bill has just been introduced in the Senate, through the Senate committee on the District of Columbia, which provides for the conferring of degrees by the Smithsonian Institution. Provision is also made for the appointment of a board of five examiners, each examiner to receive a salary of four or five thousand dollars a year, and to devote his whole time to the duties of instruction and examination.

The Egyptian budget of Mr. J. L. Gorst, the financial adviser, bears striking testimony to the prosperity of the country even under the unfavorable circumstance of the lowest Nile flood ever recorded. The total loss from this failure of irrigation, mainly in Upper Egypt, is estimated at $4,000,000. On the other hand, the value of the cotton crop alone in 1899 exceeds that of 1898 by more than $17,000,000, thanks to a larger yield and higher prices. Significant also is the influx of foreign capital, which has amounted in the past ten years to $22,500,000, while the tourists are estimated to have expended in the same time $50,000,000 in round numbers.

An evidence of the present supremacy of the civil power over the military party in France—one of the few satisfactory results of the Dreyfus trial—is the reorganization of French West Africa. A part of the Sudan is to be attached to each of the four contiguous colonies, and the remainder is divided into two military districts, while the whole region is to be under the control of a Governor-General, with powers apparently similar to those of the Viceroy of India, with headquarters at St. Louis, the capital of Senegal. One effect of this measure will be the putting an end to those annual military expeditions, at times unauthorized by and leading to action directly contrary to the wishes of the Government of the day, which have again and again brought France and England to the brink of war. Another equally desirable effect will probably be that the energies and resources of the Government will be diverted from these purely military operations to the work of the peaceful development of the country.

We regret to record the death of Surgeon Charles A. Siegfried, U. S. N., which took place at Newport on January 14. Dr. Siegfried was an occasional correspondent of the *Nation* while on his cruises. His powers of general observation were excellent, and he possessed a very humane spirit. Bacteriology was his chosen field of research, and, in the language of Dr. Wolcott Gibbs, he was "a mine of information upon all subjects connected with sanitation and with the construction, care, and management of hospitals."

—The thirteenth volume (new series) of the Transactions of the Royal Historical Society (Longmans) is one of exceptional interest. It opens with a Presidential Address—"the eighth and last"—by Sir M. E. Grant Duff. He takes for his text the recent translation of the Abbé Dubois's book on Hindu manners, and shows how the subsequent history of British administration in India has but confirmed the wisdom of the Abbé's observations. For instance, it is no less true than it was in 1823 that whoever may be the nominal sovereign, his rule must in practice be largely Brahminical. At present, "Brahmins swarm in all our public offices, and rightly so. . . . At the same time they are a caste . . . and they hold together like a vast trades-union combined with a cousinhood." Then follows an elaborate treatise of some fifty-seven pages by Mr. C. H. Firth, who, of course, knows more about the Cromwellian period than any writer except Mr. Gardiner, on "The Raising of the Ironsides." Herein he describes in detail, with an elaborate citation of authorities, the constitution of the force, its arms and equipment, its pay and maintenance, and its medical and religious organization. He furnishes incidentally some fresh evidence of the incompatibility of Cromwell's position as the commander of a body of troops devoted to his person with the theory of government by Parliament. For, within a few weeks from the day when Cromwell assured the House of Commons that his soldiers "look not upon me but upon you," and "do not idolize me, but look upon the cause they fight for," the Ironsides refused, in the absence of their beloved commander, to carry out the most positive orders of the House.

—The next paper is also by a writer who has made the period of which it treats peculiarly his own; it is by Mr. James Gairdner, and is concerned with the fall of Cardinal Wolsey. His contention seems to be that Henry VIII. had a lingering regard for his great minister to the last, and that 'the Parliamentary manœuvres of Cromwell might have saved Wolsey from utter ruin if he had not first died from disease aggravated by fright. Mr. Gairdner parenthetically expresses his dissent from the current view that the development of the House of Commons was arrested under "the New Monarchy." In his view "it was the Tudors who first instructed them to snub the House of Lords and the Bishops in convocation. . . . For the House of Lords and the Church had been the chief controlling powers hitherto to prevent absolutism; and it was the Tudor policy to depress them both by setting up the House of Commons as a counterpoise to the one, and royal supremacy to overbear the other." The other papers in the volume deal with "Politics at the Council of Constance,"

by Mr. Figgis, one of the best-known of the younger generation of Cambridge historical tutors, pointing out the similarity of the Conciliar theory to the Whig doctrine of later centuries; a comparison between Pitt's action in 1783-4 and Peel's in 1834-5, by Mr. F. H. Hill; the "Origin and Early History of Double Monasteries," or monasteries for men and women, treated with wide learning by Miss Mary Bateson; and finally the "Alexander Prize Essay on the Relations of the Crown to Trade under James I.," by Miss Hermia Durham—a pupil, if internal evidence does not deceive us, of Dr. Cunningham. So creditable a publication as this volume encourages us to remind the university librarians of America that the Royal Historical Society is more than ever deserving of support since it has been amalgamated with the Camden. Indeed, Mr. Gardiner has arranged to edit so many volumes of hitherto unprinted material for the Society that its publications will soon be indispensable to all students of English history in the seventeenth century.

—In 'Oxyrhynchus Papyri, Part II.,' published by the Græco-Roman branch of the Egypt Exploration Fund, the editors, Messrs. Grenfell and Hunt, present one hundred and ninety-three Greek texts, all of the first century B. C., or first century A. D., with the exception of some theological and classical fragments, a number of medical prescriptions for affections of the ear, and the long petition of Dionysia, which are of the second, third, and fourth centuries A. D. The theological texts include St. John's Gospel, chapters i. and xx., and Paul's Epistle to the Romans, chapter i. Among the new classical fragments are some of great interest, *e. g.*, fifty-one lines of a lost comedy by Menander, "The Shorn Lady." The scene here presented is evidently near the close of the comedy, and helps to a fair reconstruction of the plot. One large fragment contains scholia on the twenty-first book of the 'Iliad.' Another gives a list of Olympian victors for the years B. C. 480-468, and 456-448. This is of great value, as it affords a means of determining the date of various odes of Pindar and Bacchylides. The most extended of the fragments of extant classical authors is a copy of a large portion of the fifth book of the 'Iliad,' of the third century A. D. Of miscellaneous fragments, the most important is the "Petition of Dionysia to the Prefect." It has to do with a dispute between Dionysia and her father, both on money matters and on the right of the latter to separate his daughter from her husband. So, both from the historical and legal point of view, it is a valuable document for this period (186 A. D.). The remaining numbers, 238-300, are first-century documents, among them several letters. They deal with various business matters, court affairs, marriages, divorces, deaths, taxes, etc. The value of such material is evident. Besides these fragments, which are given in full with notes, a hundred papyri are merely described. Perfect indices and eight facsimile plates increase the value and usefulness of the volume.

—Among other things the bicycle is doing is to produce a crop of gossipy guidebooks; and the invention of cheap methods of reproducing drawings enables the publishers to illustrate them lavishly at comparatively small cost. Among the best of its kind (so far as the text is concerned) is 'Highways and Byways in Yorkshire,' by Arthur H. Norway (The Macmillan Co.). The author has an eye for the picturesque; he has evidently got up the local history and folklore; and he carries his readers along with a breezy, not to say breathless, enthusiasm which young ladies will find contagious. The book deserves to be a success, though it is just a little too big and a little too daintily bound to be carried about on the wheel. And as Mr. Norway will doubtless go on to describe 'Highways and Byways' in some other counties, he may be the better for a word or so of caution. "Word-painting" is always in danger of becoming verbiage, and mediævalism-for-the-multitude is tempted to resort to Wardour Street. Mr. Norway has not altogether escaped these risks. It may be added that the note of ingenuous simplicity may be a little forced. "It is with the heart of a child that I have gone round Yorkshire, catching at whatever pleased my idle fancy; and now it is with the lips of a child that I find myself repeating," etc.—this is all very sweet and pretty, but it is apt to pall. As for the illlustrations, the reader who sees on the cover that they are by Joseph Pennell and Hugh Thomson, must prepare to be disappointed. They are so badly reproduced that their scratchy outlines can give no pleasure, and some of the plates—like the "Return from the Hawking," conceived of in a G. P. R. James vein —are simply ridiculous.

—Mr. C. W. Oman's 'England in the Nineteenth Century' (Longmans) is a *compte rendu* of the past hundred years which contains 260 pages, besides several useful appendices and an index. It is a serviceable manual as it stands, but might have been made better by the exercise of a little more care in the choice of language. A book of this sort need not be colorless, but it should avoid taking a partisan stand upon matters which are notoriously subjects of debate. Mr. Oman is not fair in his attitude towards the French Revolution or towards Napoleon, his references to the Continental rivals of England at the present time are in questionable taste, and, generally speaking, his tone is too condemnatory in passages where he deals with those who differed or differ from his own view. For instance, the following comment on the Fashoda episode suggests the animus of a newspaper editorial rather than the calm of an historical treatise: "We were, in fact, on the brink of a war with France, for her intolerable 'policy of pin-pricks,' pursued for the last ten years, had rendered any further yielding impossible. Fortunately, the French Government faltered and made submission; it was not ready to fight when its internal politics were confused with the wretched Dreyfus case, and when its ally, the Czar, refused any prospect of help." It would have been quite possible to give all the essential facts of the case without introducing the note of dislike which marks the sentences just quoted. In point of accuracy Mr. Oman is better than in point of style. We have observed nothing seriously amiss in his account of English domestic politics, though when he comes to imperial expansion and colonial self-government he is not quite impeccable. He should not say that the lower branch of the Dominion Parliament is a "House of Representatives." He is also at fault in his enumeration of Canadian provinces in the Northwest. "Since it [the Canadian Pacific Railway] was finished, the development of Manitoba and the other regions of the Great Lone Land has been very rapid. Nine new provinces now exist in this once uninhabited region, with a rapidly growing population of over 300,000 souls." Mr. Oman's treatment of economic history is the most distinctive thing among the good features of his book. He establishes the connection between industry and politics, both by frequent passages in the text and by placing among the appendices a table of six selected budgets; those, namely, for 1801-'02, 1810, 1820, 1846, 1855, and 1898. The introduction also contains several paragraphs which are devoted to the transformation of English life by the industrial revolution. If a certain amount of allowance is made for the degree of Mr. Oman's patriotism, and especially for his estrangement from France, the reader will find much that is admirable in his sketch of English political history since the Peace of Amiens.

EATON ON THE GOVERNMENT OF MUNICIPALITIES.

The Government of Municipalities. By Dorman B. Eaton. Macmillan Co. 1899.

No man in New York, perhaps no man in the United States, had better earned the right to be heard on municipal questions than the late Dorman B. Eaton had done. For many years he had been a persistent and unwearied advocate of civil-service reform in the national and State governments as well as in cities, and had labored with unselfish zeal for the improvement and purification of city government in New York. We regret that our notice of this volume, in which he sets forth his view with much fulness and care, and which deserves the attentive study of those who feel how little progress American cities have yet made towards the ideal which all good citizens agree in placing before their eyes, should have been necessarily delayed till after his death.

Mr. Eaton begins by noting the fact that municipal administration is the weakest point in the conduct of our public affairs. He does not need to prove the fact. Every reasonable man, from Portland to San Francisco, admits it. He next asks why municipal administration is so bad when national administration and State administration are so good. If we are satisfied with the Federal Constitution and the State constitutions, why, he asks, are we so dissatisfied with the charters of the great cities, and why are constant attempts made to improve them? He concludes that there must be special causes at work to deprave city governments which are absent from the wider spheres of the nation and the State; and he proceeds to indicate these causes, finding the chief among them in the control which national parties have established over the politics of the cities—a control which has enabled party organizations (themselves, perhaps, caring very little about national political issues) to dominate cities, and to use municipal governments for sordid and purely selfish purposes. He observes with truth that all the evils of American city government have grown up within the lifetime of living men, and notes that it was not till 1821 that the New York State Constitution contained any provisions relating to municipal affairs. Party organization seized upon the cities before it had been

realized what a dangerous field for its working the population of great cities supplied. And it may be added, though Mr. Eaton does not lay much stress upon the fact, that the large and rapid immigration from Europe, which accompanied and partly caused the swift growth of American cities, made evils which might anyhow have been looked for develop with unexpected rapidity.

Agreeing with our author in thinking that city government is the least satisfactory part of our system of government, and that its faults are chiefly due to the power of party organizations, we must point out that these faults are, after all, only the most striking instance of the weak point of modern democracy in the United States, viz., the tendency to let government fall into the hands of those who have selfish motives for getting hold of it, and to make its administration a means of private gain. This tendency is surely more powerful and more pernicious in the national Government and in the State governments than Mr. Eaton seems to recognize. But it is doubtless more palpably widespread and harmful in municipal governments, because the questions with which mayors and city councils have to deal are less interesting to most men of ability than are the questions which come before Congress, and because the field for ambition is less attractive, while on the other hand the opportunities for illicit gain are quite as great—probably even greater—in cities than they are in State or national legislatures.

This, however, is a digression, from which we must return to the remedies suggested by our author for the faults of city government. He first examines and dismisses two remedies on which some reformers have insisted. One is the grant of autocratic power to the Mayor. Differing from President Low, he disapproves of this arrangement, and holds it to be the offspring of party expediency, and calculated to play into the hands of party selfishness. He then discusses the view that what cities need is entire emancipation from State interference, or, as he terms it, complete home rule. This he considers to be wholesome only when the population of the city is sure to make a good use of its freedom—a condition which often fails to be realized. Thus, while blaming the frequent changes in our city charters—and particularly in that of New York, which has been tinkered with (according to Mr. Conkling) 390 times in the ten years between 1880 and 1890—he holds that some power of interference ought to be preserved to the State for supervising or correcting the errors of municipal authorities; and he cites the instances of State Boards of Charities, State Boards of Health, State Civil-Service Commissions, State powers of inspection, as instances of the good which such interference may effect.

These two remedies being accordingly pronounced inadequate, Mr. Eaton proceeds to propound his own scheme of reform. The chief plank in it is the removal of the party element from city government—a change the need for which he illustrates copiously from the career of Tammany Hall. Most of our readers will agree that this removal is desirable, but will ask how in the world it is to be accomplished. Mr. Eaton answers: By civil-service reform, *i. e.*, by making promotions for merit only, by forbidding arbitrary dismissals from party motives, by lengthening terms of official service, and also by reducing the number of elections and of elective offices. A further expedient which he advocates is a change in the mode of voting. The present election districts in cities seem to him too small. He would amalgamate them so as to form larger areas in each of which several persons should be elected; and he would have these elected on the system which has been usually called proportional representation, but which he prefers to describe as Free Voting. This scheme exists in the State of Illinois under the form of the so-called Cumulative Vote. In each Assembly district three representatives are elected, and a voter may distribute his three votes among the candidates as he pleases, giving one to each, or two to one and the third to another, or all three votes to the same candidate. The same plan has been at work in Great Britain in school-board elections since those bodies were established by the act of 1870. Mr. Eaton quotes British experience as being strongly in favor of the plan, but surely without sufficient ground. This mode of election has excited constant complaints both in England and in Scotland, on the ground that it gives too much power to small but compact sections. Attempts have often been made to get rid of it, and though the party in England which favors denominational schools has so far succeeded in preventing those attempts from being carried through Parliament, it would seem that the general opinion of educationalists condemns the system, and that it will probably be abolished and the method of voting which prevails in all other elections will be extended to school boards also.

In his next proposal Mr. Eaton again appeals, and here with better grounds, to European experience. He thinks that a Mayor should be elected, not by the city voters, but by the Council, and that, so far from being autocratic, the chief power should be taken from him and vested in the Council, as it is in the municipalities of all European countries. He admits that the Councils, as they now exist in our cities, would not be good bodies either to choose a Mayor or to administer a city, but conceives that the better method of election which he suggests would so greatly improve their composition that their functions might safely be intrusted to them. This method is as follows: The model Council would be elected upon the principle of free nominations and free voting in areas larger than the present districts. The city would be divided into four districts, in each of which nine aldermen would be elected by the cumulative vote, while ten others would be elected (also by cumulative vote) from the whole city. These forty-six would then add to their own number ten others, chosen from the whole city in respect of their fitness to aid in administration. These fifty-six, forming the whole Council, may further elect, if they like, other honorary aldermen, being ex-officials, who shall be entitled to speak, but not to vote. The district aldermen are to be elected for six years, one-third going out of office each year; the ten city aldermen for two years, one-half going out each year, so that the Council, like the national Senate, would be a continuing body. We give this scheme in full, because it is perhaps the most novel part of Mr. Eaton's proposals, and raises some points of interest. That it is not likely to be carried out, our State legislatures and the opinion of practical politicians being what they are, goes without saying; nor does the experience of England seem to us conclusive, for English conditions and traditions are very different from our own. Apart, however, from these difficulties, we feel far less sanguine than the author is that any changes of machinery will bring about the improvements he desires. Party organizations have shown themselves able to lay hold on and use for their purposes any and every form of municipal constitution that has hitherto been invented. Councils, uni-cameral and bi-cameral alike, mayors—mayors limited and mayors autocratic—have both become their tools.

It is possible that the experiments Mr. Eaton advocates may be worth trying. But with the record of failures behind us, we cannot feel confident that any reform which changes in the mode of election or the transfer of functions from one authority to another may effect, will really go to the root of the evil. That root seems to lie in two facts. One is the indifference of all classes in our cities (the well-to-do not less than the poor) to good administration, as compared with their adherence to party names and party leaders. The other fact is the existence of a vast multitude of voters who do not realize that they have any interest in good administration, and who, owing to their ignorance, are not really qualified for the suffrage. Most people assume this latter fact to be the chief source of mischief. If we were to look only at New York and Chicago, we might think so. But the case of Philadelphia proves that the former is the more deep-seated cause; and it needs a complete change in the thoughts and habits of the people to remove it. However, our less sanguine estimate of the gain to be expected from changes in machinery does not prevent us from recognizing the value of the facts Mr. Eaton has so well collected, and of the opinions he has so judiciously expressed. His chapters on School and Sanitary Administration, on Police Administration, on Judicial Administration, are full of suggestions which well deserve the consideration of practical reformers. The concluding chapter, on the new charter of the Greater New York, would need a review all to itself in order that its criticisms, many of them being verified by painful experience, should be duly examined.

MUIRHEAD'S PRIVATE LAW OF ROME.

Historical Introduction to the Private Law of Rome. By the late James Muirhead, LL.D. Second edition, revised and edited by Henry Goudy, LL.D. London: A. & C. Black; New York: Macmillan. 1899.

This well-known work first appeared in an abridged form in the pages of the 'Encyclopædia Britannica.' It was published complete as a book in 1886. Its author, who for several years had been professor of Civil Law in the University of Edinburgh, and who had already given proof of his ability, in 1880, by an excellent edition of Gaius and Ulpian, rose at once, by virtue of his modestly named "Historical Introduction," to the front rank of writers on Roman law. Three years later the book was translated into French—an honor which has been granted to a few only of the most distinguished civilians, such as Ihering and Mommsen. It has also appeared in an

Italian translation. Unfortunately, the author has not lived to revise and expand his work, so as to incorporate in it the results of criticism and of recent research. The present editor has wisely refrained from changing in any way the text of 1886, but has given us a reprint, with valuable additions in the shape of notes and appendices.

Before touching upon these we feel bound to notice one striking fact. On its own subject this "Historical Introduction" has no rival in the English language. That the second edition of a book so unique should not appear till thirteen years after the first edition is certainly a remarkable illustration of how little Roman law is studied in England and in the United States. Owing to her peculiar institutions, Scotland has always fostered the study of the civil law, but in England it has not been successfully revived, except in the Universities of Oxford, Cambridge, and London. The statement made in 1879 by Frederic Harrison, that "an effective knowledge of Roman law has been introduced into the ordinary education of every lawyer" *(Fortnightly Review*, January, 1879) is not much truer now than it was then. Solicitors are not expected to possess that knowledge, and, though the examination for admission to the English bar does profess to require it, we know of a barrister who recently passed on the strength of a week's study of Hunter's 'Introduction to Roman Law,' so that even in his own land Sir Henry Maine's preaching has not yet borne adequate fruit. England has, indeed, produced in recent years a few able writers, among whom Poste, Hunter, Roby, Moyle, Clark, Amos, and Muirhead are the best known, but our own country cannot boast of a single well-known laborer in this important field of learning. The neglect of Roman law in our universities, and its entire omission from the curriculum of most of our great law schools, is perfectly notorious. Nay, more, the neglect is deliberate and the omission intentional—a manifestation of learned opinion which we do not, however, propose to criticise here.

This book is, therefore, not likely to have a brilliant career as a text-book for American students, though it is eminently fitted for their use. But among that large and increasing class of our lawyers to whom case law may be daily bread, and who yet prefer not to live by bread alone, we think that this book will prove popular, partly on account of its elegance—to borrow an untranslatable term from the Roman jurists—partly because of the facility with which it handles an intricate subject, and partly on account of the clearness with which it distils into 400 pages the essence of a vast mass of German, French, and Italian research. To readers of the class above mentioned, we have no hesitation in commending it, and we should advise them to obtain from this source a general view of the infancy and growth of the Roman law before they plunge into such formidable treatises as those of Hunter or Salkowski (Whitfield's translation), which depict that law at its maturity.

The mention of modern research suggests one serious difficulty with which all histories of this subject have to contend, and which readers of this book must be prepared to face, namely, the bewildering conflict among scholars and commentators. Whoever bears in mind the nature of the subject will scarcely be surprised that differences of opinion should exist. The earliest student of Roman legal antiquities whose works have come down to us is M. Terentius Varro, who died in the year B. C. 116, and even to him the early law was not an open secret. Several centuries later Gaius himself, when describing historical changes, occasionally hints at strife among the learned by some such remark as "valde quaeritur." If these men came upon difficult problems, surely we need expect no easier path. Since their day the sources have become scantier and more corrupt, and even the mighty Twelve Tables have been reduced to fragments, as if by the ruthless hand of some mediæval Moses. We cannot positively say whether the Lex Aebutia, so important in the history of Roman procedure, was enacted before or after the time of Cicero. The precise distinction between *res mancipi* and *res nec mancipi* will probably always remain uncertain. Instances of this sort might be indefinitely multiplied. Indeed, no history of Roman law can ever be written concerning which the critics cannot, if they please, point out weaknesses in dozens of more or less vital spots. Nevertheless, these spots are unimportant as compared with the solid bulk of fact which modern discovery has laid bare. What we may fairly demand of our historical guide, under such circumstances, is that he shall lead us over the whole field with a firm hand and a clear head, and that he shall frankly warn us when we are treading on insecure ground. That demand has been amply fulfilled in the present volume.

The author has divided his subject into five parts: i., the Regal Period; ii., the *Jus Civile*, covering the Twelve Tables and the law of the Republic down to the Punic wars; iii., the *Jus Gentium* and *Jus Honorarium*, covering the latter half of the Republic; iv., the *Jus Naturale* and the maturity of Roman jurisprudence, covering the Empire down to the time of Diocletian; and v., the Period of Codification, from Diocletian to Justinian. Some historical writers prefer to classify the various branches of the law, and to give a separate history of each branch from the earliest to the latest times. But in our opinion the method here adopted of division into periods renders the treatment of the subject far more interesting, and is worth the price paid for it, to wit, a certain amount of unavoidable repetition. The system of division adopted by Prof. Muirhead is as good as any that we have seen. Perhaps the titles of his periods might mislead the uninitiated, by their suggestion that there was no *Jus Civile* in the latter half of the Republic, or that there was no *Jus Honorarium* under the Empire; but a slight perusal of the contents would soon correct any such mistake, and would explain the broad sense in which these titles have been used. In each part there are three or four long chapters, and several sections in each chapter. The titles of the chapters and the sub-titles of the sections indicate clearly the scope and arrangement of the topics discussed, while the flow of the narrative is not broken, nor the reader's eye distracted, as is so often the case in modern treatises, by that elaborate subdivision into paragraphs and subparagraphs, each with its own numbering or lettering, which is apparently considered so lucid and so helpful.

In short, the style of our author and his methods of exposition leave nothing to be desired. The one serious fault we have to find with him and his learned editor relates not to what they have put in the book, but to what they have left out. It must, of course, be admitted that a work of this size, professing to contain only an introduction to the subject, cannot be expected to instruct us upon every point. The sense of historic perspective must be exercised, and some topics must receive a cursory treatment in order that others of greater importance may be more fully discussed. But even when due allowance is made for this fact, there remain a good many gaps which ought in our opinion to have been filled. The editor has made numerous corrections and additions of more or less consequence. Our sole complaint is that these additions are not more plentiful, for, though the text has wisely been left intact, the footnotes and appendices might easily have supplied what is lacking. For instance, in a note on page 251 the editor has corrected the inaccurate impression conveyed by the text that *pignus* always applied to movables only. We see no reason why, on the very next page, a similar note should not have been placed, supplementing the brief statement of the text as to the curious and interesting growth of *hypotheca*. The nature of the *interdictum Salvianum* might thus have been briefly explained. A student who should find some mention of this interdict and turn to this book for information, would now obtain no light on the subject.

But the chief poverty of the first edition, which the new notes have failed fully to remedy, is that relating to the development of the law of contract. Too little space in the original text was allotted to this important topic, as compared, for instance, with the space devoted to the law of procedure; and the omission could have been rectified by the present editor without greatly increasing the size of the volume. Agency in acquisition, in litigation, and in the making of contracts, a subject of the greatest interest, has been more than insufficiently dealt with. Not only are such obscure contractual relations as those of the *vas* and the *praes* noticed with the barest mention, and without adequate reference to their literature, but even such comparatively modern topics as the growth of *mandatum*, of *locatio*, of *societas*, and the important effects of the *actiones praescriptis verbis* are passed over in almost total silence. The Roman law of corporations, which presents an interesting field of research, has likewise been left untouched. In a word, we have nothing but praise for the editor's notes, so far as they go, but we regret that they do not go further.

In point of textual accuracy this edition is an improvement on the former one, which is saying a great deal. Thus, the incorrect citation of Gaius iii., 46, in a note on page 270 of the first edition, is now given as it should be, namely, Gaius iv., 36. One sensible change in the text—and almost the only change—which the editor has seen fit to make, is in the phrase "to condescend upon"—a term borrowed from Scots law, which appeared on pages 103 and 234 of the first edition. Instead, we now find the more intelligible English equivalents "to specify" and "to state." Besides the new footnotes and several valuable appendices, Prof. Goudy has added a complete collection of the fragments of the XII Tables which will prove most useful for reference. He has also

improved the index, though it might well have been improved still further. Finally, in everything which concerns outward appearance the book could not possibly be better than it is. It presents in this respect a great contrast to similar works of French or German origin, as to almost all of which it may truthfully be said that their bodily presence is weak and their type and paper contemptible.

Holly and Pizen, and Other Stories. By Ruth McEnery Stuart. The Century Co.

San Isidro. By Mrs. Schuyler Crowninshield. Chicago: Herbert S. Stone & Co.

Valda Hânem: The Romance of a Turkish Hârim. By Daisy Hugh Pryce. Macmillan.

Mrs. Stuart has a keen scent for the unusual, whether in things pathetic or things humorous, that rarely fails her in her choice of a subject. When it comes to the treatment, we have sometimes been reminded of Robert Collyer on the oysterplant which, as likened by him to the ineffective endeavorer, seems always to be upon the point of tasting like an oyster, yet never quite does. Uncle 'Riah Washington, absorbing the maladies of his neighbors in order to cure them, and incidentally to receive the good things remedial for them, could not be surpassed as a subject. Nor the Queen o' Sheba, foiled in the passion for magnificence in life, glorying in an expensive funeral, and, by favoring conditions, permitted to assist in the flesh. Nor Uncle Still, silent as an oracle and as ambiguous when moved to speech. Nor Miss Melissa, knitting green mats all her life, and suddenly impelled to change to scarlet and to go fishing on Sunday. Yet Uncle 'Riah falls short of his due effect from being over-dwelt on; the Queen o' Sheba's "pintedness" degenerates into the merely unpleasant as she approaches her timely taking off; Uncle Still's riddle is guessed so long before the climax that the sketch pays the penalty of a collapsing frame; Miss Melissa's innocent wild oatmeal has a made-up flavor as the banquet proceeds. The remaining story, "Picayune," shows, perhaps, more clever treatment than any in the volume, yet herein the subject (that of a bow-legged negro child in a Bowery freak museum) is the one least satisfactory to the sense of the picturesque. One could wish that the stories were better or worse—either really oysters or else plain squash.

A West Indian story is 'San Isidro,' prettily told and nicely observant of the relative values of landscape and figure. Across the mind occasionally darts the suspicion that one is undergoing guide-book instruction, as when one reads that the pilotojos, escaleras, ligazones, verandas, and techos were all of fine-red mahogany, that Isidro is pronounced *E-see-dro,* that the roof was thatched with yagua, and that the cattle browsed in the potrero, and that Don Beltran leaned against the chimenea which was between the casa and cocina, and that the gri-gris are hacked down to make way for banana-culture, and that banana bulbs must be planted twelve feet apart, ten inches deep, and (on windy hillsides) head downwards, and that the machete must be thrust into a post at the door when the owner enters. Still, a little knowledge, more or less, of Spanish-American language and manners is likely to attack us at any moment, and we must be brave. The story, for the rest, is full of an unusual grace, and of the picturesqueness that cannot be found elsewhere than on a tropical island; full, too, of the pathos and the tragedy that always attach to the dark drop in the human veins, and of a fierce Spanish spirit against which abduction and underground smuggling tunnels twinkle as naturally as jewels in an Ethiop's ear.

The title of 'Valda Hânem' calls up the picture of a captive beauty, playing the guitar to the listless ear of a black-bearded tyrant, who wears a fez and also a frown to match the scimitar which he fingers absently. A shadowy lover, in the background, suggests a rescue and tragedy galore. This Valda is a captive, in a sense; and her lord is a Turk of high degree, and wears a fez—sometimes. They live in a palace and have hordes of slaves. Their marriage was one of *convenance,* and neither ever saw the other before the raising of the bridal veil. There is, too, a lover, though he is not at all shadowy, and struts, oiled and curled, in the uniform of a British officer. There is even an attempt at a rescue and tragedy, of a sort. But though we have here all the elements of the suggested picture, it is a great shock to our sentimental preconceptions to find that Valda's chains are only the invisible ones of custom and convention, and that her husband is an up-to-date, well-read, and cultivated man of the world, devoted to his one wife; he even spends a part of every evening with her, and tells her all about the receptions that he attends and the foreign ladies that he meets. Their ways fill him with pleased wonder, though the veil, for his own womankind, with all that it involves, is as indispensable as ever. The book interests the reader as a series of pictures rather than as a story. The pictures are true to life in the universal; they also represent truly the present-day social and domestic life of the more conservative Turks of the higher classes. Miss (?) Pryce has evidently had excellent opportunities for observation, and she has used them well. She renders accurately what she has herself seen, but her explanations of Muslim law and custom cannot be depended upon so absolutely. She has succeeded best of all in the atmosphere of her story. Her Turks and Egyptians—slaves, children, mothers-in-law, and poor relations—are wonderfully genuine; and her book can be emphatically commended as a study in racial sociology.

The Cathedral Builders: The Story of a Great Masonic Guild. By Leader Scott. With Illustrations. Charles Scribner's Sons. 1899.

The most important work on the subject treated in this volume is that of the late Prof. Giuseppe Merzario, 'I Maestri Comacini,' published in Milan in the year 1893. The author of 'Cathedral Builders' (Mrs. Baxter) acknowledges her indebtedness to Signor Merzario, but states that she has collated many other authorities, including documents in various public archives. By the aid of such materials she has tried to make a chronological arrangement, and a list of the names of the masters at different eras.

She begins by discussing the various theories concerning the origin of masonic guilds, and finds that the first mention of them occurs in a document dating from the year 643. This document is a code of rules relating to the duties and responsibilities of builders. It appears to show that, as early as the seventh century, an organized body of architects and builders was in existence. Whether this was a survival of the older Roman organizations, we have no means of knowing. Mrs. Baxter infers that architects of the same guild worked in Rome in the early Christian ages, and that, during the disasters which overtook the city, the brotherhood fled to Como, where, at a later period, they were employed by the Lombard rulers; and that they finally became a powerful guild, and were known as the Comacini Masters. They were absolved from the observance of local laws and royal edicts, were exempt from military service, and from many other obligations which were imposed upon the people of the country. They had the power of fixing their own fees, and the right of regulating in their own lodges everything that pertained to their own government; and, by the terms of the diplomas and bulls which were issued in their favor, other artists and workmen were prohibited from entering into competition with them. Thus privileged and protected, their numbers grew, and many bands of them were sent with missionaries into distant countries, where their membership was further augmented, and Frenchmen, Germans, Belgians, and Englishmen were admitted into their body. Every lodge had three divisions—one for the novices, one for the working brethren, and one for the masters. Thus banded together for mutual aid and advancement in their art, they communicated to each other, from distant localities, such knowledge and experience as they gained in all branches of architectural design and methods of work.

We cannot follow our author through the tangled maze of history, tradition, and conjecture through which she seeks to support her main proposition, that this Comacini brotherhood, with its numerous ramifications, produced, almost exclusively, the architecture of the whole of Western Europe from the Early Middle Ages to the period of the Renaissance; nor can we accept such a proposition as true. The arguments adduced to establish this view are based on incorrect premises. It is affirmed, for instance (p. 3), that this architecture is everywhere of the same character at a given epoch. But any discriminating comparison of the monuments will show that this is not the case. Many diverse influences are manifest at all times, to say nothing of the minor varieties of Romanesque which were produced during the eleventh century, when Romanesque art was most exclusively practised. There were at that time at least two leading types of architecture differing radically one from the other—namely, the basilical Romanesque and the organic Romanesque. Churches like the Cathedral of Pisa, and many others in which the leading forms and structural principles are those of the primitive Christian basilica, with its timber roofs, its continuous arcades, and its unbuttressed walls, are certainly not similar to churches like San Ambrogio of Milan, with its vaulted nave, its compound piers, and its generally organic system. It is impossible that such wholly different forms of art should have been produced by one body of builders working on the same general principles, and inspired by the same traditions. And, even apart from such types as these, it would be easy to show that there never was anything like what the author

calls Comacine architecture as a style bearing the marks of a single school of builders, and common to all parts of Europe. The monuments stand as witnesses to the fallacy of any such theory.

The parts of this book that treat of the great corporation which the author supposes to have had so large a share in the architectural activities of the Middle Ages, might have value if the statements which she makes were based on unquestioned facts. But many of her statements lack due evidence, and her knowledge of mediæval history is imperfect. Taken altogether, her work is a mass of confusion. Its only real value consists in the interesting plates with which it is adorned.

The Expansion of Egypt under Anglo-Egyptian Condominium. By Arthur Silva White, Hon. Fellow (formerly Secretary and Editor) of the Royal Scottish Geographical Society; Hon. Corresponding Member of the Société Africaine de France. London: Methuen & Co. 1899. Pp. xvi+484.

On the front cover of this book is stamped a quotation from the Qur'ân in the original, beautifully written in an ornamental hand. Translated, it would run, "And everything We have reckoned in a clear record"; but Mr. White nowhere gives any clue to the meaning of what, for the most of his readers, must be simply a bit of effective decoration. This is a pity, for it exactly describes his book, even to a certain cocksureness corresponding, with reverence, to the divine "We." Everything about the Egypt of the present is reckoned here, and the record of it is clear. Mr. Penfield's book, which we noticed recently, was similar in a way. It, too, was about present-day Egypt, and had no lack of clarity and insight. But the touch was light, and details were skipped; it was a holiday book for a holidaying public. Mr. White's book is for study, and careful study. It is swollen with details and bristles with statistics, mercifully arranged, for the most part, in careful tables. The touch is light enough, but it is also firm; the weight of facts is carried easily and even gracefully. Mr. White has mastered the art of the bookmaker.

There go three elements to the making of this record. First, Mr. White has his theory —a theory well sponsored—that Egypt is to be regarded as an island, and must fall to that power which has command of the sea. So he traces the history of the country from point to point, and, of course, abundantly finds his dogma there. Buttressed with Capt. Mahan, his case will certainly bear stating. One weak point, however, is Syria. Egypt and Syria have always historically gone together. He recognizes that, and would rather have Syria German than French. The possibility of that arrangement and its ultimate advantages may be doubtful. So far, history; but the second element in order is the future of Egypt, and Mr. White has no more doubt as a prophet than he had as an historian. In or before 1905, England must proclaim a protectorate over the whole valley of the Nile. That follows of necessity from the situation. What, then, is that situation? The answer is the third element—a plain and full description of things as they are in and around Egypt. This description can hardly be praised too highly. We may think as we please of the theory of the sea power and of the destiny of England in the valley of the Nile, but no one can question the wonderful fulness and clearness of this account of Egypt and of the work of England in Egypt. The physical factors are here—practically the Nile, for the land is the gift of the river, and everything depends upon irrigation. Nubar Pasha is reported to have said that Egypt needed two things, justice and water. The political situation, too, in all its bewildering ramifications: the Sultan's suzerainty, firmans, capitulations, *Caisse de la Dette*, international control and English control, a Walpurgisnacht of ghosts and realities. The population, too, and its characteristics according to the census of 1897; how that population is governed and how it governs itself; how it is educated, taxed, judged; how it buys and sells and smuggles—all this with tables galore. The Suez Canal at length, with its dreary history of squabbles and cheating, and its present as an international crux; then the situation in the Sudan, the native races, the loss, the reconquest, the Condominium—almost as beatific a word as Mesopotamia. Finally, what is aptly called "The Title-deeds of the Nile Valley"—a lucid *précis*, based on Hertslet's 'Africa by Treaty,' of the documents and rights involved. This is brought down to the latest agreement with France in March of the present year, which is given in full.

It will be seen that we have here the necessary continuation and supplement to Milner's 'England in Egypt,' and Wingate's 'Mahdiism.' Of special points of interest, the book is full: the damming of the Nile, and the character of the present Khedive; educational institutions in Egypt, and missionary enterprise; the Gordon Memorial College at Khartum, and the Abyssinian difficulty; Tripoli and its relation to the Senussi dervishes—a thorny matter. Seven excellent maps are added. These are among the most beautiful, full, and accurate that we have ever seen. The last, of political boundaries and data, gives the absolutely latest agreements and delimitations for the valley of the Nile. It will stand most careful study. The fourfold shading in red, from the British Protectorate in British East Africa, through a British Sphere of Influence in the Bahr el-Ghazal and the Condominium of England and Egypt between Fashoda and Wadi Halfa, to Egypt proper with its British Occupation, and the red-bordered white of the desert with its awkward Senussi question, are a triumph of cartography and put the situation in vivid brevity. Whoever wishes to understand that situation and Egypt generally, should turn to this book. Its timely importance cannot be exaggerated.

A History of Wireless Telegraphy, 1838-1899. By J. J. Fahie. Dodd, Mead & Co. 1899. 8vo, pp. 325.

Everybody who seeks general information about Marconi's method of telegraphing and its relation to those of Preece, by ordinary dynamic induction, and of Lindsay and others by conduction through water in two paths, will be able to gather a somewhat better idea of these matters from this book than from the little volume of a quarter of the size by Richard Kerr. He will also learn here of some thirty earlier attempts. Steinheil the elder, in 1839, first proposed to telegraph by means of radiation otherwise than by vision. Morse, in 1842, first had the idea of erecting ordinary telegraphs along the two banks of an estuary or strait in order to make two conducting paths through the water. O'Shaughnessy in 1849 tried naked wires under water. Mahlon Loomis in 1872 proposed to telegraph through the upper air. Henry early telegraphed by means of the induction of coils, a method which Stevenson in 1892 practically developed.

The book has two faults that are common to almost all writings of practical men. The first is that it is needlessly technical. A good many people would like to read it who would have been thankful for a glossary explaining what an Obach cell, a D'Arsonville galvanometer, a Theiler sounder, a Cardew vibrator, a Righi exciter, and the like, are; for they will probably search for such expressions in vain in their encyclopædic dictionaries. The other fault is a want of logical distinctness in the thought. The very title of the book illustrates this. Contrivances that depend upon the vision of distant signals are, we believe, the only strictly wireless telegraphs that have ever been proposed. These, too, are the types to which the word "telegraph" was first appropriated. Yet this subject, which has been much studied by soldiers and sailors since 1838, is omitted by Mr. Fahie. On the other hand, Edison's contrivance (really due in its essence to Willoughby Smith) for communicating with a moving train cannot properly be called telegraphy, since it is only designed to close a gap of a few feet, while a telegraph is an apparatus for transmitting all sorts of messages faster than sound to distances beyond the reach of a man's voice. Nor do experiments with bare wires laid across the bed of a river come under the head of wireless telegraphy. The same defect is shown when Mr. Fahie professes not to understand what physicists mean by calling electricity a kind of matter, saying that engineers understand it to be a form of energy. If there were any real dispute upon such a point, we may be sure, from the nature of their studies, that it would be the students of theory who were right. But, in fact, it is a mere verbal discrepancy, best mended by confining the word "electricity" to vaguely denoting all phenomena depending on the luminiferous ether. Of course, optics is now universally acknowledged to be a branch of the science of electricity.

Notwithstanding these two faults, the work may be profitably read by anybody having a good elementary acquaintance with electricity.

Laxdæla Saga. Translated from the Icelandic by Muriel A. C. Press. London: J. M. Dent & Co. 1899. Pp. viii+272.

The Laxdæla Saga is, next to the Njals Saga, the longest of the sagas specifically Icelandic that have come down to us. In literary style it ranks among the very best of its kind, and far beyond many that have long been accessible in an English translation. It is, furthermore, one of the most romantic of all the sagas in its action, and one of the least removed by the strangeness of environment and the unfamiliarity of motive from the comprehension and sympathy of present-day readers. These are all good reasons for

the present translation, which, aside from an episode from the saga in Thorkelin's 'Fragments of English and Irish History' (1788), has never before been put into English.

The book, which, as a volume of the "Temple Classics," is daintily printed and bound, is intended for the general reader, and is wholly without critical apparatus. The English flows along smoothly over all difficulties of the original text—first and last not a few—although this by no means implies that, from a critical point of view, they are always satisfactorily overcome. That is here, however, perhaps, of secondary importance, and we have really in the little book an extremely good literary version of a saga that cannot fail to charm the reader, even when he is not especially interested in this particular kind of literature. The Laxdæla Saga possesses an added attraction in that it has been the source of the material for what is in many ways the strongest and best sustained of the poems in William Morris's cycle, 'The Earthly Paradise,' viz., "The Lovers of Gudrun," whose heroine is also the central figure in the saga.

The editor of the series, Mr. Gollancz, in a note at the end, expresses the hope of the popular success of this translation, so that others of the sagas may follow. The increasing number of such translations, since publishers in the great majority of cases do not proceed on a principle of pure altruism, seems already to indicate a growing curiosity regarding this astonishingly fertile field where we should least have thought to look for it:

"Betwixt the ice-hills and the cold gray sea."

Aside from the subject-matter of this old narrative prose, there is in it a strength of simplicity and directness that might well point a moral in literary manner to many a writer of the present day.

BOOKS OF THE WEEK.

Barbe, W. Going to College. West Virginia University: The Author.
Chambers, G. F. The Story of Eclipses. Appletons.
Dutt, R. Ramayana: The Epic of Rama, Prince of India, Condensed into English Verse. [Temple Classics.] London: J. M. Dent & Co.; New York: Macmillan.
Fitch, C. Nathan Hale: A Play in Four Acts. R. H. Russell.
Gay, A., and Yeaman, C. H. An Introduction to the Study of Central Station Electricity Supply. Whittaker & Co. $3.
Harrison, F. Annals of an Old Manor-House, Sutton Place, Guilford. Macmillan.
Irving, W. The Alhambra. Macmillan. 25c.
Iverach, Rev. J. Theism in the Light of Present Science and Philosophy. Macmillan. $1.50.
Kemble, E. W. Coontown's 400. Life Pub. Co. $2.

A History of the English Poor Law.

Vol. III. From 1834 to the Present Time. Being a supplementary volume to "A History of the English Poor Law," by Sir George Nicholls. By Thomas Mackay. Royal 8vo.

Mr. Mackay has brought up to the present time the History of the Poor Law left unfinished by the author of the two earlier volumes. His success with this difficult task is thus attested by the London *Speaker:* "Every reader who has tramped with Nicholls along the highways and byways of Poor Law history, . . . will be grateful for the easier and more attractive route provided in the philosophic treatise of Mr. Mackay."

Vols. I. and II. cover 954 to 1853. Each $10.00.

REMINISCENCES
OF
Julia Ward Howe.

With 24 Illustrations.

Large Crown 8vo, $2.50.

Covering so long a period,—nearly eighty years,—and touching so wide a circle,—the fashionable life of New York in its best set in her early days and, later, meeting intimately the literary, philanthropic, artistic, and musical people, not only of Boston, but of all parts of the world,—the record of a life filled to the brim with so many and such absorbing interests could hardly fail to attract and hold the attention of most of us.—*New York Times.*

The eagerly awaited "Reminiscences" of Mrs. Julia Ward Howe will not disappoint any of the expectations which the announcement of the volume aroused. It abounds in recollections of genuine value, it deals with stirring times and rare personalities, its comments are often deliciously shrewd and quaint, its dignity is marked, and it has, on the whole, an irresistible quality that tempts one to dip into it here and there before beginning at the first and attractive chapter that treats of childhood days. Much of the material that concerns Dr. Howe himself is of especial interest.—*The Living Age,* Boston.

A valuable contribution to the social and literary history of the century by one who has had exceptional opportunities, at home and abroad, of meeting the most distinguished people. The graciousness of the writer adds a charm to this record of social life in America, begun at a time when simplicity was its distinguishing feature. The evolution to the present complexity is marked, but without conscious effort, by the author.—*The Outlook.*

To a woman with the traditions of New York society, fresh from Old World experiences, and with a temperament sensitive to mental impressions, although of distinct individuality, the opportunity was exceptionally fruitful. Emerson, Holmes, Parker, Clarke, Margaret Fuller, Dr. Hedge, Channing, Sumner, Longfellow, Horace Mann, Garrison, Wendell Phillips, what a group of intellectual giants it was, and as Mrs. Howe recalls now traits or characteristics, speeches or witticisms, of the distinguished members of the group, the reader is charmed.—*Brooklyn Times.*

The Spectator.

The Proprietors who in 1861 purchased the *Spectator* have since that date conducted it themselves. They are therefore exempted from many influences which press severely on the independence of journalism, and have from the first made it their chief object to say out what they believe to be truth in theology, politics, and social questions, irrespective, not only of opposition from without, but of the opinion of their own supporters. Their object is to reflect the opinion of cultivated Liberals; but in the matter of the American War they fought against the mass of the very class they are trying to represent, and were finally acknowledged by them to have been in the right.

The news of the current week is compressed into an animated narrative, which the laziest or busiest may read, without missing the life or import of the events.

The *Spectator* contains a list of all Books published during the week (not under one shilling in price), with the names of the publishers and the prices attached, a feature which will greatly increase its value to booksellers, librarians, literary institutions, and private gentlemen.

The *SPECTATOR* is on sale regularly at **Messrs. Damrell & Upham's,** 283 Washington St., Boston, Mass.; **The International News Co.,** 83 and 85 Duane St., New York; **Messrs. Brentano's,** Union Square, New York; **The Subscription News Co.,** 47 Dey St., New York, and 77 Clark St., Chicago, and **The Harold A. Wilson Co., Ltd.,** 35 King St., West Toronto, Canada, where single copies can be obtained and subscriptions are received.

SUBSCRIPTION, PAYABLE IN ADVANCE, *$7.50 A YEAR.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 1, 1900.

The Week.

We drew attention the other day to the wavering policy of the Administration touching the tariff with Porto Rico, The President said in his annual message: "Our plain duty is to abolish all customs tariffs between the United States and Porto Rico, and give her products free access to our markets." Secretary Root said in his annual report:

> "The highest considerations of justice and good faith demand that we should not disappoint the confident expectation of sharing in our prosperity with which the people of Porto Rico so gladly transferred their allegiance to the United States, and that we should treat the interests of this people as our own; and I wish most strongly to urge that the customs duties between Porto Rico and the United States be removed."

That President McKinley and his Cabinet have been shaken in their purpose to carry out the policy so bravely proclaimed, has become plainly manifest in the last few days, but the change has been veiled by a desire to follow the lead of Congress, or, perhaps, to await a new decision of the Supreme Court. The President and Cabinet, we are told, want free trade with Porto Rico. They want to bring it about in the way that will cause the least disturbance in the popular mind; that is, they want free trade without a quarrel with the protectionists. They hope Congress will legislate in favor of free trade, but, although they have the power now, as is alleged, under the Court of Appeals decision in the Alaska case, to proclaim free trade by executive decree, they will not do so because they want Congress to take the initiative, thus maintaining the principle that Congress has authority to legislate separately for each of the colonies, regardless of the constitutional requirement that duties shall be uniform, and that no imposts shall be levied as between different parts of the United States. If they were to declare free trade now, it is said, or if Congress were to make sweeping general legislation, applicable to all colonies alike, these ends would be defeated.

This signifies a back-down from the high position taken when Congress met in December. It is Mr. McKinley's way of doing things, or rather of not doing them. He has had no colonial policy at any time. He has been waiting on Providence to supply him with one. He hopes to worry through the present session of Congress without coming to a decision on the main question of the day, which is this: What is the political status of our new possessions in the East and West Indies? Are they a part of this country, or not? Are their people citizens of the United States? If not, they must be subjects, like those of the Roman provinces of old, to be ruled by proconsuls and taxed according to our ideas and for our interests. Those who contend for this policy point to our dealings with the Indian tribes in our own territory. They forget that our statute-books are full of treaties with the Indian tribes, and that appropriations of money are made by Congress every year for the fulfilment of such treaties. In other words, the policy of the Government from the earliest times has been to treat with the Indian tribes as independent nations, however small they might be, until they reached a sufficient degree of civilization to be incorporated in the body politic. If any precedent is to be drawn from our relations with the North American Indians, it is altogether favorable to the idea of independence. We see nothing but increasing embarrassment to the Administration from its delay to carry out its declared purpose in favor of free trade with Porto Rico. We understand, of course, that the protectionists, who are threatening this and that if the McKinley plan is carried out, do not fear free trade with Porto Rico *per se*. They fear the precedent. They fear its application to the Philippines, to Cuba, and to the whole expansionist programme in the future, whatever that may be. They are wise in their generation. They are right in assuming that whatever policy is adopted now will prevail hereafter.

Seward's oft-repeated prediction, in the early part of the civil war, that the Confederacy would be overthrown within ninety days, has been recalled by the frequent statements of late that Gen. Otis would be able to report the complete pacification of the Philippine Islands within thirty days. That a proclamation announcing this as a fact may soon be issued, there seems every day increasing reason to believe. It also appears to be accepted at Washington as the fixed policy of the Administration that the President shall thereupon issue a proclamation extending amnesty to the insurgents, and denouncing as outlaws and bandits all who do not avail themselves of its terms. This would, of course, involve the shooting, at the discretion of any commanding officer in our army, of any native who might be caught in arms after the expiration of the time limit—whether he had heard of the proclamation or not. Considering such performances in the past as the firing upon unarmed people in a native village, without necessity and without warning, by a young officer who had been appointed from civil life, it would seem that the power of shooting "niggers" at will would be a most dangerous one to confer indiscriminately.

Our gold-and-glory Philippine orators have now taken to drawing circles around Manila. Circles used to be drawn only about Hawaii. Honolulu was proved, by this method, to be the centre of all our commercial and military power. But now it is Manila. Thus, the Hon. John Barrett, in his address before the Philadelphia Geographical Society the other day, solemnly said to the assembled savants: "Draw a circle of 3,000 miles around Manila, and it will include more great entrepôts of trade, more millions of human beings, and more developed and undeveloped material and moral opportunity than a similar circle circumscribed about any other Pacific-Asiatic city." But we are pained to observe one of the listening geographers. Prof. Angelo Heilprin, treating this powerful argument with levity. He wants to know, in a letter to the Philadelphia *Ledger*, why Mr. Barrett didn't make his circle 6,000 miles, and so include nearly one-half the inhabited globe. Drawing circles on the map is a harmless affair—no foreign Power would treat it as a *casus belli;* therefore, why not make one big enough to take in the whole earth? Prof. Heilprin puts two perfectly heartless questions to Mr. Barrett:

> "Is Mr. Barrett aware that a circle of 3,000 miles drawn around Boston would take in nearly the whole of the continent of North America, besides including within its confines such centres of population and industry as Liverpool, Manchester, London, Paris, and Madrid, not to mention all of the West Indian Islands and a big slice of northern South America? Does Mr. Barrett believe that any sane person recognizes any locality of the earth's surface to be the commercial centre of such a region as that which he figuratively describes?"

Coming just when our diplomatic success in helping to maintain the "open door" in China is still fresh in the public mind, there could be nothing more timely than the Chinese Minister's warning last week that open doors are of little value if the people behind them are not treated civilly and justly. To expect the Chinese to pour their money into our laps when they see themselves discriminated against in both the United States and its Pacific island possessions, is expecting too much, even from a long-suffering Oriental. No matter what the quality of the goods we may send them, no matter how tempting the bargains we may spread before them, it will not be possible to conceal the fact that the Chinaman is not a welcome visitor at our doors, and that laws exist which make it impossible for him to seek his

home where the immigrants from all other countries are welcomed. Evidently the Chinese Minister has become familiar with the word reciprocity during his residence in Washington, and in his eyes reciprocity in trade means justice, fair dealing, and mutual respect on both sides. What the inhabitants of the Pacific Coast will say to this is a very different matter. But even our gold-and-glory statesmen ought to see that it will be impossible, as the Minister said, for the United States "to take everything and give nothing." As to his recommendations that American merchants should study their markets and not dump upon China any surplus wares without regard to their quality, it is only necessary to say that failure to heed similar advice in the past has driven Yankee traders out of markets, all the world over, in which they should and could have become predominant.

We can recall nothing more judicious in the treatment of our foreign relations than the speech made by Senator Hoar on Monday in reply to that of Senator Mason on his resolution of sympathy with the Boers. Senator Mason had alluded, in an uncouth tone, to the "arrogance, cowardice, and brutality of the English Government." Mr. Hoar reminded him that the Senate of the United States was a part of the diplomatic machinery of our Government, and that all words uttered in the Senate were charged with a degree of responsibility quite different from that of the stump. Mr. Hoar then addressed himself to the merits of the subject, and gave a temperate and almost pathetic expression of his own feeling in view of the bloodshed now in progress in South Africa. He had declared himself a "Boer sympathizer" some time ago. He now tells us what that attitude signifies. It is an attitude toward Great Britain "of warm, cordial friendship—I might almost say, an attitude of attachment and love—and that, when we think her in the wrong (as we pretty often have had occasion to do, and as some of our people now do), we have the same feeling which patriotic English have toward their own Government when they think it is in the wrong, and the same feeling which patriotic Americans have toward their own Government when they think it in the wrong." He had hoped that the time might come when an expression of our Government, or the opinion of the people of the United States, calmly and modestly made known, would have its effect on these contending parties, and bring about peace with justice and liberty.

It is reported from Washington, in a triumphant way, that in the hearings on the shipping-subsidy bill nearly all the witnesses are favorable to its passage. There is nothing wonderful in that. Here is a bill which proposes to give a bonus of $1,276,948 per year to the American Line for running four ships between New York and Southampton, not to mention the subsidies for the dozen or more ships of the same company running on other lines. With such a cash inducement as that, it is not surprising that witnesses can be found in abundance, and counsel in plenty, to advocate the voting of the money. On the other hand, who is to pay the travelling expenses of anybody to go to Washington to represent the taxpayers in general? Some persons familiar with the subject have gone there at their own private expense to oppose the bill, and one of these, Dr. S. A. Robinson, characterized it as "the most infamous measure that ever marched up Capitol Hill." He was right. This is a bill to pay out of the Treasury in nine years the whole cost of such a steamer as the New York or the Paris, at the end of which time she will be owned, not by the Government of the United States, which has paid for her, but by the company which has received her cost price—the United States being obliged to go on paying the yearly bonus eleven years longer. All this is to be done because Great Britain pays $35,000 (not $350,000) as subsidy for a ship like the *Teutonic* or the *Campania*.

One of the tricks in the Hanna subsidy bill is the pretence that the cost to the Treasury will never exceed $9,000,000 a year. If this were true, the professed aim of the bill could never be attained. What the subsidy-seekers say they mean to do is to put our foreign commerce under the American flag. They point with astonishment and grief to the fact that only 15 per cent. of it is now done by American ships. Well, suppose we advance to 30 per cent., or 60, or 90, what would the cost be under the Hanna bill? It has been carefully figured out by ex-Commissioner of Navigation Bates, and he declares that, if 30 per cent. of the trade were done in American bottoms, the subsidy payments would be, the first year, $12,000,000; if 60 per cent., $24,000,000; if 90, $36,000,000. By the end of the twenty years for which contracts are to be made, and allowing for the natural increase in commerce, the Treasury would have to pay out $45,000,000 a year in subsidies if only 50 per cent. of the trade were under the American flag! This is the richness on which Hanna has his eyes fastened. That $9,000,000 maximum would endure about as long as it took to get a bill through repealing it. At any rate, the scheme is self-contradictory as it stands. If Hanna is to "restore the flag" in the way he says he is, his limit on the sum available is obviously fixed far too low. There was no limit at all in last year's bill; the one inserted this year is plainly intended to deceive.

The House of Representatives on Friday "vindicated the sanctity of the American home" by action which prevents a polygamist from serving as a national law-maker. Unfortunately, unnecessarily, and unjustly, it did violence to the Constitution of the United States in accomplishing this result, when the same end might have been reached in a much more impressive manner by compliance with the fundamental law of the land. Roberts ought not to serve as a Congressman—everybody except Roberts takes this view. But the man whom the people of Utah elected as their Representative, and who met the Constitutional tests, was as much entitled to be sworn in as a member of the House on the first Monday of December as was Representative Tayler of Ohio, who led the movement for exclusion. This plain right having been granted, the House might then have proceeded to his expulsion without a moment's delay beyond what a fair consideration of the charges against his character should demand. Not only would he have been expelled by more than the requisite two-thirds vote, but there is no reason to suppose that a single Representative would have favored keeping him in his seat.

The decision rendered on Monday, in the United States Circuit Court at Chicago, declaring the "anti-monopoly" act of Illinois unconstitutional, appears to rest on solid grounds. That act, which was passed in 1893, declared in terms that its provisions did not extend to agricultural products or live stock in the hands of the producer or raiser. In other words, it assumed that monopoly was wrong in the case of some goods and some persons, and right in the case of others. It seems pretty clear that such an act is properly described, as Judge Kohlsaat says, as both class and special legislation, and therefore in contravention of both the State and Federal Constitutions. It was speciously urged that the exception might be held void, and the remainder of the act constitutional. To this it was replied that such a decision by the courts would make the act binding on the very classes which the Legislature had deliberately excluded. That would be judicial legislation of the most flagrant character. The truth is gradually emerging that, if anti-monopoly laws are to stand the constitutional tests, they must apply to farmers and to laborers as well as other classes—a truth which makes the task of the legislator a very heavy one. No class in the community is more disposed to form combinations for industrial purposes than the farmers, and these combinations are frequently necessary for their protection against extremes in prices. Many of the laborers are also firmly convinced that combination is necessary for their prosperity, and yet the combinations which

they form savor of monopoly. On the whole it seems that, if there are to be anti-monopoly laws, they must be impartial and universal—a requirement which would silence a large part of the outcry for such legislation.

Mr. Bourke Cockran announces that he is ready to support Bryan for the Presidency this year. He was the most effective Democratic supporter of McKinley on the stump during the last Presidential campaign. He bases his change of position on what he considers the change of issues. He regards imperialism as the most important question before the people in 1900, and he would make the Democratic campaign on the reaffirmation of the Declaration of Independence. Mr. Cockran makes what we must consider a fanciful suggestion, that the Democratic national convention next summer ought to declare in favor of preserving the financial *status quo* for four years, and bringing up the free-silver question again for the campaign of 1904. We are surprised that he did not see and say that the Republicans in Congress are practically eliminating the free-coinage issue by passing a bill which they maintain will render it impossible for Bryan and a silver Secretary of the Treasury to shake the gold standard. Once convince the country that the Democrats cannot do any harm to the national finances if they shall carry the election next fall, and the people will not give much thought to the silver question. But nobody can tell yet whether the people will take this view. Meanwhile, Mr. Bryan explicitly repudiates "anything in the shape of a truce," and Mr. Cockran wants to know whether he will yield to the decision of the convention as to the timeliness of taking the sense of the people on the Chicago platform of 1896.

In the selection of Francis Hendricks of Syracuse for Superintendent of the Insurance Department, to succeed Lou Payn, the Republican machine has snatched victory from defeat. The real significance of Mr. Hendricks's appointment is found in the statement by Gov. Roosevelt, last Friday, that Mr. Hendricks was his first choice for the place, that Mr. Hendricks twice declined the office, but that finally, upon Wednesday of last week, being once more urged to accept the post, he had informed the Governor by telephone, that "*he would accept the office if the 'Republican organization' would support the nomination. This support was promised by the 'Republican organization,'* and, therefore, Mr. Hendricks's name will be sent to the Senate at the beginning of the week." Mr. Hendricks should make a good Superintendent. He has served long and creditably in public life—in his own city, as President of the Fire Commission and Mayor; in the Legislature, as member of the Assembly for two years, and a Senator for six; under the Federal Government, as Collector of the Port of New York, from September 17, 1891, to March 6, 1893. He is a man of unsullied personal character, high business standing, and ambition to make a good record in public office. He is thus at all points a welcome contrast to the man whom he will succeed. Yet, good man as he is, creditable as has been his past, and promising as is the outlook for an honest administration of the Insurance Department, the selection of Mr. Hendricks remains a signal triumph for the machine. The great evil which afflicts us, alike in the metropolis and in the commonwealth at large, is the overshadowing influence of "the organization." This is equally true of the Democratic party in New York city and of the Republican party in the State. No Democrat can rise to high position in the city without the consent of Tammany; no Republican to a prominent State office without the consent of the Republican machine.

Every one is interested in the construction of the rapid-transit tunnel on Manhattan Island, but no body of citizens feels more deeply on the subject than the leaders of the labor unions. They have succeeded in limiting the hours of daily work on the enterprise to eight; but that does not content them. What they really want is to have only members of the unions employed. If this cannot be accomplished, at all events, they maintain, no alien labor should be employed on the work. Some of the representatives of labor have suggested that if an alien belonged to a union he might be allowed to participate; but this doctrine was repudiated by the Central Federated Union. The late Stephen Walker, who was long President of the old Board of Education in this city, was in the habit of replying to those who asked about the functions of that body, that they consisted in taking care that the instruction given in the New York schools should be undenominational in character. The labor unions are not very active in their inquiries as to the character of the services to be rendered on the rapid-transit enterprise, but they are bound that it shall not be contaminated by the coöperation of foreigners. As one leader declared, "No self-respecting American citizen could compete with the alien labor brought from Europe, to whom a fishball would be a big luxury."

The annual report of the Hamburg Chamber of Commerce for 1899 pays special attention to the trade relations of the United States and Germany, which it characterizes as unsatisfactory. The blame for the situation is of course placed upon the Dingley tariff, and the harassing restrictions and regulations to which German exporters to the United States are subjected. In regard to the importations of American meats, the Chamber's conclusions cannot fail to give great satisfaction on this side of the Atlantic. The report points out that the large reward offered for a case of trichinosis in consequence of the consumption of American meat is still unclaimed, and that attempts to cause the disease in German animals, by introducing in them trichinæ from American swine, were quite unsuccessful. The Hamburg merchants therefore ask with much reason why the laboring classes should be deprived of this cheap food supply, now practically shut out by the rigorous inoculation and quarantine regulations. They do not hesitate to admit the fact that German producers will never be able to compete with foreign cattle-raisers, and earnestly urge the doing away with all restrictions on meat importations, not only because they believe this would be an economically wise move, but also because it would mean the removal of a serious cause of irritation in the trade relations between their country and the United States.

One must go far back in history to find a parallel to the severe blow inflicted by the Boers upon English military prestige when they forced the retreat of Gen. Warren's division to its original position south of the Tugela River. Gen. Buller may lay stress, if he pleases, upon the fact that the retreat was successfully conducted, but it was a retreat none the less, and in the face of his now famous instructions to his army, "Our Generals will only give one order, namely, 'Advance!'" it cannot fail to have a demoralizing effect upon his army, again checked when almost in sight of its beleaguered comrades in Ladysmith. As the three frontal attacks failed in the second week in December, so the much applauded flank movement has failed in the last week of January. There is only one other manœuvre left open to Gen. Buller—a movement to turn the Boers' left flank, and the fall of Ladysmith may be reported before this can be properly begun. For many reasons this news would be welcome to the English commanders, in spite of the additional blow to English pride which the loss of the garrison within twenty miles of a relieving army would inflict. It would undo the original military blunders of the campaign—the attempt to hold isolated fortified places instead of falling back for a general concentration, and then advancing along the best route into the enemy's territory. It would enable Lord Roberts to begin over again by marching upon Bloemfontein from the positions now held by Gen. French, through an open country favorable to English modes of campaigning.

A FEDERAL CORRUPT-PRACTICES ACT.

One who had not looked into the matter would be surprised to find how little federal legislation there is in force designed to preserve the purity of elections. Chapter 7 of "Crimes" in the Revised Statutes of the United States has some twenty-eight sections devoted to "crimes against the elective franchise," but many of these were repealed in 1894; the one section, 5507, which enacted penalties for bribery has been held unconstitutional, and the whole is practically inoperative as against modern methods of corrupting the franchise. As regards Senators and Representatives, either house, in judging of the qualifications of its members, may and doubtless would refuse to admit a man who had bought his seat with a too reckless violation of the Eleventh Commandment —not to be found out. But, aside from this doubtful resource—which, of course, is of no avail whatever in the case of Presidential electors—we have practically no federal protection of the purity of the ballot-box.

Yet the need of some bulwark against corruption of national elections was never so crying as it is to-day. Senator Hanna is almost openly preparing to raise a huge corruption fund for the next Presidential campaign. He has cynically proclaimed "money" as the great need of his party, and declared emphatically in Philadelphia the other day that "one dollar of campaign funds to-day is worth five dollars three months hence." Hanna is the Sir Gorgeous Midas of politics. His theory of nominations and elections is exactly the same as his theory of iron ore and railway bonds—if you want any, buy them. Every man has his price, and Hanna has the money. With him the true remedy for bribery is more bribery. A campaign fund is all he asks; give him that, and he will do the rest. Doubtless his appetite is only whetted by the huge sum he had the handling of in 1896. Just how great it was has never been made known. Grosvenor says he knows to a dollar, but will not tell. We are credibly informed and believe that it was $8,000,000. Hanna would no doubt argue that it ought to be at least $16,000,000 this year; for are we not twice as prosperous as we were in 1896?

Now it needs no argument to show that any such amount of money, or the tenth of it, in the hands of any man or party, collected in secret and spent irresponsibly, is a standing and enormous peril to the franchise. Something ought to be done to check it, but what? Most of the States have passed laws against corrupt practices in elections, but Congress has been a laggard. Yet the evil is national, and requires a national remedy. It is confessedly, however, a difficult thing for Congress to get at under its constitutional limitations. Full power over the "manner" of the election of Senators and Representatives is vested in Congress, and it would be well if some act were passed, like the English corrupt-practices act, regulating the amount of money a candidate for the national legislature might spend. But this, confessedly, would not go to the root of the matter, as it is Presidential electors that Hanna needs money to "educate," and their appointment is left wholly with the States.

Yet we think the thing can be got at indirectly. Congress and public opinion working together can reach the two great evils to be corrected—the secret contribution of money for corrupt purposes and its spending in secret. It has been suggested, for example, that it should be made a penal offence for a corporation as such to give any money to party war-chests. Congress is no doubt empowered to pass a law to that effect which would apply to the larger corporations, if not to all. It would be a perfectly proper law. The presumption is that any funds given by a corporation to a political boss are given with corrupt intent. A corporation as such can have no politics. If it pretends to, it can be only business in the guise of politics; and campaign contributions made under those circumstances are plainly a mere investment on the principle of *do ut des*. As corporations grow in number and power, the urgent need of laws cutting them off from mischievous interference with party politics is more apparent than ever. The State Legislatures and Congress cannot move too speedily to make corporation gifts to party funds a crime.

But the great remedy would be publicity. If national party committees had to publish a full report of the sources and amount of the money raised by them and present vouchers for its expenditure, a good part of the evil would be done away with at a stroke. Many of the mysterious rewards of rich men, in the shape of foreign missions and so on, would be impossible if it were known in this way that the discovery of their diplomatic talent was made at the same time as that of the size of their campaign contribution—money advanced, as Mr. Whitney said in the Van Alen affair, when "needs were many and friends were few." The value of the unwitting publicity in the case mentioned suggests what a gain it would be for public morals if the whole monetary transactions of party committees had to be spread out in the light of day. Whether Congress can constitutionally compel this is, of course, a doubtful question. But it ought to try to. Hanna contesting in the Supreme Court a law ordering him to publish his accounts as party manager would be an edifying spectacle.

The chief thing to aim at is agitation and the rousing of public opinion. We are surprised that the Democrats in Congress are so lethargic in this matter. Here is the most brazenly commercial boss of modern times practically notifying them that he means to buy the next election away from them. He is frying his fat in public. He is laying the foundations of corruption broad and deep. His subsidy bill, his Nicaragua-Canal bill —all the promise and potency of jobbery in financing and exploiting imperialism— these things, to his practical mind, are useful mainly as a basis for campaign contributions. He believes profoundly in gratitude as the expectation of favors to come, and is dangling the favors so that the expectant recipients will come down with the dust. It is a shameful and dangerous business, and we urge the Democrats in Congress to bestir themselves against these advertised designs on the purity of the franchise. Let them at least bring the facts to public notice, in speech and resolution and bill, and in all ways bite it into the minds of Americans that there is a conspiracy afoot to buy the next Presidential election.

THE TAX ON BANKS AND TRUST COMPANIES.

Nothing has given those who struggle with the subject of taxation in this State so much trouble as the effort to derive revenue from capital employed in the banking business. The difficulty has been mainly due to the fact that most of the banks are organized under national law. The United States law forbids the taxing of the capital of these institutions by State authority, but permits their shares to be included in the assessment of the personal property of their holders, provided it be not assessed "at a higher rate than other moneyed capital in the hands of individual citizens." Under this authority an act was passed in this State in 1866 providing for the assessment of bank shares to the holders, and the payment of the tax by the banks, which were to keep back the amount in the payment of dividends.

Under the interpretation of this law given by the Attorney-General, and sustained by the State courts, no deduction from the assessments was allowed for debt; but the question reached the Supreme Court of the United States in 1880, and that tribunal held that, as such deduction was made in the case of other moneyed capital in the hands of individual citizens, this law as interpreted by the Court of Appeals was in conflict with the national statute, and so far invalid. A new law was then passed specifically declaring, in the terms of the act of Congress, that the capital of national banks should be exempt from taxation, but providing that their shares should be included in the assessment of the personal property of the holders, that the rate of assessment should not be higher than that of other moneyed capital in the hands of individual citi-

zens, and that deductions for debt should be allowed as in the case of other personal property. The provision was retained for the payment of the tax by the banks, and its collection from the stockholders by deduction from dividends. A separate act put State banks on precisely the same footing.

The practice which has grown up under the incongruity of national and State law has been a technical evasion. Lists of stockholders are furnished by the banks to the assessors, and the shares are nominally assessed to them, their value being arrived at from statements made by the bank officers. It is virtually calculated from the amount of capital, surplus, and undivided profits, with a deduction of the assessed value of real estate and certain other allowances deemed equitable. It is what is called the "book value" of the stock, and is generally quite different from the market value. There is practically no payment by the shareholders, and even the assessment is a matter between the assessors and the bank officers. The banks pay the tax as part of their yearly expense, and deduct it from the dividends only in the sense that the dividends are necessarily reduced so much on account of it without applying the deduction to the shares individually. So far as stockholders are concerned, it is an indirect tax, of which they are not conscious, and it is assumed by the banks as a charge upon their capital. While the system of assessment has been fairly equitable and uniform in this city, assessors in other parts of the State have used their discretion in the most arbitrary fashion. In many places banks have been made to bear the chief burden of taxation. They have been assessed very unequally in proportion to their resources in different counties, and almost always excessively in proportion to the burden imposed upon "moneyed capital" employed in manufacturing and trade.

The banks have long had the grievance of excessive and unequal taxation, in spite of the restriction of the national law in regard to those in the national system, and latterly they have had a new cause of complaint in the growing competition of trust companies. These companies are all State corporations, and are simply taxed as such on their franchises and on their "property." Their capital and surplus and undivided profits are included in the assessment, but they are required by law to invest their capital in real-estate mortgages and certain public securities which are exempt from taxation, and they are at liberty to invest their surplus in the same kind of securities, so far as they see fit. The amount of their non-taxable securities is deducted from their assessment for taxation, and the result is that the tax which they pay varies greatly with the different companies, and at different times, according to the way in which their funds are invested or employed. On the whole, the burden of taxation which they carry is much lighter than that of the banks.

No great fault was found with this so long as the trust companies were regarded as fiduciary institutions, whose main business was the custody and safe employment of trust funds, but in the last few years they have been branching out greatly in their financial operations. Not only have they become trustees of the mortgages of great corporations and agents in their reorganization, but they have become promoters of industrial organizations and underwriters of their securities. Some of them have extended into the banking field, not only by loaning money on call, but by buying commercial paper and keeping mercantile accounts for deposits subject to daily check, upon which they pay interest. They have been crowding the banks very seriously in their own proper field, and the result is seen in their multiplication and the increase of their capital and their profits, while banks have been going out of business or consolidating, and their aggregate capital in this State has diminished. The State banks have suffered most, and their very existence has been threatened.

So far as the question of taxation is concerned, the joint legislative committee, which has just submitted a report on that subject, proposes a remedy for the inequality between banks and trust companies; and it is one of which the latter have no reason to complain, considering their advantages in other respects. It would simply impose an exclusively State tax of one per cent. upon all banks and trust companies alike. To conform technically to the United States law in respect to national banks, this is called a tax upon "shares," and the assessed value of the shares of each institution is to be determined by adding together its stock capital, surplus, and undivided profits and deducting the value of its real estate, which would still be assessed locally. This is, strictly speaking, an evasion of the restriction of the national law, for this State tax would be practically a tax upon the capital of the banks, and it would not be even in effect an inclusion of their shares in the assessment of personal property in the hands of their holders; but it presents, on the whole, so just and equitable, as well as so judicious and convenient, a solution of a perplexing problem, that it ought to be accepted without contest by banks and trust companies alike.

OUR ERIE CANAL POLICY.

After attentive perusal of the report of the canal committee, of which Gen. F. V. Greene is chairman, we concur with Gov. Roosevelt that its recommendations are wise and proper, and that the State ought not to abandon its great canal. This is not our preconceived opinion. When the Aldridge fiasco was exposed, and it was shown that the $9,000,000 appropriated by the Legislature had been wasted or worse than wasted, we inclined to the opinion that further expenditure would be useless, and we agreed with Abram S. Hewitt that it would be best to await events and gather more accurate information. Events have been telling their tale in the loss of still more of our trade, and now the more accurate information that was needed has come in abundant measure. It is seldom that we have seen a report on any public question more methodical, painstaking, and convincing. It leaves out no part of the problem. It minimizes none of the difficulties in the way of proposed enlargement. It exaggerates none of the dangers of supineness and delay. It presents to the people of the State the great question: Will you avail yourselves of the advantages that nature bestowed upon you; will you preserve the supremacy that your fathers bought for you when they opened the great waterway to the West; will you keep what you have got; or will you let all these things pass away, lose half your property, and sink into decrepitude and decay? To these questions there should be only one answer. The cost of the work seems large—it rises to $60,000,000; but the losses that confront us if we do nothing are obviously much greater. They cannot be computed in exact figures, but they must be many times the cost of the proposed work on the canal.

Upon this point, the report of the Schieren Commission, which was sent in by the Governor simultaneously with that of the canal committee, is very important. This Commission was appointed to investigate the causes of and remedies for the decline in the volume of commerce of the port of New York. The Commission finds that there has been a relative decline in our exports during recent years, and that while New York has been losing, Montreal, Boston, Baltimore, Newport News, New Orleans, and Galveston have been gaining. The reason for this alarming state of facts is that the rates of transportation and terminal charges at these ports are less than those at New York. It is cheaper to send grain to Europe by way of our rival ports than via New York. No matter what may be the reasons making for cheapness on the other routes, they will take the business from us if they can do it for less money. No sane person will send his goods by our route if some other route offers to do the work at a lower rate. Nothing seemed more improbable a few years ago than that Newport News, Va., should prove itself an important grain-exporting point. Yet we find it looming up as a formidable competitor with New York and Baltimore in the North, and with Charleston, Savannah, and New Orleans in the South,

This result has been achieved by small margins of cheapness, carefully studied out and steadily pursued year after year. Such results will always follow from similar causes. New York is no more exempt from their operation than the planets in space are exempt from their pulls upon each other.

The charges made by the Schieren Commission against the New York Central Railroad Company are serious, and almost savage in tone. The charge is that this railroad has entered into an agreement with other roads forming the "Trunk Line Association," whereby a differential rate against New York is allowed as an offset against the natural advantages which our harbor affords for ocean commerce. If there were no Trunk Line Association, and if inland commerce were free, these natural advantages would tell in favor of New York: her supremacy would be maintained by the same causes which first established it. But if it is agreed by all the railroads, including those of New York, that a lower rate of carriage shall be made to other ports, in order to offset the natural advantages of New York, then anything may happen unfavorable to her trade. The question of how large a differential shall be allowed against us will always be an open one, and each new improvement adopted by us at great cost may be neutralized by taking a vote in a board of half-a-dozen gentlemen. The system seems indefensible, yet the New York Central's answer would probably be that only in this way can paying rates be obtained for the carrying of grain at all. Without the differential the other roads cannot exist. Therefore, seeing that they might as well perish in one way as another, they will put the rate so low that neither the New York Central nor any other road can make a profit.

This fight about differentials has been going on, with varying results, but on the whole adversely to New York, ever since the day of Commodore Vanderbilt. The time seems to have come for the adoption of radical means to secure for New York the advantages to which her natural position entitles her. We have no confidence in any measures of coercion against the New York Central to compel it to change its policy. It is acting under coercion now. It does not want to cripple the commerce of New York. Its officers are under a grim necessity to earn dividends, and they find only one way possible, and that is to tolerate a differential which they would be glad to abolish if they could. If the canal enlargement proposed by Gen. Greene's committee shall abolish this differential or annul its effects, it will be cheap for the city and State at the price named. This is a matter for engineers and other experts to determine. If their decision is in the affirmative, then we had best carry out the Governor's recommendations. But, as we have previously said, the first step to be taken is to put all work on the canal, both of enlargement and of subsequent management, on the solid basis of a reformed civil service. Without this not a dollar should be spent upon new work, but rather should the present canals be sold at once to the highest bidder.

THE EDUCATION OF EXAMPLE.

I was much interested the other day in reading the *Nation* article on "Reform by Social Stigma," following up a line of argument already opened by President Hadley of Yale. Your proposal that we should avoid the company of dishonest men in general is, of course, a difficult one to follow, however useful it may be, owing to the way in which the good and the bad mingle in society. The good, unhappily, are not marked off from the bad by any clear line of demarcation. They have to work with them, to depend upon them, to accept aid from them in all sorts of laudable enterprises, both in the church and in the world. To evince positive disapproval of the rogues every day would be a terrible task, from which young men, who have their fortunes to make, would naturally shrink. I remember during the civil war that a lady in a country town, who had joined a society of her own sex to help the war, told me that the duty of "rebuking Copperheads" was set down in the list of those incumbent on its members. She said, with a look of despair, that all others she had faithfully discharged, but "rebuking Copperheads was something she could not do." So it will always be, I fear, with a large number of our good people. They will always find the task of telling a man that he is a knave, or indicating to him their opinion of him, a little too much for their virtue.

In this, however, as in many other things, there is a sort of half-way house. We may not always be able to avoid a rascal's company, but surely we need not seek it—if not for our own sake, for that of our children. To me, nothing is more strange than our indifference to the effect on our youth of our political manners. The extent of our reliance, in education in the duties of citizenship, on books, pamphlets, lectures, leaflets, "talks," is something amazing. We seem to forget altogether the effect upon a youth of the *milieu* in which his father and family live, of the people whom they see at their house, and of the estimation in which he finds they hold them. It is out of this that he really gets his idea of citizenship, however gratefully he may accept the books or listen to the lectures. A filial boy naturally believes that the men his father sees and "confers" with are as good as there are, and that the work in which they are engaged is honorable and useful work.

I have been familiar for twenty years with the history of Thomas C. Platt. Twenty years ago he was about the most despised and insignificant man, outside the penitentiary, in this State. When the *Tribune* used to be calling him "Me Too," he was the general laughing-stock. He is now one of the most powerful and respected. And yet his career has been one of political fraud and intrigue, and studious and protracted efforts to break down the old Constitution of the State and to impede efforts to reform it. I think few intelligent persons will deny that he is on a par with Croker, and we know the account Croker gave of himself the other day. Platt imitates him in every particular. Now how has he reached this bad eminence? Simply by success in getting ostensibly decent people to consult with him, to keep company with him, and follow his advice and example. How do you expect the children, when they see this man courted and invited to his house by the Governor of the State, to think that he is a bad man, or that his methods or way of life are odious? What do you suppose Gov. Roosevelt's children think of Platt? Why, that he is a dear old friend of their father's, and a good example for a rising young man. It is only a short time ago that a number of leading citizens of New York exposed enormous political frauds committed, connived at, and encouraged by Platt, and swore roundly that they would never, never have anything to do with him again. In a year or two they were all good friends with him, and some of them gladly accepted office at his hands. What impression do you suppose this makes on the boys? Why, either that their fathers lied when they said that Platt was guilty of fraud, or that there was no great harm in Platt's frauds, after all. Which conclusion do you think they are likely to reach?

The truth is, every one, or almost every one, admits that our standards of honor, of honesty, and of patriotism in public men, need to be greatly raised; but what to me is droll is that we expect that the next election will surely do the business. I think the process will be a long and tedious one. The general uplifting which has to take place, if America is to fulfil her mission among the nations, must be begun lower down, among the youth of the country, by showing them that there is a difference between men, both in morals and in conduct. You need not "cut" bad men, but you surely can avoid conferring with, coöperating with, lying and cheating with them.

It is not very long since two men from whom this generation expected a good deal, Messrs. Lodge and Roosevelt, filled the colleges with a terrible hullabaloo about the duty of plunging into public life, and, as they said, "accomplishing something." In fact, Lodge administered a stunning Phi Beta Kappa rebuke to Harvard College for criticising his career instead of imitating it. Well, one of the earliest acts of their political life was to vote for and support for the Presidency a man whose dishonesty and unfitness for the office they had two or three months previously admitted, exposed, and denounced. And they did this through sheer cowardice, the fear of being expelled from the Republican party. Since then Lodge's career has been simply a series of "base compliances." There is nothing, however absurd, including silver, for which he thought there was a majority, that he has not advocated. Roosevelt has been a useful civil servant, but the routine of civil life was too much for him. He had to break loose and go to war. His military exploits have procured him the Governorship of this State. The first use he makes of this is to share its powers and duties with our greatest corruptionist and our greatest enemy of good administration.

It is, therefore, hardly necessary to say that the notion of these gentlemen that they

would "accomplish something," is a mere phantasm. They accomplish nothing worth mentioning. They may turn a rogue now and then out of some trumpery place, and put a slightly better man in for a short term, or hinder the passage of a blackmailing act. But the great evil of the day, the boss system of government, they do not touch. On the contrary, they increase the boss's credit and authority; and when their own little day is over, they leave him more firmly established than ever.

Since representative institutions have been established on a popular basis, that is, within the present century, two great reforms have been achieved by agitation, the abolition of the corn laws in England and the abolition of slavery in America. But these were achieved by men who had convictions, which they would not change though the sky should fall, who stood to their guns in the darkest hour, and bore defeat without flinching. They never "conferred" with the enemies of their cause, or thought they were "accomplishing something" when they made an "ignoble peace." This is the way and these are the men to inflame the imagination of youth, and educate its conscience in a modern state. I remember how my own blood was stirred as a young man by seeing Wendell Phillips, facing a hostile audience, serene and resolute, though not still; his hand thrust into the breast of his frock-coat, like an artilleryman standing behind his piece, waiting for the enemy to get within range. The courage never to submit or yield is the courage we need to-day, for civil life more than for military life. E. L. G.

SERRAO'S 'CONQUEST OF ROME.'

PARIS, January 10, 1900.

I doubt if we are becoming very humanitarian and international in politics, notwithstanding our peace congresses and conferences; but we are certainly becoming very international in literature. It may be because novel-reading seems to be now one of the necessaries of life. I have been told that there appears on the average one new novel a day in Paris. The huge piles of them, which often have catching titles and title-pages, disappear more or less rapidly from the bookseller's shop; they never remain long, and have to make place for others. What becomes of the unsold volumes is a problem which has often puzzled me. There are about a dozen writers whose volumes have an assured sale, and of them you can see edition after edition rapidly succeeding each other. These writers have the ear of the public, and some of them make brilliant fortunes; the happy few are looked upon with envy by the legion of those who have still a name to make, and the immense majority of whom are sure to see their works sink into oblivion.

Foreign novels are a great and important addition to the novel-reader's *menu*. Russian novels were the first to invade the French market. Russia was made known to us by such eminent writers as Turgeneff and Tolstoy; and after we had admired their masterpieces, some of us wished to know Dostoyevsky and other less eminent writers. We became familiar with what was called *l'âme russe*, and there was all the more reason why we should try to understand the Russians when politically they became our allies.

Our acquaintance with modern Italian romantic literature is much more recent. Our familiarity with Russian literature dates from the time when Ivan Turgeneff made Paris his home, and was familiarly mingling with French society and French writers; we have not yet seen any Italian writer choosing Paris for his headquarters. The influence of French literature is, however, much felt in the Italian works which are beginning to attract our attention. The Italian novel-writers of the day are devoted to the principles of realism or naturalism, as you choose to call it; in fact, they are intensely realistic, but they have chosen to cover their principles with a new word—they are *verists*, devoted to truth, and to truth only. Among the recruits of this school are counted Verga, who may be considered the chief, the flag-bearer; Luigi Capuana, Cameroni, Ciàmpoli, De Roberto; but the most brilliant of the verists is a woman, Madam Matilda Serrao.

Verga's history is a curious one. He belongs, like many of the writers of the new school, to the southern part of Italy—to Sicily. His family owned a property at Vizzini, near Mineo. An epidemic of cholera induced it to emigrate, but Verga, though he became a member of the best clubs of Rome and of Milan, always remembered the poor people of Sicily. He described, in his popular novel 'The Malavoglia,' the manners of the fishermen of the coast; he wrote the libretto of the "Cavalleria Rusticana," which has become so popular; he traced for himself a programme of work which is only partly fulfilled.

But I will not speak now of Verga, and I return to Mme. Serrao, as she has taken, so to speak, the French public by storm. Several of her stories or novels have been translated into French and have had an immense success. There is no exaggeration in saying that, in the opinion of French readers, though every work of art loses immensely in a translation, Mme. Serrao has placed herself on the level of the greatest novelists of our time. She, too, represents the genius of South Italy, so full of life, of animation, of passion, rather than the more cold and prudent spirit of Northern Italy. But she may be said to be a product of the revolution which has unified the north and the south; and her great novel, 'The Conquest of Rome,' is, consciously or unconsciously, symbolic of this great revolution.

I have seldom received so vivid a literary impression, I might almost say sensation, as on reading the beginning of 'The Conquest of Rome,' describing the journey from Capua to Rome of a newly elected young Deputy of the southern province of the Basilicata. The Deputy is alone in a special car; he cannot sleep, he is cold; accustomed to the heat of the South, he set out on his journey without overcoat and with a modest trunk. He holds in his hand his Deputy's medal, with his name engraved on it, Francesco San Giorgio. He looks out of the window. "The train went on silently, now in the plain; the wheels turning on smooth rails did not disturb the sleep of the travellers; lighted windows flew past on the black earth—not a shadow behind the panes. The huge sleeping-car ran in the night as if pushed by an implacable and ardent will, carrying with it all wills disarmed by repose." San Giorgio alone is awake; he has left the paternal home, the little place where he has spent dull, insipid years as a small lawyer. He thinks of Rome. "These four letters, round, clear, sonorous as the trumpets of an army on the march, danced before his eyes with the obstinacy of a fixed idea." He had never been there, for want of leisure, for want of money. He saw Rome only in the abstract, like a huge mystery, an ideal apparition, an immense and indistinct feature. "Ah! how he liked this Rome! He figured it to himself as a colossal human shadow, extending maternal arms towards him to enfold him in a powerful embrace. . . . He thought that he heard in the night the irresistible softness of a feminine voice pronouncing his name. . . . Rome called him, was waiting for him as a mother waits for her son after a long absence."

When he approaches the great capital, his excitement increases. All his thoughts, his vague ambitions, his intense curiosity face to face with the unknown are analyzed with extraordinary vividness. The Roman Campagna has a majesty well suited to the thoughts of San Giorgio. I remember even now the sensation which I experienced the first time I approached Rome—a sort of religious awe in presence of the solitary aqueducts, the great plains which surround the capital of the world, so full of memories; and then the sudden apparition of the dome of St. Peter's.

San Giorgio arrives and takes a room at a hotel. His first thoughts are for the palace of Monte Citorio. There he has to choose a seat, there he will have to show what is in him. He has not yet selected his political line definitively; the ten years of a lawyer's work, of obscure and petty struggles, have hardened him, prepared him for public life; but he has not had much time yet to think of the great issues of politics. The old Deputies look on him with curiosity—the Socialists especially, for San Giorgio is poor, a self-made man; but "the cold look, the wilful forehead under the close-cut hair, the energetic physiognomy of the young man, mark a formed character, little disposed to submit to any influence whatever."

It is needless to say that the influence which will be felt by San Giorgio is the influence of a woman, for otherwise we should have no novel. This hard, stern, severe young man is doomed to fall under the soft, gentle, winning influence of a woman. Rome's first impressions on the young Deputy, his walks among the ruins in the Forum, in the Coliseum, in St. Peter's, are well described; but San Giorgio is not a dreamer. The Chamber, the Deputies, his new colleagues, absorb him; he studies the faces of the Ministers. "Why should he not become Minister? Is it so difficult?" There is a description of a great session, a great parliamentary tournament in Monte Citorio, which is so alive that you seem to be a witness of it. This extraordinary power of description is one of the great merits of Madam Serrao; it is found also in the account of a grand soirée at court. Photographs, cinematographs, can hardly equal the descriptive powers of the Italian writer, but she adds to her descriptions the dramatic, the psychological element.

San Giorgio is eloquent, naturally eloquent, as frequently happens in the meridional races. He has made his mark in Parliament; the party chiefs court him, dread

him. He is biding his time; does not at first know well on which side of the House he will sit. His fate is decided by accident more than by any great convictions. The Minister is an old, very old man with a very young wife. San Giorgio met her first at the railway station, on his arrival. He has seen her since continually; has taken long walks with her; has become intimate with her; she likes him, feels drawn to him, but she does not love. She is incapable of love, in the material sense; she is a creature of a superior sort, an idealist, ignorant of everything that goes under the name of passion. Nobody knows this better than her husband, the Minister, whom she regards more as a father than as a husband. The situations created by the contrast of the ardent San Giorgio and the pure Angelica Vargas give a singular psychological interest to 'The Conquest of Rome.' The devouring passion, which is never quite satisfied, finally destroys all the energy of San Giorgio; an absorbing topic incapacitates him for the political work which was and ought to be the object of his ambition. Before Angelica, all is forgotten—"so much so that the personality of San Giorgio effaced itself more and more." Angelica finally conveys to him, by the mouth of the Minister, her old husband, her desire that he would leave Rome. The Minister says to him: "Man, this great thing, this power, this force, is subjected to a supreme law which tells him, 'You must do this and nothing else if you do not wish to be useless and mediocre; you must have but one passion, one ideal. Love, science, politics, art—these forms of passion and of the ideal are exclusive sentiments.' 'What,' inquires San Giorgio, 'is Madam Vargas's desire?' 'That you will leave Rome.' 'I will go; I will resign.'" And he does resign. He returns to his Basilicata. He was to make the conquest of Rome, but Rome has vanquished him. His dream is finished.

SOME HINDU PROVERBS.

NEW HAVEN, January, 1900.

Threefold is the pleasure given by proverbs. First there is the intrinsic satisfaction derived from the adage in itself, as it is *ad agendum aptum*, or applicable to life. Thereto is added the delight of association, as we begin to wonder where we have enjoyed the flavor before, and finally locate it as appertaining to some well-concocted tart of different form but similar quality, made, perhaps, by the cooks of a far-distant nation. Lastly, if the proverb is the product of a long civilization, there is the gentle joy of tracing it back in its own confines, and seeing what proportion of its ingredients is new, stale, or well preserved. It is true that the intellectual pleasure is not of a very high order. The historical question is generally trivial; the association is sometimes very vague; nay, it must even be admitted that the pleasure in the flavor itself is often based on a somewhat reprehensible enjoyment of that spice of cynicism without which no proverb is perfect.

Nevertheless, though each strand (to change the figure) of this twisted pleasure is slight enough, the threefold cord is often constraining, and a new collection of proverbs may hold us pleasantly bound till we have satisfactorily solved some of its petty but knotty problems. This is especially true when the proverb-makers are quite isolated from Europe; and indeed in this case one of the pleasures, that of the comparative study of proverbial literature, is not without importance. For if we find proverbs springing up apart from all possible European influence, and yet identical with those of Europe, does not this do its part in helping us to understand how other traits, literary, philosophical, or religious, may arise separately in different communities, and so guard us against hasty generalizations in respect of a supposed unity of origin where such an assumption is not altogether necessary?

But to return to the proper subject of this study, and at the same time to the abandoned metaphor, all the mingled pleasures spoken of above may be had for the tasting of a new dish of Hindu proverbs recently served up to us in excellent shape by a past-master in the art, who has collected and translated under the head of 'Marathi Proverbs' nearly two thousand sayings of his chosen people, from whom he has gathered them in the course of his long missionary labors. Mr. Manwaring's collection is well arranged under different heads. Each proverb appears in the original and in translation, while numerous parallels are cited from Latin and modern European languages. Unfortunately, though naturally enough, the author is more at home in Latin and French than in the classics of India, and he gives scarcely any native parallels or originals of the proverbs of to-day, while Greek parallels appear to have escaped him altogether. But with these exceptions the book is a model of its kind. It is published by the Clarendon Press, a sufficient guarantee for its outward appearance.

Such a collection cannot be too highly commended, for it perpetuates sayings which are more or less fugitive in any circumstances, but in India peculiarly so, owing to present conditions. Proverbs change with the times; and when the times change as rapidly as they do now in India, many an old adage is liable to be abandoned as something that has outlived its usefulness. Thus, it would be a pity to lose all the scathing proverbs on the dishonesty of that wicked wight the goldsmith, for they go back at least two thousand years; but it is quite conceivable that new police and courts may even result in ousting this time-honored villain from his place in the bitter heart of his countrymen: "He may make or he may buy, still the goldsmith is content"; that is, he will cheat you just the same whether he sell to you or you sell to him.

India has always been the home of proverbs as well as of fables, and the two are often united, as in several of the specimens from this Marathi group. Some of these saws are of universal application; others could arise only in India, and lose their point elsewhere. "If you kill, kill an elephant; if you rob, rob the treasury"—that is, you might as well attempt a great deed and a great sin as run the same risk for smaller profit. The sleeping lion of the English proverb is here "Wake not the sleeping tiger," which was proverbial twenty centuries ago as it is to-day. Another proverb of antiquity (though the original is not noticed by the author) is "The elephant's footprint includes all"—the subordinate's fame is lost in that of the superior. How familiar, again, is this version of the *ridiculus mus*, "Excavate a mountain and take out a rat"; and how applicable to a certain dispute in high quarters, "The hunter is he who caught the hare." Many of the animal proverbs, though thoroughly indigenous, read like translations: "What is play to the cat is death to the rat"; "He made the stable-door after the bullock was stolen"; "A gift-cow—why has it no teeth?" (Don't look a gift-horse in the mouth.) Some might have arisen west of India: "Kicking is cheap in a gathering of donkeys"; or, "A lame cow is prime minister among blind cows." More characteristic are the agricultural proverbs. We say "as the tree is bent," but to the irrigating planter of India it is more natural to phrase the thought thus, "As the water-course goes, so the water will run." All the famine-distress of the country is epitomized in another of these rustic sayings: "Always crops and always poverty"; that is, however good the crop, the farmer's habit of borrowing will keep him always poor. He cannot lay up against a famine-year.

To illustrate some of the more remarkable coincidences of parallel proverbs, we may select the adage *zase perâve tase ugavate*, "As we sow so it comes up"; or, "Take the pestle from your own eye, then the straw from another's"; or, again, the group of sayings like *ne sutor ultra crepidam*, "A child's run extends to its mother," "A chameleon's run extends to the wall," and others of the same string. Cut off your nose to spite your face appears as "to cut off one's nose that it may be a bad omen." The Italian says, "In at one ear, out of the other"; the Hindu, "to hear with one ear, and let it out of the other." The Spaniard says, "The one-eyed man is king among the blind," which are the exact words of the Marathi proverb. So, too, "the blind as leader of the blind" is found here, as are "to look for a needle in the sea," "Walls have ears," "In need the friend is tested." Two to make a quarrel is more veiled in "You can't clap with one hand," though the thought is the same; as it is in our "too heavy artillery" and the Hindu's "use an axe when a finger-nail even is not necessary." "Beads about the neck and the devil in the heart," says the English proverb, the echo of that of the Hindu (who, by the way, knew the rosary before the Christian era), "A rosary on the neck, but black at heart." Pope said, "All looks yellow to the jaundiced eye." Yet he was anticipated in this sage remark by the Hindu, "To the one who has jaundice all appears yellow." But did Cæsar say "Teneo te, Africa," before the Hindu woman who has now passed into a proverb "fell down and said she was bowing to the sun"?

Other proverbs employ other illustrations, but have the same application: "Cooked rice can be tested by one grain" (A straw shows the wind); "Even figs are bitter to a full stomach" (A full stomach loathes the honeycomb); "to cut his throat and cure his cough" (remedy worse than disease). Some are almost like our phrase, but not self-luminous. Thus, Every light has its own shadow, appears as "Under the lamp it is dark" (two words in the original, *divyâkhâlî andhera*); that is to say, "Even an illustrious man has some vice." The Frenchman's delicate sneer, "In the adversity of our friends there is something not displeasing," is boisterously vulgarized in "Our goods are destroyed, our friends laugh," but each re-

flects its home. Quite enigmatic appears the saying, "The buffalo is dead, it gave twelve quarts"; till we learn that this is twice the usual quantity of milk, and perceive that we have to do with a bucolic *de mortuis nil nisi bonum*. Another Latin proverb is found in more elaborate form, "A poet may have a teacher, but to be a poet is nature" ('s gift, *svabhâva*), while our "when at Rome" is generalized in, "When among other people, do like them." Even *vox populi vox dei* appears as "An assembly of people is God," *janî janârdana*. To turn to another French parallel, *honi soit*, we may compare, "Evil is in front of the evil man." For the witless "Shakspere never repeats" there is a parallel phrase which is at least a figure, "We boil our rice only once" (We cannot tell the story again).

Mutual-admiration societies are well known in India, and are hit off in the succinct adage, *aho rûpam aho dhvanih*, "What a beauty [you are, says the ass to the camel], what a [lovely] voice [you have, replies the complimented camel]." Not a few proverbs are ethical and philosophical: Desert your child, but not a refugee; As many characters as there are individuals (*tot sententiae*); What is seen is perishable; What is seen is true (Seeing is believing); Practice is better than *Vedânta* (better than precept); Under its clothing the world is naked; A word to the wise, but all night to the fool (*verbum sap.*); At the end of effort is God (God helps those who help themselves). Not a bad compliment to the English Râj is the saying, now become proverbial, "The English rule and salaries are paid promptly."

Quite a number of these sententious words rest on well-known stories of which they are the epitome. A traveller asked a wise man how deep was the river he had to cross. The scholar answered correctly, "The average depth is up to the knee." So the traveller began to ford the broad stream and in its deep middle was drowned, the sage's answer remaining as a proverb on the misleading nature of averages. The King's barber, when asked how the world went, always replied, "O King, it goes well." The King's minister always said, "It goes ill." The monarch demanded the reason for this varied interpretation of life, and the minister promised that within the day he would convince the barber of his error, and the king should receive only one answer. So he stole the barber's money, and the next morning when the latter appeared and was questioned, he, too, said, "The world goes ill." Then the king, on learning how the barber's change of opinion had been effected, said, "Know the world by thyself," and it became a proverb to illustrate the truth that all human judgments are affected by the personal equation.

The melancholy condition of Hindu widows receives due attention from the proverb-makers, but these cruel jests are both too local and too sad to quote. Almost as pathetic are those on the poor little child-wife, but here a spice of wit sometimes brightens the darkness, as in this: "On becoming a mother-in-law, all the torments of being a daughter-in-law are forgotten" (The child-wife is little better than a slave to her mother-in-law).

Proverbs that go back to the classical literature of India are found in several cases, but the only one traced back by the author to its source (in the Hindu epic) is "Whom the gods wish to destroy they first deprive of sense." It may, therefore, be useful to indicate a few others which are registered as modern, but are rooted in antiquity. Thus, we find "The crow flies and the bough breaks" (*post hoc propter hoc*), which appears in the epic as a fable. Again, "The crane is a saint" (because it appears to meditate; in reality it is plotting destruction), a very ancient type of hypocrisy. Well-known, too, in ancient literature, is the proverb *hansakshîra nyâya*, "the judgment of the swan separating milk from water" (as it is supposed to do, a type of clever discernment). The saying, "Long are the arms of a wise man," is both an old epic proverb and a parallel to *longas regum manus*. What is given in the modern proverb as "Do not ask about a saint's ancestors nor a holy river's source," is an adaptation, for proverbial use, of the solemn statement of the ancients, "The source of saints and rivers is undiscoverable." Modern is "Clap in praise of him whose bread you eat," but it seems to be only a variation on the old Sanskrit proverb, "Praise the teacher" (in whose house the pupil lives). "Bear what is on your forehead," or, in other words, "What Fate has written on your forehead will never fail," is also at least as old as the classical period. It is interesting to see that both the great epics are often referred to in the proverbs of to-day, and their heroes and heroines furnish a considerable number of modern axioms. How many modern Greek proverbs, one would like to know, refer to the 'Iliad' and 'Odyssey'?

Finally, in some of these sayings there is a seeming touch of Greek literature, which need not surprise any more than the coincidence of Latin and Hindu proverb illustrated above. What Greek scholar can read without interest such proverbs as "The corpse is a burden unto the ground," ἄχθος ἀρούρης; or, "When there is an auspicious day, there is no priest; when the priest is there, the day is not auspicious"? In the original (for of course all these sayings suffer by translation) the phrase is as neat as in the case of the dog and the stone. The Greek heroine might have welcomed the proverb that declares, "The brother is one's flesh, the husband is but a relative"; and the oracle's μηδὲν ἄγαν is identical with *ati sarvatra varjayet* (not *varjayeta*, as Mr. Manwaring has it), "Always avoid the too [much]," a good proverb to end with, though to it is attached a literary question of interest. It appears that the present proverb is from a stanza which speaks of Sita, Râvan, and Bali as being respectively beautiful, proud, and liberal to excess. These all belong to the Rāmāyana cycle. Now, in the old stanza (not noticed by the author) one of the characters is from the 'Mahâbhârata' cycle, and the thought is changed also in the case of Râvan, thus:

Through too (much) giving was Bali bound;

Through too (much) pride, Suyodhana:

Through too (much) longing was Râvan doomed—

Always avoid the too (much).

There is, by the way, another proverb, which gives almost the converse of this advice in the words *thodakyânta goda*, "sweetness in little," small and sweet.

WASHBURN HOPKINS.

Correspondence.

HE KNOWS.

TO THE EDITOR OF THE NATION:

SIR: You were quite right when, in your notice of Mr. Beveridge's great speech on the Philippine question, you described him as "inebriated with the exuberance of his own verbosity"; although you were in error in not giving due credit to the extravagant praises of his "fool friends," who, it seems to me, were also largely responsible for his inebriety. But you missed the really great point of his speech, in not being aware that he spoke as an expert and past-master when he enlarged in such a beautiful and highfalutin and spread-eagle way on the necessity of sending men of the highest and noblest character and ability to administer the civil service in our new possessions. He knows the kind of men we need for such places, and is doubtless willing to "sacrifice all his wife's relations" for the great cause.

As evidence of this, I submit the fact that his father-in-law is now serving his country and its wards in the postal service in Porto Rico. It is true that he is a man of sixty-odd years, whose only previous service was as postmaster, a great many years ago, in a small Indiana town, and that he has apparently outlived his usefulness, as was shown by the unsuccessful efforts of his son-in-law to find a place for him in the federal service previous to his own election as Senator. But then, Porto Rico is only a small island, and "any old thing" will answer there. Just wait a little while until we fill up the really good offices in the Far East, and I venture to prophesy that then our young prodigy will be able to name you half-a-dozen men for every place; yes, and get them appointed, too.—Yours respectfully,

IMPERIALIST.

INDIANAPOLIS, January 23, 1900.

DEWEY'S PREPARATION.

TO THE EDITOR OF THE NATION:

SIR: Your excellent editorial, "Ex Oriente Lux," reminds me that I have seen only one statement as to how Dewey came to be so thoroughly prepared for war as to be enabled to sail for Manila immediately upon the declaration of war, April 23, 1898. I copy a letter published at the time, but, so far as I know, never commented upon.

Yours truly, R. WAGNER.

12 COLLEGE PLACE, COLORADO SPRINGS, COL., January 22, 1900.

WHILE MCKINLEY AND SAGASTA NEGOTIATED.

A Mr. Williams of Cincinnati, who has a son serving upon the *Baltimore* as Lieutenant, after receiving a letter from the young man, dated at Honolulu, prints the following statement of what was done to equip Commodore Dewey's fleet for the task assigned it:

Before the bubbles ceased to rise from the sunken battleship [*Maine*], ammunition that could not be duplicated in all America was ordered on the trains that had the right of way over all that came before their swift rush to San Francisco. There these explosives, that must be handled as carefully as a mother holds a babe, were tenderly transported to the slow but steady old warship *Mohican*, and started for Honolulu. There, at Honolulu, they were again as hastily as

possible unloaded and again restored on the beautiful but terrible *Baltimore*. Every solid foot of the *Baltimore's* magazines was filled. And 400 tons more of modern munitions were secured on her decks. She was also filled to the utmost with coal.

On March 22, just thirty-four days after the disaster to the *Maine*, the officers and crew of the *Baltimore* started on the long sail of 5,000 miles to Yokohama, and thence to Hong Kong, where Dewey was waiting for the food of war. In the meantime, the depleted arsenals were refilled by agents that made the powder-mills run day and night on both sides of the Atlantic, for every American had answered to the call for $50,000,000. On the same day thirty-five fighting vessels were added to the slender line of steel that marks our first line of defence.

While Dewey was filling his magazines from the stores of the *Baltimore*, McKinley and Lee were calmly controlling the wrath of their countrymen who were clamoring for the shooting to begin. As the last obtainable ton of coal sifted down on the hidden decks of his squadron, Dewey hoisted the signals for sail and steered straight for Manila.

McKINLEY BEER IN MANILA.

To the Editor of The Nation:

Sir: You have called attention to some of the large consignments of American beer to Manila, though I believe you have missed the most notable, that of two hundred and nineteen carloads from one Milwaukee brewer, of which he has boasted *ad nauseam* in full-page advertisements in several of our leading monthly magazines. Every man aware of the legal situation knows, of course, that the admission or exclusion of this liquor rests wholly in the power of the President, as head of the War Department (Mr. Root being merely a Secretary, removable at will), so long as military occupation shall continue. Why has not the President stopped this devastating inflow? The most obvious answer would be that the welfare of the country demands the retention in power of his party and himself, and that the exclusion of American beer from the Philippines would endanger that retention. It would never do to sacrifice the present Administration to the moral needs of the Filipinos. Besides, it will no doubt be true that the wives and children of drunken Filipinos will be peculiarly susceptible to the consolations of the missionary, when his turn at last comes, and thus we see that bottles as well as bullets may have their place among the weapons of a holy warfare. It is only on some such theory as this that one can understand the silence of our imperialistic religious editors as to the President's action in allowing this enormous introduction of beer into "our new possessions."

But I venture to suggest the possibility of a deeper motive behind the course of the Administration. Ancient expansionists openly and above board used the vices of inferior races as a means of keeping them in subjection. Now Manila, with its hundreds of new American saloons, is of course more disorderly in many respects than it would be otherwise, but what is the chance of any intelligently planned and carefully concealed insurgent plots there with so large a portion of the natives constantly filled with liquor? Of course everything becomes known at once, and why may we not suspect that this is the intention? I know that the faithful supporters of the President will rise in wrath at any such suggestion, and deny it explicitly and *in toto* on the simple ground of the President's character; but let them pause and consider the simple and undeniable facts that the President does allow the liquor to go there, and that the natives do drink it; that its immediate result cannot be other than the frequent exposure and failure of plans for resistance in the city and for aiding the insurgents in the field, and that the final result of all this must be the easier subjection of the islands as a whole. Now the President must have some motive in admitting liquor which he has the full and legally unquestionable authority to keep out, and, from the imperialistic standpoint, what motive can be more admissible than the one suggested? It is incumbent on some such moral authority as Dr. Abbott to say.

W. H. Johnson.

THE VERB *DOUBT*, 'FEAR, 'APPREHEND,' 'SUSPECT.'

To the Editor of The Nation:

Sir: Of the equivalence thus indicated, taken in its entirety, the illustrations furnished by even the amplest of the dictionaries must be, to many, misleading, their scantiness being such as to suggest, at variance with the truth, that, in recent times, it has been of somewhat infrequent exemplification. To correct this impression, a string of quotations for it, selected from a very large number which might be produced, is appended:

"I have sent him the following verses, which I neither like myself, nor will he, I *doubt*." Thomas Gray (1761), *Works* (ed. 1858), vol. iii., p. 287.

"I shall come off, I *doubt*, But scurvily with my decrepid Eunuch." George Colman (1764), *Terence* (ed. 1810), p. 86.

"Feeling something pointed running into his breast, he *doubted* some foul play." Goldsmith (before 1774), *Scarron's Comic Romance* (1775), vol. i., p. 24.

"I *doubt* some little difficulty may arise." Jeremy Bentham (1778), *Works* (1838-43), vol. iv., p. 16.

"I *doubt* those from whom I heard it think any use of punishment too much." Rev. Thomas Twining (1779), *Recreations and Studies* (1882), p. 65.

"I *doubt* they will not be done before you come away," "I *doubt* he can do no good to poor Mr. Scrafe." Dr. Johnson, *Letters to Mrs. Thrale*, April 11 and July 10, 1780.

"If they [the Americans] will still persevere, they will find it, I *doubt*, an hopeless contest to the last." William Cowper, *Letter to the Rev. John Newton*, Nov. 27, 1781.

"My execution of their second orders will not be answerable, I *doubt*, to what is expected." Henry Thomas Colebrooke (1790), *Life* (1873), p. 36.

"The answer was in the affirmative; but it was given in such a manner that I *doubt* they wished to deceive me." Mrs. Eliza Parsons, *Woman as she should be* (1793), vol. iii , p. 185.

"The little darling urchin robs me, I *doubt*, of some portion of thy love." R. B. Sheridan, *Pizarro* (1797), Act ii., Scene i.

"I *doubt* I am almost too far off to be in a sufficient fury for the purpose." Lord Byron (1819), *Works* (ed. 1837-40), vol iv., p. 176. "I *doubt* that it would not be honest." *Id*., *ibid*., vol. v., p. 25. "I am glad you like it, however, but *doubt* that you will be singular in your opinion." *Id*., *ibid*., vol. v., p. 189.

"I *doubt*, I *doubt*, sir, that this is the book which belongs to the scrutoire." De Quincey, *The Dice* (1823), *Works* (ed. 1862), vol. x., p. 295.

"I *doubt* that the salmo salar is only one species." T. L. Peacock, *Cro chet Castle* (1831), ch iv.

"The task you would set him is, I *doubt*, utterly impracticable with his other numerous avocations." Rev. H. F. Cary (1843), *Memoirs* (1847), vol. ii., p. 338. Also vol. ii., pp. 15, 24, 84.

"James Marshall went in pursuit of that game, I think, in company with Buckland (and, I *doubt*, Sedgwick)." Rev. Dr. W. Whewell (1846), *Account of Dr. Whewell's Writings* (1876), vol. ii., p. 335.

"I very much *doubt* that my Aunt . . . did not know what she was talking about." Sir G. W. Dasent, *Annals of an Eventful Life* (1870), vol. i., p. 96.

These quotations would, of course, appear in several distinct groups, if disposed lexicographically.

A reviewer in No. 1800 of the *Nation* speaks of the partiality of Edward FitzGerald, my neighbor in past years, to the employment of *doubt* as typified in the expression, "to the detriment, I *doubt*, of his family." In his younger days, such phraseology, though already then archaic, had considerable vogue, especially in discourse of an informal cast. By Sir George Dasent—since, as has been seen, he patronized it only a generation ago—it must have been regarded as an item of by-gone diction deserving of continued existence. But FitzGerald's fondness for it, while he, without question, estimated it similarly, was, not at all improbably, in some measure determined by his surroundings. In the common speech of these parts one constantly hears the like of, "There's a mouse in the cupboard, I *doubt*," "I *doubt* the dog will bite you," "I *doubt* he won't get back to-day." In the case of most locutions akin to these, the generality hereabouts often substitute, after the occasional fashion of those who should set better example, *expect;* and only in its injurious sense do they ever employ *suspect*.

Provincial peculiarities, in language no less than in pronunciation, are, in England, very far from unusual among the educated. Many instances which I have observed, above all, in Suffolk, might be enumerated; but I here confine myself to the mention of two or three, the first of which calls up, but only on a superficial view, the French *chez moi, chez nous*. Bernard Barton, FitzGerald's father-in-law, has, in one of his published letters, "I may be tempted to stroll over to *thine* to dinner," thus amusingly Quakerizing an every-day East-Anglianism, "I were to *his* this morning, and he were to *mine* this afternoon." This bucolically worded information, addressed to me while still unversed in outlying English, availed to enlarge my linguistic knowledge by more than one interesting fact. What was intended by *his* and *mine* was self-explanatory; but I should have decided amiss in taking *were to* for *was at*. Not till after some reflection did it dawn on me that the idiom, long widely familiar, which imposed on *was* the senses of *went* and *came*—and not only as above, but in, for instance, "I *was* to see him there, and he *was* to see me here"—still subsisted, locally, as a noteworthy survival.

F. H.

Marlesford, England, January 12, 1900.

ROMAN LAW.

To the Editor of The Nation:

Sir: On page 76 of No. 1804, in your review of Muirhead's 'Roman Law,' you say: "Our own country cannot boast of a single well-known laborer in this important field of learning" (Roman Law). Permit me to call your attention to the analytical power of Morey's 'Outlines of Roman Law' (N. Y., 1884), and to voice the expectation with which students of this subject are looking forward to the publication of Prof. Munroe Smith's treatise on the Roman contracts—a work which will, we trust, remedy the deficiency that you justly censure in Muirhead.

Your review further says (p. 76): "The one serious fault we have to find with him and his learned editor, relates *not to what they have put in the book*, but to what they have left out." Perhaps your words are too gentle here—at least, so far as you include the first edition, which is before me. Of its 448 pages of text, 77 are given to the law of the "Regal Period," while only some 90 are given on the average to each of the other four parts, and nothing whatever is said of post-Justinian law. Now while it is clear that the Roman *public* law—at least the *constitutional*—did develop during the first three centuries of the city, so elaborate an attempt as that of Muirhead's to trace the development of *private* law prior to the Twelve Tables, based, as it must be, on the inferences of men of much later times (*e. g.*, Varro, about three centuries later than the Twelve Tables), is hardly well calculated to impress the practitioner of to-day with a sense of the practical value, or even the reliability, of the book—or the science. If even the earliest Latin inscription known (C. I. L. xiv., 4123) should be dated in the fifth century B. C., and the early period of the literature begins three centuries B. C., surely the most obsequious follower of the fanciful German reconstructor should say on every page: "This is mere inference based on the fancies of the poet Ennius, the antiquarian Varro, of Livy, Dionysius, Plutarch, Pliny, Tacitus, Servius, Macrobius, Voigt, *et al.*" Even Bruns, though he excerpts references to the *leges regiae*, adds ('Fontes,' 5, 1, note): "omissa quaestione de vera earum natura."

To illustrate my contention (that in this matter your review is too generous): Muirhead (i., pp. 67 ff.) gives, with some qualms, two pages and a half to Servius Tullius's contract laws. Far better Krüger's treatment: "Diese Servianischen Gesetze sind nicht verschollen, sondern erdichtet"!

Yours truly, EDGAR S. SHUMWAY.

RUTGERS COLLEGE, January 30, 1900.

ANTHROPOLOGICAL EVIDENCE.

TO THE EDITOR OF THE NATION:

SIR: The reviewer whom I have to thank for a kind critique of my 'Homeric Hymns' (*Nation*, December 28, 1899) demurs to the evidence for a Pawnee rite, analogous to the myth which inspired the Eleusinia. He wants evidence "not taken from the reports of missionaries," who "are easy to gull." I relied on De Smet, and I think that a "guileless" Pawnee cannot have known the myth of Demeter and so palmed it off on the recorder. Again, De Smet, I think, does not even notice the Eleusinian parallel; indeed, it does not appear to have been observed, any more than the Pawnee rite parallel to the Attic Bouphonia, by other students.

Again, evidence from "the journals of educated travellers" is objected to, and what sources are left? Only the reports of uneducated travellers. It seems that the educated, "not possessing the scientific spirit, are too ready to press analogies between the beliefs they encounter and the classic myths." Lafitau, about 1740, may fall under this condemnation, and so does Adair, with his Jewish theory. But surely Messrs. Spencer and Gillen, in Australia, do "possess the scientific spirit." Mr. Spencer is Professor of Biology in the University of Melbourne, and, while they give, *e. g.*, an Australian parallel to the Osiris myth, they never notice the analogy. A Professor of Biology may know little of Egyptology. Nor does Winslow note analogies, in 1621, with his Kishtan and Hobamoc; nor, in Fiji, does Mr. Basil Thompson note the classic analogy of the golden scroll from Petelea: very possibly he did not know of its existence. In short, I do not think we have here to deal with "missionaries looking for analogies," when neither missionaries nor travellers, educated or not so educated, seem to be aware of any analogy at all. Lafitau, as was said, and William Strachey, in Virginia (1602), *did* note analogies, and we recognize their bias accordingly.

In this spirit of criticism I "ride my hobby," which is common to all anthropological students of early religion. The savage and classical parallels impress me the more when the reporters show no sign of being aware of their existence. When missionaries and travellers are also comparative mythologists, *then* their evidence becomes *suspect*. But, hitherto, we have suffered little from this growing source of possible error.

I regret my archaistic "explosions," though I warned the reader of "Etin" in the preface. Only for "shieling" do I stand out, because, as the man said of a "Yorker," what else can you call it? Every reader of Mr. William Black knows what a "shieling" is, just as every reader of Malory knows what "flatlings" means.

> "From the dim shieling on the misty island
> Mountains divide us and a world of seas."

"Aumbry," an English word, I like better than "cupboard"—when speaking of the furniture in the divine cave of a goddess. I can hardly think such words unknown either to scholars or ordinary readers of our literature. But, methinks, I have taken too much knowledge for granted in both classes of men. It is a mistake which I would gladly correct if I had an opportunity.

Faithfully yours, A. LANG.

ST. ANDREWS, January 13, 1900.

Notes.

G. P. Putnam's Sons' preliminary announcements embrace Prof. B. I. Wheeler's 'Alexander the Great'; 'Charlemagne,' by H. W. Carless Davis; 'Oliver Cromwell,' by Charles Firth; 'Theodore Beza, the Counsellor of the French Reformation,' by Prof. Henry Martyn Baird; 'Modern Spain,' by Martin A. S. Hume; 'Slavery and Four Years of War,' in this country, by Major-Gen. J. Warren Keifer; 'Reminiscences of J. Morris Steinert,' compiled by Jane Martin; a (third) volume supplementary to Sir George Nicholls's 'History of the English Poor Law,' bringing the work down to date from 1834; and 'North American Forests and Forestry: Their Relations to the National Life of the American People,' by Ernest Bruncken.

Harper & Bros. will issue next month the 'Life of William H. Seward,' by Frederic Bancroft, and 'The First American: His Homes and his Households,' by the late Miss Leila Herbert.

Fresh announcements from Macmillan Co. are 'Great Oxford Leaders: Keble, Newman, Pusey, Liddon, and Church,' by the Rev. A. B. Donaldson; 'A Short History of the Church in Great Britain,' by William Holden Hutton, D.D.; 'Clinical Studies in Vice and Insanity,' by George R. Wilson; and 'The Peace Conference at The Hague,' by Frederick W. Holls.

Still another translation of Hauptmann's "Versunkene Glocke" is announced by Henry Holt & Co. It has been made by Dr. Thomas S. Baker.

'Ten Years' War,' by Jacob A. Riis; 'Charles Sumner,' by Moorfield Storey; and 'Charles Francis Adams,' by his son, the bearer of the name, are about to be issued by Houghton, Mifflin & Co.

The Clarendon Press, Oxford (New York: H. Frowde), will soon publish 'British Jurisdiction Outside the United Kingdom,' by the late Sir Henry Jenkyns, and a large-type edition, in crown octavo, of Dr. Moore's text of the 'Divina Commedia,' with a few emendations and corrections, and a revised index of proper names by Mr. Paget Toynbee. By midsummer of next year, a volume of notes, in preparation by the Rev. H. F. Tozer, is expected to be published by the same press.

Mention may appropriately be made here of the Temple edition of the "Paradiso," of which we shall say no more now than that it presents the Italian text, based on Cassini's and looked after by H. Oelsner, face to face with an English prose version by the Rev. Philip H. Wicksteed. Both editors are responsible for the notes at the end of each canto, and the latter for the Arguments prefixed. The handy form of this edition (London: Dent; New York: Macmillan) chimes in happily with the end in view, of being "helpful to the beginner" as well as of interest to the more advanced student.

Bibliographically, Mr. M. H. Spielmann's book on Thackeray's 'Unidentified Contributions to *Punch*' (Harpers) is an unexceptionable piece of work. The necessity of doing it the author justifies on the ground that "the matter has been trifled with in another quarter." He says, also, that his project had the approval of Thackeray's daughter, Mrs. Richmond Ritchie. His "authentic and exclusive information" is derived from "a long-forgotten editorial day-book" in which the items of Thackeray's contributions to *Punch*, with the payments for the same, are all entered. This, of course, puts all the higher critics at Mr. Spielmann's mercy. His corrections of mistaken attributions, together with his revelations of unknown contributions, make a good-sized volume, which the publishers have properly bound up uniform with their recently completed "Biographical Edition" of Thackeray. But it must be said that there is little here which lovers of Thackeray would not willingly have left unidentified. Mr. Spielmann's service is to bibliography, not to Thackeray's fame. One can imagine the fresh point which the novelist would find this book giving to his own words: "That turning back to the old pages produces anything but elation of mind. Would you not pay a pretty fine to be able to cancel some of them? O, the sad old pages, the dull old pages."

Dr. Garnett's 'Essays in Librarianship and Bibliography' (Francis P. Harper) have more than mere technical interest. The difficult problems with which the administration of a vast library has to grapple, such as classification, space, and cataloguing, and the ingenious devices by which special exigencies are met, will appeal to all librarians; while the papers on early printing and book-hunters and on eminent libra-

rians and collectors will interest a wider public.

Richard de Bury, born in 1287, the descendant of an ancient Norman house, favorite of Edward III., Ambassador to the Pope and the King of France, Prince-Bishop of Durham, Lord Treasurer of England, Lord High Chancellor of England, reached the highest pinnacles of earthly greatness, short of royalty. Yet the ambition of his life was to go down to posterity as a lover of books. All his life he was an eager collector, and that in an age which cared but little for books, and in a society that looked upon so strange a passion with disapproval mixed with some scorn. So, "to close the perverse mouths of talkers," he wrote the treatise 'Philobiblon,' the first of its kind, in praise of books and in vindication of book-collectors. From Meyer Bros. & Co., New York, we have of it a reprint from the first English translation, made by John Bellingham Inglis in 1832, the author having waited more than 130 years for a printer and about 500 for a translator. Though the 'Philobiblon' is often referred to, it is not often read; and this handsome reprint, accompanied with an excellent introduction, should make it more widely known.

Mr. Henry Childs Merwin contributes to the "Beacon Biographies" a pleasantly written sketch of 'Aaron Burr' (Boston: Small, Maynard & Co.), in which the immorality of that extraordinary life is lightly touched, and some of its grosser faults in part condoned. Burr's eventful course as a free lance in politics and a pagan in social relations is, on the whole, sufficiently well set forth, though with less attention to the political side of his career than is usually given. The portrait frontispiece is well executed.

If brevity is the soul of wit, we cannot praise 'Wit and Humor of Bench and Bar,' by Marshall Brown (Chicago: T. H. Flood & Co.). The author has, apparently without much knowledge of the art of effective narration, made his book largely from newspaper clippings which record local witticisms and anecdotes. Judicious compression and selection would have doubled the value of this collection by diminishing its bulk one-half. Many of the jests are of great antiquity, and few that are new have very striking merit. Even the old stories are occasionally marred by mistelling, and the omissions of really classical anecdotes are conspicuous. The arrangement of matter is alphabetical, according to the name of the person or the title of the subject, as it happens. But it is only fair to say that this book is not worse than most collections of the kind.

'The Social Philosophy of Rodbertus,' by Prof. E. C. K. Gonner (Macmillan), is a scholarly attempt to systematize the views of a thinker who left no methodical exposition of them. In a sense, Rodbertus laid the foundations of the theory of State socialism; but he was too much of a philosophic historian, not to say statesman, to become prominent as an agitator. It was said of him by Prof. A. Wagner that while most of the points of his theoretical teaching were incorrect, he yet possessed deep insight, and in fact deserved the title of a "Ricardo of scientific socialism." Whether the theories of Rodbertus are of sufficient consequence to deserve exposition, is a question to which different persons would give different answers; but those who would answer the question affirmatively should be grateful to Prof. Gonner for the light which his labors have thrown on the subject.

Dr. S. A. Knopf, an authority on the subject, in his 'Pulmonary Tuberculosis: Its Modern Prophylaxis and the Treatment in Special Institutions and at Home' (Philadelphia: Blakiston), is infused with the spirit of Pasteur's quoted utterance: "It is in the power of man to cause all parasitic diseases to disappear from the world." The transcendent importance of the matter considered and its painstaking presentation deserve more extended notice than can be given here, though there is in the book much of vital interest with which the lay reader is too often unfamiliar. The dangers of indiscriminate spitting, the necessity of sputum disinfection, the means of avoiding inoculation by inhalation or ingestion, the need of pre-natal prophylaxis, the influence of dress on breathing, the methods of obtaining correct breathing habits, the subordination (in recent opinion) of the efficacy of specific climates in phthisis to that of outdoor life in general, the social significance of the fact (hitherto little recognized) that cures obtained in native air are relatively more lasting than those procured away from home, are all clearly discussed with easy intelligibility. An urgent appeal is made for the wide establishment of proper institutions for phthisical patients exclusively, as being essential in the fight of the community against consumption, and, in the end, financially economical for the commonwealth. The well-illustrated list of sanatoria will prove useful to the physician, and is critically compiled.

Students of French history will welcome the 'Répertoire Méthodique de l'Histoire Moderne et Contemporaine de la France,' of which the first issue, for 1889, has just appeared. Under a topical classification which the editors, MM. G. Brière and P. Caron, appear to feel an unnecessary obligation to defend, the guide groups somewhat more than two thousand titles, most of them, of course, from periodicals. A few words of description accompany the more important entries. The periodical list is remarkably full, though susceptible of improvement on the side of English and American publications. Chronologically, this first number stops with the war of 1870-'71, but the next is intended to reach to 1900.

Otto Ribbeck's 'Reden und Vorträge' (Leipzig: Teubner), a collection of the greater number of that scholar's public addresses, will be of interest to those who have known him either in person or by reputation. The six lectures which he gave at Kiel in 1864-72 derive their chief interest from the application which he made of classical material to the political events of that time. A second group comprises six addresses on subjects in Greek and Latin literature, such as Euripides and his Time, and the Idylls of Theocritus. A third section contains seven masterly "in memoriam" pieces. At the end of the volume is Ribbeck's review of Stromberg's translation of Catullus, entitled, 'Catull in Rom und Poppelsdorf,' which is a masterpiece of wit, satire, and sarcasm.

'Geschichten vom Rhein' (American Book Co.) is the title which Mr. Menco Stern has given to a collection of retold tales from the region of the Rhine. Though primarily designed as a reading-book for more or less advanced students of German, it possesses an interest for all lovers of Rhineland lore. A distinguishing feature is the geographical arrangement of the tales and legends. Starting at the sources of the Rhine, the reader is carried down stream past the thousand haunts of ancient romance, with occasional excursions overland, until he reaches Lohengrin's castle in Brabant, and is borne out to sea, where lies submerged the glittering city of Stavoren. A small map serves as a general guide, and an inadequate vocabulary is appended. The stories themselves, often of a most tenuous character, are all told in clear and colloquial German. That the narrator should sometimes fall into the condescending, familiar tone of the nursery, and so exasperate minds more mature, is a fault which it was perhaps impossible entirely to avoid in a work of this kind. In the preface we are informed that the author has in a manuscript form had these stories in use for fourteen years, with such success as to encourage him to extend the sphere of their usefulness. Few readers can fail to find in these pages something that is new and attractive.

The Third Annual Report of the Commissioners of Fisheries, Game, and Forests of the State of New York, for 1897, seems likely to attain the popularity of the former issues, and, in its limited edition, equally to fall short of the demand. It is a handsome quarto, illustrated with many colored plates of fishes and birds, with numerous sporting vignettes and plates, and abundance of photographs from nature. Fish-hatching is the leading topic, but much information is also given about forest fires, destruction of timber for wood pulp, the manufacture of maple sugar, forest reservoirs, etc. One hatchery has entered on the business of growing the ringnecked pheasant. The black bass, not being capable of artificial breeding, is most in need of protection. At Chautauqua Lake an effort has been made to extirpate the garpike, which preys upon the mascalonge, among other coinhabitants; but the Commission will not aid in propagating the mascalonge in inland waters, on account of its cannibal voracity. On the other hand, it propagates frost fish though they can be taken only with a net—which is illegal. The reason is that the trout feed on the frost fish. So man distributes praise and blame among his inferior fellow-creatures, and interferes with natural selection.

The important features of the Third Annual Report of the Historical Manuscripts Commission of the American Historical Association are a calendar of letters of Calhoun heretofore printed, and an index guide to the American items in the reports of the English Historical Manuscripts Commission. The twenty pages of the former represent almost exclusively official correspondence; and it is interesting to note that hardly more than twenty of Calhoun's private and political letters have ever been published. The task of collecting and editing the correspondence is well in hand, although early publication is not promised. The guide to the contents of the English calendars will be a real boon to students, to whom the lack of a general index to the series has been a serious obstacle to the use of those important collections. Useful, also, is the further list of items relating to

historical manuscripts in the different States, supplementary to a similar list published in the first annual report.

The third volume of the publications of the Maryland Geological Survey is entirely devoted to questions connected with highway improvement, and, although written with special reference to Maryland, contains much information upon this important subject which will be of value in other communities. The subjects discussed include the relations of Maryland topography, climate, and geology to highway construction, the present condition of the roads and the best means for their improvement, the relative values of the different natural road-building materials, and the construction and repair of roads in Maryland, in other States, and in foreign countries. The book is copiously illustrated with half-tones, cuts, and maps, and as a whole makes an attractive appearance.

The Maryland Weather Service has published the first volume of a new series of reports dealing with the climatic features of the State. The introduction, by W. B. Clark, is devoted to an account of the plan of operation, and a history of the work and publications of the service since its establishment in 1891. A general report on the physiography of Maryland, by Cleveland Abbe, jr., follows, and there are also chapters on the aims and methods of meteorological work, by Cleveland Abbe, on the progress of meteorology in Maryland and Delaware, by O. L. Fassig, and on the present knowledge of the meteorology and climatology of Maryland, by F. J. Walz. The director, William Bullock Clark, who is also superintendent of the Geological Survey, has had charge of the publication of this volume. It contains numerous illustrations and several maps, and presents the same elegant appearance which characterizes the publications of the Geological Survey.

The French Société de Géographie has just begun the issue of *La Géographie*, a monthly journal which it hopes to make worthy of itself and of the growing importance of the science in France. The managing editors are Baron Hulot, the society's General Secretary, and M. Charles Rabot, under a committee consisting of President Milne-Edwards, Gabriel Marcel, Prince Roland Bonaparte, etc. The publishers are Masson & Cie. (New York: Lemcke & Buechner). The journal will contain the reports of the Society's proceedings, hitherto committed to a special *Comptes Rendus*.

The Munich periodical *Jugend* is fond of publishing special numbers. Not long ago we noticed its Goethe number. Now come two others—one, of December 9, a Heine number, on the occasion of the one-hundredth anniversary of the poet's birth; the other, of December 23, a Schiller number, in honor of the "Lied von der Glocke," which was published 100 years before. Particularly noticeable in the first are the illustrations and two articles: "Heinrich Heine's Seele," by Otto Ernst, and "Heine's Lottchen: Errinerungen an Charlotte Embden-Heine," by J. Loewenberg. In the Schiller number is a series of interesting pictures illustrating the "Song of the Bell," which is also the title of an article by A. Matthäi. Other noteworthy features are Paul Heyse's poem, "An Schiller," and articles on the poet by Otto Ernst and Prof. Ziegler of Strassburg.

—Three more of the excellent series of "Great Masters in Painting and Sculpture" (London: George Bell & Sons; New York: Macmillan) are issued, two of them being 'Luca Signorelli,' by Maud Cruttwell, and 'Andrea del Sarto,' by H. Guinness. In his essay on "The Study of Poetry," originally prefixed to Ward's "English Poets," Matthew Arnold dwells upon the importance of retaining "a sense for the best, the really excellent," and of the danger that this "real estimate" shall be superseded by "the historical estimate and the personal estimate, both of which are fallacious," and goes on to say: "The idea of tracing historic origins and historical relationships cannot be absent from a compilation like the present. And naturally the poets to be exhibited will be assigned to those persons for exhibition who are known to prize them highly, rather than to those who have no special inclination towards them. Moreover, the very preoccupation with an author, and the business of exhibiting him, dispose us to affirm and amplify his importance. In the present work, therefore, we are sure of frequent temptation to adopt the historic estimate, or the personal estimate, and to forget the real estimate." The warning is equally necessary as regards the present series of monographs upon great artists, and we are a little in danger of finding each of these masters the greatest of all masters, and of losing sight of proportion and of "the real estimate." Signorelli is of great historic importance, and made a real advance in the drawing of the nude figure; but it is far from true that his work is "an achievement which no later skill has surpassed, which is perhaps the last word in the treatment of the nude in action." The estimate of Del Sarto is more measured, but even so, the "faultless painter," the most modern of old masters, whom one earliest likes and soonest tires of, is given an undue importance. With this suggestion the books may be recommended. Although the list of illustrations gives the facts correctly, in the body of the book the portrait of Signorelli by himself is twice spoken of as forming the frontispiece of the volume. This may cause confusion to the unwary. The portrait of Signorelli is on p. 8, and the frontispiece is correctly labelled, "Portrait of an Unknown Man."

—The 'Raphael' of the same series, by Henry Strachey, is a more than usually good book. The "real estimate" is here so high that even great enthusiasm could not go far wrong; but Mr. Strachey is far from a blind enthusiast. His criticism is sound and sensible, and his analysis of the talent of Raphael is excellent. Common sense is predominant also in the treatment of the biographical part of the volume, and it is rather refreshing to have some of the conjectures of the Morellists disposed of with the quiet statement that there is really no evidence in the matter. Conjecture so rapidly becomes fact in the hands of some writers, and is so readily accepted as such by succeeding writers, that it is surprising to find any one asking for proof or refusing to accept, for instance, the imputed mastership of Timoteo Viti, which has been considered as established—Mr. Strachey says, "chiefly, as it seems, on the ground that no evidence exists to prove that he did not occupy that position." Mr. Strachey acknowledges his indebtedness to Mr. Berenson, but the doctrines of that critic, so far as adopted, are stated in simpler and less technical language, and are, be it further said, intrinsically modified by the "sweet reasonableness" of their present expounder. We think Mr. Strachey leans too heavily upon a passage of Vasari in making it support Berenson's theory that the "Sposalizio" of Caen is by Lo Spagna rather than by Perugino. Vasari simply states that Raphael's "Sposalizio" is finer work than his master could do, and this is certainly true, whether or no the picture is a modified copy of Perugino. Berenson's theory must rest, for the present, entirely upon such internal evidence as the picture may afford. The exception proves the rule in this case, for this is the solitary lapse from sound sense and mental balance that we have detected in the volume.

—The Tower of London offers a capital subject to the author of a book for boys, and Mrs. Violet Brooke-Hunt has thus used it in her 'Prisoners of the Tower' (E. P. Dutton & Co.). Whether or not she writes for the benefit of a particular lad matters little, but in the prologue she describes a typical incident, "Geoffrey's first visit to the Tower." Finally, the boy is led by the conversation which springs from a round of the apartments and cells to exclaim: "Why, it is every one out of the history-book, and I can't remember everything about them all. Couldn't you write it down from the very beginning, so that I could read it over and over again?" The result of Mrs. Brooke-Hunt's compliance with this request is that she tells in direct and simple style the story of the celebrated prisoners, from Flambard to Thistlewood, the Cato Street conspirator. In another department of history the design is similar to that of Freeman's 'Old English History,' though Mrs. Brooke-Hunt's manner is fortunately less patronizing than that of the late Oxford professor. She does not, in the words of Gray, apostrophize the great fortress as "Ye towers of Julius, London's lasting shame, With many a foul and midnight murder fed!" Her moral is of another kind. "Within the cells of that Tower many a victory has been won, many a lesson has been learnt, many a soul has been purified, of which the record has never been kept, and yet which surely never can have been in vain." The volume is beautifully printed, well illustrated, and written in a healthy tone—not one which will tend to give a child "the horrors." It is picturesque without being inaccurate, and will rejoice the hearts of those for whom Mr. Henty cannot produce stories rapidly enough.

—In the dramatizing of "Vanity Fair" Mr. Mitchell has introduced two anachronisms. In the ball of the night before Waterloo, when the alarm comes that the French are at hand, an officer cries, "This is serious; they will fight to a finish," and the phrase is used a little later by another. It is difficult to determine the exact chronology of slang, but we will venture to say that "fight to a finish" cannot be found in any sporting literature more than fifteen years old. We apprehend that it came in with "to knock out" and "to put up a fight." The English at Brussels would, perhaps, have said, "They'll fight it out this time." The other anachronism is worse. When

Lady Bareacres, jealous of Becky's social triumphs, tries to take her down by recalling her governess days, adding, "I cannot imagine Mrs. Rawdon Crawley teaching anything, at least anything useful," Becky replies, "Oh, it's quite simple, dear Lady Bareacres. Imagine me giving a lesson in French to your daughter. I ask her, 'Have you the brains of your mother?' She answers, 'No, my mother's brains are in a nutshell,' "—an evident allusion to the Ollendorffian manuals. Now Ollendorff first published his idiotic but not ineffective method of teaching languages in the forties. He loudly proclaimed it a new thing, and with justice, for any one can see by looking through the earlier school-books that they had no such infantile questions and answers. Becky would have been about as likely to draw her retort from telephones or automobiles as from Ollendorff's Methods. Thackeray was more careful about his local color and his dates.

—In his latest drama, "Naar vi döde vaagner" (When We Dead Awake), Ibsen shows the same qualities of style and dramatic construction that have won him his present high place in European literature. Not a word fails of the desired effect, not a situation falls short of the author's intention. The atmosphere of the play, or rather of the heroine, suggests strongly the weirdest of Ibsen's dramas, "The Lady from the Sea." The story is briefly as follows: Prof. Rubek is a Norwegian sculptor who has won fame and wealth by a statue called the Day of Resurrection. Four years before the opening of the play, he had married a girl named Maja, who is incapable of sympathizing with his artistic ideals. They are introduced at a Norwegian watering-place, and the opening words indicate clearly their relations to each other. Soon after, the wild huntsman Ulfhejm appears, and, by his contrast to her husband, makes an immediate impression on Maja, whom he asks to join him in a bear hunt in the mountains. As they leave the garden together, Rubek joins a lady who proves to be Irene, the model for his great statue. On finding her love for Rubek returned with formal thanks for her services as model, and her share in the work regarded as a mere episode, she had disappeared mysteriously, all efforts on the sculptor's part to find her proving fruitless. She is now, as she says, dead, wandering about the world with only a mute sister of charity as companion, and with all her thoughts centred in her child, the statue. Rubek's love for Irene asserts itself, and they are united at last, but in the mist and death-bringing avalanche of the Norse fjeld, to which they have hastened in an ecstasy of passion. Maja's adventure with Ulfhejm and her escape from the storm that overwhelms the others, seem to be introduced mainly by way of contrast to the main story. As for the moral, Edvard Brandes, in his review, published a short time ago in Copenhagen, holds that the work is a hymn in praise of free love, an anathema pronounced by the Norwegian prophet on such hindrances as marriage and public opinion, though it would seem quite as natural to find the moral in the disillusioning of Maja, who is disgusted with the coarseness and sensuality of her huntsman lover. It is characteristic of the literary relations of Norway and Denmark that the new National Theatre in Christiania has acquired the right to produce this play, but not until after its production at the Royal Theatre in Copenhagen.

MR. GOLDWIN SMITH'S ENGLISH HISTORY.

The United Kingdom: A Political History. By Goldwin Smith, D.C.L., Author of 'The United States,' etc., etc. 2 volumes. The Macmillan Co. 1899.

The first thought that occurs to us in reading this book of one of the most famous of living authors is that of the delightful inexhaustibility of history. Hundreds of histories of England have been written, many of them by able investigators, many others by brilliant literary artists. They have been written by men of every type of political and religious opinion. Rapin, Hume, Goldsmith, Hallam, Lingard, Macaulay, Freeman, Froude, Stubbs, J. R. Green, S. R. Gardiner, F. York Powell, are only a few among the men—some eminent as masters of style, some as investigators, some few as both—who have produced books which everybody knows upon some larger or smaller part of this great theme. Yet here another author handles it in a way so fresh and so vigorous that it reads like a new tale, and makes on us an impression different from what any of his predecessors have made.

This is not the result of the collection of fresh materials, for Mr. Goldwin Smith does not claim to have unearthed MSS. or to have laid under contribution matter inaccessible to earlier students. The novelty lies in the point of view and in the method of treatment. The essential feature of the treatment consists in seizing the salient and characteristic points of an epoch, or a question, or a character, and in bringing them into a strong light, while passing quickly over details or minor incidents. A deeper impression is thus left on the reader's mind; and matters whose significance he had not realized in the histories he had perused before, stand out clear and sharp before him. Such a method needs a style to match it, and Mr. Goldwin Smith's style retains the qualities which have, for fifty years past, put him in the front rank of masters of English. It is strong, trenchant, cogent. The diction is choice and elevated. It is full of color, yet of a color which is rather deep than bright in tone. Each sentence—and they are mostly short—is so concisely pregnant as to seem to sum up and exhaust the particular matter it handles, leaving little further to be said; while that which most writers would need a chapter to convey, is frequently condensed into a single paragraph.

The preface contains a touching reference to the author's age. There is, however, no sign of old age in the book. It is as keen in vision, as forcible in expression, as decided in judgment, as anything which he wrote in the days when he was the most powerful champion in England of the Northern cause during the war of secession. Yet there is one characteristic of the book which makes us feel that it comes from a man of the older generation. This is that very decision in its judgments to which we have just referred. The modern habits of seeing good in every party and every doctrine, of finding compensations for every misfortune and redeeming traits in every villain, the disposition to look on all events as the result of general and therefore irresistible causes—habits so marked in most of our younger historians—are here quite absent. Mr. Smith does not, like the proverbial young Oxford don, bid us remember that Phalaris must be judged by the standard of his own age, not of ours. To him black is black and white is white. He refuses to accept the view that the Norman Conquest was a blessing in disguise. He displays none of that tenderness for the Roman Church which has become so fashionable among English and American men of culture, but treats her with the sternness of a Puritan, though a Puritan of that modern and enlightened type, perhaps too rare, which is repelled by her policy as much as by her doctrine. The Anglican ecclesiastical establishment is handled with scarcely less severity; that establishment having, in his view, retained, along with a tendency to relapse into Roman doctrine, a pernicious leaven of the Roman disposition to intolerance and the Roman attachment to arbitrary power. Nevertheless, he is ready to reverence virtue and purity even in a prelate, and one of the finest passages in these volumes is that which describes the saintly simplicity of Anselm, and his strenuous, albeit passive, resistance to the tyranny of William the Red.

In its form, though not in its substance, the book reminds us of Lectures, such as those of Niebuhr on Ancient History or those of Sir James Stephen on the History of France, rather than of a narrative like that of Hallam or Green or Freeman. The book is, indeed, not so much a chronicle of events as a running commentary upon them. The chief events are doubtless told, but told rather as things already known to the reader, which have to be mentioned not for the sake of fixing them in his memory, but of explaining their significance and drawing moral or political lessons from them. Its markedly ethical character is another sign that the work represents a taste and temper not of the younger generation of historians. They are nothing if not objective. This book bears in every line the stamp of a marked personality, with clear and strong convictions, and with a gaze so fixed upon the present that allusions to the incidents and controversies of the years that are now passing meet us in his comments upon struggles fought out and settled long ago.

The period before the Norman Conquest is passed over very briefly and lightly, and the twelve centuries from the coming of the Saxons down to the beginning of the great constitutional struggle with Charles I. are summarily dealt with in four hundred and seventy pages, while more than six hundred are given to those more definitely political ages which link the days of the great Civil War to those of the Reform Bill of 1832. With the Reform Bill, or rather with a survey of its results down to the fall of Lord Melbourne's Ministry in 1841, the history closes an era well chosen, because it marks the beginning of the passage from an oligarchy with some popular elements into a pure democracy, tempered only by a remnant of traditions formed in aristocratic days, and qualified, not to its benefit, by the all-pervasive influences of wealth. It is also the date when the historian's own contemporaries began to appear upon the scene; and though it is not impossible for a powerful mind, however decided in its views, to deal even justice between allies and opponents, it is impossible for the crowd to believe

that a historian has so shaken himself from the prepossessions to which it is itself enslaved.

The omission of social, economic, military, and ecclesiastical matters, except in so far as they bear upon political history, and the summary treatment of the legal side of constitutional questions, together with the briefness of the references to Scotch and Irish affairs, leave space for a full handling of the great epochs of change, such as the Reformation and the struggle of Parliament against the Crown, which, beginning under James the First, lasts till 1688. Nothing can be more brilliant or effective than the manner in which these periods are presented. The point of view is that not so much of a Whig as of a theoretic Republican, who is also an advanced Protestant, so that to the friends of monarchy and of ecclesiastical pretensions it may, perhaps, appear that their side of the case is not adequately stated. Yet it is a sign of the author's insight and superiority to prejudice that those supposed champions, or at least unconscious pioneers, of Protestantism, Henry the Eighth and Queen Elizabeth, find no favor, while King Charles the First receives much more indulgence than was allowed to him by Carlyle, or even, perhaps, than is allowed him by the singularly cool and impartial S. R. Gardiner. As there has been of late a tendency in England (partly, perhaps, owing to the renewed passion for naval achievement and territorial expansion) to glorify Elizabeth, it may be worth while to quote our author's short description of her character:

"Her youth, her good looks, her high spirit, and princely carriage, with her mental accomplishments, which were remarkable, awakened an enthusiasm of which she had the tact to make the most. . . . False and perfidious she was, heartless and selfish, capable at times of hateful cruelty, possessed with a vanity such as could hardly dwell in the same breast with greatness, to say nothing of her indelicacy and of at least one darker stain, for if she was not criminally cognizant of the murder of Amy Robsart, she certainly prompted to the assassination of Mary Queen of Scots. Yet Elizabeth, in spite of all revelations and dissections, still keeps the title of the Great Queen. Writers again bestow it upon her after recounting the proofs of her littleness. They say, with scant justice to her sex, that, after all, she had only the faults of a woman. She had the sense to keep good counsellors, though she preferred to them unworthy favorites, and sometimes treated them with base ingratitude. She had remarkable arts of popularity when she chose to exert them. She had a queenly bearing, tempered with condescension. She had personal courage, which was needed in an era of assassination. . . . Something, also, her reputation gained from the contrast of her reign with the political troubles which followed, albeit of those troubles her self-will was in part the cause. The illusion was strong. It was strong enough in her lifetime to make men fancy themselves, or at least say that they fancied themselves, in love with a virago who spat, swore, and cuffed; and this when she was past middle age and the last traces of her youthful comeliness had fled. But those who still call her great, if they do more than pay tribute to custom, have before their mind's eye not the figure of the Queen in the grotesque trappings of her vanity, but the figures of Burghley and Walsingham, of Sir Philip Sidney and Sir Walter Raleigh, of Shakspere and Spenser, of Drake and Frobisher, of the heroic mariners of England returning from the attack on Cadiz or the victory over the Armada."

Still more striking, and, as is his due, more full and careful, is the account of Oliver Cromwell—an account more penetrating than is Macaulay's, more discriminating, if not more picturesque, than is Carlyle's. Indeed, the biographical sketches are among the finest things in the book. Some among them are worthy of Tacitus, of whom, in epigrammatic conciseness and piercing sarcasm, we are often reminded. A Tacitean grimness is relieved by a humor less frequent in the Roman, for Mr. Goldwin Smith has a keen eye for those minor traits of character which make men real to us, and for any touch of picturesqueness in an incident which brings a distant age nearer. He has also the Tacitean gift of conveying a judgment in a statement of fact. Narrating the last moments of Charles the Second, he tells us: "He declared himself a Roman Catholic, was admitted by a priest furtively brought to his bedside into the Church, and, after a confession which, if at all complete, must have been highly condensed, received absolution and the sacrament." And in mentioning the movement for the repeal of the Test and Corporation Acts, he observes that "Pitt consulted the bishops, who deemed the profanation of the sacrament for political purposes still vital to the maintenance of religion."

We have noted some points, such as his notice of the so-called massacre of 1641 in Ireland, in which his views seem hardly in accord with the results of recent investigation. But these are few. He shows throughout that sort of instinct for being right which is a mark of the highly trained historical mind, together with a power of appreciating the main principles which run through and give unity to the long and splendid drama of English history. To see these and to be able to set them forth with breadth, conciseness, and unfailing energy, are gifts so rare that they insure for one who possesses them a permanent place among the great historians of all time.

AN UNSAFE GUIDE.

Religion under the Barons of Baltimore. By C. Ernest Smith, D.D. Baltimore: E. A. Lycett. 1899.

One would have thought that by this time the question of toleration in Maryland had been so thoroughly threshed out that nothing remained to be said. However, it is open to any one to form opinions and conjecture motives, and if he thinks his opinions and conjectures of interest, he may give them to the world. All we ask is that, in making an historical argument, he shall carefully distinguish between opinion and fact; that he shall, as far as possible, verify positive statements, and that he shall not accept an authority as trustworthy, nor discredit him as unveracious, according as that authority agrees or disagrees with his own views.

Though written under a strong bias, there seems no intentional want of candor in this book. The author has made liberal use of the original and authentic sources wherever they served his purpose. But, unfortunately, he has accepted as history too many statements of prejudiced, or even mendacious, writers when those statements tend to confirm his own opinions. Still more unfortunately, he too often insinuates an unproved opinion as an historic fact, and draws positive inferences from an unsubstantial conjecture. He says, with entire truth, in the preface, "The facts herein recorded are true"; but he has given the ordinary reader no means of distinguishing the facts from the fictions and the fancies. The present writer has no intention of taking a side in an idle controversy; but as the book has a rather imposing air of authority, and may be accepted by some as history, it may not be amiss to give specimens of its inaccuracies in points of fact, and of its vicious mode of reasoning.

History tells us that in 1625 George Calvert announced to the King his conversion to the Roman Catholic faith, at the same time resigning his office of Secretary of State. As this effectually closed his political career, it is a reasonable inference that his conversion was sincere. It is also a probable opinion that this change of faith was not sudden, but a gradual process. Dr. Smith, however, conjectures that he had long been a Romanist in secret, while "outwardly a member of the Church of England ever since he obtained court preferment," and proceeds to draw positive conclusions from this conjecture. His argument, condensed, is this: Calvert may have been long a secret Romanist. Therefore he hypocritically professed himself a Protestant in order to hold office. "Prompted, then, by ambition, he had conformed to the national church, and had not been found afraid to use even religion itself as the ladder by which he might rise to wealth and fame." But a man who is a hypocrite in one thing will probably be a hypocrite in two; and he therefore tells us positively that Calvert was not even a sincere Catholic; he was only a Catholic "so far as he was anything at all." Men have wrecked their fortunes for their faith, but here is one who wrecks his for a faith which he does not believe in. And all this rests on an unsupported surmise.

In comparing the charters of Maryland and Avalon, Dr. Smith very properly calls attention to the fact that one was held by knight's service and the other in free socage (which he thinks was not a feudal tenure). And then he tells us that this last tenure compelled Baltimore to reside in England. The statement is so surprising that it is best to cite the author's own words: "The patentee under the Maryland holding . . . year by year had to appear personally at Windsor, bringing his Indian arrows with him and prepared to give an account of his stewardship." And he draws the inference that this obligation "to regularly appear in person at a certain time and place and there pay his rent," was the reason why Cecilius never came to Maryland, and that it was inserted on purpose to keep him in England. The weak point of this ingenious theory is that it is contradicted by the facts. The delivery of the arrows was not a *service*, all services being discharged by fealty. The words of the charter are: "In free and common socage, by fealty only for all services . . . yielding therefor unto us, our heirs and successors, two Indian arrows of those parts to be delivered at the said castle of Windsor." There is nothing about personal delivery nor "giving account of a stewardship"; and, as matter of fact, from the first the payment was made by deputy, as the receipts show.

Another important difference between the charters our author finds in the clause wherein the people of Maryland and their successors are expressly declared to be "denizens and lieges of us, our heirs and successors of our kingdom of England and Ire-

land." On this he comments as follows: "The change from the feudal lordship to the free and common socage involved it [this clause]. As by feudalism all the people in Avalon were also under the over-lord—the English King—under the Maryland charter they were not, save as specially declared to be so. Hence the clause." That the author should be hazy in his ideas of feudal tenures is a small matter; but what is surprising is the fact that the difference on which he founds these singular notions does not exist. The whole tenth clause of the Avalon charter is almost word for word identical with the corresponding clause of the Maryland charter, and in particular provides that all settlers there (in Avalon) and their descendants "shall be denizens and lieges of us, our heirs, and successors." It would seem indeed that the author has the unsafe habit of citing authorities without consulting them, for he tells us that the charter of Avalon made Calvert more absolute than the King, empowering him to rule "without a parliament or even a council of state," when the charter expressly provides for both.

The notion that Thomas Cornwaleys was a Protestant, Dr. Smith has taken from Neill. The letter of Cornwaleys to Baltimore (Calvert Papers, i., 169) settles that question. The story is too long to discuss here, but Cornwaleys is protesting against what he thinks harsh treatment of the Jesuits in holding them liable for public taxes and services, amenable to the civil law, etc. In this letter Cornwaleys calls himself "a real Catholick," and deprecates ingratitude to that church, "which is the only true guide to all eternal happiness." He then goes on to say that persons better qualified than himself will place the matter more clearly before his lordship; and, in fact, Copley (who seems to have been a lay member of the order, and not a married priest, as Dr. Smith thinks) writes more explicitly by the same ship, detailing the grievances that Cornwaleys hints at. Any one who can believe that Cornwaleys, writing a most earnest, friendly, and respectful appeal to his chief, would gratuitously insult him at the same time by implying that he was no real Catholic, and telling him that his church was no true guide to eternal happiness, must have some power of drawing conclusions that is denied to the present writer.

An instructive example of our author's mode of reasoning may be seen on page 133. In March, 1639 (N. S.), an "act for Church Liberties" was passed, which, he thinks, contained provisions dangerous to the Protestants, and that it was these perils which called forth Cornwaleys's remonstrance. But here he is confronted by the fact that Cornwaleys's letter was written in April, 1638, nearly a year before. This difficulty he gets over by *assuming* that, at the previous session, some act of a similar character had been passed, and goes on to reason from that assumption. And yet he had before him the journal of that session, with a list of all bills proposed or passed, in which nothing of the kind is mentioned.

On page 302 he tells us that at Ingle's invasion Baltimore lost all hope, and wrote to his brother bidding him "gather together the wreck of his private property, and then abandon his ill-starred enterprise." After the previous instances of this author's imaginative powers, our readers will not be surprised to learn that Baltimore did nothing of the sort. What he did was to send out a power of attorney to his brother and to Secretary Lewger to collect his rents and other debts due him; but it contains no word about abandoning the province.

Dr. Smith is fond of making assertions on the authority of the Rev. E. D. Neill, in whose veracity he appears to place entire confidence. Thus he tells us, on that reverend gentleman's authority, that in the Assembly of 1650 it was proposed to make the Toleration Act "a permanent feature of the Maryland Constitution" (whatever that may mean), and four Roman Catholic members voted against it "because it was too tolerant." Those who have undertaken to verify Neill's statements will feel no surprise when told that nothing of the sort is to be found in the records. One member, it is true, scrupled at taking the regular oath as a Burgess (in which there is no mention of any toleration act), and was therefore not allowed to take his seat.

Again, on p. 181, our author has a note: "On April 4, 1638, the Commissioners of Plantations reported the right and title to the Isle of Kent to be absolutely with him [Claiborne]," and refers to Neill's 'Founders of Maryland,' p. 55. Neill's words are: "While the Maryland Assembly was confiscating his estate, Clayborne was not idle in London, and on the 4th of April, 1638, the Commissioners of Plantations reported the right and title to the Isle of Kent to be absolutely with him." It is true that Neill quotes this from another writer, but he quotes it as fact, while he had the State Papers before him in which we have the full record of this session of April 4. After premising that Claiborne and Baltimore had appeared before them, and that Claiborne's commission, when produced, was found to be "only a license under the signet of Scotland to trade with the Indians," the Commissioners add: "Which commission their lordships declared did not extend nor give any warrant to the said Clayborne nor any other, nor had they any right or title thereby to the said Isle of Kent." And finally they resolve and declare "the right and title to the Isle of Kent and other places to be absolutely belonging to the Lord Baltimore."

With the main thesis of this book—that neither the Proprietary nor the Catholics are entitled to any credit for religious toleration in Maryland, and that the famous Act of 1649 was really "a most disgraceful piece of intolerance"—we are not concerned. Our object is simply to protest against history being written in the manner of which we have given a few examples. At the same time we would commend to the author's consideration the wise admonition of a great divine of his own church, "not to be too peremptory herein, and build standing structures of bold assertions on so uncertain a foundation; but rather, with the Rechabites, live in tents of conjectures, which, on better reason, he may easily alter and remove."

Mediæval Music: An Historical Sketch. By Robert Charles Hope. Second edition, revised. London: Elliot Stock; New York: Charles Scribner's Sons. Pp. viii, 170.

This is partly a professed compilation; partly, no doubt, the result of independent study; but we have failed to discover whether even those chapters where the author seems most at home represent any considerable amount of original research. He has a habit of verbally quoting some recent authority, like Hawkins's 'History of Music,' Grove's 'Dictionary of Music and Musicians,' etc., for what, if anything, should be his own contribution to our knowledge. Furthermore, where he has used original sources, he often either merely asserts that Alcuin, or Bede, or St. Augustine says this or that, or else he gives the passage in somebody's translation—possibly his own, if one could but know—without any reference which would enable us to verify the citation and collate the version with the original. This is not quite fair. Modern critics have justly vindicated our right to every aid which an author can give us in the examination of facts alleged in argument. Purposely to deprive the reader of this right would be unpardonable; to do so even by mere negligence is still a serious fault in a book which professes to teach the adult reader. And this is nothing if not such a book; for, from the literary point of view, it is mere chaos—a jumble of memoranda, some of them incredibly crude in form. In many cases the beginning of a chapter gives the impression of being written like any other book, but, after a page or two, the author suddenly drops into mere jottings like this (p. 9): "The Bruce harp with twenty-one strings being finely shaped and excellently painted," which is a sentence absolutely without syntax. If such examples did not necessarily take up more room than we can spare, we could easily multiply them.

So far as the author is a compiler, he professes to follow the best authorities; but when we find him adopting the heresy that the Greek modes differed only in pitch, and preferring the authority of Mr. D. B. Monro to that of Gevaert, Jahn, Westphal, and, we had almost added, Common Sense, we cannot greatly trust his judgment as to what authorities are best. Our distrust is enhanced when we see that on such a vexed subject he gives no hint that any question exists. Who can tell how many other important questions are ignored in the same misleading way? We would not speak over severely of a habit too common with a certain class of English antiquarians, but the day of the *ipse dixit* is happily past. It is time that not writers only, but all readers, should understand this elementary truth.

There is much more that the reader will complain of. Although this is a second edition, "thoroughly revised," he will find that Mr. Hope has not corrected the most obvious mistakes, even in matters of mere grammar. We meet with such sentences as this (p. 83): "The Tables of Alypius, a native of Alexander [*sic*], . . . *is* printed in 'Meibomius Antiquæ Musicæ,' 1652." On p. 13, "The historical period of Greek Music commences with the establishment of the Olympian . . . games, *and was of the simplest kind*," etc. But far more serious are the mistakes we discover in essentials. On p. 46 the Ven. Bede is said to be a contemporary of Isidore of Seville; and this in the face of the dates given by the author himself, from which it appears that Isidore died in 636 and Bede was born in 672. On p. 41 we find "St. Augustine c. 597" (meaning the date of his birth, we suppose), and the footnote shows that Mr. Hope refers to

the author of the 'Confessions.' He simply confounds him with Augustine, first Archbishop of Canterbury. He is careless even in musical matters, where we might expect extreme carefulness. Thus, p. 101, we read that in triaphony the "organum," or added melody, "was doubled in the octave above, being both a fifth below and a fifth above the canto *firmo* [*sic*]." Every tyro in music knows that this would separate the added melodies, not by an octave, but by a ninth, which is a discord. On p. 112 we find the startling proposition that "when the lesser contains the greater, the above terms," *i. e.*, the names for the quantitative ratio of two notes, prefix "the word Sub-." What the author means to say is that, when proportions like $\frac{3}{2}$, for example, are regarded inversely, the smaller number being taken as the numerator, the names are thus modified; but who would guess it from his language?

Owing to such carelessness on the author's part, we cannot feel sure, as to many other errors, whether they should be laid to him or to the proof-reader. We have seldom seen a book so full of misprints as this second edition "thoroughly revised." In a single piece of Greek, p. 23, we find seventeen mistakes in twenty-seven words. On p. i., "Harmonic and Monodic" is printed "Homonic and Monadic"; on p. vi., "Mongal" stands for Mongol"; p. 9, "Diodorus, Siculus and Athanæus" for "Diodorus Siculus and Athenæus"; p. 13, "Pythagorus" for "Pythagoras"; p. 38, "Cæsara" for "Cæsarea"; p. 39, "St. Marcelona" for "St. Marcellina" (sister of St. Ambrose); p. 39, note, "Vales in Socrates" for "Vales. (*i. e.*, Valesius) in Socratem"; p. 83, "the 11th c." for "the 2d century." Elsewhere we have the bilingual combination, "San Isidore" for "St. Isidore," "San Isidro," or "Sant' Isidoro." On p. 54, "Council of Quierci" means, probably, the Council of Quierzy, by confusion, perhaps, with the town of Quercy, innocent, we believe, of any council. On p. 56, "Honorious" is for "Honorius"; p. 90, "Apezzio" for Arezzo; p. 100, "de Devina Natura" for "de Divina Natura"; p. 104, "Punctus, Contra-punctum," which is nonsense, for "Punctus contra punctum," or, in better Latin, "punctum contra punctum." We omit several other serious mistakes which could not be explained briefly; but we must mention the amusing statement on p. 51, that Charles the Great "posted to Milan, and, seizing *all* the chant and hymn-books containing the Milanese song, *made bonfires of them* in the middle of the city. *He also carried many with him across the Alps*," etc.

In spite of all these faults and all this unaccountable carelessness, of which we have omitted as many instances as we have given, there are some chapters which will interest musical readers. We would especially mention chapter v., in which Mr. Hope discusses Pope Gregory I.'s claim as the compiler of the Gregorian Antiphonary, the chapter on Measurable Music, a very good one on mediæval notation, the one on the introduction of the organ, and the chapter in which the claims of Guido d'Arezzo are examined. But, even in these, the reader will do well not to accept any historical statement without express reference to original sources, and to remember that, even when passages are cited, it is almost always in translations which may be, like one from St. Augustine on p. 41, of questionable accuracy.

Two Years in Palestine and Syria. By Margaret Thomas. London: John C. Nimmo; New York: Charles Scribner's Sons. 1899.

One wonders, sometimes, how it is possible for all the books that are written about Palestine to find a sale. That so many are published is, perhaps, the best evidence of the intense interest which people feel in everything pertaining to the Holy Land. The present work is written from the artistic standpoint, and does not lay claim to any special Biblical or archæological knowledge. This largely disarms criticism when we are told, for example, that "the Jews brought a taste for tombs, excavated in the natural rock, from Egypt" (p. 117); but it does not pardon such numerous inaccuracies as appear throughout the book, like "Terah" for "Torah" (p. 45); "Adonai" for Jehovah or Yahweh as the unutterable sacred name of God (p. 46); "Ecco Homo" for "Ecce Homo" (p. 130); the statements that our word "hell" is derived from "gehenna" (p. 147)—that the Jordan flows from the north end of the Lake of Gennesaret (p. 201)—that the Dead Sea is "two thousand six hundred and three feet below the level of the Mediterranean" (p. 203)—that the rocks of the Judæan wilderness are lava (p. 228), etc.

The book is scrappy and somewhat inconsequent. Apparently, the two years referred to in the title were spent in Jerusalem. The author is familiar with that city, and two-thirds of the book is a description of Jerusalem, its inhabitants, its ceremonies, and the most notable sights within and about it, as far south as Hebron and as far east as the Jordan. The last third of the book is the story of a hasty trip from Jerusalem northward by the ordinary route to Damascus, from Damascus to Baalbek and Beirut, and back to Jerusalem by the coast. There is, therefore, practically nothing of Syria outside of Palestine, and in so far the title is misleading.

The charm of the book, and it has very distinctly a charm of its own, lies, not in the information which it imparts with regard to history or topography or the like (for, as already stated, it does not profess to do that), but in the artistic appreciation of the scenery and the people. The descriptions are often charming. The author saw everything of consequence at and about Jerusalem, including all the great religious ceremonies and functions. More than that, she saw what very few people do see, wonderful sunsets, moonlit mountains and valleys, plains decked with flowers, and all the picturesque effects of a most picturesque country.

At times, however, the artistic element leads her astray. The Syrians are picturesque and the Jews are distinctly unpicturesque. Hence, apparently, her conclusions with reference to the two. The Syrians "are a handsome, strong, clean, and industrious race—upright and manly, well dressed and cared for, they tread their native land as if it belonged to them; while the mean and shifty Jews, idle and cunning, creep about in the streets of Judea as if they apologized for their existence, and dare scarcely call their gabardines their own" (p. 312). She evidently met with much bigotry and superstition among the Jews in Jerusalem, but we should like to know in what language she had "a long conversation with a Jew as to his religious ideas, a subject about which little seems known" (p. 36), and who and what that Jew was. "Jews, he said, believed in transmigration. The soul of every Jew goes to hell for eleven months. Women have souls, but infinitely inferior to those possessed by men," etc., etc.

The book is beautifully illustrated with colored reproductions of paintings by the author, and the text is also illuminated by occasional facile verses from her pen. The print is large and broadly spaced, and the paper is soft to the eye. It is an attractive volume outwardly, and, in spite of its scrappiness and inconsequence and generally unscientific character, it is an agreeable book to read, and gives one a picture of the Holy Land and its inhabitants from a point of view not commonly presented. If not a work of permanent value, it nevertheless well repays the perusal of any who are interested either in Bible lands or in beautiful scenery.

Le Mécanisme de la vie moderne. IIIme Série. Par le Vicomte G. d'Avenel. Paris: Armand Colin & Cie. 1900. 18mo, pp. 340.

If the first two volumes of this work are as good as the third, which we venture to doubt, it is well worth binding and putting on one's shelves. This volume treats of the house, of alcohol and *liqueurs*, of heating, and of horse-races. It tells all about these things as they exist to-day in Paris. For example, under the head of the house, it fully informs us concerning the different building-stones, where they come from, what precisely each kind is used for, what various defects may lessen their values, how they are tested, how cellars are dug, how long it takes a man to get out a cubic metre of earth of different kinds, how fast the wheelbarrows move, what the volume of the earth is after it is taken out, how long it takes to shovel it into a cart, where the rubbish is carried, how the foundations are constructed; all the different trades of workers in stone, plaster, and wood; the processes of stone-cutting; the laying of stones, plaster, mortar, cement, "ciment armé"; how the workmen live, how they spend their money, what they lay up, how they bathe, how often they change their sheets; contractors, their methods, their overseers, their profits, the legal requirements relative to different kinds of walls, the different styles of plastering and its substitutes, the different trades of carpenters; roofs of tiles, slate, "zinc blanc"; the locks and hardware, the marbles, paint, wall-paper, window-glass, mirrors, bow-windows, elevators, bath-rooms, closets, the dissection of the space into rooms, and so forth, with surprising accuracy. The only errors we have detected are quite unimportant. In short, the general reader will rise from the perusal knowing infinitely more about the way things are done in Paris than in New York. At the same time he will be supplied with a classified treasury of French terms relative to the arts treated of, where they can be readily recovered when they are needed for use in writing French.

Nor must it be supposed that the account is dry and tedious, for it is anything but that. As the author proceeds, he everywhere compares the present state of the arts of life with those of previous centuries in a way that evinces not only industrious

study but real research. The whole is enlivened by many anecdotes and bits of history that are at once instructive, curious, and amusing. The French art of making a book was never more consummate. It is a mass of facts and statistics dressed up to make a charming "article-Paris." The author is of the opinion that it was not during the dark ages that dirt flourished most richly, but in *le grand siècle* of Louis XIV. We confess we can hardly believe he is right about this. However, he argues that, even in the later Middle Ages, the innumerable bagnios still served their original purpose, while the palace of Versailles had 274 *chaises percées* and not a bath-tub. He tells how an aged lady under the Restoration, visiting a château impregnated with bad smells, which had already at that date become rare, but which in her youth were usual in the best houses, remarked, "Voilà une odeur qui me rappelle un bien beau temps et de bien doux souvenirs!"

Chapter xi., about the house, is so much the best that we suspect the earlier volumes are not comparable to the third. Chapter xii., on alcohol and liqueurs, is, however, also very entertaining and full of information, and chapter xiv., concerning horse-races, will interest a great many readers; for, as M. d'Avenel remarks, of all topics that supply fuel to fashionable conversation, this is the only one about which one can discourse at length without danger of being deemed either a muff or a pedant.

The Future of the American Negro. By Booker T. Washington. Boston: Small, Maynard & Co. 1899.

"A single school-house," Mr. Washington tells us, "built this year in a town near Boston to shelter about three hundred pupils, cost more for building alone than is spent yearly for the education, including buildings, apparatus, teachers, for the whole colored school population of Alabama." In the State of Georgia, according to a recent report of the Commissioner of Education, there were 200,000 children who had entered no school during the current year, and 100,000 who were at school but a few days. In that State the average number of school-houses, outside of towns, was sixty to a county, and their aggregate value was less than two thousand dollars. In the Gulf States not more than one black man in twenty owns the land he cultivates. It is believed that the coming census will show a negro population of ten millions; and the future of these poor and ignorant masses well deserves the anxious consideration of the country. It concerns more closely the people of the Southern States, but it will affect the welfare of the whole Union.

What that future shall be, Mr. Washington earnestly contends, will be determined by the degree of education in the industrial arts which the negroes may receive. The ordinary curriculum of the public schools of the North he holds altogether unfitted for the Southern negroes. They have not reached such a stage of development as to enable them to assimilate abstract learning. On the other hand, they are capable of proficiency in dealing with the concrete. Under slavery they were trained by their masters to be masons and carpenters and blacksmiths. Under freedom this training ceased, and the skilled workmen left no successors. The negroes have been the prey of politicians and of usurers. Without capital, and without the capacity to use it, they have enslaved themselves to those who would advance them money, and all that they earn, beyond the bare necessaries of life, goes to their creditors. They need to be taught to desire to better their condition, to deny themselves present gratifications for the sake of the future, and to make use of modern knowledge and methods in agriculture and the mechanic arts. The institution with which Mr. Washington is connected furnishes the desired teaching, and its pupils become independent and prosperous citizens. The higher walks of life are not open to them; but in the ordinary pursuits they are capable of succeeding and of bringing to their race knowledge of the conditions of success.

The Tuskegee Institute is, happily, too well known to require any description here. It may be said to prove Mr. Washington's case, and the simple and touching plea which this book sets forth ought to bring rich results. A greater return in the promotion of human welfare than has been obtained by a very moderate expenditure at Tuskegee is scarcely conceivable. The negroes are, indeed, terribly handicapped; but a race that can produce men having the devotion and the administrative capacity of the author of this book has not a hopeless future. Yet the rapidity of its progress must depend largely on the generosity of the race which so long thought to profit by its degradation.

The American in Holland: Sentimental Rambles in the Eleven Provinces of the Netherlands. By William Elliot Griffis, L.H.D. Boston: Houghton, Mifflin & Co. 1899. Pp. viii+403.

The sentimental journeys of which Dr. Griffis's latest book is a record, number no less than five made at various times to the home-land of the Dutchman. The author's pilgrimages are preëminently historical. His eyes, to be sure, are never closed to the picturesque, which is so much in evidence in every part of Holland, or to what is characteristic in the life of the people, but his primrose (here a red Dutch tulip) is inevitably to him something "more" in the light of its historical background, and particularly as this light reflects upon America.

It is strange that nobody has thought of doing this before. It is true that almost every book on Holland contains, perforce, this or that reference to historical places and events connecting early conditions in America with what, to an extent that we have only just begun to realize, was a mother country. Dr. Griffis's book, however, does this systematically, and, though we may have known as facts the separate details, by their combination we are given the impression of a picture that as a whole we have never before seen.

The moving sentiment, then, in the author's mind is one of piety towards our own beginnings, and his pilgrimages are in very many instances to the places of their origin. He takes us to Haarlem, to Bloemendaal, and to Breukelen, whose namesakes have carried their old names without essential change into the maze of a Greater New New York. In old Amsterdam we are shown the Pilgrim's quarters and the Brownists' alley. At Beverwijk we are reminded of the original Dutch name of Albany on the Hudson. At Franeker and Leeuwarden, in Friesland, we are told how, at a later time, the streets resounded with patriotic songs celebrating American victory, when Paul Jones appeared with his prize, the *Serapis*, in the Texel and the Zuider Zee.

It is astonishing how many and how intimate are these points of contact that appear in the author's peregrinations; and though this is, after all, but a phase of the book, to our mind it is altogether its most valuable part. Holland, in spite of some still comparatively unknown nooks and corners, is a well-travelled land, and it is in the main difficult to retell a story that has so often been told already. There is much in the book, nevertheless, even along beaten tracks, that is both new and suggestive. Particularly timely are the last chapters, vividly describing the recent inauguration of Queen Wilhelmina, of which the author had the great good fortune to be an eye-witness.

The *history* of the book is much surer than its linguistics. In the description of Middelburg, for instance, the statement is made, apropos of the charter granted to the city in 1253 by William of Holland, which the author says is the oldest deed in the Dutch language, that "the Dutch language in literature is fully as old as that of England, for here is a document which is not in Anglo-Saxon or in Latin, but in pure Dutch," as if this document of 1253 could prove anything of the kind. Bearing also upon the history of the English language is the statement, not generally recognized by the books, that "It is from Old Frisian 'wyf' that our word 'wife' comes." In this connection the author himself speaks of "reveries and wool-gathering among the brambly paths of linguistics." Many of the etymologies, like that, for instance, of "William," or "gild-helm," on p. 123, are more daring than those of Archbishop Trench of blessed memory in his most imaginative moments; but a climax of statement is reached on p. 252, where the author says: "Dutch is the vernacular in four of the Belgian provinces, and the burgomaster of Antwerp speaks Platt-Deutsch—the language of Erasmus, Vondel, Rembrant [*sic*], Bilderdijk, Boerhave, and Kuenen." It may be, of course, that the burgomaster of Antwerp has learned Platt-Deutsch as a foreign language, and thus is able to speak it, but to expatriate the rest by depriving them ruthlessly of their mother Dutch is surely not justified by the facts of the case; and the thought especially of Vondel's stately periods in Platt-Deutsch is not at all an edifying one. Linguistic, again, is the slip of the pen which calls the district about Arnhem, in Gelderland, "the Swiss Netherlands," when the Dutch themselves speak of it somewhat jocosely as "the Dutch Switzerland." This latter reminds us of a single corrigendum in a book published not many years ago: "For pithless stem read stemless pith." Of a somewhat different kind is the lapse involved in putting the Anna Paulowna street at The Hague between De Ruyter and Tromp, "like Una among the lions." If we do not stop this sort of thing—of attributing to American orators well-known lines of Milton, and of surrounding Una with lions when Spenser gave her but one—we shall ultimately be accused of not knowing our classics.

As a whole, the book is thoroughly good, and of the sort, moreover, be it said, which is above treaties and diplomatic agreements

between nations, in that it contributes, in no small degree, to the infinitely firmer friendship born of a mutual intelligibility. It is, finally, well illustrated from photographs, and contains a map of the eleven provinces; and there is an index of objects, persons, and places.

L'Inquiet. Par Samuel Cornut. Paris: Perrin & Co. 1900.

M. Samuel Cornut is a young French writer already for some years distinguished for novels which have a stamp of their own, and have awakened in literary circles and among a portion of the public a most sympathetic echo. He was born in French Switzerland, and brought up in the honest and serious-minded little Protestant community of the Canton of Vaud, amidst the beautiful scenery of that picturesque corner of the Alps. To this origin may be ascribed the special character of his books, which reveal both a moralist of high purpose and a poet of exuberant imagination. He has a liking for the study of *cas de conscience*, which he treats with the psychological keenness and the scrupulous severity of a theologian. Moreover, his native land has endowed him with a notable gift for description, which is seen at its very best in his very odd 'Regards vers la Montagne,' a distinctly Swiss book, and in 'Chair et Marbre,' a Parisian novel which contains vivid and poetical pictures of the suburbs of Paris as well as of the Mediterranean coast.

'L'Inquiet' is mostly a psychological and moral study. The hero is a young literary man struggling in the midst of the Bohemian life of the Latin Quartier for position and a living. There is in it not much of the merriness and jollity that Bohemian life usually suggests, and 'L'Inquiet' reminds us of 'Trilby' only by contrast. M. Cornut being of a rather serious bent of mind, and his hero being a most restless fellow, he is inclined to describe to us rather the dreary and desperate side of that life; and his Paris students, boarding-houses, and journalists are, if truly, not always cheerfully, portrayed. But, besides its merits of style, its directness, and its fervid eloquence, its graphic relation, too, of certain interesting events in contemporary history, 'L'Inquiet' commends itself to the reader by an earnestness of purpose and a generosity of inspiration which are contagious and stimulating, and make of it a remarkably humane, feeling, and wholesome novel.

5 and 7 East 16th St., New York.

Heredity and Human Progress.

By W. DUNCAN MCKIM, M.D., Ph.D.

12mo, $1 50.

Believing that in its endeavors to bring about ideal conditions of happiness, the human race is hampered by the present system of permitting hopelessly degenerate classes to become burdens on the State and to perpetuate their degeneracy, Dr. McKim has suggested a plan whereby this grievous burden might be removed. His plan, at first sight, seems extremely revolutionary, but his presentation of the problem and his arguments in support of the solution worked out by him are so forcible that his book will undoubtedly receive the serious attention, not only of law-makers, but also of all who are interested in human progress.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 8, 1900.

The Week.

The firm of Destiny & Duty has been dissolved, through the retirement of the junior partner. This firm was organized at the White House, on the outbreak of the Spanish war in 1898, by the McKinley-Hanna Syndicate, with the President as silent partner. Duty was taken in at the latter's suggestion, on account of its high standing with the religious public, although Hanna always insisted that there was no need of "pandering to the better element." The firm did a large and lucrative business from the start, the orders from spread-eagle orators often taxing the full capacity of its works. The dissolution is due to the officiousness of the junior partner, through whose forwardness the President was induced to insert the following passage in his message to Congress last December:

"Our plain Duty is to abolish all customs tariffs between the United States and Porto Rico, and give her products free access to our markets."

This disgusted a large number of Republican Senators and Representatives so much that they threatened not only to withdraw their own patronage, but also to institute a boycott against the firm among their constituents unless Duty should be got out of the firm at once. Through the kind offices of Mark Hanna, the withdrawal has been amicably arranged. The terms of settlement are private, but it is known that business will be carried on at the White House as before. It is also given out that the sole authority to wave the Flag, and the copyright upon Loyalty, which constituted the original stock in trade of the firm, are retained by Destiny.

The text of the tariff bill for Porto Rico agreed upon by the Republican members of the Ways and Means Committee is much worse than any previous outgiving had made it, since it extends to that island our tariff duties as regards all imports from foreign countries, but does not allow free trade with us. It hands over the inhabitants of Porto Rico to the tender mercies of our tariff-protected Trusts, and then imposes a protective tariff on their exports to the United States. The island is thus put at a disadvantage in trade as compared with Jamaica and all the other West Indies. Jamaica, for example, can buy her manufactured goods from the whole world without any tariff duties whatever, if she chooses, but Porto Rico can buy only after paying Dingley rates. The money actually collected in this way is to be used in defraying the cost of governing the islands; but in cases where the Dingley rates are so high that the goods cannot be imported from Europe, but must be obtained from the United States, the amount collected at the custom-houses will be the smallest part of the tax paid by the consumer. The larger part will be pocketed by the protected classes in the United States, who produce the goods. Thus the poverty-stricken islander will become the victim of a foreign monopoly, and will not have the benefit of the American market. We wonder what the Home Market Club of Boston will think of this treatment. It is exactly what American colonies rebelled against when they threw the tea into Boston harbor. It is taxation without representation. It is the colonial system of the eighteenth century. It makes a laughing-stock of our advocacy of the open door. It is a cool adoption of Imperialism of the Old World type, much worse than that of England, since England scorns to tax her colonies by means of tariff duties or trade monopolies. It seems impossible that such a bill can pass Congress in this age of the world.

The results of the municipal election at San Juan, in Porto Rico, which has just taken place, are very instructive on the question of the political capacity of the people of that island. Under the election laws, it seems, the minority party is entitled to one-third representation in the City Council, which is now composed of ten Republicans and five Federalists. The latter, it is reported, tricked the Republicans in the election by voting on the Republican ticket for inexperienced men, thereby "freezing out" of the Council five of the best Republican candidates. If this does not prove that the Porto Ricans are capable of self-government, according to the standard of our own politicians, what evidence could prove it? With two political parties already formed, having leaders as astute as these Federalists of San Juan, our rulers ought from very sympathy to welcome the Porto Ricans to citizenship. Certainly our fellow-citizens of Kentucky must feel a brotherly yearning toward these people, when they read this item of news:

"On the 24th the Federals were celebrating their victory at Fajardo, when they met a Republican parade. The collision resulted in a riot, in which one man was killed and six were seriously wounded. Fourteen of the town's best citizens are in jail, charged with murder."

The cries of treason which greeted Senator Pettigrew's efforts to have the recently published Aguinaldo statement embodied in the *Congressional Record* on Wednesday week, are all the more remarkable when contrasted with the spirit in which the attacks of the English Opposition in Parliament have been received. There, in what many of us have been pleased to consider a downtrodden monarchy, the right of free criticism and free speech is as clearly recognized as it was in the days when Fox and Burke expressed their indignation at the policy of subduing the American colonies by force. Just as their utterances inflamed the Americans to a more vigorous resistance to the redcoats, so must the recent English criticisms of the cabinet and its poli cy encourage the Boers to fresh efforts against the British armies. Yet there is no effort to suppress any one by demagogic cries of treason or by such utterances as marked the discussion in the Senate. Indeed, there could be no more open confession of the weakness of the American cause in the Philippines than the whole debate furnished, and particularly Senator Hawley's statement that his objection to the publication of the document in the Senate's records was that it might "encourage desertions and discourage enlistments" if it found its way into the hands of our soldiers.

The folly of the Republican opposition must be plain when one considers that the Aguinaldo statement has been published by the Springfield (Mass.) *Republican*, not only in its regular issue a few days ago, but also as a broadside, and is now being widely circulated by the Anti-Imperialist League. Beside this circulation, that which would be given by the *Congressional Record* is small indeed. Aguinaldo's statement professes to be the "Authentic Review of the Philippine Revolution," and to have been issued from Tarlak, Philippine Islands, September 23, 1899. It is one of the many documents bearing upon the origin of the present warfare in the islands which the historian of this period must take into account when the responsibility shall be apportioned. Its most important feature is the claim that American officials, and particularly Admiral Dewey, made promises of independence to the Filipinos, and that the Admiral treated Aguinaldo as an ally, received him with military honors, and saluted the Filipino flag. All these allegations are pronounced by the Admiral "absolutely false," except that he did "make use of him [Aguinaldo] and the soldiers to assist me in my operations against the Spaniards." Much more important than the disputed question as to how far American officials encouraged the idea of independence in the Filipino mind is the utter lack of tact in the treatment of Aguinaldo and other leaders of the natives, which has been thoroughly established. Gen. Charles A. Whittier, for instance, who was for a

time Collector of Customs at Manila, holds that the present war might have been avoided if Aguinaldo had been treated with decency, and he presents reasons for this belief which seem conclusive.

The speech of Senator Caffery, in opposition to the Philippine policy outlined by Senator Beveridge, was a very reasonable and conservative presentation of the view that the Constitution of the United States protects all persons under its jurisdiction. He cited abundant authorities to show that the annexation of the Philippine Islands conferred citizenship on their inhabitants, and that they must be governed by Congress in accordance with the Constitution, or else that Congress must usurp powers of government. Moreover, he contended, the principle that governments derive their just powers from the consent of the governed ought to apply in the case of inhabited territory ceded to the United States as a war indemnity. Whenever in such territory there was a government, or even a "germ of nationality," he insisted, the United States would have no right to overthrow it. The usual question was asked Mr. Caffery, "What would you do with the Philippines?"—to which he promptly answered, "Let them go." That, he said, would be better for them, and better for us. Such an answer as this is, of course, treated as irrelevant by the Imperialists; but there is no obstacle to letting go, except their determination to hold on. Destiny, we venture to predict, would not interfere if we were to recognize such governments as the Filipinos can organize, and extend the Monroe Doctrine to protect them.

A condition of great tension had been reached in Kentucky before the crime of murder had been added to the combustible matter collected at Frankfort. A thousand armed men had come there from eastern Kentucky, ostensibly to see that justice was done by the Legislature in its decision on the certificates of election for Governor and Lieutenant-Governor awarded by the State Board of Canvassers to the Republican candidates for those offices. Probably these men from the eastern counties really believed that they had a right to overawe the Legislature, or to besiege it with firearms, if the decision should not be in accord with their notions. They come from a region where the services of courts and sheriffs are commonly dispensed with in the administration of justice. They issued an address, giving their ideas of the fundamental principles of liberty, and constituted themselves a fourth department of the State Government. Being armed with Winchester rifles, they were necessarily stronger, for the moment, than the other three departments. It would be very strange if, in a collection of a thousand men possessed of such ideas, there should not be at least one man prepared to take the entire administration of justice into his own hands. Indeed, that is the Kentucky way of deciding important legal questions. A few years ago an assassin waylaid and shot the Chief Justice of the Court of Appeals dead because the latter had decided a case against him. The murderer was tried two or three times, and finally escaped on grounds of insanity, and was confined for a short time in an asylum. In 1895 Mr. Goebel himself, the victim of the crime of January 30, shot and killed the President of a bank in Covington in a public street of that town, in consequence of a quarrel which had its beginning in a political controversy. Mr. Goebel was acquitted by a jury.

Whatever may have been the infractions of justice and decency contemplated by the Legislature, they could not be righted by the threat of turning the legislators out of their seats, *vi et armis*. We have no doubt that the Legislature was perpetrating a fraud on the electors of Kentucky—a kind of fraud, too, which attacks the foundation of free government. The present controversy grew out of the so-called Goebel law, which aims to keep the Governorship of the State in the hands of the party which controls a majority of the Legislature, *i. e.*, in the control of the Democratic party. The Democrats had all this machinery in their own hands, and supposed that they should win by virtue of their control of the election boards. It turned out, however, that these boards did their duty in an impartial and honorable manner. Although Democratic party interests demanded the seating of Goebel in the Governor's chair, they found that the majority of votes had been cast for Taylor, the Republican candidate, and they accordingly awarded him the certificate of election which he now holds. Under the Constitution of the State, however, it rests with the Legislature to say the last word as regards the election of the Governor and the Lieutenant-Governor. Here was one more chance to upset the popular verdict, and it was the evident intention of the Democrats to avail themselves of it when the bullet of an assassin entered into the proceedings.

Upon the death of Goebel his powers, whether more or less, devolved upon Mr. Beckham. The latter has the same title to the office of Lieutenant-Governor that Goebel had to that of Governor. This is indeed irregular, consisting merely of a paper signed by a majority of the members of the General Assembly of the State. The reason why it is not more regular, however, is, that Gov. Taylor prevented the General Assembly from holding its sessions at the State capitol, and adjourned it to London on the ground of an alleged insurrection in Frankfort. On Saturday, Gov. Taylor declared martial law in Frankfort, suspended the writ of habeas corpus, arrested a man named Walker, who tried to serve upon him (Taylor) a writ issued by the county judge, and held him for trial by court-martial. On Sunday Walker was released from arrest. Neither the arrest nor the release has added anything to the dignity of Gov. Taylor. It has rather given him the character of a man of flighty purposes, as indeed some of his other acts had previously done. The Democrats have behaved with more moderation than was expected, and it looks now as though a way would be found out of the difficulty without a resort to force.

Seven Representatives of the Republican party and as many Democrats have reached a unanimous agreement leading to a truce. It is stipulated that Gov Taylor shall not be impeached or proceeded against for treason, usurpation, or contempt of court. In return for this immunity—which includes those who acted under his orders—he is to abstain from interfering with the action of the Legislature, and it is understood that that body is at liberty to pass an act validating its proceedings in deciding the contested elections. It is not clear whether, in case such an act is passed, the submission which the Republican candidates promise will prevent them from testing their claims in court. That would seem an unnecessary concession. But the most important feature of the treaty of peace is the provision that all parties shall unite in an effort to have the election law so modified as to provide for nonpartisan election boards and to insure free and fair elections. If that result can be brought about, it will go far to compensate the State for the distressing scenes which it has witnessed.

The visit of Bryan to New England, and particularly his experience in Boston last week, have furnished convincing evidence that the old financial issue which dominated in the Presidential campaign of 1896, has lost its interest for the public, and that the question which will engage men's minds in the impending national contest is the new one of Imperialism. The most significant fact is not that the last and the next Democratic candidate has paid little attention to silver, and devoted his speeches in the various New England cities chiefly to the situation in our new possessions and the problems growing out of the course pursued by the McKinley Administration. The important thing is, that his hearers—and he has had great audiences—cared little or nothing for discussion of the currency, but

were deeply interested in everything which Bryan said on the question of Imperialism. For instance, at Montpelier, Vt., on Friday, an audience containing many Republicans and Gold Democrats, as well as Bryanites, listened for nearly two hours with eager attention to a speech which said nothing about "16 to 1," and was devoted almost exclusively to the Philippine question.

The propensity of the French to disregard the affairs of all other nations is occasionally a cause for thankfulness. If the French journalists should happen to discover the proceedings by which the Senate of the United States is now endeavoring to ascertain the methods employed by one of its members in securing his election, we fear that they might retort upon us some of the reproaches which we heaped upon them at the time of the Dreyfus trial. Bribery, did we charge? Very well, what do we say now of the use of money in the Montana Legislature? Is it true, our esteemed contemporaries might ask, that Senator Clark paid $568,000 for votes, tendered $200,000 more, and spent enough in addition to bring the sum up to $1,000,000? Was something said of evidences of corruption among French officers? Perhaps the persons who were so painfully shocked at those revelations, or suspicions, will now disclose their feelings when sixteen citizens of Montana and thirty-eight Senators and Representatives of that State have been charged with giving or receiving bribes, and no proceedings have been taken to punish them if they are guilty, or their accusers if the charges are false. There were dramatic episodes in the trial of Dreyfus. Documents of a startling character were produced; but nothing quite so striking as the $30,000 in notes which are now lying before the Senate; $30,000, in the land of the Almighty Dollar, which no one admits ever belonged to him, and no one now ventures to claim! There were witnesses against Dreyfus who were said to have perjured themselves. But there were none who declared that they sold their votes to one man, and then sold their testimony as to their own corruption to his enemy. There were instances in the Dreyfus case where it seemed that witnesses deviated from the truth for the sake of shielding their superior officers, or with the idea of saving the honor of the army. But in the Clark case we have a witness who coolly admits that he found it necessary "to assume a position of falsehood" in order to attain his virtuous ends, and who defines a lie as "an untruth told to a person who has a right to know the truth"; untruth in a good cause being justified.

Sydney Smith's celebrated description of the tax-ridden British citizen, who was finally committed to the grave "to be taxed no more," would not apply in the city of Philadelphia. Nothing is more common in that community than for a man to keep on paying taxes after he is dead and buried. It is provided by law that a citizen may request that his poll-tax be paid, and the Republican city committee has benevolently complied with this request in the case of 30,000 alleged voters. The Receiver of Taxes admits that many of these voters have ceased to exist, if they ever existed, but he maintains that his duty is confined to erasing such names as are written in one handwriting; preventing reform organizations, meanwhile, from inspecting the lists. One of these organizations lately ascertained that in one ward there were hundreds of these disembodied citizens, whose undying patriotism impelled them to keep on paying their poll-taxes and vicariously casting their votes. Exposures of this kind do not seriously disturb the placidity of the mass of the Philadelphians, but some of them manifest impatience at the appropriation of $25,000 by the municipal government for the benefit of the coming Republican convention. Taxpayers not belonging to the Republican party seem inclined to regard this application of public funds to partisan ends as inexpedient; but it must be said that the Republican politicians have done many things worse than this with impunity.

"A situation full of humiliation, and not free from danger." Such was the frank language in which the British Premier last week described the state of things in the British empire upon the assembling of Parliament. The tone of the speeches for the Government was distinctly apologetic. The Duke of Somerset, who moved the address in reply to the Queen's speech in the House of Lords, urged the necessity for reform in the military administration, and said that "hitherto the army seemed to have existed for the benefit of the War Office, and in future the War Office must exist for the benefit of the army." The Premier in turn admitted the deficiencies of the existing system, remarking that "the Treasury had acquired a power which was not to the public benefit," Lord Salisbury also conceded that the Government had lacked the information which it ought to have had as to the importation of arms into the Transvaal and the other preparations of the Boers for war. His only excuse was that other nations spend enormous sums in getting such facts about possible enemies, even the Transvaal Government using £800,000 in a single year, as he had heard on high diplomatic authority, while England has allowed only "small sums" for such purposes, which rendered it impossible for the cabinet to have omniscience. Altogether it was with a most deprecatory air that the Government leaders faced the Opposition.

The attitude of the Opposition showed that the Jingo theory of "standing by the flag" without a murmur of criticism, which the McKinley Administration has tried so hard to enforce in the United States, will not be accepted in Great Britain. Lord Rosebery, believer in advanced imperialism as he has seemed of late years, said frankly that the Premier "made it difficult for the man in the street to support his policy," and insisted that it was "necessary to know what the Government is going to do." In this country the McKinley syndicate have urged that the people ought to be willing to trust everything to the wisdom of the President. In Great Britain the cabinet would like to have the people leave everything to her Majesty's Government. But Lord Rosebery does not hesitate to say that "the country will have to be inspired by a loftier tone and truer patriotism than that shown by the Prime Minister." It is already evident at Washington that the attempt to prevent discussion and criticism, on the ground that they are unpatriotic, will prove equally futile.

At a recent meeting of the Vice-Regal Council of India, it was announced that the expenditure on account of the famine was estimated at between thirty and forty million rupees for the period up to the end of March. Twenty-two million persons were then suffering in British territory, it was computed, and twenty-seven million in the native states. The Viceroy stated that the famine-stricken area had expanded to a degree surpassing the worst fears, and that the country was now face to face with a scarcity of cattle, water, and food terrible in character and intensity. Three and a quarter millions of people were then in receipt of relief, and the Government would do what it could, but, the Viceroy added, ominously: "In 1897, hundreds of thousands of pounds were contributed by England, and the world shared in our sorrow, but now we have to struggle alone, for the whole thoughts of England and of every Englishman in the world are centred in South Africa." A small part of the money already spent on an unnecessary war, and a very small part of what will be spent, would save hundreds of thousands, perhaps millions, of human beings from the miseries of famine. Probably a thousand Hindus could be kept alive for what it costs to kill one Boer. Possibly the starving people of Porto Rico may feel that it would be more humane on our part to divert to their relief a portion of the funds employed in hunting down the Filipinos. But in all wars, the check to public benevolence is one of the elements of "hellishness."

THE ISTHMIAN CANAL.

The reports that England has consented to modify the Clayton-Bulwer treaty turn out to be correct. The problem which Mr. Blaine rushed at in his eager, blundering way, with those ludicrous arguments and that gross garbling which Lord Granville so cruelly exposed, Secretary Hay appears to have solved satisfactorily. It is one diplomatic triumph more to be added to his achievement in securing the open door in China.

And it is not merely a diplomatic triumph; it is a victory of good sense and civilization. It is a negotiation in which both parties to it see their ideas prevail. The great aim of the Clayton-Bulwer treaty, so far as it related to an Isthmian canal, looked to the neutralization and perfect freedom of any waterway that might be cut. Secretary Hay now undertakes to guarantee that this chief end of the treaty shall be safeguarded. The canal is to be as open as the high seas to the commerce of the world. If built under "the exclusive control and management" of the United States, it is yet to favor our ships no more than those of any other nation. In peace or war, merchantmen or battleships are to come and go as freely as through the Suez Canal. No military advantage is to accrue to us by possession of the canal or its termini. We even undertake not to fortify its approaches. All is to be open and equal to all. This represents such a distinct and enlightened advance over what American diplomacy has hitherto contended for that Mr. Hay is to be warmly congratulated upon his success.

We could wish, however, that he were well out of the woods with his new treaty, or convention. That it will meet with bitter and unreasoning opposition is clear. All the consistent foes of England in this country—and they are many and vociferous—will soon begin to rage after their manner. They would attack any agreement with Great Britain, even if it gave us everything we asked for. The only way they can get on happily with England is always to be disagreeing with her. And they will be sure to suspect the existence of some hidden *quid pro quo*. Suppose they find that Secretary Hay has made a slight concession in the matter of the Alaskan boundary; will they not tear him to pieces? If all else fails, they will pounce upon the very concession he has made in respect of the military control of the canal. To waive that will be a deadly sin in their eyes. Is Mr. Hay prepared to deny that the canal must be a part of our coast line? Does he make light of the contention of our Congressional strategists that to allow foreign warships the right to pass through it freely in time of war would be equivalent to national suicide? There will be lively times when all these things come up in the secret session of the Senate. We doubt if Senator Morgan can contain himself even in open session. He will see in Mr. Hay's negotiation a direct flouting of his own bill and report referring to a Nicaragua canal. Morgan's bill directs the President in express terms not only to "excavate" a canal, but to "defend" it. What is the use of a canal which you cannot defend—that is, go to war over? Moreover, Senator Morgan would have "fortifications for the defence of the canal." Shall these be basely abandoned at the request of the wily Briton? We have always maintained that a good part of the eagerness among politicians for an Isthmian canal was due to their hope of getting a rousing international quarrel by means of it. Their zeal will rapidly cool if it is to be a tame work of peace, for ever dedicated to peace; and their disappointment may take the form of a savage turning upon the Secretary who has tried to rob them of an ancient feud.

The Clayton-Bulwer treaty extended, and we understand its prospective modification will extend, not simply to the Nicaraguan route, but to any route whatever that may be pitched upon as the best for a canal across the Isthmus. In so far, and pending the report of our investigating commission, the scales are held even as between the Nicaragua and the Panama locations. It should not be forgotten, however, that there are other and serious diplomatic difficulties in the way of the Nicaragua route. These are the treaties still in force between Nicaragua, on the one hand, and Great Britain, France, Spain, Italy, and Belgium, on the other, securing to those nations equal rights in any interoceanic canal that may be constructed through Nicaraguan territory. Of course, if Secretary Hay is prepared to guarantee equal rights to all, it will doubtless be an easy matter to secure the abrogation or modification of the treaties mentioned. But they are still in vigor, and, until got out of the way, constitute an effective diplomatic barrier to our exclusive control of a canal via Lake Nicaragua.

Why, then, are the Nicaragua bills so urgently pressed in Congress? Why is the word quietly passed around that the Administration has set its heart on passing them? Why, above all, is it proposed to adopt the exceedingly awkward and irregular course of going blindly ahead without waiting for the report of our own commission? Well, we gather that Hanna very much desires the beginning of a canal as a political asset in Mr. McKinley's campaign for reëlection. He desires to include that in the gorgeous programme with which the country is to be beguiled. Here was a problem which had troubled our statesmen for more than half a century; but the great McKinley came along, and, lo! he loosed the Gordon knot of it, "familiar as his garter." Hanna also regarded the commission as a mean trick played upon him by Speaker Reed in the last Congress. Worse than simply refusing the money for the canal last year, it shoved the question along till next year. Why wait for the report of the eminent engineers when their appointment was a legacy left by a man now out of politics? Such, we understand, is the present working of the Ohio intellect, which does not see how indecent haste would leave the President in the attitude of eating his own words and repudiating his own appointees, and would be practically a fraud on the country. The legislative part of the business should be done with as decent a regard for the opinion of mankind as Secretary Hay has shown in the diplomatic part, if we are really to get a civilized canal in a civilized way.

OUR CONQUESTS AND OUR CONSTITUTION.

The report of the majority of the Ways and Means Committee of the House of Representatives, in providing a tariff for Porto Rico different from that which prevails throughout the United States, raises perhaps the most momentous constitutional question which our country has ever faced. It commits the Republican party to the doctrine that Porto Rico is not in or a part of the United States; that the United States may have territory belonging to it to which the Constitution does not apply; and that Congress has power to act as the governing body of such territory without any constitutional limitations whatever. It is not surprising that the Democratic minority of the committee say of this doctrine that the majority submit no opinion or decision of the Supreme Court of the United States to sustain the contention they make. It would be remarkable if a court created by the Constitution for the purpose of pronouncing on the constitutionality of the acts of a Congress created in the same way, should declare that that body is not subject to constitutional limitations.

What that court has heretofore declared, when similar questions have come before it, admits of brief statement. The issue is a great one, but it is simple. The question whether the United States may acquire territory in war, or by treaty, is not now involved; and the power has been exercised so often that it would be unprofitable now to question its constitutionality. But the status of territory so acquired has been several times considered by the court, and its decisions contain language so apt in its application to the present situation, and so conclusive in its repudiation of the doctrine put forth by the party in power in Congress, that we quote it in the hope that it may attract the attention of the country.

The case of Loughborough vs. Black,

reported in 5 Wheaton, arose from the act of Congress imposing a direct tax on the District of Columbia, and it was held that such taxes were constitutional if levied in proportion to the census directed to be taken by the Constitution. The following words were used by Chief Justice Marshall:

"The power, then, to lay and collect duties, imposts, and excises may be exercised, and must be exercised, throughout the United States. Does this term designate the whole, or any particular portion of the American empire? Certainly, this question can admit of but one answer. It is the name given to our great republic, which is composed of States and Territories. The District of Columbia, or the territory west of the Missouri, is not less within the United States than Maryland or Pennsylvania; and it is not less necessary, on the principles of our Constitution, that uniformity in the imposition of imposts, duties, and excises should be observed in the one than in the other."

The foregoing extract may be profitably compared with this declaration of the Republican majority of the Ways and Means Committee:

"(1.) That the term 'United States' in that provision of the Constitution which declares that 'all duties, imposts, and excises shall be uniform throughout the United States' means and is confined to the States that constitute the Federal Union, and does not cover also the territory belonging to the United States."

The general principle laid down above by Chief Justice Marshall was amplified and made more explicit by Chief Justice Taney in the celebrated Dred Scott case. In view of some of the attempts recently made to maintain that Congress has, during all our history, been administering our Territories in the exercise of a power free from constitutional limitations, the following passages are peculiarly apposite and timely:

"There is certainly no power given by the Constitution to the Federal Government to establish or maintain colonies bordering on the United States or at a distance, to be ruled and governed at its own pleasure. . . . No power is given to acquire a territory to be held and governed permanently in that character. . . . No one, we presume, will contend that Congress can make any law in a territory respecting the establishment of religion or the free exercise thereof, or abridging the freedom of speech or of the press, or the right of the people of the territory peaceably to assemble and to petition the Government for the redress of grievances. Nor can Congress deny to the people the right to keep and bear arms, nor the right of trial by jury, nor compel any one to be a witness against himself in a criminal proceeding. . . . A power, therefore, in the general Government to obtain and hold colonies and dependent territories, over which they might legislate without restriction, would be inconsistent with its own existence in its present form."

Such language as this cannot be explained away. It gives a perfectly clear, intelligible, and consistent explanation of the status of territory acquired by the United States. It excludes, as thoroughly and completely as any language can do, the theory which the exigencies of protectionism have forced the Administration to adopt, that Congress, or the President, can exercise powers independently of all constitutional restraints. What decisions the Supreme Court may hereafter render we cannot predict; but it has only to follow established precedents to insure to the people of Hawaii and Porto Rico and the Philippine Islands the most important of those rights which the war of the Revolution was fought to secure to the people of the United States. To abandon these precedents is simply to hold that the men in control of the government of the United States can exercise the same autocratic powers over many millions of human beings that the Czar of Russia and his councillors can employ in ruling their subjects.

YEAR ONE OF THE EMPIRE.

It is now a full year since the treaty with Spain was ratified, and the ignoble and bloody war in the Philippines began —a true *annus horribilis*. Nothing but the gradual induration of heart and conscience could enable Americans to look back upon such a twelvemonth without shame. If they had been told on February 6, 1899, that February 6, 1900, would see the work of devastation and death still going on, they would have shrunk from the prospect with horror. Why should the retrospect seem any less repulsive to them? Shall we add to our disgrace by pretending now to approve what then we should have vehemently reprobated? At any rate, we cannot honestly refrain from reckoning up the bitter humiliations of this year in Cathay. We admit that the moral balance-sheet is not pleasant reading; but to those who take offence at it, we must say, with Swift, that we write for their amendment, not their approbation.

In one respect all are agreed—this Philippine year has been one of illusion succeeding illusion, and hope deferred. The war has dragged on its misery beyond all computation. A pitiful collection of unfulfilled prophecies could be made out of Gen. Otis's dispatches and the official utterances of the Government at Washington. Thus, on March 17, nearly a year ago, the Administration assured the country that hostilities would end "within a very short time." On March 24 we were informed that the insurgent army would have "ceased to exist" after Otis had delivered his next blow. Otis himself telegraphed on April 3 that the insurgent Government was in a "perilous condition." On April 4 the War Department was confident that "the backbone of the insurrection is broken." By April 29 Gen. Otis was positive that the insurgents were "tired of war." On May 18 the "end of the insurrection was at hand." But why go on with the record of promises never kept, and flattering hopes always dashed to the earth? Everybody recalls the general fact. The American people has been fed for a year on official optimism respecting the Philippines. The resisting power of the natives, the number of troops needed to subdue them, the cost of the war, have all been grossly miscalculated, so that we have to look back on a twelvemonth of disappointment and thwarting and humiliation, merely as respects our capacity to make war intelligently.

But on the side of moral and political standards and ideals, the year has brought us a disillusionment still more grievous. Its steps can be conveniently traced in the person of the President. He stands as a general type of the people in this regard—the "homme moyen," if there ever was one; and his own progress from first enduring to pitying and then embracing the Philippine vice is illustrative of the moral decay from which public sentiment at large has suffered. Mr. McKinley began by professing his earnest aim to "win the confidence, respect, and affection of the inhabitants of the Philippines," and to bestow upon them "the blessings of a good and stable government." When the unhappy war broke out, largely in consequence of his illegal and mischievous proclamation, he still was able to say, as he did say at Boston, that "every red drop from the veins of a misguided Filipino is anguish to my heart." But it was not long before he began to threaten the "cruel leaders" under whom the Filipinos fought so heroically, and to assert truculently, like another Arolas or Weyler, that he would tolerate no further "parley" with such miscreants. From that it is only a short step to the proclamation which he is now said to be contemplating, declaring all Filipinos in arms to be bandits, and so liable to be hung without trial. That would be a fitting end of the policy of "benevolent assimilation."

We do not mean to single out the President for special condemnation, except as his official power and responsibility call for special severity of judgment. He only typifies the general decadence which results from the abandonment of principle. The country has sinned with him and suffers with him. From tolerating an alleged necessary evil, we have gone on to defending it and then exulting in it. If the President does issue an order to string up on sight every Filipino taken with arms in his hands, he will be but executing the policy which too many people are advocating with unconscious brutality. Such is the sure acceleration of tyranny when once we adopt its methods. That is the true explanation of the cries of "Treason" heard even in the Senate. It has come to be felt that every objection to what is going on in the Philippines is an affront to the head of the state, an impairment of the reverence and awe due him, and so a lessening of his chances of reëlection. Who could be a more unblushing traitor than one who hoped that Mr. McKinley's Philippine performances would endanger his continuance in office?

To get a proper perspective for the

humiliation which the United States have undergone through this Philippine business, we need to look at the matter from the international point of view. What a disgrace it is for us to encounter on every hand sneers at our good faith, taunts at our incompetence, and cries of disgust at our professed ardor for liberty! Even Spaniards talk condescendingly of our ignorant blundering in the Philippines. You cannot speak with an Englishman or Frenchman or German about the Philippines without seeing how we have, and deserve, their wondering scorn. The Boer war has come as a timely touchstone of what we have lost. One cry of "How about the Filipinos?" is sufficient to check the most eloquent orator in the midst of his appeals for the heroic Dutchmen of South Africa. We have disabled ourselves from expressing sympathy with any oppressed people on earth. Our generous professions of love for liberty stick in our throats (the blood of Danton chokes us) as we think of what we have been doing in this Year One of our new Empire.

If the events of the past twelvemonth have been thus melancholy for ourselves, what have they been to the Filipinos? We are bound to consider their feelings in reckoning up the total result. Even granting that we have the noblest impulses in the world, and the best intentions, we have to take into the account what they think of us. Their sentiment towards us is what we are mainly trying to influence, and what is that sentiment to-day? What would an educated Filipino say had been the chief import of the year past to his people? He would have a terrible array of disasters to specify. He would point to dawning hopes of liberty crushed to earth by the land of liberty; to broken promises; to trenches full of Filipino dead; to smoking heaps where once were happy villages; to desolate fields and ruined industries and starving women and children; to soldiers, with no heart in their task, pursuing the defenders of freedom to their last stronghold in the mountains—and he would say:

"These are the tyrant's trophies of a year."

THE NEW CONSULAR BILL.

The question of a reform in our consular service was, it will be remembered, taken up seriously over a year ago by a number of the chief chambers of commerce throughout the country; the Cleveland Chamber of Commerce, through its then President, Harry A. Garfield, being in the lead. Of course, no action was had by the last Congress, as questions growing out of the war with Spain pushed all other measures aside. The matter has now been revived before the present Congress, and at the joint invitation of the Chamber of Commerce of the State of New York through Mr. Schwab, and of the Cleveland Chamber through Mr. Garfield, a concerted effort is being made by the principal trade organizations to secure consideration of a new bill which has been introduced by Mr. Burton of Ohio in the House and by Mr. Lodge of Massachusetts in the Senate.

This is, we believe, the seventh bill on the subject that has been presented to Congress in the last three years, and it bears about it signs of expert preparation, which its predecessors have lacked. It is announced that ex-Secretary Day has given it his general approval, and that ex-Secretary John W. Foster has endorsed it as the best measure thus far introduced, and earnestly favors its passage. It is understood, also, that the State Department regards it with approval; but on this point there should hardly be room for doubt, as successive Secretaries of State have, for many years past, declared in favor of remodelling our antiquated consular service.

The new bill provides for Consuls-General of three classes, with salaries from $5,000 to $8,000 per annum, and for consuls of six classes, with salaries rising from $1,500 to $5,000 per annum. It requires a reclassification of all the existing consular offices, and permits the abolishing of any that are or shall become superfluous. All the present incumbents are to be assigned to consulates with salaries as nearly as possible the same as those they now receive, after which they are to be gradually recalled and subjected to the same examination as is required for entrance to the service. Those who pass are to be definitively a part of the new system, and those who fail are to be dropped out. The service is to be arranged by classes and not by places, so that the consuls may be shifted from one station to another, according to the needs of the service. All unofficial fees, which now go into the consuls' pockets, and the full amount of which no one can more than guess at, are to be turned into the Treasury, so that the only compensation shall be by fixed salaries. It is probable that this provision would result in making the whole service not far from self-supporting. Vacancies above the lowest class are to be filled from the next lower class, but the President may skip a class in making a nomination, provided he publishes his reasons for doing so.

Entrance to the consular service is to be after public competitive examination by a board composed of the Secretary of State or an official of the State Department acting for him, an officer of the consular service, and the Civil-Service Commissioners. The names of five persons who pass the best examination are to be certified to the President, and from them he is to make his nomination. A new appointee may be dropped at any time during the first year of his service, but after that he cannot be dismissed except for due cause and after trial before a board. A unique feature of the bill permits the assignment, by the President's order, of any consul to special duty in the United States for a period of not more than one year at a time, and permits the nomination to consulates without examination of persons who have been in the classified service of the State Department for at least two years, thus creating an interconvertible service, and making experience in the foreign service available for the home office, and experience in the home office available for the foreign service. The subjects of examination for entrance to the service are left largely to the examining board, but they are required to include a knowledge of French, German, or Spanish, and no one is to be assigned to a consulate in a country where the United States exercises extra-territorial jurisdiction unless he shall have passed an examination in the principles of the common law, the rules of evidence, and the trial of civil and criminal cases.

Such are the chief provisions of the bill. If, in the multitude of measures already before Congress, many of which will have the benefit of greater personal importunity than the consular bill can expect to enlist, the chances appear to be against favorable action at this session, the fact should not discourage the advocates of the reform, which is based upon just principles, and is rapidly gathering strength.

Our consular service has been anything but a source of credit. It is true that from it has emanated an excellent series of printed consular reports, but these come from a small proportion of the consuls, and are, after all, rather a tribute to the system evolved by the Bureau of Foreign Commerce of the State Department than to the consular service as a whole. Every traveller and every person engaged in foreign trade knows the deficiencies of the service. It is largely recruited from a class of small politicians who look upon it as only a temporary refuge, and not as a permanent career offering any opportunity of advancement. From such a class it would be unreasonable to expect good consuls to come; and almost before they have been trained to their new duties, they are recalled to make room for other small politicians of a different political faith. There is thus no stability in the service; it is composed of constantly shifting individuals, who are not wholly responsible for their conduct to the service itself. The consequence is that our foreign trade suffers, that the rights of individual Americans are often put in jeopardy, that our prestige is lessened, and that we are humiliated in the eyes of foreign nations. In the face of this situation, which the passage of the Chambers of Commerce bill would rectify, it would seem to be simply a patriotic duty for Congress to respond to the general demand in favor of the reform.

MOREAU.

PARIS, January 25, 1900.

The life of General Moreau has never been written with the fulness which is found in modern biographies. His end cast a gloom over his beginnings; he remains among the dark figures of history. His great victories are mixed up with the darkest days of the French Revolution; his name, however, will always be connected with the famous Republican armies of the Rhine—armies of volunteers, led by young generals, which astonished the world by their endurance and their audacity, and which paved the way for the brilliant successes of the Empire. The history of Moreau's campaigns belongs chiefly to the period of the Directory; he deserved to be considered as the worthy rival of young General Bonaparte, whose first campaigns in Italy astonished the world and began a new era in the terrible art of war.

The operation of the armies of the Rhine in 1796, after the defeat of Jourdan, ended in Moreau's famous retreat, which was considered as great a feat as a victory. When the Archduke Charles, after having crushed Jourdan's forces, forced him to recross the Rhine, Moreau had already crossed the Danube and the Lech, and was on his way to Munich. When he heard of Jourdan's retreat, he found himself isolated; he immediately began his retreat by the valley of the Danube, having sixty thousand men following him in the rear, and expecting to find sixty thousand Austrians in the passes of the Black Forest. He fought a battle on his way, gained it, went through the Valley of Hell (Val d'Enfer), and reached the Rhine in perfect order after a march of twenty-six days. After a petty engagement with the advance guard of the Archduke, he recrossed the Rhine by the bridges of Breisach and Hüningen. This splendid retreat gave Moreau a high place among the generals of his time, and he was looked upon as a worthy rival of Gen. Bonaparte.

I cannot follow Moreau in his successive campaigns. His reputation grew from year to year, and, after the battle of Hohenlinden, equalled that of Napoleon. The imperial army of the Danube in 1800 was a hundred thousand strong, under the Archduke John. Moreau had a hundred thousand men between the Isar and the Inn. The operations of the armies of the Rhine and of Italy were to be harmonized. The Archduke John suffered a great defeat at Hohenlinden; he lost six thousand men and sixteen thousand prisoners. The Austrians retreated in the greatest disorder; in twenty days they lost forty thousand men and a hundred and fifty guns. Vienna was terrified. The Emperor gave the command to the Archduke Charles I., but it was too late. When the Archduke saw the state of the army, he begged the Emperor to make peace at any price. Moreau, who had arrived at Steyer, consented to an armistice on condition that Austria would treat separately from England, and that the fortresses of Tyrol and Bavaria should be placed in the hands of the French.

From the day of Hohenlinden, Moreau became a formidable rival to Napoleon; he became during the Consulate even a centre of opposition. Many of the generals and officers of the armies of the Rhine were hostile to the heroes of the armies of Italy, who had become richer, more popular; they affected the Republican ways and manners of the first armies of the Revolutionary period, in contrast with the more frivolous manners of the brilliant officers who surrounded Napoleon, and who already formed a sort of court. The Republicans, those whom Napoleon afterwards called the idealogues, thought to find in Moreau the head of a real Republic, of a wise and constitutional government; the royalists imagined that Moreau would be tempted some day to play the part of Monk.

Moreau heard them all, and gave no definite hope to anybody; his chief passion was jealousy of Bonaparte—a jealousy which became a real hatred, and was increased by purely personal considerations. The vanity of his wife and his mother-in-law, Madame Hulot, had been wounded by the First Consul and Madame Bonaparte. The relations between Napoleon and Moreau became such that, in the great trial of 1804 of the royalist George Cadoudal and Pichegru, Moreau was designated by Napoleon as their accomplice and condemned to two years' imprisonment. He was held up as a promoter of civil war, as an agent of foreign Powers. There seems little doubt that Napoleon desired and expected that the judges would condemn Moreau to capital punishment. He found the punishment too lenient, not wishing Moreau to remain in France, even in prison. At Fouché's instigation, Madame Moreau went to Josephine, the new Empress, with a letter in which she asked for her husband permission to go to the United States. Napoleon at once commuted the sentence rendered against Moreau into perpetual exile. Moreau started for the United States the day of the execution of Cadoudal and his friends. His name was struck from the army rolls. His private property was sold; under cover of Fouché's name, Napoleon bought his hôtel in Paris, which he gave to Bernadotte, and the estate of Grosbois, which he gave to Berthier. Moreau was not allowed to start for the United States from England; he received a passport for Cadiz and left Europe from Spain. At Barcelona he was joined by Madame Moreau and their young son; from Barcelona they went to Cadiz, where, a few days afterwards, Madame Moreau was confined and had a daughter. They were obliged to remain several months, and left only in July, 1805, in an American ship.

Talleyrand sent special instructions with regard to General Moreau to the French Minister at Washington, named Turreau. The arrival at Philadelphia was reported by Turreau in these terms:

"Moreau lodged, after landing, with a certain Madame Cottineau, who pretends to be a relation of Madame Moreau. The house was soon filled with all sorts of people, and the General had to receive 'How d' ye do's' till he was deaf, and shake hands till he was lame. The next day a fraction of what is here called the army, two companies of the town militia, came to pay their respects. Moreau, not knowing the language of the country, was reduced to salutations. The ex-General remained only three days in town, and started for Morrisville, an estate which he has taken near Trenton."

Moreau established himself there, on the Delaware River; he spent his time in fishing and hunting, and made long journeys as far as the Mississippi, the Great Lakes, and (in the South) Louisiana. He spent his winters in New York and Philadelphia. Mme. Moreau, who was still young, was fond of society. It would be interesting to have some account of the impression made by Moreau on American society; we know very little on this subject. Mme. Moreau made the acquaintance of a Frenchwoman whose husband, Hyde de Neuville, had been a secret agent of the Bourbons in Paris, under the Consulate, and who had been obliged to leave France. The two ladies met accidentally at a watering-place. Hyde de Neuville arrived in America in 1807, with a letter for Moreau from Mme. de Mouchy, but Moreau was rather shy of making his acquaintance. By degrees the intimacy which sprang up between the two ladies brought the husbands nearer together. Hyde de Neuville succeeded in bringing Moreau over to the idea of a monarchical restoration in France.

Moreau was directly tempted in another way on the side of Russia. He was not willing to serve Austria or England, from fear of offending French feelings; he was not unwilling to form an independent French corps made up of soldiers who had served under him and to use this force, in alliance with Russia and Prussia, against the man whom he considered the scourge of Europe. Such dreams savored of high treason, and it was Moreau's misfortune to have entertained them. His independent force never existed except in his imagination; his coöperation with Russia and Prussia became a reality. In the month of August, 1805, the principal adviser of the Emperor Alexander, Prince Czartoryski, offered Moreau the place of general in the ranks of the allied armies. At that time, Moreau had left for America. He wrote a polite answer to the Emperor, refusing his offer. In 1812, when war broke out between the United States and England, Moreau offered his services to President Madison. His wife fell ill, and left for Europe. Bernadotte, who had become Prince Royal of Sweden and had entered into the coalition against Napoleon, made new offers to Moreau, through Madame de Staël. At the end of 1812, Moreau sent his aide-de-camp, Repatel, with instructions to St. Petersburg and Stockholm. He wrote a letter to Bernadotte, in which he said: "I am ready to enter France at the head of French troops, but I cannot conceal from you my repugnance to reëntering it at the head of foreign troops." He left America with a passport (under the name of John Caro, born in Louisiana) on June 21, 1813. On July 26 he landed at Gothenburg, and the Swedish general who received him said to him: "You bring us in your person an army of a hundred thousand men."

Moreau left Sweden somewhat disgusted with the personal and egoistical views of Bernadotte, and, joining the headquarters of the allied sovereigns, found the Czar at Prague, where he met Jomini. The rest is well known: at the battle of Dresden, Moreau was riding next to the Czar, between too English officers, Cathcart and Wilson; he was struck by a cannon-ball and mortally wounded.

Correspondence.

KENTUCKY AND THE BOSS.

TO THE EDITOR OF THE NATION:

SIR: William Goebel, a Senator for the State of Kentucky and contestant for the

office of Governor before the General Assembly, was shot and probably mortally wounded on Tuesday last, while entering the capitol at Frankfort. Kentucky has an unenviable and to some degree a deserved reputation for crimes of blood, but this most shocking episode of our history needs some explanation. I have yet to find a man, Democrat or Republican, of any standing who believes it was the act of any but some irresponsible and over-excited individual acting for himself alone. His escape amid the excitement that immediately followed the crime is regretted by all parties, as his punishment by process of law was certain. The crime itself has been extenuated by no one. Both parties stand appalled at the monstrous conditions that made it possible; both want peace, both are afraid to push their cause to the arbitrament of arms. But one man is responsible for the condition, and that man is the victim lying prone and dying at Frankfort.

Goebel has his example in Quay, in Tammany, and in the bosses of Ohio. These succeed in their respective States, and resistance ceases with an indignant editorial in the opposition paper and then supine submission. I take some pride in the thought that among us civil liberty is not so lightly held, and that resistance to the tyranny of an irresponsible political ring is not so feeble. We will not submit; and though our rougher virtues show at times the savage characteristics that exist unfortunately to some degree, yet we can give assurance to the world that liberty shall not die among us in our own time, that no political tyrant shall rob us of political liberty. Amid all this turmoil, life and property are safe and shall continue so. Kentucky even to-day is not an armed camp. Outside of Frankfort, business proceeds without disturbance. A calm, resolute, and determined people know their rights, and are determined lawfully to preserve them. A DEMOCRAT.

LOUISVILLE, February 2, 1900.

A HARMONY OF ABBOTT GOSPELS.

TO THE EDITOR OF THE NATION:

SIR: As you are nearer the Editor of the *Outlook* than many of us who have been trying to comprehend his apologies for Sulu slavery under the American flag, and destined expansion in general, perhaps you can the better reconcile his present arguments with comparatively recent teachings of Lyman Abbott. In 1896 Dr. Abbott published an attractive little book, entitled 'Christianity and Social Problems.' In it are the following words on self-government:

"The birth at Bethlehem sounded the knell of imperial prerogatives and privileged classes throughout the world. What is liberty? 'The true liberty of a man,' said Carlyle, 'you would say consisted in his finding out, or being forced to find out, the right path and to walk therein; to learn, or to be taught, what work he is actually able to do, and then by permission, persuasion, or even compulsion, to be set about doing the same. Oh, if thou really art my senior, my elder, or priest—if thou art in any way wiser—may a beneficent instinct lead and impel thee to conquer and command me! If thou do know better than I what is good and right, I conjure you, in the name of God, force me to do it; were it never by such brass collars, whips, and handcuffs, leave me not to walk over precipices.'"

Dr. Abbott thus quotes Carlyle's idea of liberty, which is a good plea for benevolent assimilation, and then he gives this vigorous answer:

"No, this is not liberty; it is servitude. Servitude may be better than walking over precipices; but it is not liberty. Liberty is ability to do as one pleases. Freedom is the exemption from the power and control of another; this is liberty. It assumes not that every man can safely govern himself, but first that it is safer to leave every man to govern himself than to put any man under the government of another man, or any class of men under the government of any other class; and, secondly, that there is such potentiality of self-governing power in every man, such capacity to learn by his blunders, that he will acquire a wisdom and a self-restraint through the very perils of self-government, which he will never acquire under the protecting government of others wiser and better than himself."

This seems to be sound doctrine, but it does not harmonize with the *Outlook*. This was the doctrine of the Republican party in enfranchising the freedmen of the South. Kentucky, according to the Carlyle idea of self-government, may be in need of brass collars, whips, and handcuffs, but Dr. Abbott believed, four years ago, that it were better policy to allow the Kentuckians to learn through the perils of self-government than to place them under a protecting government better than themselves. Why does not the Filipino possess "potentiality of self-government, and capacity to learn by his blunders, that he may acquire a wisdom and self-restraint through the very perils of self-government, which he never will acquire under the protecting government of others better and wiser than himself"? If you can explain the Lyman Abbott of 1900 in the light of the Lyman Abbott of 1896, you will confer a favor upon a reader of the *Nation* and the *Outlook*. ARTHUR C. LUDLOW.

CLEVELAND, O., January 31, 1900.

THALIA.

TO THE EDITOR OF THE NATION:

SIR: Mr. Paul Leicester Ford, in the "spinning and weaving" of his novel, 'Janice Meredith,' appears to have caught up one small filament of rather doubtful quality. In the fourteenth chapter are some verses, presumably of Mr. Ford's composing, entitled, "To Thalia." The opening stanza is as follows:

"These lines to her my passion tell,
Describe the empire of her spell,
A love which naught will e'er dispel,
That flames for sweetest Thalia."

The scansion of the fourth line shows that the author accents the name Thalia upon the first syllable. In other words, he treats it as if it were a rhyme to "Badalia" (of Gunnison Street), whereas, according to both rule and custom, it is a rhyme to "Obadiah." That it is intended to be pronounced as a trochee is made clear by the remark put into Tibbie Drinker's mouth a little later, that "If thee copies it fair, and puts in 'Delia' or 'Celia,' 'twill do to show to the girls." It may, perhaps, be granted that to Tibbie and the Merediths a popular mispronunciation like Tha'lia would be allowable; but a like concession cannot be made to the hero Charles. He is a man of culture, who, knowing his Pope, would surely recall the lines of the 'Dunciad'—

"There sunk Thalia, nerveless, cold and dead,
Had not her sister Satire held her head."

And Charles is not the man to affront one of the Graces by giving currency to a mispronunciation of the lady's name; he is far too gallant.—Yours truly,

FRED NEWTON SCOTT.

UNIVERSITY OF MICHIGAN.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* appearing to-day, p. 88, on Hindu Proverbs, citing *ne sutor*, I see I have carelessly written *ultra* for *supra* (*crepidam*). I should like to correct the obvious error.—Yours truly,

WASHBURN HOPKINS.

NEW HAVEN, February 1, 1900.

Notes.

'John Ruskin,' by M. H. Spielmann, will be issued directly from the press of J. B. Lippincott Co.

A. Wessels Co. of this city, successors to M. F. Mansfield & A. Wessels, announce 'London Souvenirs,' by C. W. Heckethorn; 'The House of Commons,' by Sir Richard Temple; 'The History of the Temple,' by G. Pitt-Lewis, Q. C.; 'Aubrey Beardsley: A Catalogue of his Drawings,' by A. E. Gallatin; 'Ivory Apes and Peacocks,' by "Israfel"; and 'The Search of Ceres,' poems by Sarah Warner Brooks.

"Macmillan's Pocket American Classics" series, set down for the spring, will consist of 18mo volumes derived from Irving, Poe, Franklin, Lowell, and Cooper; "Pocket English Classics" will be continued with selections from Milton, Scott, and Shakspere. The same house has in preparation 'European Travel for Women,' by Mrs. Mary Cadwalader Jones, and 'The Nervous System of the Child,' by Dr. Francis Warner.

Henry Holt & Co. are to publish 'The Practical Study of Languages,' by Prof. Henry Sweet; 'Specimens of Forms of Discourse,' by E. H. Lewis; and an anthology for wayfarers, 'The Open Road,' compiled by Edward Verrall Lucas.

'Trusts and the Public' is the title of Mr. George Gunton's new book, to be published immediately by D. Appleton & Co.

Charles W. Sever & Co., Cambridge, Mass., announce a second edition of Thayer's 'Cases on Evidence,' to be out in August next. It will have considerable changes, remaining, however, of substantially the same size as before.

Small, Maynard & Co., Boston, have in press 'The Anglo-Boer Conflict,' by Alleyne Ireland, and 'Indian Story and Song from North America,' by Miss Alice C. Fletcher.

The American publishers of 'The Expansion of Egypt,' reviewed by us in No. 1804, are the New Amsterdam Book Co. of this city.

Stately reprints at a very low cost are the two volumes of "Macmillan's Library of English Classics" before us, viz., Sheridan's Plays and Bacon's Essays. The series, which will number at least twenty-five volumes, will make its way by handsome typography and careful collation of texts. Mr. A. W. Pollard, in charge of the latter, furnishes for each volume a bibliographical introduction, and no other apparatus is promised. In the case of Sheridan, he has followed Moore's text, with correction of some carelessnesses that have been perpetuated. The text preferred for the Essays is

that of 1675, and the volume is filled out with "The Colors of Good and Evil" and "The Advancement of Learning." The spelling has been modernized, and Mr. Pollard has generously added a glossary and a translation of the Latin quotations. This series, which ranges from Sir John Mandeville's Travels to Carlyle's 'French Revolution,' and from Shelton's 'Don Quixote' to De Quincey's 'Confessions,' must command a widespread popularity.

A still more striking reprint is the small-quarto edition of Gilbert White's 'Natural History of Selborne' (London and New York: John Lane), edited by the late Grant Allen. This is so handsomely printed and bound, so copiously and aptly illustrated, so carefully edited and indexed, as to discourage any near attempt to rival it. Coleridge's annotations upon his own copy—made somewhat apologetically, for fear of "lessening the value of this sweet delightful book"—are now first printed. They are remarkable, not so much as corrections of White's occasional errors, nor even as new evidence of Coleridge's encyclopædic knowledge, but as adding the testimony of so sound a critic to the charm the book possesses for so many and so different people—enduring after a hundred years and into nearly a hundred known editions.

White's influence that was apparent in Mr. Dewar's 'Wild Life in the Hampshire Highlands,' which we recently praised, also appears in Mr. J. Arthur Gibbs's 'A Cotswold Village' (London: John Murray; New York: Scribners). This is a bulky duodecimo, handsomely printed and illustrated. The subtitle, "Country Life and Pursuits in Gloucestershire," is more aptly descriptive of the book, which is a pot-pourri of local history and tradition, fox-hunting, shooting, fishing, cricket, politics, landscape, and architecture. In this last feature Gloucestershire is rich, possessing not only the Roman remains of Cirencester and its environs, but examples of all the periods of English Gothic, from the early Norman churches down to those oak-raftered Elizabethan barns which pass for architectural masterpieces. In describing them, the author is appreciative and not too technical, whereas the lovely Gloucestershire landscape is apt to seduce him into a reckless use of adjectives. His aim throughout is so modest ("to please rather than to instruct") that he is safe from unkind criticism, unless, perhaps, from the unhappy puffins whom he introduces as kin among the hawks (p. 112)!

Those who have enjoyed Mr. Maurice Hewlett's 'Earthwork Out of Tuscany,' first published daintily some four years ago, will extend a welcome to a new (third) edition (Putnams), backed in white and gold, with the illustrations increased by several photogravures. It would appear, then, that the elect who have yielded to his impressions of Italy, and of whom in the second edition he could say, "Not more than two in every hundred who have read me have known what I was at," have increased in numbers. Whether for what he calls the religion of his book, or for the poetry of his style, these fantastically entitled pictures, essays, allegories, and stories are warmly to be commended anew.

Mr. Edwin Emerson, jr., had a brilliant opportunity for satire in bringing back 'Pepys's Ghost' to walk among our own contemporaries (Boston: Richard G. Badger & Co.). The first of his adventures are told divertingly, and are quite in the vein; but dragging the old fellow through Cuba with the Rough Riders was cruel hard, and left him, on his return to Montauk, but the shadow of a shade. Pepys's judgment of men during this incarnation seems, perhaps, less shrewd than of old. It was quite in character, however, that a man corrupted by the loose and convivial ways of Charles's navy should have shrunk before the austere rectitude of Admiral Sampson.

Miss Pamela Coleman Smith, who hails from Jamaica and is vouched for by Thomas Nelson Page, gives us the 'Annancy Stories' (R. H. Russell), a collection of local negro tales on the Uncle Remus order. For Breda Annancy's usurpation of Brer Rabbit's honored position we are prepared, and likewise for the substitution of Breda Paarat and Breda Tiger, with other unfamiliar beasts, in the more humble rôles. It is with some surprise, however, that we fail to find more of the familiar earmarks, that we had been led to believe were in this hemisphere visible in all negro animal stories, denoting their common origin. We discover in this series but two which are even suggestive of those in Mr. Harris's extensive collection. Annancy's adventure with the wasps and as the rider of Breda Tiger remind us of Brer Rabbit and the mosquitoes and his humiliation of Brer Fox before "Miss Meadows en de gals." In other instances Grimm's Fairy Tales seem to have been the source of inspiration. Copious illustrations from the author's pen fill this little volume, which is not unamusing.

'Mexican Vistas,' by Harriott Wight Sherratt (Chicago: Rand, McNally & Co.), purports, according to its motto, to set forth certain analogies to the land of Edom, in compassing which "the soul of the people was sore discouraged." But Mrs. Sherratt's soul was never discouraged, in spite of the ruggedness of Mount Seir. The analogy might have been pressed judiciously in other directions. In more ways than one, Mexico is the American Edom. We have here, however, no critical study, but a jolly record of travel by a bright, jovial woman, who has presented her experiences in conventional language that will oppose no difficulties to the ordinary Pullman-car reader. The pictures of life are faithful and free from exaggeration, and the comments on customs and racial idiosyncrasies are unusually kind and sympathetic. The illustrations are a help to the text, but the reader should be warned not to follow the author's spelling of Mexican names without verification.

Signor Lanciani's 'Destruction of Ancient Rome' (Macmillan Co.) is a duller book than we had supposed so bright a man could make. But it is obviously a pot-boiler, consisting of little more than a brief catalogue or summary of the destroyers and the things which they destroyed. The general reader will find the treatment too meagre to be of interest, and scholars will wait for the larger work promised by the same author.

Mr. E. S. Shuckburgh may fairly be congratulated upon a piece of good and useful work in his translation of the 'Letters of Cicero' (London: Bell & Sons; New York: The Macmillan Co.). Two volumes are already published, and when the whole (in four volumes) has appeared, it will furnish the first English translation of the entire series of letters which passed back and forth between Cicero and his friends, a correspondence not surpassed in interest and importance by any other that is known. The two volumes cover the years 68-49 B. C. To each volume is prefixed an introduction on the principal events in Cicero's private life and on public affairs, and nearly every page is supplied with notes on social, historical, and biographical matters. Mr. Shuckburgh has succeeded in making the letters read like genuine productions, not rhetorical imitations of epistolary correspondence. The colloquial style which he has adopted is free from dulness, and yet seldom degenerates into offensive modern slang. We wish that the printer had left us a little more inside margin, for the books do not open easily; but the paper is good and the ink black.

No. 40 of "The Religion of Science Library" (Chicago: Open Court Co.), entitled 'Kant and Spencer,' by Dr. Paul Carus, being a criticism of Spencer and his agnosticism, and a comparison of his metaphysics with that of its true author, Kant, is well worth attention. In some recent remarks on Kant as an important precursor of modern evolutionism, we were probably influenced unawares by one of the chapters of this brochure which had appeared in the *Monist*. We shall not express approval of the acrid tone of the criticism, which is of a kind obsolescent even in Germany. To say that Herbert Spencer has been a man who "shirks the toil of research" is not to invite philosophical discussion, and is really too much. It is difficult to conceive how such personalities can be to the taste of a philosopher, *i. e.*, of a man intent mainly on supplying the defects of his own knowledge. In this country, they will not even serve the purpose of the man who is only eager to teach. Mr. Spencer has surely put out his talent to usury if ever any man did; and what he has succeeded in accomplishing must, in any fair estimate, be called immense—an epithet that leaves room for an infinite shortcoming, of course.

Prof. Carl Budde of Strassburg has proved himself one of the most fruitful and original of the younger students of Old Testament problems. His Qinâ discovery and his hypothesis of the "Song of Songs" and of the "Song of the Well" have been definite and permanent steps in advance. A full recognition of the comparative method in history, sociology, and literature has characterized his work, and his views, whether accepted or not, have always tended to bring clarity into the subject of them. Yet only with the present little volume on the 'Religion of Israel to the Exile: American Lectures on the History of Religions' (G. P. Putnam's Sons) have we a connected statement from him in Old Testament theology. His attitude on many points, on some of which he differs widely from the dominant school, was already known; but this gives us his reconstruction, as a whole, of the early development of the religion of the Hebrews. In that respect the book has great importance for the specialist; and the non-specialist, to whom it is primarily addressed, will find in it a lucid résumé of the positive results of the newer criticism. It is one of the best, if not absolutely the best, in the series to which it belongs.

It may be of general interest to learn that the Library Company of Philadelphia has just been presented with five large

volumes of newspaper cuttings from foreign papers during our civil war. The London *Morning Star, Daily Post, Daily News, Daily Telegraph, Morning Chronicle,* and Manchester *Examiner* are some of the English papers contributing to these excerpts.

The desert sand-dunes bordering on the Nile Delta, their origin, growth, and structural characteristics, are described in the *Geographical Journal* for January by Mr. V. Cornish. He touches also on the attempts made to check the progress of the sand, which in a stiff breeze amounts to three-quarters of an inch per hour, by plantations mainly of casuarina. The peasants "seem to have an inherited aptitude for the work [of planting], which they do with a will" for a wage of a franc a day. Vice-Admiral Makaroff of the Russian navy contributes an interesting account of the *Yermak* ice-breaker and its cruise last August to the north of Spitsbergen, together with some observations on the movement, temperature, strength, gravity, and salinity of the polar ice. Its maximum thickness it was impossible to determine. An unexpected result of the cruise, which may lead to the use of these ice-breakers in arctic and antarctic explorations, was the discovery of the ease with which polar ice was penetrated in comparison with that of the Baltic. The salt polar ice, fourteen feet thick, "provided there is room to remove the broken parts," cracked more easily, and progress in it was more rapid than in the fresh-water ice in the Baltic "composed of pieces no more than two to three feet thick." The *Belgica's* experience in the cutting of a canal to enable it to escape from the antarctic ice-pack would seem to tally with this. Both articles are fully illustrated.

A specimen number of the *Russian Journal of Financial Statistics,* printed in St. Petersburg, is being distributed gratis, and presents some curious aspects. Announcement is made that a second number will also be distributed free, and the first year of the *Journal* will begin with the issue of September, 1900. No subscriptions will be received before August. Not only is this initial number printed in English, but its 236 pages are devoted to a defence of Russian finance against foreign criticism, notably that of the London *Economist.* It has the flavor, therefore, of a Government or official issue, and of a campaign document. However interesting may be the matter it contains—and many topics are treated—its political features stand foremost. The debt, liquor monopoly, and budget statements, and the account of Russia as a proprietor and capitalist, are all of value, and, with a little suppression of the polemical spirit, will do service in making foreigners better acquainted with the financial concerns of that great empire. The *Journal* is not intended to take the place of the *Bulletin Russe,* but to supplement it, more directly in its financial statements. Russian finance has always been a perplexing matter, for the policy of the Treasury has been subordinated to state policy. The editor, "G. B. V.," makes a good hit at the political statisticians of the United States Treasury, and points out their superficiality.

A striking illustration of the remarkable celerity with which armies can now be transported from one part of the world to another was given in the recent "experimental" movement of Russian troops. On December 24 a force, variously estimated at from one to two battalions or divisions even, left Tiflis in the Caucasus by rail for Baku, crossed the Caspian, and then went by rail to Kushk on the frontier of Afghanistan, a distance of some 1,500 miles, arriving on January 1. While the act is described by the Russian military authorities as an experiment, it may be indicative of the intention of Russia to avail itself of Great Britain's stress to break through to the sea and secure a port.

A plan, first conceived thirty-five years ago, by Richard Wagner, and since then never quite abandoned, is just beginning to take shape in the erection of a new theatre at Munich. The proportions and arrangement of the interior will be those of the Wagner Theatre at Bayreuth, and the building will be constructed in part after the plans drawn by the architect Semper in 1865. It is intended exclusively for the German musical drama and the Shaksperian and other great classical plays, all to be put under one management with the other two royal theatres. The probability, therefore, is, that after March 12, 1901, the day on which it is proposed to open the new house with the representation of the "Meistersinger," devotees of Wagner will direct their pilgrimage to the Bavarian capital rather than to the crowded Franconian town.

The representation, a few weeks ago, of Ibsen's "Nora" in German before an enthusiastic mixed French and German audience in one of the theatres on the Paris boulevards, followed by favorable, even flattering, notices in many of the daily papers, forms a significant contrast to the chauvinistic outbursts of last summer. One ought never to forget that Frenchmen must not be taken too seriously in their manifestations of hatred or of love. The generous reception accorded to this German company, the first that has ventured to appear in the French capital since the great war, is in large measure due to the artistic excellence of the leading actress, Frau Agnes Sorma—a new proof that the highest art transcends the bounds of nationality.

—Prof. Rufus B. Richardson, Director of the American School of Classical Studies at Athens, writes us under date of January 16 as follows:

"Salomon Reinach, whose judgment weighs as much as that of any archæologist in France, in the *Revue Archéologique* (1899, p. 239), after giving the substance of an article contributed by me to the *Nation* of August 24, 1899, adds the following paragraph: 'The excavations at Corinth have cost about fifteen thousand francs a year; it is very little for excavations of this sort, and the American School with reason complains of not having larger sums at its disposal. Certainly archæological achievements like the recovery of the topography of Corinth ought to suffice to recommend the young and valiant school to the liberality of American Crœsuses.' Prof. Wilamowitz-Möllendorff, who occupies a similar position among the scholars of Germany, in the *Deutsche Literaturzeitung* (May 6, 1899, p. 701), says of the excavation of Peirene: 'By this the cornerstone for the topography of Corinth is found. One can wish nothing better for the young institution [the American School] than success in a great undertaking which of itself will augment its powers and lend steadiness to its aspirations.' These utterances of great foreigners are consoling; but they cannot prevent the enterprise which they praise from lapsing unless haply they help to bring home to some rich American the importance of our work. With this object I wish to give these utterances a wider circulation."

—The current quarterly instalment of the Oxford Dictionary (Henry Frowde) is Mr. Henry Bradley's, and carries the letter G from Glass-coach to Graded. Nearly twenty-one columns are occupied with the monosyllable Go, some American uses of which have naturalized themselves in England or (as "go ahead," "go back on") are in a fair way to do so. "Go in for" is cited, through Bartlett, from the *Tribune* of December 25, 1849; in 1862 *Temple Bar* tried it tentatively between quotation marks, in 1863, Kingsley boldly (in 'Water Babies'), and now it is any Englishman's property. Gen. Perronet Thompson, whose sympathy with our abolitionists made him an interested student of American affairs, in 1840 wrote of "the active, the wide-awake, or, as the Americans would call it, the 'go-ahead' portion of the Established Sect," and in 1859 Mill asks, "Do we find in Canada that go-ahead spirit?" while Kingsley in 1864 exclaims, "What a go-ahead place France is!" The Gallicism "goes without saying" is first traced to *Scribner's Magazine* in 1878, but it is, of course, much older. Gown, whose Celtic derivation is here disputed, has undergone fluctuations in English usage, after being the ordinary word for a woman's garment in the eighteenth century. We have been more conservative than John Bull, and "in the United States it has always been the current word." Grab, employed intransitively, takes only *at* in England, while we feel free to use *for* also. A little dry humor lights up the record of the expression "good time," which Pepys found handy in 1666, and Carlyle, Trollope, and Stevenson did not disdain. "Now regarded as an Americanism," notes the editor. Good is another of the major articles of this number. "To the good," or with the balance on the right side, crops up in the *Spectator* in 1882. Goody-goody is referred to Samuel Smiles in 1871. The formal development of Good-by out of "God be with you" is very curious. God is another voluminous rubric; and the fact that in Gothic and Old Norse it always follows the neuter declension, leads to the remark that "the neuter substantive, in its original heathen use, would answer rather to Latin *numen* than to Latin *deus.*" Gloat, though common in the seventeenth and eighteenth centuries, was unknown to Dr. Johnson; and in 1755, Glee, meaning 'merriment,' was to him a purely comic word. Milton's use of Gloom nine times for 'darkness' seems to have extinguished the sense for a time; it is next seized in 1717. The poets, by the way, let slip a sonorous word in the obsolete Governail, whether for 'rudder,' 'government,' 'reign,' 'state,' or 'behavior.' Golf, which most Americans sound with the *l,* the Scotch pronounce *gowf;* and *goff,* "somewhat fashionable in England, is an attempt to imitate this." Finally, as Shaksperian has got the better of Shaksperean, Goethian is here preferred to Goethean.

—Volume xxiv. of the Memoirs of the Museum of Comparative Zoölogy at Harvard College consists of Samuel Garman's report on the deep-sea fishes obtained by the *Albatross* expedition under Alexander Agassiz in 1891 in the equatorial Pacific. The area dredged lay east of the Galapagos Archipelago and on a line from it to the peninsula of Lower California. The greatest

depth that rewarded the dredge was 2,232 fathoms, and 900 out of more than 1,200 specimens of fishes secured were bathybial, representing 180 species, of which 85 per cent. were undescribed, as equatorial deep-sea collecting had hardly been attempted before 1891. The result disproves a theory of bipolar distribution, with absence of deep-sea fish from the torrid zone. The forms least capable of migration exhibit the greatest divergences in specific characters. In vertical distribution, temperature counts for much more than pressure, and the bottom having a light of its own (so that blind fish are rare), while the light from the surface reaches to 200 fathoms, the dark intermediate zone is one of passage, not of habitat. There appears to be evidence of a gradual upheaval of the Isthmus of Panama, permitting a commingling of shoal-water fish, while obstructing bathybial interchange. Such are some of Mr. Garman's interesting conclusions in his general introduction to the specific description of the collection. There follow essays on the lateral-canal system and on the distribution of genera (in detail; a valuable list of the known species of deep-sea fishes, showing range and locality; a bibliography, etc. The ninety-seven plates, beautifully executed and curious in a high degree, form a separate volume (xxvi.). The whole work is a model of its kind.

—The second volume of the 'Letters to Washington,' published by Houghton, Mifflin & Co. for the Colonial Dames, opens with Washington on the frontiers of Virginia, in command of a force insufficient in numbers for the purpose of defence, and rendered less efficient by the want of pay, clothing, proper food, and a definite plan of operations. The Earl of Loudoun was echoing the complaints of Dinwiddie, and the latter was restive under the apparent obstinacy of the Virginian Colonel. Washington's position was thus a difficult one, for he was obliged to ward off criticism, to temper impracticable orders, and to feed and discipline his troops with little encouragement from his superiors. It was a wholesome training for future service, and taught him that patience and regard for his men which were to be exercised to the full in the wider sphere of the Revolution. These letters of complaint, of correction, and advice point to his wide interests and connections, but leave an impression of thankless labor, until Col. Bouquet came forward, and some design and energy was infused into the campaign. Washington had broken down in health under the pressure of responsibility thrown upon him, but he was again able to bear his share when a military leader was substituted for the good-intentioned but inept and ambitious Dinwiddie. The advice of his friends, to endure all, bore fruit, and he was counted among the advisers of the campaign. This volume closes with Washington's election to the House of Burgesses.

—Although the labor of the editor has been better bestowed and shows an improvement in accuracy over the first volume, some vagaries point to an absence of real appreciation of the responsibility of editorship. There is the same curious introduction of dashes, lines, and interlined words, meaningless in themselves and not illustrating the character of the writing. A half-dozen facsimiles of the letters, scattered through the volumes, would have cost less and been infinitely more suggestive and valuable. Not content with this minute following of the unessential form of the text, Mr. Hamilton adds (*sic*) or a note, assuring the reader of his accuracy. In the face of such parade, what is to be said of the use of Botomworth for Bosomworth, wherever the name is found, although a mere reference to the army list would have prevented such an error? Mr. Hamilton gives no good reason for omitting entire phrases from Dinwiddie's letters. The manuscript may be mutilated, but the letters have been printed by the Virginia Historical Society, and it would have been a simple matter to insert the missing words, thus saving the necessity of consulting both printings to obtain the sense. Where the writers of the letters have exercised so much freedom in spelling, it is somewhat rash to suggest error in the printing, but a few doubts are awakened. As examples may be named *county* on p. 182, which should probably be *country*; "*attain* to influence" on p. 346 is a misprint for *attend*; and a "sure and settled affair" on p. 140 is sometimes read as "*done*," etc. The instances of actual misprints could be multiplied, but the following may serve to show carelessness: Hackett for Halket; Atkins (more than once) for Atkin; Massapipi for Massassipi; and Tulither for Tuliken. Mr. Hamilton will still find occasion for greater care in his readings.

—'The Birds of Rhode Island,' by Reginald Heber Howe, jr., and Edward Sturtevant (Newport), is a privately printed book of about 100 pages, comprising a carefully annotated list of 291 species, with a review of previous works on the same subject, a full bibliography, and a chapter on the migration of birds in Rhode Island. It has been prepared with great care and thoroughness, and is in every way a credit to the authors. It is, moreover, the first attempt at a complete enumeration of the birds of this State. It is neatly printed on excellent paper, is very free from typographical errors, and, with its six half-tone plates, forms a very attractive and authoritative little volume. In the case of the rarer species, the authority for their occurrence is duly stated, each instance of capture being enumerated and duly accredited. As a rule, the annotations relate to the manner of occurrence of the species within the State, and give, in a general way, the dates of arrival and departure of the migratory birds. Three species, formerly more or less abundant, are recorded as extirpated, namely, the Heath Hen, the Wild Turkey, and the Passenger Pigeon. Ten species, most of which have been attributed to the State, have been excluded from the main list on the ground that there is not as yet conclusive evidence of their occurrence. This evinces a spirit of proper discrimination that cannot be too highly commended in the compilation of all similar lists, the value of which so largely depends upon the just separation of the known from the unknown.

—One of the most interesting of modern languages is Hindustani. Formed artificially in Akbar's camp, by the union of two radically different races, it has long lived as the tongue of soldier, bazaar-peddler, and servant, the *lingua franca* of Northern India, adopted perforce by the conquerors much as Saxon was contemptuously employed by the Normans. It has been a language changing from day to day, without literature of any kind to fix it, lasting as a whole but of ephemeral form. It is not only satisfactory to have caught at last this floating composite; the language and literature, such as it is beginning to be, furnish to the student a valuable parallel to the origin of other languages and literatures—for example, English and Albanian. Of the scanty literature that has arisen in the last few decades, very little has hitherto been available without a knowledge of Persian script, and even then what has been written has been difficult of access to those outside of India. A praiseworthy effort on the part of Mr. G. E. Ward goes far to relieve the embarrassment of such as have sought help in this regard. The number of "English ladies who desire to study Hindustani," for whom 'The Bride's Mirror' of Nazir Ahmad has been edited in Roman character with a full vocabulary and copious notes (Oxford: Clarendon Press: New York: Henry Frowde), will probably be confined to those whom fate has taken to India, but the book will prove useful to the student of language everywhere. For the tale itself as literature (it is a novelette), not much can be said except that it is placid. Its beauty lies in the fact of its being literature, *terra firma*, one of the few islands in the ocean of this shifting speech. Mr. Ward has unfortunately thought out some original ideas on the subject of language in general, and embodied them in an Introduction remarkable for its daring ignorance, as an example of which may serve "Hindustani *êk* (one) derived from Persian *yak*," in evidence of the "fact" that all words must originally have begun with consonants. But we forgive Mr. Ward his Introduction in view of the excellent service he has done in providing a good primer for the study of Hindustani.

GOSSE'S LIFE OF DONNE.—I.

The Life and Letters of John Donne, Dean of St. Paul's. Now for the first time revised and collected by Edmund Gosse, Hon. M.A. of Trinity College, Cambridge, Hon. LL.D. of the University of St. Andrews. 2 vols., 8vo. London: Heinemann; New York: Dodd, Mead & Co. 1899.

No trustworthy account of Donne's life existed before the Rev. Dr. Jessopp contributed a memoir of him to the Dictionary of National Biography. This, though brief, showed such acquaintance with the subject, and such appreciation of Donne's character, as to lead to the expectation that the volume entitled 'John Donne, sometime Dean of St. Paul's,' which Dr. Jessopp published in 1897, would fill the long existing want of a satisfactory biography of the famous poet and preacher. The expectation was only in part fulfilled, for the work was but a sketch, in which the author "dealt with Donne as one of the great leaders of religion in his time," leaving the other sides of his activity comparatively disregarded; and in his preface he resigned the hope "of issuing the life and letters of the great Dean" to Mr. Edmund Gosse, as the man in England best fitted to accomplish the task because of "his subtile sympathy with Donne's poetic genius." "It is from him," said Dr. Jessopp, "that any adequate and elaborate biography is to be looked for." It was consequently with

great interest that the students of Donne anticipated the work of Mr. Gosse and welcomed its appearance.

The material which Dr. Jessopp had been collecting for fifty years he generously placed at Mr. Gosse's disposal. Other material was not wanting. There was, first, the delightful so-called "Life" by Walton, one of the most exquisite pieces of biography in the language, inspired with the enthusiasm of admiring devotion, but as inaccurate and insufficient in its account of Donne's career as it is tender in feeling and delightful in expression. Besides this, there was the confused collection of Donne's letters published by his son in 1651, while other letters were to be found in the 'Cabala' (1651), and in Sir Tobie Matthews's Collection, printed in 1660, and yet other letters and documents, published and unpublished, were to be gathered from various sources, and to be used in what Mr. Gosse calls "perhaps the most imposing task left to the student of Elizabethan and Jacobean literature," and the one "above all others dealing with this literature now required to be performed." While Dr. Jessopp's interest in Donne was mainly in him as a divine, Mr. Gosse declared his to be mainly in him as a poet, for "to me," he says, "Donne is quintessentially a poet." With Dr. Jessopp's aid and promised revision, there was reason for hoping that Mr. Gosse's work would afford an adequate and satisfactory Life of the poet and preacher.

The book has been received in England with a chorus of commendatory notices. The *Athenæum* of November 11, 1899, declared that

"Mr. Gosse's subtle and solid study of John Donne justifies expectation. It will take rank at once, not merely among its author's happiest contributions to the finer understanding of English letters, but also among the all too few masterly biographies of subjects worthy to receive masterly treatment. . . . That anything written by Mr. Gosse upon this particular poet would be full of sympathy, the world knew well; but let it be said at once that the book has other qualities, the possible absence of which did, when it was first announced, fill us with some trepidation. It is a brilliant portrait; it is also a laborious and exact work of literary history. The complicated and disorderly material out of which it was necessarily constructed is full of pitfalls; and the little demon of inaccuracy, who occasionally takes his stand at Mr. Gosse's elbow, has before now tripped him up on this very topic. It would be too much to say that there are no slips and errors of fact in these two bulky volumes; but, after making a careful and detailed examination, we are convinced that, in proportion to the difficulty and minuteness of the work, the total number of desirable corrections is infinitesimally small."

The final words of the *Athenæum's* notice are: "We can only conclude by once more expressing our sense of the debt which English letters owes to Mr. Gosse for his faithful presentment of one of its most unparalleled and fascinating personalities." The *Spectator* of the same date, while finding some points of question in parts of Mr. Gosse's work, asserts that he has laid his readers "under an immense debt of gratitude," and "has rendered a permanent service to literature."

A large part, somewhat more than two hundred pages, of Mr. Gosse's volumes is taken up with a reprint of all the accessible letters of Donne. Few of the one hundred and twenty-nine published by Donne's son are dated, and they are printed in the original and hitherto only edition of them in almost inextricable confusion. Mr. Gosse has rendered good service in doing his best to present them in their due chronological order. Another large part of the volumes is occupied with an account and analysis of Donne's poems and other writings, and the student or lover of the poet is likely to turn to this portion of Mr. Gosse's work with especial interest, because much of Donne's poetry, while it serves to illustrate his strange career and stranger character, presents such difficulties as to require intelligent and appreciative exposition in order that its true merits may be understood—merits which led Ben Jonson, one of the most capable of critics, "to esteem John Donne the first poet in the world in some things."

In his second chapter Mr. Gosse deals with the earliest of Donne's poems, his Satires, of which the first four were probably written when Donne, born in 1573, was hardly more than twenty years old. They are extraordinary performances for a youth. Though rugged in versification, they show as a whole remarkable breadth and keenness of observation and maturity of thought. Mr. Gosse introduces what he has to say of them with an account of the contemporaneous prevalence of this species of poetry in several countries of Europe. He attributes it largely to the influence of Casaubon's lectures at Geneva on Persius, and declares that "it is probably not too much to say that the criticisms of Casaubon created satire, in its exact sense, as a poetic form both in England and France." But though Casaubon lectured upon Persius at some time between 1590 and 1600 at Geneva, his edition of Persius did not appear till 1605, and Mr. Gosse seems to believe that the report of his lectures was so effective in England as to induce not only Donne, but Hall and Marston, who also wrote their satires before 1600, to adopt this poetic form, and so effective in France as to determine the direction of the genius of Régnier, who, born in the same year with Donne, 1573, "tout jeune encore," says his biographer, "songeait à des satires." Such influence of a work of pure scholarship, like Casaubon's notes on Persius, previous to its publication, would be, if well certified, an unexampled fact in literary history. But Mr. Gosse attributes to Casaubon a still more remarkable effect upon European literature. He says: "The edition of Theophrastus which Casaubon was to revolutionize European belles-lettres by publishing in 1598, was still unknown." Casaubon's edition of Theophrastus was indeed a remarkable work, and its notes still remain of value to the student of Greek literature. It was not published in 1598, as Mr. Gosse says, but in 1592, and must then have begun to exert that marvellous revolutionary influence, which, so far as we are aware, has not hitherto been noted by any historian of literature, and is not referred to by Casaubon's most learned and sagacious biographer, the late Mark Pattison.

After general discourse on the Satires of the time, Mr. Gosse proceeds to speak more particularly of those of Donne. In giving an account of the first of them he says: "Incautiously leaving his chamber for the streets of London, Donne is pounced upon by a 'fine, silken, painted fool,' the typical society man, who attaches himself to his arm and sails along with his morose companion." This sentence is not correct. The Satire begins with Donne's bidding a "wild, uncertain" fellow of "refined manners, but ceremonious man," who has sought him in his chamber, to leave him with his books, and not urge him to go out. But finally yielding, he says:

"Io!
I shut my chamber door; and come, let's go."

Now they are in the street, and among the persons whom they meet are "fine, silken, painted fools." Mr. Gosse's inaccuracy in this special instance is of slight moment, but its significance will shortly become apparent.

There is no one of Donne's earlier poems which is of more interest as an illustration of his character than his third Satire. It is an impassioned discourse, addressed to an unknown person, on the need of getting and holding to religion.

"Is not our mistress, fair Religion,
As worthy of all our soul's devotion
As virtue was in the first blinded age?"

Canst thou dare all dangers of sea and earth for mere repute of courage or for sake of gain, and yet, overcome by temptations of the devil, the world, and the flesh, wilt thou, O desperate coward, to thy real foes and His,

"who made thee to stand
Sentinel in His world's garrison, thus yield,
And for forbid wars leave th' appointed field?"

Seek true religion.

But at this injunction the question arises, Where shall true religion be found? One seeks her at Rome, another at Geneva; another accepts her whom he finds at home; another abhors all because all cannot be good; another loves all as one. But thou must allow but one, and that one the right. Distinguish between Truth and Falsehood.

"Believe me this,
He's not of none nor worst, that seeks the best."
"Doubt wisely; in strange way,
To stand inquiring right is not to stray;
To sleep or run wrong, is."

Strive, do hard deeds; seek hard knowledge; keep the truth which thou hast found; accept not thy religion at the command of Pope or King, for souls perish which rather trust the ordinances of men, though claimed to be of God, than God himself.

The whole satire is the utterance of intimate personal conviction; it is full of vigor of thought, no less than of expression, and it is of the more interest because its main conception, that religious truth was not to be found complete in the creed of any one church, was one of Donne's abiding convictions, as appears alike in certain of his letters and of his sermons.

Now concerning this important and significant poem, the general meaning of which is perfectly clear, Mr. Gosse makes the statement: "This is a diatribe against the extravagance and hypocrisy of the Religious Man!" and he further declares that it "is conducted in a darkness unusual even in the writings of Donne." He gives to it more than two pages, in which there is little but what, in the work of a writer of different reputation from that of Mr. Gosse, would be rightly called strange confusion and error.

The best known poems of Donne are his Lyrics. Like his Satires, they mostly belong to his earlier years—years before his marriage in 1601, when he was twenty-eight years old. They are full of the buoyancy, the fancy, the passionateness, the reckless-

ness and insolence of youth. They have a general autobiographical worth, exhibiting Donne as an inconstant but ardent lover of more than one mistress, leading a life in which religion and morality had little share; cynical, of poetic temperament capable of high exaltations and deep depressions, of exquisite delicacy of sentiment and extreme coarseness of mind, according as the spiritual or the sensual elements of his passionate and unbalanced nature had temporary supremacy in the mood of the moment. A few of these lyrics are among the most admirable in the language. No other poet has surpassed Donne in giving exquisite expression to refined and, at the instant, sincere sentiment; but also, no other poet of rank has surpassed him in preference for conceits to simplicity, and of obscure subtilities to limpid clearness of expression, and none has sunk lower in grossness. At his best, Donne is one of the most delightful of poets; at his worst he is detestable.

Mr. Gosse devotes his third chapter to these lyrics, and the reader, recalling that to Mr. Gosse "Donne is quintessentially a poet," is interested to learn what he has to say of these, the completest expression of Donne's poetic faculty. But before many pages are read the discovery is made that, in dealing with these poems, Mr. Gosse would seem, so absolutely unfounded are many of his statements concerning their contents and meaning, not to have read them with even ordinary attention or intelligence. For instance, speaking of a little poem entitled "A Fever," Mr. Gosse says: "In 'A Fever' the mistress of the moment is ill, but it only amuses the lover. The malady is an excuse for a *feu de joie* of conceits; she may die of it for all he really cares." The first stanza is perhaps a sufficient refutation of the charge that his mistress's illness only amuses the lover:

> "Oh, do not die! for I shall hate
> All women so, when thou art gone,
> That thee I shall not celebrate
> When I remember thou wast one."

And the poem closes with the words,

> "For I had rather owner be
> Of thee one hour than all else ever,"

which hardly indicates that she might die for all he really cared.

Again, speaking of another of these lyrics, Mr. Gosse says:

"His sensitive heart is ingenious in self-torture, and to what extremities it still can fling him [*sic*] we read in 'The Blossom.' The lady of the moment has left him a week ago, and in three weeks more he is to meet her in London. In subtle, modulated verse his heart taunts and plagues him, for he no longer knows what he desires nor what he is. His previous adventures have made him cautious, even sceptical, and he will not frankly give way to this sweet, insidious hope. He apostrophizes his own trembling heart, which knows not whether to bide with him or to follow the new and desired mistress" (i. 75).

From this version of the poem let us turn to the poem itself. It begins with one of Donne's loveliest stanzas, in which, addressing the flower, he sets forth its ignorance of its own brief life, and says, "little think'st thou that I shall to-morrow find thee fallen or not at all." In the second stanza he addresses his own heart, that little thinks that to-morrow it must go on a journey with him, leaving her whom he loves. But in the third stanza the heart replies: "If you must go, what's that to me? Here I will stay. You go to friends, and, if your body go, what need your heart?" "Well, then," replies the poet, "stay here, but know

> "'A naked, thinking heart, that makes no show,
> Is to a woman but a kind of ghost.
> How shall she know my heart, or, having none,
> Know thee for one?'"

And the poem closes with the direction of the poet to his heart: "Meet me at London, then, twenty days hence; I will give you there to another friend."

If the reader will now turn back to Mr. Gosse's words, he will see that what we called Mr. Gosse's version of this little poem should rather be called a perversion of it. It is inconceivable how, with the poem before him, he could thus misrepresent it. This is not carelessness, it is a procedure for which there are no words; nor is this a single instance of such procedure. One more must suffice. Mr. Gosse says of "The Apparition" that the "horror of his situation" overwhelms the poet "as he tosses between sleeping and waking." This is pure invention; the poem is a threat to his mistress that, when by her scorn he is dead, his ghost shall visit her and terrify her. The strangest part of Mr. Gosse's dealing with these poems is that he appears entirely unconscious of its nature, so that, after giving his false account of "The Apparition," he actually prints the poem itself, as if he fancied that it justified his statement concerning it.

Mr. Gosse has framed out of some of Donne's lyrics and elegies an ugly elaborate story of what he calls "a deplorable but eventful liaison" with a married woman of some social position. He declares that "we can reconstruct the story almost without danger of a mistake." But the reader will now not be surprised to learn that the narrative, as woven by Mr. Gosse, is a pure chimera, the result simply of his method of misreading the contents of the poems. The poems justify any ill conclusion in regard to Donne's illicit loves, but afford no material for a connected narrative of the course of any one of his love adventures.

THE ABORIGINES OF CENTRAL AUSTRALIA.

The Native Races of Central Australia. By Baldwin Spencer, M.A., and F. J. Gillen, Special Magistrate and Sub-Protector of the Aborigines, Alice Springs, South Australia. The Macmillan Co. 1899. 8vo, pp. 671.

Regarded from an ethnological point of view, this is one of the most satisfactory works recently published. In fact, so thoroughly is it done that it is probably within bounds to assert that a careful study of its pages will make us as well acquainted with the natives of Central Australia—their social and political organization, manners and customs, arts and industries, traditions, myths, rites, and ceremonies—as we are with tribes that are nearer home, and with whose institutions we are supposed to be more familiar.

Important as such thorough investigations are at all times, they have, in this case, an added interest for us in so far as they necessitate a radical change in the opinion we have hitherto held of the Australian's position in the scale of progress. Instead of grovelling in the lowest depths of savagery, as we have been accustomed to picture him, it is now in order to assign him a place which (except, perhaps, in the development of a few industries) is but little if any inferior to that occupied by our own Indians. Certainly, in the capacity he has shown for social and political organization, he has nothing to fear from a comparison with his savage compeers here or elsewhere; and in everything that relates to his intercourse with his neighbors (p. 32), and with other tribes, to say nothing of the consideration with which he treats his women and children (pp. 50 *et seq.*), and especially the old and infirm, he is not behind, if, indeed, he is not, mentally and morally, somewhat in advance of the standard by which we assume to measure his progress.

Of course, this is but another way of saying that these tribes, like savages everywhere, have the virtues and vices of their condition, and, consequently, that resemblances more or less striking are to be expected in their customs, institutions, and mode of life generally. This, we need not add, is apparent even to the most casual reader; and yet, in spite of the uniformity that is to be found at the base of most of their institutions, there are differences existing, not only between tribes that are far apart, but among those in close proximity to each other, so numerous and so pronounced in character as to call for an explanation. Take, for example, the question of descent (pp. 34, 60, 70, etc.), and we find that in some of these tribes it is in the paternal, and in others in the maternal, line, and that "it is not yet possible to say which of the two methods is the more widely practised" or the more primitive. So, too, in regard to the system of organization known as the totemic, and to some of the obligations and limitations to which it gives rise. Among the Urabunna, for instance, totems (p. 114) govern marriage, and children belong to the mother's totem; while among their next neighbors—the Arunta—totems (pp. 116, 121, etc.) have nothing to do with marriage, though the tribe, like all central Australians, is divided (p. 55) into two exogamous intermarrying groups; and a child's totem, owing to a belief (pp. 127, 202, 512, 523, etc.) in what may be termed the theory of reincarnation, "will sometimes (p. 115) be found to be the same as that of the father, sometimes the same as that of the mother, and not infrequently it will be different from that of either parent." Other differences there are (pp. 73, 167, 467) in the privileges and restrictions that belong to this particular system of organization, just as there are (pp. 35, 151, 228, 305) in some of the ceremonies connected with the rite of initiation, and in a few of their arts (pp. 596, 611, etc.) and industries. It is unnecessary, however, to refer to them in detail, as they are one and all believed to be of degree and not of kind, and hence do not indicate a difference in race. On this point our authors hold very decided opinions, for, after telling us (pp. 54, 117, etc.), that "this great continent was most probably peopled by men who entered from the north," they add that

"The most striking fact in regard to them at the present day is, that, over the whole continent, so far as is known, we can detect a community of customs and social organizations sufficient to show that all the tribes inhabiting various parts are the offspring of ancestors who, prior to their migrating in various directions across the continent, and thus giving rise to groups separated to a great extent from one another by physical barriers, already practised certain customs and had the germs of an organization which

has been developed along different lines in different localities."

In other words, they hold, and, as we think, justly, that the fact of the existence of a custom, or of a form of organization, among two or more tribes is a proof of uniformity that cannot be gainsaid by differences that may have supervened in the way such a custom or system is observed and followed.

Among the other questions that are here discussed and have for us a special interest, may be mentioned the fact that, in declaring their belief (pp. 56, 59, 108) in the former existence of group marriage among these people, our authors bear out Morgan's theory on this point, though the contrary opinion, as held by McLennan, Curr, and others, has, of late, been much in vogue. We are also told, somewhat to our surprise, that "marriage by capture [pp. 103 and 554], which has been so frequently described as characteristic of Australian tribes, is the very rarest way in which a Central Australian secures a wife," thus, of course, doing away with the account, once familiar to most of us, of a band of savages lying in wait by a waterhole against the coming of the lubras for water, when such of them as were required were seized, "and, if they attempted to make any resistance, they were struck down insensible and dragged off." So, too, contrary to what we have hitherto been taught, we are now to learn that the practice of sub-incision could not have been instituted for the purpose of preventing or even checking procreation, for the simple reason (p. 264) that it does nothing of the kind. This is proved by the fact that "every man without exception throughout the central area, in all tribes in which the rite is practised, is sub-incised. . . . He must be before he is allowed to take a wife, and infringement of this rule would simply mean death to him if found out." Infanticide, not sub-incision, is said to be the explanation of the small size of the average family, and it is resorted to "not with any idea at all of regulating the food supply, so far as the adults are concerned, but simply from the point of view that, if the mother is suckling one child, she cannot properly provide food for another, quite apart from the question of carrying two children about." Powerful as this practice must have been in keeping down the population, it was probably not as destructive in its effects as was the belief in sorcery. Among them, for instance (and the same thing will apply to our Indians), "there is no such thing as belief in natural death; however old or decrepit a man or woman may be when this takes place, it is at once supposed that it has been brought about by the magic influence of some enemy, and in the normal condition of the tribe the death of one individual is followed by the murder of some one else [pp. 48, 476], who is supposed to be guilty of having caused the death."

In an appendix (C) we have a table of the bodily measurements of twenty men and ten women, the majority of whom belonged to the Arunta tribe. Limiting ourselves to the men and to what is termed the cephalic index, we find (p. 44) that it ranges from 68.8, the extreme of dolichocephalism, through all the different degrees of mesaticephalism to 80.55, which is just within the limit of subbrachycephalism. As the group of which this tribe forms one has been, for "long ages" (p. 54), "locally isolated" and "shut off from contact with other peoples," the variation here noted would seem to show that there is practically no limit to the differences that may be found in the head-form of a people of relatively pure breed, and, consequently, that the cephalic index is of little or no value as an indication of race.

In conclusion it may not be out of place to call attention to the fact that, rude as is the Australians' code of morals, "their conduct is governed by it [pp. 8, 12, 46], and any known breaches are dealt with both surely and severely." Especially is this true of the infractions of any regulation governing the intercourse between the sexes. These are punished by death (p. 110) or in some other severe manner, and, curiously enough, the reason assigned for such severity is (pp. 99, 100, etc.) that the offence is against the tribe, and "has no relation to the feelings of the individual." In thus transferring (p. 15) the duty of punishment from the individual to the tribe, these people may be said to have reached a level of development not yet attained by some of us who are rated much higher in the scale of progress. Generosity, we may add, is one of their leading features (p. 48), as it is always their custom to give a share of their food, or of what they may possess, to their fellows, and particularly (p. 51) to the children and to the aged and infirm, who are unable to provide for themselves. Of course, there were times of scarcity, and possibly they were frequent here, owing to the inhospitable nature of the soil. But when times are favorable the "black fellow," so we are told (p. 53, 54), is light-hearted, lives in the present, and gives no thought as to what the morrow may bring forth.

"At night time men, women, and children gather round the common camp-fires, talking and singing their monotonous chants hour after hour, until one after the other they drop out of the circle, going off to their different camps, and then at length all will be quiet, except for the occasional cry of a child who, as not seldom happens, rolls over into the fire and has to be comforted or scolded into quietness. . . . Granted always that his food supply is abundant, it may be said that the life of the Australian native is, for the most part, a pleasant one."

LYON PLAYFAIR.

Memoirs and Correspondence of Lyon Playfair, First Baron Playfair of St. Andrews. By Wemyss Reid. Harper & Bros. 1899. 8vo, pp. 487.

The ambition of Lyon Playfair was at first directed towards scientific eminence. A pupil of two of the greatest chemists that a man born in 1818 could have for masters, Graham and Liebig, he made several discoveries, as all chemists do. The chief of these was that of the nitroprussides. A coffee-colored solution is formed by adding nitric acid to ferrocyanide of potassium, and something peculiar and interesting was known to be contained in it. To neutralize the acid and isolate the resulting salts was no great feat, especially since they yield magnificent crystals. Had Playfair gone on to elucidate the constitution of their acid, he would have taken a considerable step; but this he failed to do. Apart from this, his two chief researches were carried on in collaboration, the one with Bunsen, the other with Joule—men of such fertility that one naturally attributes the main ideas of the work to them. One at least of Playfair's own theories—that the specific gravities of the elements are proportional to different powers of their atomic weights—is downright absurd. On the whole, the evidence is that his purely scientific genius was not extraordinary. That this was the opinion of Faraday is indicated by a letter in which, wishing to recommend Playfair, he limits himself to testifying that "you are able to expound the truths of experimental science in a clear, logical, audible, and to me satisfactory manner."

On the other hand, statesmen like Sir Robert Peel and Prince Albert were struck at their first interviews with him by the evidences of his practical resource, tact, *coup d'œil*, power of elaborating a workable plan, and energy; and, having once tried him in those tasks where physical science and the art of government overlap, would never thereafter allow him leisure for the pursuit of pure science. Thus he was carried in spite of himself into the business for which he seemed born. The ease with which he surmounted difficulties, both on great occasions and on little ones, was pretty to see. "I arrived," he says, in the fragmentary autobiography upon which Mr. Reid builds, "at Kranichstein on Sunday morning. The Prince and his visitors having gone to chapel, and also the servants, Princess Alice kindly remained behind, in order to welcome me on my arrival. While we were conversing, a note came from Prince Louis to say that he would bring the Lutheran minister to the midday dinner. This seemed to disturb the Princess, who told me that her table was small, and that there was absolutely no room for an additional guest, and as all the servants were at church, the table could not be relaid." What could the Princess expect Playfair to do about that? But people had learned to feel that there was no kind of difficulty which this politico-scientist was not fit to cope with. "I reminded her that she used to entertain me at the Swiss Cottage at Osborne when she was a child, and that I knew she could lay a table better than servants. She was pleased with the suggestion, and we went to the dining-room, took all the things from the table, put in a new leaf, and rearranged everything before the party returned to the house." A man of such American efficiency could not but be liked in palaces; and a little incident is as good evidence as a great one of his practical resource.

Feats of nice tact are not to be explained to all sorts of readers in a few words. Suffice it to say that functions were continually devolving upon Playfair to exercise which, without disastrous friction, was a task harder than ever the guardian of a fairy princess set to semi-miraculous suitor. But Playfair had the art of applying a little drop of lubricant good sense just where it would insinuate itself into the closest bearing. He usually went straight to the persons from whom antagonism was likely to develop. When the Great Exhibition of 1851 was preparing, an executive committee was first appointed by the Society of Arts, and as this did not succeed in executing much, it was supplemented by a Royal Commission of politicians. Still the manufacturers hung back, and at last Playfair was appointed "Special Commissioner," with powers just large enough to insure perpetual jealousies, but not large enough to make these jealousies unimportant. Sir Henry Cole had been the

mainspring of the Exhibition from first to last. The reminiscences contain the following narrative:

"When I joined the Executive of the Exhibition, Sir Henry Cole scarcely knew me, and, like the other members, was naturally displeased that I was placed in a position of confidence superior to theirs. On the second day after my appointment I met Sir Henry Cole in Whitehall, at the door of the Home Office. He told me frankly that he was going to see the Secretary of State to resign his connection with the Exhibition, and that his letter of resignation was then in his pocket. I took his arm and walked up and down Whitehall. On asking him whether he believed the ship was sinking, and that the Exhibition would be a total failure, he frankly admitted that he did, as the state of indifference of the manufacturing districts rendered failure almost certain. I then urged that, as he was the real pilot of the vessel, it was a wrong act to desert the sinking ship. The country could be aroused to the importance of the undertaking, and my work could be well separated from his, for I intended to visit the chief manufacturing centres in order to create a public sentiment in its support. Our conversation was mutually satisfactory, and we walked to the Exhibition office together, and his letter of resignation was destroyed. Had the accidental meeting not taken place, the Great Exhibition would never have been held, for its mainspring would have been broken. After this interview, if jealousies still continued, none were ever shown, for all the members of the Executive worked loyally to bring the undertaking to a successful issue."

The excellence of Playfair's *coup d'œil* was shown in this same business. That he should go straight to the manufacturers was only what his invariable habit dictated. But that he should have seen, in the midst of a confused state of affairs, that what was requisite to bring the manufacturers into hearty coöperation was simply to present to them a new classification of the objects of the Exhibition, such that each of them should clearly comprehend the parts that concerned him—this was what nobody else but Playfair had had the perspicacity to see, or was even able to see after it was pointed out, until the result proved his insight. The same affair illustrated also Playfair's capacity for elaborating a feasible plan. For he had not only to construct a detailed classification in which everything offered for exhibition should find a suitable section that seemed to ask particularly for that very thing, but he had so to construct it that the manufacturers would approve of it; that the Prince, who was wedded to a highly German classification of his own (in which most things either had no place or several places), would yield to it; and, most difficult of all, such that French and other foreign commissioners would surrender their own prepossessions, and cordially accept the new arrangement. But Playfair had all the elements of his problem so thoroughly studied and well in hand that, when it came to the execution, there was not a serious hitch.

As for his energy, we can compare it to nothing but that of a terrier in a room full of rats, with such incredible swiftness did the wickedest difficulties get their quietus under his action. It cannot be better evidenced than by enumerating say a dozen of the main achievements of his life. First, he greatly stimulated scientific agriculture in England by translating Liebig's books and conducting Liebig himself through the country; second, he considerably reduced the death-rate in England by his activity upon the Commission on the Health of Towns; third, if it had not been for him, the Great Exhibition of 1851 would certainly have been a failure, and probably no great international exposition would have been held—to the immense loss of material civilization; fourth, the whole science department, at least, of the establishments at South Kensington is entirely due to his management, together with the School of Science; fifth, he gave the initial impetus to technical education in England; sixth, the regulations of 1874 for filling places in the British Civil Service are due to him; seventh, he invented post-cards in 1870, and caused them to be brought into use; eighth, he considerably furthered first steps towards realization of the great ideal of general international arbitration; ninth, he was instrumental in bringing the Venezuelan imbroglio to a peaceful termination, which was finally effected by the adoption of his suggestions; tenth, he determined the choice of coal used by British steamers; eleventh, he saved the causes of vaccination and vivisection; twelfth, he stopped the cattle plague in England by severe measures. This is not all he did, but we stop the list at a dozen achievements.

At the close of the Exhibition, Playfair received a gold medal, the companionship of the Bath, and the office of Gentleman Usher in the household of the Prince Consort. The Exhibition produced a profit of £190,000, and the question arose what should be done with this money and with the building. It was the Prince's idea that an institution should be founded. The House of Commons granted £150,000 additional, and the South Kensington estates were purchased. Playfair now made a tour of Northern Europe and Austria in order to study their educational systems, with special reference to science and technology. Coming home, he made a crusade in favor of what is called in England "technical education." This he did for the sake of its effect on British industry and civilization rather than for the young men to be educated; and the benefit near and remote to Great Britain at large has been immense. In 1858 he was appointed Professor of Chemistry in the University of Edinburgh, but he was so weighed down with duties imposed upon him by Government that he accomplished little purely scientific work. He did a great deal for educational methods there. In 1868 he was elected member of Parliament for the University of Edinburgh, being a Liberal representing a Conservative constituency; and he gave up his professorship. In 1873 he was made Postmaster-General. In 1874 the Gladstone Ministry went out, and Disraeli appointed Playfair Chairman of the Civil-Service Commission, which established the new system called the "Playfair Scheme." In 1875 he was influential in the selection of Hartington as leader of the Opposition, though he would have preferred Forster. In 1877 he first visited the United States, and the next year married a young lady of Boston. In 1880 he was tendered the post of first whip, but declined it, unwisely. He was appointed Chairman of the Committee of the Whole, as we should call it, and was obliged to bear the brunt of the *clôture* odium. In 1883 he resigned and was made Knight Commander of the Bath, or rather he supposed he had been, for he neglected the formality of receiving the accolade, so that he never was legally Sir Lyon Playfair. In 1885 he was elected to Parliament from South Leeds. In 1886 he was appointed Vice-President of the Council, practically Minister of Education in the House of Commons. In 1887 he headed a deputation who presented a memorial in favor of general arbitration to President Cleveland. In 1892 he was raised to the peerage, and made Lord-in-Waiting. In 1895 he received the honor of the Grand Cross of the Bath. He died in May, 1898.

It is delightful to read the biography of a man to whom life must have afforded a constant series of surprises to find himself so much cleverer than he had supposed. No wonder he was gay, sunny, sociable, entertaining, and affectionate. It is to be remarked that his peculiar good fortune never corrupted him in any way; for certainly a little healthy conceit is no fault, but a necessary quality. Without something like this, Playfair could not have passed through two periods of extreme unpopularity with such perfect equanimity as he did. The Life by Mr. Wemyss Reid brings out Playfair's character quite thoroughly, considering that it is one of those biographies which are prepared with the coöperation of intimate relatives of the subject. No little skill in the art of bookmaking has been put forth upon it. It is crammed with Playfair's amusing anecdotes, and is altogether a difficult book to drop. The index is thoroughly well executed.

The Writings of Thomas Jefferson. Collected and edited by Paul Leicester Ford. Vol. X. and last. 1816-1826. G. P. Putnam's Sons. 1899.

Mr. Ford himself will, we believe, be the last person to reproach us with delay in noticing the completion of his severe, yearlong task, which he has already well forgotten, seeking pastures new wherein to frolic with his historic imagination, and winning a multitude of readers who will never resort to his precious Jefferson volumes.

In this final instalment the veteran statesman links himself with the next generation, now gone from the stage, by his panicky reprobation (January, 1816) of the Rev. Lyman Beecher for his "plan to establish '*a qualified religious instructor* over every thousand souls in the United States,'" the South not excepted. This he calls "the most bold and impudent stride New England has ever made in arrogating an ascendancy over the rest of the Union." But Jefferson could neither foresee Dr. Beecher's futile endeavor to suppress anti-slavery discussion at Lane Seminary, Cincinnati, nor his daughter's great tract of 'Uncle Tom.' In 1825 he professes to Fanny Wright his interest in her dreams for the abolition of slavery, but his views on gradual emancipation with colonization, elsewhere expressed, show him (like Henry Clay subsequently) unwilling to abate one jot of the slave-owner's pecuniary title to his property in human beings. There is also a single mention of Webster (December, 1824), whose visit to Monticello is recorded in his 'Private Correspondence,' which Mr. Ford fitly reproduces. Jefferson correctly thought Webster "likely to become of great weight in our government."

It is, however, the Spanish question which gives the more striking modernity to these letters. Jefferson had no doubt, in February, 1816, considering our sympathy with the revolted South American colonies, "that a war is brewing between us and Spain."

But when the bloody struggle had gone on five years longer he thought it demonstrated that "these people were not yet sufficiently enlightened for self-government," and had better patch up an accommodation with the mother country "until they shall be sufficiently trained, by education and habits of freedom, to walk safely by themselves." But he adds, with a momentary glimpse of the *fin de siècle* Jingo, "You see, my dear sir, how easily we prescribe for others a cure for their difficulties, while we cannot cure our own."

Meanwhile (1823) Cuba looms up as "a speck of war to us," and Jefferson anticipates with complacency the spectacle of England and the United States exercising a joint protectorate over the island. "She joins us too in a guarantee of the independence of Cuba, with the consent of Spain, and removes thus this bone of contention between us." Cuba would then be "nearly as valuable to us as if it were our own." However, on learning that England's interests there are not "quite as strong as those of the United States," he "must retract an opinion founded on an error of fact," and his standing dread of England returns in force. He has "ever looked on Cuba as the most interesting addition which could ever be made to our system of states," yet would accept its independence "with peace and the friendship of England, rather than its association at the expense of war and her enmity."

The numerous references to slavery are the most suggestive (and melancholy) portions of this correspondence. Jefferson is too old to take an active part in removing the evil, and in 1817 has "not perceived the growth of this disposition in the rising generation, of which [he] once had sanguine hopes." When the Missouri agitation arose, he saw only the Southern side, considering the issue sectional and partisan; "not a moral question, but one merely of power." "All know that permitting the slaves of the South to spread into the West will not add one being to that unfortunate condition, . . . will dilute the evil everywhere, and facilitate the means of getting finally rid of it" —with a fling at "the noisy pretenders to exclusive humanity." His scheme of emancipation and forcible expatriation (why is it that the follies of pro-slavery philanthropists are forgotten in decrying the immediatism of Northern abolitionists?), he was aware, involved "some constitutional scruples" such as he was an adept in swallowing. "The separation of infants from their mothers, too, would produce some scruples of humanity. But this would be straining at a gnat and swallowing a camel." Never did it enter his thoughts to ask consent of the freedmen to deport them. While the slaves numbered (in 1824) a million and a half, he thought them within control for colonization. "But six million (which a majority of those now living will see them attain), and one million of these fighting men, will say, 'We will not go.' "

The World's Orators. Vol. I.: Orators of Ancient Greece. Edited by G. C. Lee. New York: G. P. Putnam's Sons. 1900.

This is the first of a series of ten volumes designed to present to English readers such masterpieces of oratory, in chronological order, as shall "indicate the development of the different schools of oratory from the classic periods down to the present day." That this is as a whole a very ambitious undertaking its promoters appear to be entirely conscious. Whether a series that devotes three volumes to the Orators of America, two to the Orators of England, and one to the Orators of Greece can be said to demonstrate their sense of proportion, is quite another question. Meanwhile we are concerned only with their conception of representative Greek oratory, and the use to which it may be put in the form in which they offer it to the reader. The selection of Greek masterpieces of rhetoric from Homer to Deinarchus has been, we should say, wisely made. Where fresh translations were called for, as in the case of Gorgias and Antiphon, Mr. Mitchell Carroll has supplied an adequate version. Where standard translations existed they have been used. The introductory essay, by Mr. Carroll, gives a clear account of the chief characteristics and tendencies of Greek oratory. The notes affixed to the several orations provide the essential facts about their authors.

Naturally there is, in all this, very little room for comment. Granted the need for such a work, it was hardly possible to go wrong in putting together standard English translations of Greek orators, and introducing the collection with a few well-chosen words. But before one is committed to applaud the appearance of nine more volumes of the same size, one may fairly stop to ask who will read them, and why. It will be recognized that the interest of the present volume, at any rate, is purely academic. A modern orator trains his natural gift by contact with men, not books; or, if he seeks to improve his style by the study of oratorical masterpieces, he will turn to Burke, or, more probably, to some orator of his own generation. We cannot imagine a politician about to speak on the navy estimates looking up Demosthenes "On the Navy Boards" for a tip, nor Krüger diving into the "Philippics" for invectives against the British Government. On the other hand, the student of literary form knows well enough that he cannot get anything more than the merest adumbration of the style of Demosthenes from the best possible translation. The ideas may be faithfully represented, the rhythm of the periods retained, but one might as well try to illustrate on a piano the technique of a great violinist as attempt to convey in English the effects gained for the Greek ear by the finest Greek prose. As for such a writer as the Sophist Gorgias, whose thoughts are all in pairs, who balances his ideas in carefully planned antitheses, it is quite as impossible to reproduce his ingenuity by the instrument of another language. It is, then, the historical interest that will be served by such a series. To historical students, or to students who wish to observe the development of rhetoric and the subject-matter of oratory throughout the ages, such a series should prove most useful. Of course, a thorough student would have to supplement by deeper researches such a view of Greek oratory as he obtains in this volume, which cannot pretend to be exhaustive.

The general get-up of the book is excellent. The type, which at first bewilders the eye, wins favor as one grows used to it. The proof-reading has been well done. On p. 80, for Shuckburg read Shuckburgh. The Latinized "Hercules" is out of place in a translation from the Greek, now that "Heracles" is well established in English.

Darwinism and Lamarckism, Old and New. Four Lectures by Frederick Wollaston Hutton, F.R.S., etc. G. P. Putnam's Sons. 1899. 12mo, pp. 226.

To improve the prevailing estimate of Darwinism appears to be the aim of this essay. From the matter as taught by Darwin it puts aside some portions, modifies others, and in various ways attempts reduction of the general confusion enveloping it. The purpose is a firmer establishment; the result falls short of what is worked for with such zeal and energy, and is negative. The author concedes that Darwinism and the modern theory of evolution are two very different things, but protests the statement that Darwin's "flock has scattered, and that the great theory he so successfully reared is in danger of falling to pieces." The doctrine in this book varies from that of either Darwin or Wallace; it is less complex and more consistent. Pangenesis is dropped entirely, part of sexual selection is cut away, and artificial selection is thrown out as radically different, regardless of the fact that with it goes much of the so-called proof of natural selection. The following summary is made up of definitions by the author:

The new Darwinism is natural selection, to which methods of isolation have been added. Natural selection is at present the only known efficient cause of progress; it is a theory of the origin of species and higher groups by the preservation of variations; it is merely a process of picking out useful variations, no matter how they have arisen; it is also a method for the evolution of adaptive characters only, because the elimination is for the benefit of those who remain—that is, for the benefit of the selected; it is a selection taking place, as it were, by and among the individuals themselves. It is an internal principle, and may be called intrinsic selection; in all cases it must be a struggle with death as the penalty of being vanquished, because, without elimination by death, there can be no selection and no isolation. It is a powerful cause of divergence between different species and genera, but cannot by itself originate divergent evolution; it is not so much natural selection as natural elimination, for it works not by the survival of the fittest, but by the destruction of the least fit. It can propel a species only in one direction unless isolation steps in and divides it into smaller groups. In combination with inheritance and variation, it is cumulative, but (and this is important to notice) it is cumulative only by selecting the best varieties of each generation. It cannot make one species divide into two, but actually prevents such a thing from coming about. It can hardly come into play in the early stages of a variation, or when competition is checked by physical isolation; it isolates beneficial variations by killing off the others. The principle of selection does not necessarily lead to improvement—it cannot by itself originate or improve; if, however, an improved variety appears, the improvement is at once made permanent and diffused through the species by the action of selection. It has no power if the individuals are not competing, and it is in no way con-

cerned with the origin of the differences—the differences must be there before selection can act. Finally, it does not explain all the changes that have taken place, but only a certain number of them.

The arguments in support of this doctrine are suppositive, assumptive, and prophetic. Their style is familiar:

"Take the evolution of the eye. Suppose that, in a number of eyeless individuals, the nerve of some portion of the skin of one of them was slightly sensitive to light. This one, being able to distinguish day from night, would have an advantage over other individuals in escaping its enemies, and thereby it will be one of those that survive, on the principle of selection; and in the next generation there will be, by the law of inheritance, several individuals endowed with this same power of distinguishing day from night. These, in their turn, will survive; and at last all the individuals of the species will have the same faculty. This will be the result of selection; but selection did not make the nerves of the first individuals sensitive to light, and it is powerless to improve the nerves of the offspring; what it can do is to bring all the individuals up to the level of the best."

"The individuals that die will usually be those that are least adapted for living—either for procuring food or for escaping enemies."

The individuals upon which, in times of severe competition, death from starvation, enemies, diseases, or accidents, will fall heaviest are the young, the laden females, and the old. The competing individual in the foregoing is supposed to be superior to all competitors at all periods of his existence; infancy, temporary weakness, age are all supposed away. The field has been considerably narrowed, but the theory is still "in the air"; the absolute essentials in the origin of species still appear to be variation, use, heredity, and some form of isolation. It is not yet satisfactorily proved that selection is a necessity, or that, when existing, it is other than a result of accidental conditions. Useful and beneficial in the employ of Darwinians are synonymous. Had Darwinism originally appeared as now, it would have been recognized as only a modification of Lamarck's theory.

Lamarckism is given equal space in the title; it occupies about a fifth of the discussion, and is not handled at all as if the author loved it. He is making a case against it, and it is to be expected that the mention of facts favoring the Lamarckian contention may be followed by something like this: "But many of these, perhaps all, can be also explained by natural selection, and furnish, therefore, unsatisfactory evidence"; or, "As it is useful, we cannot doubt that it has been developed by natural selection." From the text we do not get a very clear idea of Lamarck's theory, either as left by its founder, or as accepted by most Americans. Approximately, the theory of variation and of the origin of varieties, species, and higher groups preferred in this country may be stated thus: Change in the condition of animals and plants brings about changes in their needs, which, in turn, compel changes in the efforts to satisfy them; persisted in, these changed efforts become habitual, and induce individual variations to harmonize with effort and use in the organs affected; a tendency to such variation, and in time to some extent the variations, are transmitted by heredity; and thus, the variations accumulating from generation to generation, varieties are formed which ultimately become species or higher groups with or without the aid of isolation. How this agrees with the teachings of Lamarck may be seen by the following from his statements:

"Tout changement un peu considérable et ensuite maintenu dans les circonstances où se trouve chaque race d'animaux, opère en elle un changement réel dans leurs besoins; tout changement dans les besoins des animaux nécessite pour eux d'autres actions pour satisfaire aux nouveaux besoins et, par suite, d'autres habitudes; tout nouveau besoin nécessitant de nouvelles actions pour y satisfaire, exige de l'animal qui l'éprouve, soit l'emploi plus fréquent de telle de ses parties dont auparavant il faisoit moins d'usage, ce qui la développe et l'agrandit considérablement, soit l'emploi de nouvelles parties que les besoins font naître insensiblement en lui, par des efforts de son sentiment intérieur."

"Or, tout changement acquis dans un organe par une habitude d'emploi suffisante pour l'avoir opéré, se conserve ensuite par la génération, s'il est commun aux individus qui, dans la fécondation, concourent ensemble à la reproduction de leur espèce. Enfin, ce changement se propage, et passe ainsi dans tous les individus qui se succèdent et qui sont soumis aux mêmes circonstances, sans qu'ils aient été obligés de l'acquérir par la voie qui l'a réellement créé."

"Les besoins, toujours occasionnés par les circonstances, et ensuite les efforts soutenus pour y satisfaire, ne sont pas bornés dans leurs résultats, à modifier, c'est-à-dire, à augmenter ou diminuer l'étendue et les facultés des organes; mais ils parviennent aussi à déplacer ces mêmes organes, lorsque certains de ces besoins en font une nécessité."

Because adherents have usually kept propositions of their own in the foreground, and because opponents, to secure standing for their theories, have found it necessary to detract from it as much as possible, Lamarckism has not received the attention to which it is entitled.

Cambridge Compositions. Edited by R. D. Archer-Hind and R. D. Hicks. Cambridge: University Press; New York: Macmillan. 1899.

Nova Anthologia Oxoniensis. Edited by Robinson Ellis and A. D. Godley. Oxford: Clarendon Press; New York: Henry Frowde. 1899.

Florilegium Latinum. Edited by F. St. J. Thackeray and E. D. Stone. London and New York: John Lane. 1899.

In the face of all that we hear about the passing of Greek and Latin verse-making, these three volumes are good evidence that men are still left in England who are masters of that art of graceful expression and correctness of style. If the art is really to become a lost one, here are permanent records of the proficiency which the end of the nineteenth century has reached in it. As one turns these pages and notes everywhere extraordinary felicities of language and evidences of perfect familiarity with classic idiom, the wonder grows that a school capable of such sympathy with the style and form of the Greek and Roman poets should do so little, comparatively speaking, that is convincing in the emendation and elucidation of their texts. Perhaps this is because the English have made verse-composition too much of a fetish, stopping to worship it as something adorable in itself instead of proceeding to use its lessons as part of the equipment of the philologian.

To the student the principal interest in these volumes lies, we think, in the opportunity they offer for comparisons between the treatment, by different scholars, of the same English originals. Thus, for Greek verse, with the Oxford volume, pages 22 and 254, compare Cambridge, pages 336 and 246; for Latin verse, with 'Florilegium,' pages 108 and 160, compare Cambridge, pages 90 and 108. Again, it is interesting to see how Prof. Butcher's Latin version of Wordsworth's "Ode on Intimations of Immortality" in the 'Florilegium' (page 200) differs from his version of the same poem in Cambridge (page 18), and again to compare with these two the version of the Provost of Oriel, in Oxford (page 7). Thus, for

"Heaven lies about us in our infancy.
Shades of the prison-house begin to close
Upon the growing Boy:
But he beholds the light, and whence it flows,
He sees it in his joy."

Butcher writes:

Caeli circumvolat annos
lux teneros; puero mox carceris ingruit horror
crescenti, tamen is lucemque agnoscit et unde
derivatur, ovans.

And Monro:

Vivimus infantes haud parvo lumine divum:
paullatim urgeri tenebris et carcere caeco
incipiunt pueri; tamen illi luminis oras
dispiciunt, fontemque ipsum, gaudentque tuendo.

Then Prof. Campbell's Greek iambics (Oxford, page 20) and Mr. Greene's Latin elegiacs ('Flor.,' page 19) from Sir Henry Wotton's "Happy Life" afford another fruitful opportunity for comparative study of the two types. Of a different sort is Prof. Hardie's version, in the style of Horace's satires, of Thackeray on "Literary Snobs" (Oxford, page 51); we wish we had space for this, since it reads more like real Latin than almost any other attempt in the whole collection. For, as a rule, the chief value of a "copy of verses" (to any but the writer thereof) lies in the warning it conveys against the utter inadequacy of translation (whether from English to a foreign tongue or vice versa) to preserve the life and essence of the work which it strives to represent. We gayly translate from the ancient languages into English, but when a man meets with one of his favorite English poems made over into Greek or Latin (even by a master hand), the tables are turned, and he begins to understand how unsatisfactory even the best translation from the classics into English must always be. Plenty of proof of this may be found in these collections. For instance, here are Sapphics by Prof. Postgate (Cambridge, page 41):

Sole qua fulgent propriore terrae
alta desertae, digitis reduncis
haeret ad rupem, mediumque cingunt
caerula caeli.
Desuper rugas simulante lapsu
ire Neptunum specula superbus
respicit summa; ruit inde praeceps
fulminis instar.

What was the English for them?

A Manual of Coaching. By Fairman Rogers. Philadelphia: J. B. Lippincott Co.

This elaborate work of Mr. Rogers's is a valuable addition to the sporting library, and will appeal particularly to lovers of four-in-hand driving. It is profusely and one may say practically illustrated, showing that the author has been a very close student of his subject and a keen enthusiast as well. Coaching history has been treated at length, and while Mr. Rogers quotes freely from the older authorities on the subject, he nevertheless has introduced an element of completeness, as it were, which

is most agreeable. Beginning at the bottom, the construction of roads is intelligently discussed; and so on, from the tires of the wheels to the splicing of the whipthong, the minutest detail is given close attention and a clean exposition. A number of interesting charts and tables are introduced, showing the draught of vehicles under varying conditions, the angles at which a coach loaded or light will upset, together with quite a scientific treatise on centrifugal force as applied to a coach driven at various speeds around a curve.

All these points are interesting and instructive in the abstract, and should serve to make the intelligent coachman a closer observer of the numerous details which go to make up absolute proficiency in the "art." The chapter on driving is explicit, the various cuts indicating clearly the position of the hands, while the text conveys even to the tyro the object of the movements and the manner of their execution. While there may be a few points on which competent critics might take issue with Mr. Rogers, the work is singularly free from disagreeable egotism, and has an atmosphere of common sense about it which confirms its authority.

The "driving apparatus" shown in figure 154 is a very useful device for one who would be a coachman, or, being one, is out of practice. The scheme of weights attached to reins which run over pulleys enables one to train his fingers and arms, as well as to acquire the necessary skill in execution; for, however light-handed a coachman may be, the proper driving of four horses requires a strong arm and a "wrist of steel." The tired arm will invariably make a heavy hand, and in consequence an increased exertion of force is requisite. The systematic use of an apparatus such as Mr. Rogers has devised should therefore be of great service.

It is quite possible that the layman, who has not the love of coaching grafted in his heart, might criticise this work as being too serious in its treatment of a light subject, but it is certain that the craftsman will appreciate the enormous amount of labor and close attention which its production must have entailed. 'A Manual of Coaching' is in every sense well done. In addition to a complete system of indices, the introduction of a list of books which treat the subject of the horse either directly or indirectly is useful, as is also the translation of the various equipment and coaching expressions into French. The book is written purely for the man who loves coaching for itself, and is sure to take a prominent place in every coachman's library.

Surgery: A Treatise for Students and Practitioners. By Thomas Pickering Pick. Longmans. 8vo, pp. xix, 1,176.

The lectures on surgery which form the basis of this volume were delivered at St. George's Hospital, London, and are published chiefly for the use of beginners, though the author hopes the book will prove of value to practitioners. Mr. Pick's position is too well known for comment. His book bears witness to his thirty years of hospital experience. It should, despite obvious limitations, find favor with practitioners, but it is more particularly adapted to the time-pressed student, who is best served by concise tone and positive statement. The style is direct; occasional slipshod English not interfering with clear exposition. The topics are, as a rule, treated comprehensively, and inaccuracies are not common. The volume, in its unusual compactness, is especially adapted for easy reference. It is well indexed, illustrated, and arranged.

In section i., Inflammation is discussed entirely in the modern spirit. Section ii. deals with General Injuries. Careful mention is made of the details of surgical cleanliness, that factor which has so profoundly changed the aspect of surgery, almost in the last decade, by the immense enlargement of its scope and the furtherance of safety in operating. In section iii., devoted to General Diseases, cancer is, perhaps, of most interest; it is noteworthy that its cause is still unknown, that belief in its hereditary nature has materially lessened, and that, in England at least, it is apparently largely on the increase, although, on the other hand, it is stated that better diagnosis may in part account for this. Section iv. treats of Injuries and Diseases of Special Organs and Tissues, and we find that recent methods have much shortened the time formerly consumed in the care of certain fractures, and that Roentgen's discovery has been of the greatest value in this connection. Far less satisfactory has been the treatment of cerebral tumors, which, however, though its progress is not commensurate with that of localization of brain function, is a matter of infinite interest and perhaps of great possibilities. The therapy of nose-bleed as outlined in this book seems incomplete. The work is concluded by a chapter on deformities, and an appendix describing amputations.

BOOKS OF THE WEEK.

Bacon, E. F. A New French Course. American Book Co. $1.
Baker, Th. A Biographical Dictionary of Musicians. G. Schirmer.
Brown, Rev. J. Puritan Preaching in England: A Study of Past and Present. Scribners. $1.50.
Carpenter, F. G. South America. American Book Co. 60c.
Chalmers, Rev. T. The Christian and Civic Economy of Large Towns. Scribners. $1.25.
Claxton, Adelaide. Brainy Odds and Ends. London: The Author. 1s.
Fitchett, W. H. How England Saved Europe. Scribners. Vols. II. and III. $2 each.
Freytag, G. Die Journalisten. Boston: C. A. Koehler & Co.
Gollancz, I. The Works of Shakespeare. [The Larger Temple Shakespeare.] London: J. M. Dent & Co.; New York: Macmillan. Vols. 3 and 4. $1.50 each.
Hall, Rev. T. C. The Social Meaning of Modern Religious Movements in England. Scribners. $1.50.
Hovey, T. Taliesin: A Masque. Boston: Small, Maynard & Co. $1.
King, L. W. Babylonian Religion and Mythology. London: Kegan Paul, Trench, Trübner & Co.; New York: Henry Frowde.
Lapsley, G. T. The County Palatine of Durham: A Study in Constitutional History. [Harvard Historical Studies.] Longmans, Green, & Co. $2.
Lavisse, E. Album Historique. Tome III. Paris: Armand Colin & Cie.
Lee, A. The Gentleman Pensioner. Appletons. $1.
Lee, Sidney, Dictionary of National Biography. London: Smith, Elder & Co.; New York: Macmillan. Vol. XLI. $3.75.
Lindsey, W. At Start and Finish. Boston: Small, Maynard & Co.
Littell, Mary V. From Pot-Closet to Palais Royal. J. S. Ogilvie Pub. Co. 25c.
Lodge, T. Rosalind. Cassells. 10c.
MacDougal, D. T. The Nature and Work of Plants. Macmillan. 80c.
Markham, E. The Man with the Hoe. Doubleday & McClure. 50c.
Maspero, Prof. G. The Passing of the Empires. 850 B. C. to 330 B. C. Appletons. $7.50.
Norris, F. A Man's Woman. Doubleday & McClure. $1.50.
Paddock, Mrs. A. G. The Fate of Madame La Tour: A Tale of Great Salt Lake. Fords, Howard & Hulbert.
Prentiss, G. L. The Union Theological Seminary in the City of New York. Asbury Park, N. J.: M., W. & C. Pennypacker.
Pyle, Katherine. Prose and Verse for Children. American Book Co. 40c.
Quiller-Couch, A. T. Historical Tales from Shakespeare. Scribners. $1.50.
Roberts, Prof. C. G. D. By the Marshes of Minas. Silver, Burdett & Co. $1.25.
Sedgwick, E. Thomas Paine [The Beacon Biographies]. Boston: Small, Maynard & Co.
Seidel, H. Der Tausendmark Schein, und Andere Erzählungen. Boston: C. A. Koehler & Co.
Smith, Minna C. Mary Paget: A Romance of Bermuda. Macmillan. $1.50.
Spencer, H. The Principles of Biology. Appletons. Vol. II. $2.
Swift, L. Brook Farm. Macmillan. $1.25.
Tarbell, Ida M. The Life of Abraham Lincoln. 2 vols. Doubleday & McClure.
Torrence, F. R. The House of a Hundred Lights. Boston: Small, Maynard & Co. $1.
Trist, N. B. Whist: American Leads and Their History. Harpers. $1.
Ward, J. Pyramids and Progress: Sketches from Egypt. Eyre & Spottiswoode. $4.
Warner, F. The Nervous System of the Child. Macmillan. $1.
Whates, H. The Politician's Handbook: A Review and Digest of the State Papers, Diplomatic Correspondence, Reports of Royal Commissions, Select Committees, Treaties, Consular Reports, etc. Session 1900. London: Vacher & Sons.
Wilson, Mrs. L. L. W. Picture Study in Elementary Schools. 3 books. Macmillan. 35c. each.
Wilson, Mrs. L. L. W. Picture Study in Elementary Schools: A Manual for Teachers. 2 parts. Macmillan. 90c. each.
Wilson, L. L. W. Handbook of Domestic Science and Household Arts: For Use in Elementary Schools. Macmillan. $1.
Zile, E. S. van. With Sword and Crucifix. Harpers. $1.50.

PUBLISH SATURDAY

The Fortune of War

By Elizabeth N. Barrow. 12mo. $1.25. A novel of the American Revolution, laid chiefly in New York City during the British occupation.

TO HISTORICAL STUDENTS.

A reputable and responsible publishing house has in hand an important literary undertaking which will require solid work in biographical and historical writing of the highest character on American subjects. It will be work upon which the younger generation of historical scholars in particular may build reputations, and the financial return will be as large as the market permits. Men who have had thorough training in the use of original materials and are masters of a good English style may learn particulars by addressing "IMPORTANT UNDERTAKING," care of the Nation.

JUST PUBLISHED.

THE UNDOING OF JOHN BREWSTER.

By Lady Mabel Howard. Crown 8vo. $1.50.

*** This is a story of modern English life. John Brewster, returning home from eight years' sheep-farming in Australia, falls in love with Carmella, a girl half English, half Italian. She had, however, made up her mind to take the veil, and had rejected several suitors on that account. In the influence of Carmella upon Brewster's religious development and ultimate reception into the Roman Catholic Church, and the effect of that event upon their personal relations, is found the chief interest of the story.

LONGMANS, GREEN, & CO.,
91-93 Fifth Avenue, New York.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing here. Special collections formed, and fuller information supplied than from any other house. Books, both old and new, and relating to any subject, can readily be supplied, at very moderate prices.

Agents for Clubs, Libraries, and all private collectors.

187 Piccadilly, London, W.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 15, 1900.

The Week.

It is a pleasure to be able to say of an important appointment by the President, namely, of Judge Taft, of the United States Circuit Court, for head of the new Philippine Commission, that Mr. McKinley's choice is a man of high character, excellent ability, and judicial mind. But this is a very different thing from expressing any assurance that a commission entirely composed of equally good men will accomplish satisfactory results. We need only recall the disappointing outcome of the old Commission's work, made up though that body was of men who seemed well chosen for the task set them. It is a very different thing, too, from endorsing the policy under which the President, not acting as Commander-in-Chief to name a Military Governor, assumes the dictatorial power of sending men to establish such civil government as may seem good to them and him, without the slightest authorization from Congress.

The treaty concerning the Isthmian canal so occupies the mind of the public that the ratification of the treaty of The Hague has passed almost unnoticed. There is nothing in this treaty to inflame our "patriotism," or cause us to exult in our ability to hold our own with a strong hand. In fact, the treaty was in danger of rejection because it was feared that it might somehow hinder our Government from going to war whenever it was so disposed. There is nothing in the treaty, however, that will prevent us from fighting whenever we have a just cause, while it will operate to prevent hasty and passionate declarations of war. Its ratification is one of those silent advances which civilization from time to time makes, and which place future generations on higher ground than our own. Gradually the idea that arbitration is the proper and natural method of settling disputes will become a part of the mental constitution of our citizens, and even of our Congressmen. If for no other reason, the fact that it encourages the growth of this idea is enough to make us rejoice over the ratification of this treaty. While there may be nothing in the report that, under its terms, our Government will presently extend its good offices in bringing about a termination of the South African war, the very fact that such a report is heard is significant. Without the support of this treaty the idea of extending our good offices could hardly have been entertained, while with its countenance there is nothing in it intrinsically improbable.

The report of the Republican majority of the ways and means committee makes a needless concession to scruples about the Constitution. It says that Congress has absolute and exclusive power over conquests, "except in so far as it is limited by the XIIIth Amendment to the Constitution, which prohibits the existence of slavery in any place over which the United States has jurisdiction." But there is abundant contemporary authority for holding that the term "United States" is very ambiguous. In fact, we believe no less than four senses of the title have been pointed out. In the phrase "throughout the United States," where imposts and duties are spoken of, some hold that the States alone are meant, not the Territories. Others concede that the older Territories are included, but are not sure about Alaska; and they are clear that Porto Rico and the Philippines are not covered. Another view would seem to be that only the original thirteen States are meant, and that the others might be described, to use President Johnson's expression, as bodies "hanging on the verge of the Constitution." We cannot understand why such minds should feel any embarrassment because of the XIIIth Amendment. Is it not perfectly plain that "the jurisdiction of the United States" means the jurisdiction then exercised within the boundaries then existing? Observe, the amendment uses the word "has," not "shall have"! The necessary amplification and justification of this construction will be furnished by any believer in our imperial destiny and our boundless future. Such a construction will put to rest a number of awkward problems sure to arise out of the use of "contract labor," without which our tropical colonies cannot be exploited with profit.

Attorney-General Griggs ascended the glory-crowned heights again at the dinner of the Republican Club, on Monday night, but his speech was not more coherent than usual. "It is hard to understand," he said, "why the presence of our flag anywhere on the face of the globe should give offence to some Americans, especially when all the rest of the world seems content about it." The display of our flag in foreign parts may be on the mast of an American ship, or over the office of an American consul, in both of which cases it is typical of peaceful commerce. On the other hand, it may signify "criminal aggression." It may represent invasion and desolation of the homes of distant people who have done us no harm. In short, the question whether the presence of our flag abroad ought to give offence to any American citizens depends upon whether it represents a just cause or an unjust one. This branch of the subject was skilfully ignored by Mr. Griggs, who went on to shout that the United States has become a great world-power by growth, development, and an extension of her domain of territory as well as of trade "into regions where we must encounter the rivalries, and at the same time shall claim our share of the privileges, that pertain to the dominant Powers in administering the affairs of the Orient." This looks like a supplement to Secretary Hay's treaties negotiating for the "open door" in China, but it is really something quite different. It is a coarse, swaggering threat that if our claims in China are not recognized and granted, we shall use our foothold in the Philippines to make war on anybody who denies what we consider just claims. The reason why some Americans objected to the retention of our flag in the Philippines was, that it would bring our fighting apparatus into closer contact with the fighting machines of the Old World, and, therefore, tend to make wars more frequent; that it would expose the country to an unnecessary danger. Now this is avowed by a member of the cabinet as a policy desirable in itself. It is part and parcel of the spirit which demands that the Isthmian canal shall be fortified and made one of our implements of war, instead of being a new contribution to the triumphs of the Prince of Peace.

The remarks of the Chinese Minister at the dinner of the Silk Association on Thursday night were very diplomatic, but they veiled the severest reproach. This representative of an effete civilization, of a race incapable of progress, of a country so backward as to arouse the indignation of Christendom, actually lifted up his voice in support of those principles of human liberty which were recognized by our Constitution before it was outgrown. He commented on the decline of the silk business in China, and said that he was far from attributing it to the policy of our country; but added that he believed in fair competition, and that his country did not legislate against American trade. The doors of China, he said, were open, and it was recognized there that trade was barter, and was for the benefit of both sides. On this principle foreigners were not excluded by the Government from China, although, when they entered that country, they sometimes looked at things from an interested point of view. Even the pious and noble missionaries, whose good work was appreciated in China, occasionally suffered during popular disturbances, and when their governments interfered, something more than justice required was exacted from China. Finally, this representative of heathen-

dom declared that he was glad to find that this great republic was not to adopt a policy of territorial aggrandizement, and congratulated the Americans on their devotion to a religion whose fundamental maxim was: "What you would have others do to you, do the same to them." This maxim, he ventured to suggest, might have some practical application in commerce and in international affairs. The audience received this speech with laughter and applause, but the diplomatic adroitness of the speaker hardly veiled his exposure of our cant.

Nothing in the shipping-subsidy bill now before Congress is more objectionable than the scheme for disguising bounties under the mask of contracts. The advocates of this measure do not like to speak of subsidies and bounties. These terms suggest that the moneys derived from the taxation of all the people are being applied to the use of certain favored individuals, and, if this idea becomes prevalent, the people may demand that such diversion of revenue shall cease. But a contract is a different thing. The element of valuable consideration is inseparable from the notion of a contract, and if it can be made to appear that payments to ship-owners are required by contracts duly entered into by the Secretary of the Treasury, such payments may be kept up indefinitely. Should the Democrats return to power and threaten to stop them, the ship-owners would at once cry out that the sacredness of contracts was attacked, that vested rights were imperilled, and that any diminution of their "compensation" would be an act of bad faith on the part of the Government.

Such "contracts," however, as are proposed in the subsidy bill, are neither fair nor legal obligations, and it is the duty of the opposition in Congress to notify all parties interested that they will not be recognized when the present Administration is overthrown. The general rule of law is that pensions and bounties are not enjoyed as of right, but of favor, and that they may be terminated without impairing any right of property. It does not change the character of a bounty to call it a contract, and the element necessary to support any contract—the consideration—is lacking. The Secretary of the Treasury may agree to pay money to certain ship-owners, but the ship-owners render him no service in return. They obtain a part of the revenue of the public, and spend it in building ships which are their private property. It is commonly believed that a consideration, and a very substantial one, will be paid by the ship-owners; but they will not pay it into the Treasury of the United States. There may be a contract; but it is a contract between certain private citizens and certain influential politicians, relating to the furnishing of money for the coming Presidential campaign, and to the compensation to be provided for those contributors out of the revenues of the government. Such a contract would not be enforceable at law, and it has no claim to be regarded as sacred.

The amendment to the Currency bill reported by Senator Aldrich, declaring that the act is "not intended to place any obstacles in the way of the accomplishment of international bimetallism, provided the same be secured by concurrent action of the leading commercial nations of the world, and at a ratio which shall insure permanence of relative value between gold and silver," is futile and unnecessary. It is a tub thrown to the whale after the whale has disappeared. In legislation we look for something substantial, or at least intelligible, but there is nothing substantial or intelligible in the phrases employed in this amendment. Which are the leading commercial nations of the world, and how many are they? What is the ratio that will insure permanence of relative value between gold and silver? These are the things which are to guide us in any future rambles after bimetallism. It is needless to say that such an amendment has no practical end in view—except, perhaps, to promote Senator Wolcott's reëlection in Colorado. It is a "stump-speech in the belly of the bill."

Gov. Roosevelt has formally announced that he will not, under any circumstances, accept the nomination for the Vice-Presidency. In giving out his statement he said: "And I am happy to state that Senator Platt cordially acquiesces in my views in the matter." The Governor had already made it practically impossible that he should be on the same ticket with Mr. McKinley, by pointedly opposing the President's policy on the two most important questions which have come up of late. Mr. McKinley favored a peaceable adjustment of the controversy in Kentucky; Col. Roosevelt's voice, as usual, was for war. Mr. McKinley accepted the civilized view that an Isthmian canal should be a neutral waterway for the commerce of the world; Col. Roosevelt, of course, insists upon the United States managing it in such a way that there shall always be a good chance for a fight over its control with one of the great Powers. The Governor sees that oil and water will not mix any better than such conflicting views as to the true policy of the party, both at home and abroad. The Governor believes that his surrender to the Republican boss has insured his renomination for his present office next fall, with the support, or at least without the opposition, of the party machine. At any rate, he will seek the nomination, as he has a perfect right to do, and he invites the judgment of the people upon the record which he has made in the executive office since New Year's of 1899.

The latest scheme to enlarge the pension list was unfolded at a Grand Army dinner at Washington last week, by Commander Shaw. He declared that a great injustice was done to many worthy applicants for pensions by the rejection of their claims. The trouble was due, he said, to "the hateful cry of fraud," and to the Pension Commissioner's lack of loyalty to the law. "We want," said Col. Shaw, "no more makeshifts, no more evasions, no more unworthy cries about 'frauds, frauds,' in pension affairs." To correct the present abuses, it is proposed to have established a court to hear appeals from the decisions of the Pension Commissioner, to consist of five judges with salaries of $5,000 a year each. Under the present system such appeals are made to the Interior Department, which has generally sustained the rulings of the Commissioner. A bill to establish such a court has been introduced already by Senator Mason, and no doubt its passage will be urged by a host of pension attorneys. When legitimate claims begin to be scarce, these attorneys turn to the great mass of rejected applications and devise means for reviving them. There seems to be no ground whatever for the complaint that meritorious claims for pensions are rejected. The private pension bills that are passed to remedy supposed hardships of this kind are generally found, if examined, to be of very doubtful character. Vague assertions of injustice in the Commissioner's rulings will not convince those who know anything about the subject that any court of appeals is necessary.

In view of the extensive improvements in transportation about to be carried out in this city, the report of the Superintendent of the State Free Employment Bureau has a special interest. During the past year there has been a considerable demand for manual labor, but it was almost impossible to secure employment for men in the public works of the city. The reason for this was that the work was "mortgaged" to the dominant political party, and no workmen not satisfactory to the party leaders were allowed to obtain employment. Even in such emergencies as the Street-Cleaning Department encounters after snow-storms the rule is not relaxed. In order to get work, the laborer must have the endorsement of an Alderman or a district leader, or enlist under some padrone. The consideration for these opportunities to labor is not only political fealty, but also a percentage on the wages received. Men who have earned $20 find it better to have their claims cashed at a discount

of 10 per cent. than submit to the delays which they will otherwise experience. These statements are rather confirmations than revelations, and they make the support given by many sincere reformers to the eight-hour and union-wages rule in public works a cause for surprise. The laborers on these works are a favored class, in that they receive more pay for less work than laborers without political influence. Their higher wages are regarded by the politicians as a regular source of revenue, through assessments and discounts. The system benefits nobody but the Boss and his lieutenants, and the abuses which it creates constitute a strong argument against the policy of municipal ownership.

The City Club has resolved to take up a matter which certainly demands thorough investigation. A few days ago the public learned that the Brooklyn Wharf and Warehouse Company was unable to pay the interest due on its mortgage bonds, and that a receiver was to be applied for. Both plaintiff and defendant in the suit were willing to have a receiver appointed, and naturally both were anxious to secure a receiver who would preserve the great property involved from waste, and administer it in a business-like manner. It was stated at the meeting of the City Club by a very responsible lawyer, Mr. Wheeler H. Peckham, that the parties to the suit agreed that they would like to have the United States Mortgage and Trust Company, the trustee under the mortgage, appointed receiver. They were apprehensive, however, that the emoluments and patronage attached to such a position would influence the action of the court, and it was, therefore, deemed expedient to propitiate the "machine" by consenting to take ex-Mayor Grant. In this way, the counsel seem to have agreed, they might secure a fairly business-like management of the property, and at the same time concede something to the politicians. But the suggestion did not prove acceptable to the court. To the consternation of all the parties to the suit, the order appointing the receiver was found to contain, not the name of Hugh J. Grant, but that of John F. Carroll, who occupies the position of vicegerent in this city during Mr. Croker's absence.

The attorneys in the suit rebelled outright on seeing this order. They immediately decided not to submit to the prospective spoliation of the property, and resolved on the bold course of discontinuing their suit. This was evidently a step for which the court was unprepared. Had it been anticipated, it could have been checked; for if Mr. Carroll had once got his bond approved, few persons believe that an order discharging him would have been obtained. Unfortunately for Tammany Hall, the order appointing Mr. Carroll seems not to have been previously made known to him; at all events, the parties to the suit appeared before the court with consents to discontinue before Mr. Carroll was able to qualify. For the court to refuse to enter an order discontinuing an action on the consent of all parties thereto is an unheard-of proceeding; nevertheless, in this instance the court demurred. The prey had not only been scented; it had almost been tasted. The mouths of the hungry "Braves" of Tammany were watering; to have come so near to so fat a job and to lose it, after all, was too much to submit to. Yet the position was finally recognized to be untenable by the court, and, after hearing some very plain talk and some undisguised threats of future retribution, the court finally permitted the suitors to escape from its jurisdiction. It was an escape "so as by fire," and the parties fled to another judicial department, where the atmosphere is somewhat purer; and whither, we must say, considering the situation of the property, it is not easy to see why they did not go in the first place.

Probably the most conclusive piece of evidence in the Molineux trial is the verdict of the jury. It is unquestionably a surprise to the public. Many people who had followed the proceedings expected an immediate acquittal; perhaps most were sure that the jury would disagree. That after not unreasonably protracted deliberation a verdict of guilty should have been pronounced is a circumstance of very great weight. The jury was carefully selected, and was regarded as composed of better than the ordinary material. It was confronted with a mass of expert opinion sufficient to becloud any issue. It was distracted by continual and violent disputes between counsel, and not aided by much display of judicial firmness or discretion. It was exhausted by the protraction of testimony to an unparalleled length, so that the beginning might well have been forgotten before the end was reached. The jurors in this case, breathing the mephitic air of the court-room, stunned with the clamor of the lawyers, bewildered with the technical language of chemistry and physiology, warned of the fallibility of expert testimony, aware of the danger of trusting to circumstantial evidence, and wearied by the interminable length of the proceedings, might well have washed their hands of the responsibility of condemning a human being to death. That in spite of all these adverse influences they should have promptly found the prisoner guilty, establishes a very strong presumption that they have arrived at the truth. The fact that any verdict was reached, instead of the disagreement very generally expected, also constitutes a most impressive proof of the merits of the system of trial by jury.

It was a foregone conclusion that the English Government would be triumphantly sustained in Parliament. Reckoning in the Irish members, who refused to vote, and those Liberals who walked out of the House, the Government's majority was only about its normal figure; but that was more than was at one time anticipated, and was naturally hailed as a great Parliamentary victory for the Ministry. The fact that the Liberals could never think of taking office themselves if they carried a vote of censure, and that they were compelled to advocate a vigorous prosecution of the Boer war, necessarily made their attack feeble. But a tactical advantage of this sort is far from proving that the Conservatives will not yet suffer severely because of the African war. Chamberlain himself admitted that the Government had made many blunders and was much to be blamed. Perhaps its hugest blunder was in having so mismanaged a case in which there were at least elements of justice on the English side, as to make Great Britain appear in the wrong to nearly the whole civilized world, and to put into a grievous dilemma lovers of liberty in Europe and this country, who have been accustomed to think of English rule as synonymous with freedom and progress. The case has been put with force in a private letter from a leading Liberal of the Continent:

> "Next to my own country I love England. But in this war you are in the wrong. You are fighting against a small and brave people who are defending their freedom. If you beat the Boers I shall be very sad, but I am not sure that I shall not be sadder if you are beaten, for it will mean so much for human freedom."

France, as well as England and the United States, is exemplifying the horrible cost in life and treasure which colonial wars involve. The disastrous expeditions of the French army in Madagascar have recently been freshly brought to public attention. They constitute one of the charges made against Gen. Mercier in his campaign for election as Senator. In was under his direction that the calamitous expedition against the Malagasies was undertaken in 1895. The full official reports show what terrible and needless losses were suffered in that one year. Whole regiments were almost annihilated by disease, without having once met the enemy, the total deaths footing up 5,756, while the money spent on the ill-starred campaign amounted to more than $10,000,000. What is worse, evidence of official incompetence and neglect abounded. The medical reports had shameful things to say of the lack of foresight on the part of those in charge of the army: supplies were deficient; tents were missing; medicines never got to the front; mismanagement reigned on all hands. It was the old history of military adventure in the tropics. We, in the Philippines, are writing only one more miserable chapter in it.

THE PORTO RICAN INHUMANITY.

The humane people of the United States cannot too soon be aroused to the fact that the Republicans in Congress are proposing to commit, in the name of this nation, an act of unparalleled and shameful cruelty. We refer to the bill taxing Porto Rican exports and imports to the extent of 25 per cent. of the Dingley rates. There are strong reasons for thinking this bill unconstitutional. They are set forth in the minority report, and also in the individual report of Mr. McCall of Massachusetts, a Republican who has the courage of his convictions, and, what his Republican colleagues apparently have not, a sense of humanity. But we do not now insist upon the illegality of the measure. Chatham indignantly cried in Parliament: "I come not here armed at all points with law cases and acts of Parliament, with the statute-book doubled down in dog-ears, to defend the cause of liberty." So we say to-day, be the constitutional right what it may; let the Supreme Court reverse itself if it choose; rule out all questions of fiscal need and policy—the fact remains that this proposed legislation is so cruel, so heartless, so charged with disaster and starvation for 900,000 human beings, that to adopt it would entitle Spain or Russia or even Turkey to send missionaries to us.

What are the facts? They are set forth in voluminous detail and with overwhelming force in the reports of our own officials. Governor-General Davis, Consul Hanna, Secretary Root, Commissioner Carroll, the President himself, have all shown how the immediate necessities of Porto Rico cry out for freedom of trade with this country. The inhabitants had practically a free market in Spain and Cuba. We destroyed that. Then we double-locked our own against them. The result is, as Secretary Root declared, that two crops of tobacco lie rotting in the warehouses of Porto Rico; that her coffee and her sugar are practically unsalable. This was true even before the hurricane of last August came to complete the ruin we had done our best to bring about by neglect. The hurricane was "an act of God." What can we call our deliberate attempt to prevent the Porto Ricans from living by honest labor but an act of the devil?

The tax on their exports is flagrant enough; but to make them pay one-quarter the Dingley rates on the necessaries of life would argue a perfectly fiendish ingenuity of malevolence. People do not generally understand this. The Dingley Schedule G, "Agricultural Products and Provisions," is a section full of "fake" duties, so far as we are concerned. These are the hoary old tariff taxes put in to fool the American farmer, and make him think that he, too, is "protected." But every one knows that the high duties dangled before his innocent eyes are not operative. They do not affect the cost of the prime necessaries in this country, for practically none are imported. In Porto Rico, however, these Dingley duties would take effect in crushing fashion. The island has long imported a vast amount of food products, paying for them with tobacco and coffee and sugar. Now the Republican plan is, on the one hand to refuse the Porto Ricans a market for what they raise, and on the other to tax them exorbitantly for the food they must have or starve.

Take a few sample figures. Commissioner Carroll returns the Porto Rican imports of rice in 1897 at 77,994,122 pounds. Here is a necessary of life, now free. We propose to clap on 25 per cent. of the Dingley rate of 2 cents per pound. In other words, we propose to tax a ruined and starving people $389,000 on a single and necessary article of food! Did a Borgia or a Bajazet ever condemn his subjects to death with a more refined cruelty? The case will be very much the same with the other leading imports of Porto Rico—kerosene oil, pork, lard, flour, fish. Salt fish is taxed three-fourths of a cent a pound in the Dingley tariff; flour, 25 per cent. ad valorem; lard, two cents a pound; pork, two cents a pound, and so on. In other words, all these sleeping Dingley duties on food, which are only a joke to us, are to be wakened by the bill before Congress, and set to clutching the throats of the unhappy Porto Ricans, whom we rescued from the tyranny of Spain in order to fling them into the jaws of our Moloch of protection.

This, we say, is an act of stark inhumanity, to which we do not believe the American people will ever consent. Certainly they will not if its monstrous nature is brought home to them. Why, we might as well turn our soldiers loose in the island to butcher the inhabitants as to decree their death by act of Congress. When Russia annexed the Crimea in the last century, she put 30,000 Tartars, men, women, and, children, to the sword. Is our proposed course a whit less unfeeling and bloody? Here are 900,000 fellow-men; if not fellow-citizens, they are at least our subjects, as even the Imperialists must admit. Their lives and fortunes are in our hands. We propose to rob them of both. And the leaders in the crime are the Senators from Connecticut—the State of schools and universities and churches! That State has no more inhabitants than Porto Rico; yet its representatives in Congress, some of them lights in the religious world, coolly urge a bill to extinguish the right of nearly a million men under our flag to life, liberty, and the pursuit of happiness.

The whole thing seems a ghastly joke—like Swift's proposal to kill and eat the babies in Ireland. But if this law is pushed in dead earnest, there will be need of Swift's *sæva indignatio* against its authors and abettors. Is this to be a final demonstration of the inhuman nature of protection? When the McKinley tariff worked distress in Vienna, its author exulted over the misery he had wrought. Will he now sit idly by and see a protective tariff made an instrument of torture for men and women and children under the American flag? We cannot believe it; nor can we believe that the religious and educated opinion of this country will tolerate the crime which the Republicans in Congress are intending to commit in the name of protection. The American people are not cruel. They do not want the blood of Porto Ricans or Cubans or Filipinos on their heads. But, if they would be guiltless, they must lose not a moment in letting their selfish and besotted representatives at Washington know what they think of this attempt to make the United States synonymous with greed and cruelty.

FROM BLAINE TO HAY.

The full text of the Hay-Pauncefote treaty has now been made public, and bears out all that has been said in its favor as an instrument of civilization and peace. Perhaps the best way of demonstrating its enlightened and progressive character is to show how Secretary Hay's positions in 1900 differ from the demands of Secretary Blaine in 1881. It was Mr. Blaine who first exploited the idea that an Isthmian canal would be a part of the coast-line of the United States. In his letter to Minister Lowell of June 24, 1881, he wrote that such a canal would be "substantially a part of our coast-line." By November 19, of the same year, he had got to the point of affirming that "the United States will always insist upon treating the great water-way as part of her coast-line." Naturally, there could be no neutralization. Mr. Blaine vehemently asserted that, in time of war, "the passage of armed vessels of a hostile nation through the canal would be no more admissible than would the passage of the armed forces of a hostile nation over the railway lines joining the Atlantic and Pacific shores of the United States." And in the very fore-front of his list of "the changes necessary" in the Clayton-Bulwer treaty, in order "to meet the views of this Government," he put the following:

> "First—Every part of the treaty which forbids the United States fortifying the canal and holding the political control of it in conjunction with the country in which it is located, to be cancelled."

One glance at the modification of the Clayton-Bulwer treaty now before the Senate shows how completely these reactionary and impossible contentions have been abandoned. The first specification of the neutrality of the future canal provides that it "shall be free and open, in time of war as in time of peace, to the vessels of commerce and of war

of all nations." What Mr. Blaine characterized as wholly inadmissible, is thus not only admitted, but proclaimed highly desirable. And his impatient demand that the right be given us to fortify the canal has the fitting comment made upon it in the seventh specification: "No fortifications shall be erected commanding the canal or the waters adjacent." In short, the present treaty is a full justification of what President Cleveland said in his annual message of December 8, 1885, namely, that the only way to secure the neutralization of interoceanic transit was to make "the use of the route open to all nations, and subject to the ambitions and warlike necessities of none."

Mr. Hay deserves high praise for quietly sponging the slate of all the Jingo absurdities and extravagances. He plainly saw that in no other way could the matter go forward. If he had gone at Salisbury in the pugnacious way in which Blaine approached Granville, he would have got the same answer that Blaine did—that "her Majesty's Government rely with confidence upon the observance of all the engagements of that treaty [the Clayton-Bulwer]." A modification of the treaty necessarily meant a friendly attempt to agree with Great Britain, instead of berating her. If there was to be any diplomatic progress at all, Mr. Hay clearly saw that the shirtsleeves and shot-gun methods of the art of managing foreign relations must give way to civilized usages. More than that, being a man with a mental horizon not bounded by the valley of the Ohio, in touch with international ideas, familiar with the conception of a world's commerce and a world's peace and their needs, the Secretary of State has risen to his great opportunity of preparing the way for an interoceanic canal, that shall be a means of international unity and amity, as well as a highway of international commerce.

Why, then, is his work so bitterly assailed? Why is he accused of surrendering, of being tricked in the negotiation? Why are even the leading New England Senators found opposing this great step forward in international good feeling and service of the world's trade? Partly, we suppose, it is the effect of Jingo virus in the veins. We have been so long bred to the wild notion that an Isthmian canal is primarily an instrument of war, a work of military strategy, a means of infuriating our enemies, that it is hard for us to go over at once to the common-sense idea of it as a great labor of peace and for the cementing of peace. The old confusions about "control" still bother us. But we have learned something about sea-power since Blaine's day. The true control of the canal in time of war is at sea. The Power able to beat an enemy's fleet before it gets in sight of the canal is the Power that will be able to prevent a foe from utilizing it in war. That was true under the Clayton-Bulwer treaty; it will remain true under its proposed modification. The Jingo Senators are imagining a vain thing.

But we suspect that the opposition to Secretary Hay's beneficent diplomacy has other and baser motives. A part of the outcry sounds very like the fury of disappointed speculators and contractors. They fear that Congress will never vote the money for a thoroughly neutralized and non-military canal. Then where will their bonds and liens and concessions and contracts come in? Already they are raising the constitutional point that Congress has no power to lay taxes (and hence vote money) except for "the defence" of the United States. A canal for the free use of all the world is not a thing to defend us or to be defended. But, luckily, these unworthy motives cannot be avowed. The men actuated by them can work against Secretary Hay only in darkness and secrecy. What he has done is so plainly in the interest not only of this country but of all the world; is so undeniably in the line of progress and humanity, that the friends of civilization and peace should see to it that his statesmanlike achievement be not crippled or defeated.

SUBSIDIES OF VARIOUS KINDS.

Senator Butler of North Carolina has proposed an amendment to the shipping-subsidy bill in the interest of farmers. It provides that there shall be paid out of the Treasury of the United States to any exporter of wheat, rye, corn, flour, cotton, hops, or tobacco, to foreign ports, the sum of ten cents per bushel on wheat; fifty cents per barrel on wheat flour; ten cents per bushel on rye; fifty cents per barrel on rye flour; five cents per bushel on corn; seven cents per cental on corn ground; one cent per pound on cotton; two cents per pound on hops; two cents per pound on tobacco. This is a practical way to insure to the agriculturists the direct benefit of the subsidy which the Hanna-Payne bill proposes to pay them in an indirect manner through the pockets of the steamship owners.

Hanna will probably think that Butler is trying to load the bill down with amendments so that it will sink, either in the Senate or the House. Hanna may even think that the Butler amendment is "paid for," like the adverse criticisms of the press. However that may be, we think that it will be unsafe for Senators who represent the agricultural States of the West to vote $9,000,000 per year for twenty years for ship-owners, and vote against a proviso to pay the farmers anything for their contributions to our glorious export trade. We say glorious advisedly; for what is the significance of the American flag at the mast-head without a cargo underneath? All the arguments in favor of shipping subsidies are based upon the idea of export trade. They say that "trade follows the flag," and some people are so fuddled by their own phrases that they make the flag of more importance than the trade. Senator Butler rightly conceives that the trade is the important part of the scheme, and that the subsidy should be given in part at least to those who furnish the exports, and not wholly to those who carry them.

Other amendments in harmony with this conception are said to be in embryo. Some Western Congressmen who have been repeatedly told that the promotion of export trade is the object of the Hanna-Payne bill, have been so simple as to raise objections to the discrimination in the bill in favor of large and fast passenger steamships. The bill provides a certain rate of subsidy per mile per ton for all craft, sail or steam. Then it provides an additional rate for vessels over 1,500 tons, with a higher rate for those of 3,000 tons, and a still higher rate for those of 8,000 tons, with increments also for the rate of speed, ranging from fourteen to twenty-one knots. The scheme seems to have been cunningly drawn to fit the present and prospective conditions of the International Navigation Co. Now these shortsighted Congressmen from the West say that this preference ought not to be given to passenger steamers; that if any advantage is given to one kind of craft over another, it ought to be given to freight steamers, tramp steamers if you please. What is a tramp steamer but a ship carrying freight cheaply; and is it not the object of the subsidy bill to get our freight carried at low rates so far as the shipper is concerned?

The advocates of the Hanna-Payne bill were quick to scent danger in this quarter, and proposed to meet it by putting a limit of $2,000,000 on the amount to be paid in any one year to steamers of high speed. This did not satisfy the Western objectors, who could see no reason for paying any subsidy at all to passenger-boats. Why should we pay money out of the Treasury, they said, to send our people to Europe? Why should we tax ourselves to furnish fine ships and low fares to rich men who are abundantly able to pay their own way? These people, who flock to Europe every year, carry money out of the country and spend it abroad, to the detriment of home industry and our balance of trade, besides aping foreign manners and learning that this country is not good enough for them. Why should we vote public money to promote this kind of snobbery? So these objectors are of the opinion that no subsidy at all should be given to passenger steamers, but that it should be restricted wholly to freight boats. This is a sound view, if any subsidy at all is needed or justified—which we deny.

From various sources we gather that the subsidy-hunters are in trouble. The

Tribune's dispatches say that, in order to obviate objections to the Hanna-Payne bill, a number of amendments have been prepared and will be reported by the committees of the Senate and House. One of these amendments limits the "compensation for speed" to $2,000,000 per year, or to 22 per cent. of the largest sum appropriated in any one year. This is regarded as a great concession to the taxpayers, but it does not seem to be sufficient, for the dispatches to the *Times* say that the bill is to be reported favorably, and then dropped for the present session, on account of the opposition of Western and Northwestern Republicans. We are quite prepared to believe this.

We warn the advocates of the scheme, however, that they will never be stronger in Congress, or in the country, than they are now, and that if they pause in their efforts to pass the bill, their prestige will be shattered. They will lose ground from that moment. There is no such thing as standing still on a proposition to raid the Treasury of the United States. Here is a cool proposal to pay to one steamship company a sum of money equal to 20 per cent. per annum on its capital, in addition to its regular commercial earnings from freight and passengers. Any such scheme as that must either be put through at once, before the public understands it, or be abandoned altogether. To lay it over a year, for prying investigators and carping critics to work upon, is to insure its death.

A DAY ON CHALGROVE FIELD.

I do not remember a time when the following passage from Macaulay did not ring in the ears of my memory. If I had written one of those remarkable essays of a few years ago on "Books that have influenced me" I should have put down the essay of Macaulay's on Nugent's 'Memorials of Hampden.' It closes as follows:

"The news of Hampden's death produced as great a consternation in his party, according to Clarendon, as if their whole army had been cut off. The journals of the time amply prove that the Parliament and all its friends were filled with grief and dismay."

Lord Nugent had quoted a remarkable passage from the *Weekly Intelligencer:* "The memory of this deceased colonel is such that in no age to come but it will more and more be had in honor and esteem. A man so religious and of that prudence, judgment, temper, valor, and integrity, that he hath left few his like behind."

And now Macaulay again:

"He had indeed left none his like behind him. There still remained, indeed, in his party many eloquent tongues, many brave and honest hearts. . . . But it was when the too sullen tyranny of Laud and Charles had succeeded the fierce conflicts of sects and factions ambitious for ascendency and burning for revenge; it was when the vices and ignorance which the old tyranny had generated, threatened the new freedom with destruction, that England missed the sobriety, the self-command, the perfect soundness of judgment, the perfect rectitude of intention, to which the history of revolutions furnishes no parallel or furnishes a parallel in Washington alone."

The reverence for Hampden which this expresses was stimulated in me many years later by a very charming article in the June number of the *Atlantic Monthly* for 1859, by Col. Wentworth Higginson, entitled "A Charge with Prince Rupert," describing the cavalry raid from Oxford, in opposing which Hampden met his death. There has been a controversy, within a very few years, as to whether Hampden's wound was caused by the pistols of the Cavaliers, or by the bursting of his own. But that makes little difference. I had always intended, if I ever found myself near Chalgrove Field, to make a pilgrimage to the spot where this great man met his fate. I was staying last September at the house of a friend in Oxfordshire, and, hearing from my hostess that Chalgrove Field was only a few miles away, I saw the long-looked-for hour had come, and I started for the famous spot on a path through the happy autumn fields. I was told a monument had been erected about fifty years ago on the place where the great man received his wound, by a body of English Liberals. For a mile and a half we followed one of those delightful grassy lanes of English country, stopping only too often to pick the blackberries which barred our progress and with which the hedges abounded, and exciting the curiosity of many herds of prosperous-looking cattle. We opened many gates, climbed many stiles, without seeing any sign either of the monument or of Chalgrove church; we finally fell in with a farmer who showed us the spire in the distance, still across the fields covered with the signs of recent harvesting. Twenty minutes more and we were in the grassy streets of the village, without seeing a soul to inquire of. The population all seemed absent, gathering their crops. At last we saw an open door where a tidy-looking woman stood kneading her bread. She presumed of course we wanted to see the church, which is one of the oldest and quaintest in England, and contains some of those early mural paintings which carry one back to the tenth century. On telling her that we desired to see the monument of Hampden even more than the church, she expressed polite surprise that we should be so besotted, for "Hampden," she said, "was a traitor." We found afterwards that the clergyman of the parish was a strict Ritualist, and we saw clearly that it was his influence which had made this good woman pay more respect to the memory of King Charles than to that of John Hampden. In fact, the traditions of the Church all over England are and have been, except in one or two dioceses, opposed to what is called "liberalism."

After a pleasant half-hour in the antique church and in the grassy churchyard—for we had interest and sentiment enough for both church and monument—we got the local carrier to drive us over to the latter, which stood a mile from the village. It was in an angle of the cross-roads, two or three dozen yards from where Hampden received his death-wound. The monument is a plain shaft, engraved with the names of its constructors, most of them men who figured later in the short and happy records of Peelite politics. Rupert, it will be remembered, was making many excursions from Oxford, where the King had established himself, in order to "beat up" the Parliamentarian quarters in the country around. Hampden had heard of it, and was chagrined by the impunity which Rupert owed to Essex's supineness. On hearing of this foray he called his Buckinghamshire cavalry together, and made a hurried march in order to seize the Stadhampton bridge, which he felt sure Rupert would have to cross on his way home. His levies were raw, and when, on coming in contact with the enemy, Rupert leaped the hedge which divided them, and fell upon them, sword in hand, he wrought somewhat of a panic among them, for he was of huge stature, determined countenance, and a practised sabreur. Hampden was there in front, and, instead of seeking to "confer," as a modern politician would do, met him in arms and almost immediately received two bullets in the shoulder. On seeing him turn, his followers broke and were pursued for a short distance. He rode mortally wounded from the field to Thame, and there, six days later, he died, probably the greatest loss that England has ever sustained in the person of one man.

He was buried in the churchyard of his own village of Hampden, and was followed to the grave by his troopers, with their arms reversed, singing, as Macaulay says, "the lofty and melancholy psalm" which declares, "For a thousand years in thy sight are but as yesterday, when it is passed, and as a watch in the night."

Hampden, like Washington, was one of the men who occasionally appear, as the ages roll by, to make you proud of your race and raise your hopes of its future. I could not but think, in standing where he fell, that I stood on holy ground, and felt more than ever the force of the lines—

> "But whether on the scaffold high
> Or in the battle's van,
> The fittest place where man can die
> Is where he dies for man."

In returning, our friendly carrier drove us past the site of an ancient and lordly mansion, of which the civil war had caused the destruction, Fairghley Hall. The old gates, the old park walls, the stately avenues of secular beeches and elms, the outhouses, with the ponds and terraces of the old garden, were still there, offering, we thought, as we sat down among them to rest, an irresistible temptation to the American multimillionaire to build himself an ancestral home on the old site, and take to himself Cavalier ancestors. In such places the thought inevitably occurs, if all the beautiful things which the earth has owed to man's industry and taste had escaped his rage for destruction, what an attractive abode it would be. E. L. G.

IMPRESSIONS IN THE MEXICAN HIGHLANDS—V.

GUERRERO, September, 1899.

Guerrero, in Chihuahua, must not be confounded with the important State of that name in the southwestern portion of the Republic. On nearly all maps, even of recent date, this town is called Concepción, following the old title derived from the mission station that formed the nucleus around which it grew. Its local importance is great, due in part to the large amount of arable land in its vicinity, having at command an unfailing abundance of water from the Guerrero River, and chiefly because of its favorable geographical location on the extreme western edge of the plains, where cargoes must be broken for transfer by mule trains

into the Sierra Madre. It is already a thriving place of 4,000 inhabitants, and as soon as it has become the terminus of the new railroad, now nearly completed from Chihuahua, its commercial progress will be rapid. Mining is the chief dependence of the mountain region, but hitherto the enormous cost of supplies has prevented the operation of any but large and highly productive properties. Improvement in transportation, however, will lead to the development of many new mines, increasing the volume of business, to the joy of the Guerrero merchants.

The dispatching of goods by mule-trains is a unique occupation, and, though profitable, not every one who undertakes it is able to succeed. It involves, first of all, a thorough acquaintance with the mountain region, the camping-grounds, pasturage, the state of the roads and streams, and an equally intimate knowledge of the characters and reliability of the *arrieros* (muleteers) and their assistants. A skilful arriero will take his train-load of freight through in safety at any time, while an incompetent man might lose many mules and much cargo, particularly during the rainy season. Again, an energetic, faithful man will occupy no more than from ten to fourteen days in the trip to Jesus Maria, a distance reckoned as 160 miles, which the laggard could hardly cover in a month. The custom among the arrieros is to depend upon pasturage entirely for feeding their animals en route, except during the height of the dry season in April and May, when a portion of the train must carry corn for the rest. The delays for feeding consequently consume a large part of the time in transit. Then, much time is lost in "rounding-up" the mules, adjusting the *aparejos* (pack-saddles), and in lashing on the cargoes. The chief display of skill on the part of the arriero is shown in his adjustment and fastening of the pack. If not well balanced and securely lashed, constant readjustment will be necessary throughout the day. To do it well requires good judgment and long practice. When finished, the mule and his cargo seem covered by a bewildering network of rawhide ropes and wooden hooks (*ganchos*), but it is all disposed according to a system, each rope performing its own peculiar function, which the arriero fully understands. Three hundred and fifty pounds is the maximum load for a strong mule, and one hundred to one hundred and fifty for a burro. And such awkward, heterogeneous cargoes as they carry! Cog-wheels and shovels, railroad iron and drill steel, candles, dynamite, boxes of groceries almost as big as the mules that bear them, and flasks of mercury, insignificant as to size, but, from the oscillation of the heavy mobile fluid within, constituting a most fatiguing burden.

The long lines of laden beasts, patiently toiling in zigzag paths up and down these steep inclines, are an interesting feature of the mountain journey. A little bronco, with a tinkling bell on his neck, leads the way, with an arriero by his side, while the drivers follow the train, urging the slower-footed animals with incessant, short, sharp whistles, "Wheet! wheet!" and cries of "Arre! arre, mulas!" No civil engineer better understands the practical value of reducing grade by detouring on a steep incline than these experienced pack-mules. They are continually expanding the curves, and would stretch out the road to an interminable length but for the energetic reproaches of their drivers.

Travellers never accompany these tedious cargo-trains. Though the difficulties of the trail are very great, horses are always ridden, with strong active mules for baggage and provisions. Properly equipped, with a good *mozo*, or servant, one can average fifty miles a day. It all depends on the mozo, and good ones are rare. Upon him also largely rests your personal safety. The organized bandits have ceased to be a terror, thanks to the effective police administration of the Mexican Government, but the mozo is an ever-present danger. You cannot well dispense with him, and yet many a traveller is murdered at night by his servant for the pittance he may carry in his purse. Whether it be necessary or not, every one carries a rifle in a holster slung under his saddle-skirt, and a revolver in his belt. In case of attack, however, these would be of little avail, for the Mexican highwayman shoots his victim from safe ambush first, and robs him afterward. The danger at night must be unflinchingly taken. The only effective safeguard is to engage none but a well-known mozo, and then to inform yourself as to the proper stopping-places on the road, and insist on reaching one of the caravansaries on your list each night, no matter what may betide. If your servant shows a disposition to camp in the open, or to put you up at unfamiliar ranches, you will be justified in holding him under grave suspicion, and in sleeping with an eye open. Between Guerrero and Jesus Maria, the customary halting stations, where provender for animals, and supplies of milk, eggs, chickens, and tortillas, may be obtained, and where the honesty of the people can be depended upon, are Terrero, Rio Verde, Tomóchic, Aguas Calientes, and Tabacótes.

It is a long day's ride from Guerrero to Rio Verde, passing Terrero on the way. Three lofty ridges must be crossed, besides a lower but very steep one between Terrero and Rio Verde, on this day's ride. Three more ranges, with an hour's hard work in surmounting each, bring one to Tomóchic, a veritable oasis in this barren waste of crags and gulches. Here first are seen mountains of sandstone, flat-topped semi-domes, bold precipices with lines of stratification drawn across their faces, and black caverns yawning where waters have beaten in some distant past. Deep down under the shadows of these peaks and domes lies a nearly circular level floor, laid off into corn fields, with a brown adobe town and a ruined church in the centre. Two rivers issue from cañons, join forces, and wind across this intermontane mesa, and then plunge into another cañon on their way to the Rio Yaqui. Here are evidences of a former lake, whose life history was rudely interrupted by seismic or volcanic agencies, draining it before its basin had been filled.

Not only is Tomóchic a spot of rare beauty and startling contrasts; it is a meeting-place of many roads, and a divisional point between the flora of the plains and the lofty mountains. A few hasty journeys through this complex mountain system are insufficient to give one a very accurate notion of its geology; but some features stand out in strong relief. There has been folding of the old Tertiary rocks on a magnificent scale, with extensive faulting. The deeply buried strata, fusing with relief of pressure, have followed up under the arches of the anticlines, forming mountains of felsite now exposed by the denudation of the overlying formations. In places dikes have intruded from this lower ferruginous magma, which to-day stand forth as walls of brick-red porphyry. Subsequently, mighty eruptions of trachyte forced their way through lines of weakness, following the axes of the anticlines, or opening fissures along fault-planes in a transverse direction. The most magnificent of these trachyte dikes is one averaging more than a thousand feet in width, intruding through a complex of fault-planes running west-northwest from Tomóchic. The junction between this dike and the adjacent sandstones has proved so feebly resistant to erosion that the waters have here carved out Banderilla Cañon, one of the grandest gorges in Mexico. The pinnacled escarpments of trachyte, the fantastic cliffs, and terraces of sandstone like stupendous Egyptian architecture, the grotesque caverns and balanced rocks, the twilight gloom of the narrow cañon with walls towering thousands of feet above, the suggestions of superstitious awe which this marvellous scenery has inspired (as shown by crosses planted on lofty crags or disposed in the shadows of smoke-stained caves), the roar of waterfalls, the ceaseless sighing of the wind through notches in the mountains—all combine to leave an impression of might and mystery and beauty which can never be forgotten.

It is conspicuous that these cañons have almost invariably had their location determined by dikes of trachyte, or by dikes of basic intrusives (either basalt or andesite) which burst through at some period after the trachytic outflow, following approximately the same general lines of weakness. But most curious is the abrupt change in character at Tomóchic between the vegetation east and west of this point. Elevations of nine to ten thousand feet are common on either side, but eastward the mountains resemble in almost all details the ranges which intersect the plains. The same scrubby evergreen oaks, with their small, slender, rigid leaves, the clustering manzanilla bushes with gnarled, shining, maroon-colored stems, the open, bare appearance of the peaks with secate growing to their summits, the grayish-brown hue of the landscape, are precisely what one may see at Colláchic or in Pedernales Gap. More than this, there is evidence that the mesa country did once extend to Rio Verde at least, within fifteen miles of Tomóchic, which is probably fifty miles west of Guerrero. By road the distance is nearer seventy miles. The valley immediately to the eastward of Rio Verde is the result of denudation of a mesa. The corrugated edge of the mesa-bench, now nothing more than a fringe high up on the flanks of the enclosing mountains, the characteristic mammillated surface of the lower denuded region, the lava terraces, all are here, but in a more advanced stage of degradation than is to be seen elsewhere in Chihuahua. This effect would seem to be due to rejuvenation of the rivers by the elevation of this ancient level plain. It raises a very interesting question as to the relation between the upheaval of the great Sierra, with its intrusive rocks, and the geological phenomena which produced the parallel mountains of the plain. It might serve as a time measure, and is worthy of careful study.

The most extraordinary intrusion of basic rocks to be seen on the whole route across the mountains occurs at Rio Verde, on the western edge of this old denuded mesa. These rocks are apparently rich in alkalies, so that in their decomposition they yield a soil in which no vegetation can flourish. They are bleached, barren, desolate, crumbling away by concentric weathering, leaving fantastic towers and masses like the ruined walls of structures built of rubble. Well does it merit its appellation of the Devil's Field (El Campo del Diablo).

West of Tomóchic the oaks are rapidly replaced by pines, until at Tabacótes splendid forests of conifers cover the mountains to their summits. Even a few hemlocks and spruces appear, with other species belonging to more northerly latitudes, and a singular scrubby tree, probably a heath, called the *madroño*, with dense foliage of corrugated, obovate, thick, brittle leaves, glossy-green above and covered with white down on the under surface. Its gnarled trunk and branches are brilliant red on one side, fading off into a dull creamy gray on the other, as if it had once received a coat of paint which the weather had nearly worn away. Other vegetation, however, is very scanty until the advent of the rains in June and July. This is properly the springtime of the high mountains. The flowers burst forth with suddenness, and amidst the general barrenness their brilliancy seems enhanced, and they assume a prominence quite out of proportion to their numbers. The most abundant of the smaller plants are vetches and sorrels, though the compositæ and liliaceæ are also common. The vetches, however, are the dominant family, as many as twenty distinct species being counted in one small valley, but no arboraceous forms of the leguminoseæ were found. The adaptability of the country to the culture of beans, peas, and alfalfa is unmistakable, but the available agricultural land is insignificant in extent. Such as there is has mostly been occupied by the Tarahumara Indians, a native tribe which, after a long struggle against the Apaches, finally exterminated these enemies with the aid of rifles supplied by the Mexican Government, and has now settled down to peaceful industry. Their wretched stone huts are in striking contrast with their well-tended farms and sleek cattle. In appearance and mode of living they are still savages, but the instinct of the husbandman is strong in them, and the country is better off for their existence. The sterling qualities of this race are shown by the circumstance that the Government officials charged with the transportation of bullion from the mines to Chihuahua employ only Tarahumaras as guards for the treasure-trains.

Although mining has been carried on for many decades in this region, the industry has only made a fair beginning as yet. Very little intelligent prospecting has been done, and the discoveries made have been the result of accident. The relation of the veins to the geology of the country is extremely simple. They seem to have been formed after the latest intrusions of basic lavas, in close connection with the contacts between these and the preceding acidic intrusives. This relationship holds good also for many of the greatest veins in the mountains of the plains. Hence one may expect that something might come of the reported occurrence of metalliferous deposits in the vicinity of Rio Verde and Guerrero, where the geological setting is certainly similar to that in which veins are being worked in the District of Ocampo, in the vicinity of Jesus Maria. For a like reason it is not improbable that the claims made by residents of Colláchic and Santa Isabel, farther east, concerning veins in those localities, may have some foundation in fact. The ores for the most part are not simple, carrying chiefly silver, often with important quantities of gold, associated with more or less copper, lead, and antimony. Rich veins of argentiferous copper and lead have been reported at various times, and some have been worked in a crude way, but little is yet known concerning them. Mining operations are necessarily conducted here under severe difficulties, owing principally to the excessive cost of transportation, and this hardship will not soon be overcome. The railroad from Chihuahua is obliged by the charter under which it is being built to continue across the mountains, and the route is expected to lead through the District of Ocampo, but this is all in the future. It will be a great boon, however, when freight may come to Guerrero by rail, and mining operations in the mountains will undoubtedly expand largely in consequence.

In spite of the large sums paid out as wages by the mining companies, there is terrible poverty throughout the whole Sierra Madre. The cost of provisions is so high that even those of frugal habits (who are very few) cannot lay up money, and a temporary stoppage of mining work throws the idle upon the charity of the community. Some who have grown discouraged from the uncertainty of employment in the camps have taken small ranches in the intermontane valleys, where they may at least grow corn and beans to feed themselves and their children, and raise goats to give them milk, even if they cannot buy clothes to wear. It fills one with inexpressible sadness to see these poor, starved, timid children of the mountains, often bare from their waists up, shivering in the icy blast, hoping against hope that the traveller who has come to their roof for the night may invite them to share some of his abundance to appease for once their hunger. Yet, famished as they are, they will never venture to ask for as much as a cracker, and, after all that has been said about the purloining habits of the Mexicans, it is pleasing to be able to testify that, so far as one traveller's experience goes, neither the provision-box nor baggage was ever molested, though no special precautions were taken to protect either. This is rural honesty—strong here as it is among the agricultural classes of nearly every country in the world. In the towns and mining camps one cannot be so trustful, but, considering the conditions under which they live, and the lawlessness which so long existed, it is creditable to the character of the common people that they do not more often take to open brigandage, which in these wild mountains one would think could be conducted with no great fear of the civil authorities. But it must not be forgotten that the Government has pursued the bandits, whenever they have appeared, with relentless energy. When captured, they have been shot without ceremony, and their bodies have been hung up by the wayside as a warning to the evil-minded. To bring rude men like these of the Sierra Madre to respect the law of the land was no easy task, but it has been accomplished in a most commendable manner. And as the paths of commerce and the pursuit of industry have been rendered safe, the schools have followed under the guidance of the State, even into the remotest hamlets of the mountains. Whoever thinks that the Government of Mexico is weak will experience an agreeable change of belief by penetrating into these mountain fastnesses of Chihuahua, than which there could be no more difficult place for the maintenance of law and order.

BETTERING THE INSTRUCTION.

TO THE EDITOR OF THE NATION:

SIR: My Kentucky friends seem to have improved upon the "Returning Boards" of Reconstruction days. They now have two, so that if one should miss fire, as was the case here, they can fall back upon the other. The law is abominable, I grant you, but in this case there is a bit of poetic justice (so called) in it, that commends itself to those of us who lived south of Mason and Dixon's line in the seventies.

VIRGINIUS.

February 9, 1900.

THE SHIPPING SUBSIDY BILL.

TO THE EDITOR OF THE NATION:

SIR: In the daily papers of the 17th of last month the President of the International Navigation Company, in his testimony before the congressional committee having the Subsidy bill in charge, is reported to have said: "The four fast ships [the *New York*, *St. Louis*, *St. Paul*, and *Paris*] never made the Company a dollar, and he figured the net loss to the Company at $415,600 annually. The eleven ships under foreign flags supported the other ships. The fast ships, like fast trains, did not pay." In the papers of the following day he is reported to have further explained his testimony as follows: "The reason for the need of such legislation he places at the door of the protective tariff, with its consequent higher scale of wages. The Liverpool scale of wages for firemen, for instance, he said, is $17 to $30 a month, while the American rate is $35 or more."

When President Griscom declares that "the fast ships, like fast trains, do not pay," I take it that he means that fast ships which are competing for high-class passenger service are less profitable than slow ships, and hence need to be especially subsidized. Whether his statement is intended to apply (in a less degree, of course) to fast ships under foreign flags, as well as to those under the American flag, or not, is not made clear. But, however this may be, it means that high-class passenger service is much more unprofitable, under the American flag, than freight and low-class passenger service. The question is, What do we want with business that can be carried on only at a loss? Of course this applies to all ships requiring a subsidy, but it applies to fast ships particularly, where the loss is very much greater. It is plain that the subsidy will not make the business any more profitable. It will only tax the American people

and thus reduce the remuneration of profitable American industry, in order to make up the loss on this unprofitable business. If foreigners see fit to carry us across the ocean, in a floating palace, for less than cost, surely we have reason to wish them joy of the traffic, and no reason whatever to wish to deprive them of it. For instance (supposing the subsidy is sufficient only to make good the actual loss), if it costs $100 to transport an American citizen across the Atlantic, in a fast ship under the American flag, and the foreign companies are willing to do it for $80, how can it benefit the American people to give him (or the steamship company on his behalf) $20 out of the public treasury merely to enable him to sail under the American flag? Under the foreign flag he uses but $80 of American wealth, all of which is of his own private funds. In the subsidized ship, under the American flag, he would use $100 (instead of $80) of American wealth, 20 per cent. of which would be out of the public funds, and would entail that much reduction of the profits of American industry. If this American citizen cannot afford to go abroad, with a satisfactory display of patriotism, at his own expense, it is evidently best for the American people that he should display his patriotism by staying at home.

The other point is, that ships, under the American flag, being compelled by our laws to employ American labor, cannot compete with ships under foreign flags, on account of the higher wage-rate of this country. This is supposed to be true (in differing degrees) of both slow and fast ships. The statement that this higher wage-rate is due to the tariff has nothing to do with the matter. It is altogether gratuitous. All that concerns the Subsidy bill is the statement that foreign labor can be hired for less than American labor. Hence the question here is, What benefit can it be to the American people to take money out of the public treasury in order to bring business under the American flag which is not sufficiently profitable to afford American wages? President Griscom, who, undoubtedly, is a thoroughly competent witness, says substantially that the actual earning capacity of a marine fireman is from $17 to $30 a month. He mentions firemen as representative of all employees, in respect to the difference between the American and foreign wage-rate, and says, in effect, that they must be hired at that rate to enable the company to do business at a profit. And he also says that the American rate is $35 or more, and hence the need of a subsidy to enable the company to hire American labor. Now, the only conceivable reason why American firemen must be paid $35 or more a month is because they have other employment which is profitable at that rate; and it follows that the Ship Subsidy bill is a proposition to tax the whole population of the United States and give the proceeds to the steamship companies to enable them to transfer American workmen from profitable to relatively unprofitable employment. This is much worse than robbing Peter to pay Paul.

Is it not evident that the only right way to bring foreign commerce under our flag is to change our navigation laws and our customs laws, so that business can be done profitably? FREEMAN STEWART.

PHILADELPHIA, February 10, 1900.

"PHANTOMNATION."

TO THE EDITOR OF THE NATION:

SIR: Nowhere that I have seen this monstrosity adverted to is anything said relative to its history.

We find, in Richard Paul Jodrell's *Philology on the English Language*, published in 1820:

"*Phantomnation, n.* A multitude of spectres. 'These solemn vows and holy offerings paid To all the *phantomnations* of the dead.' Pope, *Odyssey*, b. x., v. 627."

Worcester followed, in 1860, with:

"*Phantomnation, n.* Illusion. Pope."

A few years later, Webster's editors proposed, aiming at an improvement on Worcester:

"*Phantomnation, n.* Appearance as of a phantom; illusion. [*Obs. and rare.*] Pope."

In England and its dependencies, this Brummagem gem of lexicography is known chiefly through the medium of Ogilvie's Dictionary.

If those who have accepted *phantomnation* as incomplex had used their eyes to proper purpose, their recorded treatment of it would have been impossible. Though "a multitude of spectres" is not one with "a nation made up of phantoms," Jodrell plainly understood what he essayed to define. But his definition was passed by unobserved, and so was the very next article after his *phantomnation*, namely, *phantomprophet*,—also credited to Pope,—explained by "an incorporeal seer." A single glance, other than the most hasty, at his article on either of those eccentricities would have sufficed to reveal that he was possessed with a singular caprice. In *phantom* we have a substantive passing into an adjective; so that, *phantomnation* being no stereotyped combination, either *phantom-nation* or *phantom nation* is permissible, with hardly anything to choose between them. The point is by no means a nice one.

Worcester, where quoted above, gives no information as to where he learned that Pope has *phantomnation*, or as to who first defined it "illusion," or something similar. It would be curious to know how many of those who, like him, have appropriated it, were aware of its being in Jodrell. That they all went astray owing to a coincidence of oscitancy is clearly beyond belief. We must suppose, then, that their miscarriage had its source in the too frequent practice of their craft in general: whatever novelty one of them brings forward is spheterized by his successors in compilation, without scrutiny and without acknowedgment of indebtedness.

A good relevant example is offered in the fortunes of Archdeacon Todd's *innuent*, which he evolved out of Robert Burton's *inuent*, for *invent*. To produce a hundred spuriosities matching this, I need only explore a few of my pigeon-holes. And what acquaintance could any patron of the spookish *phantomnation*, "illusion," have had with the English of Pope, a severe purist, to believe him capable of being the father of such a misbegotten bantling? In order to its existence, it is necessary to presume the verb *phantomnate;* and how could that, or a derivative of it, come by an epenthetic *n?* That Bishop Hall, Owen Feltham, Sir Thomas Browne, or Henry More might have coined *phantomnate* or *phantomnation* is not wholly incredible.

Endless are the mishaps of dictionary-wrights and glossarists. I will instance a couple more, both of them disastrous croppers, and so conclude.

Among the publications of the early English Text Society is a volume containing Simon Fish's *Supplicacyon for the Beggers*, etc., in which occurs *gnatonical*. This, in the Glossarial Index to the volume, is interpreted "gnat-like." Looking to the sense assigned to *gnatonical*—correctly *gnathonical*—equally with it might be expected *catonical, ratonical,* or *spratonical*. As little connection had Terence's Gnatho with *gnats* as his Thraso had with *thrashing*.

In the *Supplemental Glossary* of the Rev. T. Lewis O. Davies, M.A., we find, taken from an old divine, *glossem*, regarding which we are told, as a tentative guide to its signification: "I suppose meant for *gloss 'em.*" A little search ought surely to have resulted in the discovery of γλώσσημα, of which it is a shortening. F. H.

MARLESFORD, ENGLAND, January 13, 1900.

P. S.—The *Encyclopædic Dictionary*, analyzing *phantomnation* into *phantom* and *-nation*, defines it: "An appearance, as of a phantom; an illusion." Its mysterious *-nation* is left unexplained.

Notes.

We are requested to give notice that any person having letters from the late Gen. S. C. Armstrong of Hampton, Va., will greatly oblige his family by communicating with Mrs. Edith Armstrong Talbot, Holderness, N. H.

Funk & Wagnalls Co. announce for spring publication 'The Hexaglot Bible,' edited with co-laborers by the Rev. Edward Riches De Levante, in six quarto volumes for Hebrew, Greek, Latin, English, German, and French (O. T.), and Greek, Syriac, Latin, English, German, and French (N. T.); 'A Mental Index to the Bible,' by the Rev. S. C. Thompson; 'The Jefferson Cyclopædia,' by John P. Foley; and 'The Domestic Blunders of Women,' by "A Mere Man."

'The Distribution of Wealth: A Theory of Wages, Interests, and Profits,' by Prof. John Bates Clark of Columbia; 'Rural Wealth and Welfare,' by George T. Fairchild; 'A History of Rome for High Schools and Academies,' by George Willis Botsford; and 'The Teaching and Study of Elementary Mathematics,' by David Eugene Smith, are in the press of Macmillan Co.

Cassell & Co. will shortly have ready Schilling's Spanish Grammar, translated and edited by Frederick Zagel; and 'Our Rarer British Breeding-Birds; Their Nests and Summer Haunts,' by Richard Kearton.

Brentano's will bring out 'The Writing-Table of the Twentieth Century,' "an indispensable book for all American Society correspondents," by F. Schuyler Matthews.

A translation of Balzac's Letters to Mme. Hanska, by Miss Wormeley, is promised by Hardy, Pratt & Co., Boston.

Houghton, Mifflin & Co. will soon issue Michelangelo's Sonnets, edited by William Wells Newell.

A new novel, 'She Walks in Beauty,' by Katharine Tynan, is announced by A. C. McClurg & Co., Chicago.

"The Riverside Art Series" (Houghton, Mifflin & Co.) follows the 'Raphael' of its first issue by a 'Rembrandt' which is, as to text, by the same writer, Estelle M. Hurll,

as the former volume. Great story-teller as Rembrandt was, upon occasion, he is yet less essentially an illustrator than was Raphael, and one feels that more of the essence of his art is omitted in the kind of comment that Miss Hurll gives than in the case of the Urbinate. Parts of the little book read dangerously like illustrated Sunday-school lessons. The reproductions are rather better than in the first issue, but are not yet irreproachable.

Just one year after the first appearance of Dr. Frank Hall Thorp's 'Outlines of Industrial Chemistry' (Macmillan Co.) comes a new and revised edition. If the determination is to revise this publication yearly, it will undoubtedly gain vastly in importance. In the early years it will be requisite not only to keep up with the march of improvement, but also to remedy inevitable faults of the original preparation. We find, however, only two considerable changes in this issue: namely, on p. 446, a paragraph of eleven lines on carbonizing wool is inserted at the expense of a shorter paragraph on scouring wool, two others being more concisely expressed; and on p. 51 an account of the Herreshoff Pyrites Burner takes the place of descriptions of the Perret-Ollivier Furnace and the Hasenclever-Helbig Burner. The other changes that we have remarked do not amount to a score of slight corrections. The index is amended by the addition of a single entry, besides those which the above-mentioned insertions in the text required. The lists of authorities are almost absolutely unchanged. Not even new editions have been noticed. At this rate, the work, far from being improved, is barely maintaining its place in the line of march. Its external appearance is even handsomer, owing to the paper taking the ink better; and figure 26 has been redrawn to advantage.

Prof. John Goodman's 'Mechanics Applied to Engineering' (Longmans) is a book which we may just mention, notwithstanding its elementary technical character, because its purpose is peculiar. It is addressed to men who have some knowledge of mechanics, as taught in the mathematical treatises, but whose knowledge floats among the clouds, so that they do not know how to apply it to engineering problems. Among the various effects of the usual bad teaching of mathematics, this is a very common one; and this work will do something for the victims. Part of it, however, seems to fall between two stools, being superfluous for those who are up in theoretical mechanics, and insufficient for those who are not. This will not prevent other parts of the book from being useful. Even an accomplished engineer will find some things in it worthy of his attention.

'Mathematics,' from the Chicago *Record* (Doubleday & McClure Co.), will be found useful by journeymen carpenters who are deficient in the theoretical side of their profession, and perhaps by some others.

Prof. William Ripper's 'Steam-Engine Theory and Practice' (Longmans), though too technical to be criticised here, is, nevertheless, so well put together and so concisely expressed as to deserve notice for its literary merit; and the matter of it is equally judicious and strong. So far as we have tested it, we have found it unusually accurate. But that students who mean to make it their business to understand the steam-engine, and who have gone so far as to know what differentials and integrals are, should shirk the labor of going on to learn enough mathematics thoroughly to master the theory of thermodynamics, and should find themselves sufficiently numerous to compel the adaptation of a work like this to their half-and-halfness—this, we must say, bespeaks some great fault in the methods of teaching. Perhaps it is ultimately traceable to the neglect of scientific logic, in consequence of which teachers of mathematics, not fully understanding its logic themselves, are unable to impart it to others, unless their pupils have a natural gift that makes them independent of teaching. But, given the conditions, we cannot see how Prof. Ripper could have done better than he has.

Dr. Philip Atkinson's 'Power Transmitted by Electricity' (Van Nostrand) has been fully revised; and obsolete matter has been cut out. There is nothing useless in it, and it well represents the present state of the art.

A new volume of "The Specialists' Series" is 'An Introduction to the Study of Central-Station Electricity Supply,' by Albert Gay and C. H. Yeaman (Macmillan). It is to some extent a work of reference, but is much rather a book to be read, dealing broadly with all sorts of points which arise in the conduct of a central station, but which are distinct from direct problems of electric lighting. There is no attempt at treating details exhaustively; but we feel sure that the discussions the work contains will be highly appreciated and found serviceable by those to whom they are addressed.

We believe there is no more uncompromising educational iconoclasm on record than that indulged in by Superintendent Edwin P. Seaver of Boston in his delineation (in the *Educational Review* for February) of the ideal public high school of the twentieth century. Yet some such plan as he proposes is what we are inevitably coming to: the ever-widening field of knowledge, the accumulating mass of heterogeneous educational material, together with the growing claims for recognition of individual tastes and rights on the part of the pupils, are even now beginning to remove beyond the range of possibility fixed courses of instruction for all. To do away with all prescribed work and allow students to select any study, or studies, to suit themselves or their parents, and to "carry these far enough to realize well-nigh their full educational value," is merely accepting fully and frankly a principle already powerfully asserting itself in the educational practice of our time. The shifting of responsibility for the pupil's education and success in life from the school to the pupil himself or the parent is considered by Mr. Seaver a decided gain, and it can, at least, be said that the risk is no greater in one case than in the other. For no thinking man or woman of mature age can for a moment doubt that the number of lives marred is at least equal to that made by scholastic rigidity, and by the authoritative or persuasive influence of narrow-minded, ill-balanced pedagogues. The subject, which the Boston Superintendent of Schools discusses in half-a-dozen pages, constitutes one of the greatest problems bequeathed by the closing century to the new.

We are glad to receive the first number of an attractive quarterly magazine, albeit of slender dimensions, entitled the *Pennsylvania German*, and edited at Lebanon, Pa., by the Rev. P. C. Croll. It is to a large extent devoted to Conrad Weiser, of whom a curious frontispiece portrait is given. He heads a series of "Famous Pennsylvania Germans." Next follow some "Poetic Gems," in the dialect and partly in translation. The tourist is invited by an interesting "Historic Pilgrimage over the Old Horse-Shoe Pike." Numerous illustrations helpfully adorn the number.

The modification of the American character by the physical nature of the country is dwelt upon by A. Oppel in the *Annales de Géographie* for January. A sympathetic and suggestive record of the impressions of an intelligent observer closes with a reference to the wonderful assimilative power of the country, especially over Germans, and to the completion of the "economic domain" by the acquisition of tropical possessions and its probable effects upon our future. Other articles are a résumé of recent investigations of coral reefs; observations on Mt. Blanc, and on the vegetation of the Caucasus (with a map); and an interesting sketch, with numerous illustrations, of some of the Berber tribes inhabiting the Aurès, the highest chain of the Atlas Mountains.

The *Bulletin* of the Society of Civil Engineers of France, at Paris, has become a semi-monthly, and is published on the 15th and 30th of each month. The first number of the current volume contains the conclusion of Périssé and Godfernaux's interesting memoir on mechanical traction as applied to public conveyances on railroads and highways.

Among the contents of *Petermann's Mitteilungen*, number twelve, is a suggestive colored map, with notes, showing the distribution of the agricultural and industrial population of the German Empire. A glance suffices to perceive that eastern Prussia and Bavaria are almost exclusively agricultural, while Saxony and Brunswick are wholly devoted to manufactures. The editor summarizes the meteorological observations of the Belgian Antarctic expedition, and holds that they prove that the absolute "Kältepol" of the earth is to be found there. The index of the geographical publications for the year exhibits the influence of current events on this branch of literature. The whole number of works noticed is 868, of which 221 and 22 are on Europe and the United States respectively, a considerable falling off from the previous year, while the 127 and 145 for Asia and Africa show an equal increase.

A striking description of Turkey under the present Sultan was given by Mahmud Pasha, his brother-in-law and for twenty-two years his minister, now a refugee in Paris, in a recent interview with M. de Blowitz of the London *Times*. "The whole empire is captive," he exclaimed impulsively at the outset. "Abdul Hamid keeps everybody in prison. . . . Whatever he has not directly under his hand frightens him, and whatever he thus does have in hand appears to him menacing at the slightest sign of individual will on its part or of a thought not the master's own. He is the Sultan of the Terror, and this fact haunts him even as it does others." At the same time he is a man of wonderful activity, working "harder than any of his subjects, but at useless and childish things," as, the uniform of the army and the voluminous police reports. Mahmud recounted his own futile efforts to secure reforms, and

pictured the heir to the throne, a man of fifty-five, as "shut out from the world. He sees nobody and knows nothing of what is going on outside. Then suddenly he will be told that the Sultan is dead and that he has been proclaimed. It is just as if a blind man were told, 'The door is open, walk!'" Mahmud closed by saying that the great wants of Turkey are an unfettered press, amnesty for political offences, and equality for all before the law, and to gain these he should support the liberal Turks scattered over Europe.

The Quarterly Statement of the Palestine Exploration Fund for January contains, besides the regular illustrated reports on the excavations at the Tells Zakarîya and es-Safi, an interesting account of a recently discovered rock-tomb north of Jerusalem. From the Greek influence displayed in the architectural and decorative details of the entrance it probably dates from the Hasmonean period. Prof. Sayce contributes a note on the inscribed jar-handles discovered by Dr. Bliss, which he is inclined to refer "to the eighth century B. C., though they may belong to the reign of Solomon." A similar jar-handle has been picked up at Tell el-Amarna, with a cartouche stamped in the same place and the same manner, which was manufactured about B. C. 1400.

The University of Heidelberg has started a university extension movement, and a number of professors have organized courses of lectures for the working classes to be delivered in Mannheim. The President of the Arbeiterverein of the latter city warned Catholic laborers not to attend the lectures, because the programme included a course by Prof. Klaatsch on "Darwin's Life and Teachings," and another by Prof. Deissmann, on the "History of the Origin of the New Testament." This opposition failed to produce the effect intended. More than five hundred workmen immediately joined the movement, and the lectures began on January 12 before a large and attentive audience in the aula of the Oberrealschule at Mannheim. A short address was delivered by the Prorector of the University, Prof. Osthoff, followed by Prof. Klaatsch, who gave the first of a course of six lectures on "Darwin's Life and Teachings."

The Danish Bureau of Statistics celebrates its half-century's existence by preparing a sketch of its institution and functions, with a full bibliography of its issues. In fifty years there have been only five changes in the head of the Bureau, which gives one explanation of the intelligent and consistent direction it has enjoyed and the admirable quality of its publications. Another lies in the careful selection of the chief, for he has been taken from the University or from the Bureau itself. The present head, Marcus Rubin, was long in charge of the municipal statistics of Copenhagen. The five series of annual reports, and the statistical reports and abstracts issued at irregular intervals, are worthy results of the Bureau's activity.

The death is announced of the Danish poet and critic Kristian August Emil Arentzen, at the age of seventy-three. Arentzen's first publication was a drama, "Gunlög Ormetunga," based on the saga of that name, which was followed by a second drama, also in the Oehlenschläger manner. In 1857 a collection of poems appeared under the title "Et Livsstadium" (A Stage in Life). As a poet, Arentzen belongs to a past generation, and his work as critic was also devoted to the past. His most valuable prose contributions are his treatment of the great Baggesen-Oehlenschläger polemic, in eight volumes (1870-'78), and his study of Oehlenschläger (1879), from which all later critics of the Danish poet have drawn liberally. With Arentzen passed away the last representative of the classical period of Danish literature.

—The *Atlantic* for February opens with an interesting article by Mr. Herbert Putnam on "The Library of Congress." In the course of it he explains some peculiarities of this library (which promises in time to be one of the world's great collections), not perhaps generally understood. The Library of Congress is, first of all, he says, a "legislative library"; *i. e.*, "its primary duty is to Congress." The material that it should amass should be "primarily" such as would "serve a legislator in the highest legislative body in the United States." It must not be supposed, however, that this condition restricts the field narrowly. A Representative or Senator may be an ignoramus; on the other hand, he may be capable of drawing for the discharge of his functions upon all the learning in the world; consequently, the field embraces "all history," all statistics, all the literature of institutions, everything relating to government, including political economy; "sociology in its largest sense," to say nothing of "finance, transportation, public improvements, education, international law, diplomacy." Inferentially, science, music, belles-lettres, and art might be neglected, but, owing to the fact that it is a copyright library—that is, a library which grows by a constant accession of everything copyrighted in the United States—it is not likely that these branches will be as weak as might at first sight appear. Moreover, what Congress can make, Congress can direct; and while Congress can appropriate, the Library can also accept gifts; and the direction of expansion will be necessarily determined to a great extent—though Mr. Putnam does not say so—by the genius of the Librarian. To many minds the argument would seem strong that from a library in which all future American literature is to be given a place, the literature of the world at large should not be repelled. In the Congressional Library cataloguing seems only to have begun; "there is no subject-catalogue of the general collection as it exists to-day," and the "author-catalogue" is on "loose slips, constantly withdrawn for reference" and which have not yet been verified. In answer to the question, "What is the Library of Congress to-day?" Mr. Putnam says that in mere mass it surpasses any other library in the Western Hemisphere; but that, deducting from the gross total of printed books (850,000 volumes) the Law Library, "the copyright record copies," and the Smithsonian Deposit, we have a miscellaneous collection of about 500,000 volumes, to which are to be added 250,000 pamphlets. "In these proportions," he adds, "the collection is not numerically greatly in excess of certain other collections in the United States—the Boston Public Library, for instance, the Harvard College Library, or the New York Public Library." The library is practically only fifty years old, the first collection of books having been destroyed by the British troops in 1814, and the fire of 1851 having consumed all but 20,000 volumes of the then existing collection.

—The Spanish war was eminently a magazine war, every month furnishing its new crop of military or naval articles illustrated by the pictures of heroes and their glorious deeds. This was no doubt mainly because of the encouragement given to correspondents, reporters, and illustrators by the heroes themselves. The case is reversed in the Boer war, neither side caring much about the interests of the press. Our magazines rather neglect the subject, but *Scribner's* shows its enterprise by publishing "The First Stage of the Boer War: The British Camp at Orange River," by H. J. Whigham. The illustrations are from the author's photographs. The narrative comes down only to November 22. It seems that even at that date the English officers had begun to carry rifles, to prevent their being distinguished from the men; it being felt that "something must be done to reduce the terrible mortality of officers experienced in the first two fights in Natal." Mr. Whigham thinks that the high percentage of officers killed is really due less to sharp-shooting than to the fact that, with the enormous amount of lead poured into an advancing force by the modern magazine rifle, "the officers who are standing up to direct their men run a tremendous risk of being hit." It has been said also, we believe with truth, that English officers expose themselves unnecessarily, merely for the sake of getting the Victoria cross. The moral of it all would seem to be that the English have got to learn Boer tactics; the recent operations having been magnificent, but not war. An out-of-the-way contribution is "A Garden Idyl," by George Meredith, whose poetry is now in that limbo between the uncomprehended and the classical from which his admirers assure us he will soon pass into the latter. Far be it from us to predict, or even to write of this matter sceptically. The fatal *argumentum ad hominem*—if you do not care for Meredith's "Garden Idyll," then you are no judge of garden idylls—is ever ready.

—"The White Man's Rule in Singapore" (illustrated by R. Caton Woodville) is the title of an article in the current *Harper's* by Poultney Bigelow. According to his figures, Singapore is, by virtue of a fair and peaceful English administration, a thoroughly Chinese port. The Chinamen represent 100,000 out of a total population of 160,000. "They are thus stronger numerically than the native Malays reinforced by immigrants from British India." This, however, gives but a faint idea of the relative strength of the races in economic respects. "Malays and Hindus might disappear to-morrow," yet the foundation of the prosperity of Singapore would not be affected. This is because for eighty years an English Governor, assisted by an English judge and a few white policemen, have maintained justice—and the "open door." Mr. Bigelow seems to think he may induce us to do the same thing in the Philippines. The prosperity of Singapore has its dark side in the coolie trade, more cruel, according to this authority, than the old African slave trade. He gives the usual argument for this belief—that, in the case of the slave, the importer had the same in-

terest in bringing him to market as in the case of any other chattel, while in the case of the coolie (as employers do not pay their coolies until they have worked out their contract time) no one cares whether the coolie perishes while performing his contract or not. But does not this argument prove a little too much? Cannot the same sort of reasoning be applied to free labor in general? If I hire a man to navigate a vessel for me and agree to pay him at the end of the voyage, shall I not take much less care of him than if I own him? It seems that the tigers devour the coolie, too, and no one cares. A slave would surely be protected in some way by any prudent master against tigers. It is all plausible enough; but we should like to hear an educated Chinaman's opinions about it. When all is said and done, we doubt whether the horrors of the middle passage exist anywhere now. An amazing article is "The Moral Value of Hypnotic Suggestion," by John Duncan Quackenbos. It seems that we have in hypnotism a moral cure-all, by means of the application of which to our subliminal selves we can work a complete change in our moral nature. Thieves can be cured of stealing, drunkards of drinking, and liars of lying. Beside this, hypnotism as a panacea for disease sinks into insignificance. But what becomes of individual responsibility? To us, the answer seems very plain. If, by assuming a comfortable attitude on a lounge, or in a reclining chair, and gazing, according to good Dr. Quackenbos's orders, at a red carnelian, you can sink into a hypnotic slumber which will drive out the old Adam, it were the essence of wickedness to refrain, and consequently every one who henceforward neglects this cure will be under a double responsibility, for he will sin against the light. On the other hand, any one who takes the cure, and is pronounced cured by the Doctor, is free to do what he likes. There seems, however, some doubt as to whether, in the case of relapse, the Doctor does not himself become responsible.

—The *Century* has unearthed a fresh instalment of Napoleonic memorabilia in the shape of the original record made by Napoleon's physician, Dr. Barry E. O'Meara. "Talks with Napoleon: His Life and Conversation at St. Helena," is the title of a series of papers which are to give the substance of the record, not already covered by Dr. O'Meara's well-known book, 'Napoleon in Exile.' According to the editorial introduction, the worthy doctor made use in his book of less than half of his manuscript journal, and condensed and modified much of the part which was actually utilized. Nineteen manuscript volumes have come into the possession of the *Century*, which will now decipher and publish, with illustrations. For the Napoleonic student it is no doubt interesting, but for the ordinary magazine reader this first chapter seems hard reading. "Paris Revisited: The Governmental Machine" is the title of an entertaining paper by Richard Whiteing—the author of 'No. 5 John St.'—with pictures by André Castaigne. The "machine" in France is more or less like the same institution in every country which derives its administrative institutions from Rome; its striking feature in that country is its permanence amid revolutions and convulsions such as have shaken no other part of the "Latin" world. Monarchy, Republic, Empire, Commune—it is all one to the machine, which works on, socially, politically, and legally, as if the other changes were mere changes in name. It has the permanence which in Anglo-Saxon countries law and constitutions have. It is the great administrative habit of France, which has come down through the centuries, and in a certain sense is France. How closely connected with militarism it is, we have just seen in the Dreyfus trial. To get justice for Dreyfus required a new machine, which meant not merely a new administration, but a new social, military, and political world. The complete militarization of France has, of course, had an astonishing effect on opinion, and, just now, it produces some curious effects, because for the moment the machine is pulled one way, by a liberal executive, while the army threatens in the other direction to swallow up the whole affair—republic, machine, and all. Hence, on the return of a successful commander, the first effort of the Government is to "keep him out of the way." When Gen. Dodds came back from Dahomey "he was isolated as though he had brought the plague with him." "If America were France, Admiral Dewey would be invited, not to say ordered, to recruit his health in the country; and the Government, while still constrained to offer him a smiling welcome, would tremble every time he approached Washington or New York." So the Roman machine palpitated eighteen centuries since when a victorious general approached Rome. And so, should France become involved, as the army hopes, in actual war, may the machine be once again swallowed up by it. But the machine will still exist, and what has been shall be—till the end of the machine.

—In the *American Historical Review* for January, attention should be fixed on M. Ostrogorski's paper on "The Rise and Fall of the Nominating Caucus, Legislative and Congressional." The writer's imperfect mastery of our idiom makes some friction in the reading, but the fruit of his researches is substantial, and his political ideals are creditably high. The particular kind of caucus under review is indeed no more, but, as this writer well says, it "established disastrous precedents and habits of mind which American political life has never been able to throw off." It nullified the intent of the Constitution regarding the election of President, and has implanted in the people "a respect for party conventionalism, for its external badge; has drilled them into a blind acceptance of *regular nominations*." Should this practice, said the DeWitt Clinton protestants of 1812 against the Congressional caucus, "become inveterate, we do not hesitate to say that to promulgate a nomination will be to decree the election"—a state of things fully realized by our latter-day bosses and machines. "The cry," says Mr. Ostrogorski, quoting further the same protest, " 'The charm of a regular nomination shall no more have influence upon us, and no candidate shall receive our support who pretends to have any other reliance than his own intrinsic merits'—this cry has lost nothing of its timeliness and reality. It has remained a legacy to be discharged by the American democracy. The efforts that the latter will make to pay it off and to do honor to its name, will form one of the most moving of dramas, and one whose vicissitudes will be followed with bated breath by contemporaries no less than by the future historian."

—Among the original documents in the same number of the *Review*, the Journal of the Jerseyman Philip Fithian, kept at Nomini Hall, Virginia, in 1773-74, well repays perusal and reflection. Fithian graduated with Aaron Burr at Princeton in 1772, and went South as tutor in the family of Robert Carter, owner of 60,000 acres of land and 600 negroes. His pictures of Southern life and manners are truly valuable. "Mr. Carter is allowed by all, and from what I have already seen of others, I make no Doubt at all but he is, by far, the most humane to his Slaves of any in these parts"; but "Good God! are these Christians?" exclaims the diarist on learning that the woman who makes his bed and "a civil, inoffensive agreeable young Man who acts both in the character of a Clerk and Steward," have for their weekly allowance of food only a peck of corn and a pound of meat. There is, we believe, no recorded utterance of Dr. Channing's of like nature in consequence of his Virginia experience. Fithian goes on to relate two devices of fiendish cruelty practised as punishments in lieu of flogging by "Mr. George Lee's overseer, one Morgan," and concludes: "I need say nothing of these, seeing there is a righteous God who will take vengeance on such Inventions!" Fithian had already begun the study of theology, and in 1774 was licensed to preach. It is significant of his own personality and of the time that some reflections on his life at Princeton evoked while still at Nomini Hall give him "a secret and real Pleasure," as he recalls the various forms of college rowdyism, "the Mischiefs often Practised by Wanton Boys," the hazing of freshmen, robbing of chicken roosts, and the like, and the "Parading bad Women." The last item of our divinity student is to be understood only by reference to the indignities visited on that unfortunate class in broad daylight by respectable citizens in an age of low morals and heartless indifference to suffering, as evidenced also by the treatment of criminals and the insane.

—Workers in many fields of philology met in San Francisco on December 29 and 30, 1899, to unite in founding a Philological Association of the Pacific Coast. The meeting was a surprise to all its promoters in the number and enthusiasm of those in attendance, and in the quality of the papers read—some twenty in number. This meeting, the first general philological gathering ever held on the western side of the continent, was the realization of plans laid at a dinner of the University of California Greek Club in December, 1898. The cooperation of the Philological Society of Leland Stanford Junior University was sought, and a general invitation to participate issued to all philological workers, whether in ancient or modern languages. The society was thus intended to follow the lines of the American Philological Association of earlier days, rather than the more specialized bodies of late years. Of the scholars present, the majority were from one or other of the two great California universities, but the smaller colleges and secondary schools also were well represented, and there were delegates from Washington, Oregon, and Nevada. While the papers on subjects connected with the classical languages outnumbered the rest, yet other portions of

the field of philology were not neglected. Of the papers read at the three general sessions, a number were of decided weight and importance, especially "Points of Interest in Chinese Philology," by Dr. John Fryer, Agassiz Professor of Oriental Languages in the University of California; "Certain Suggested Irregularities in the Versification of Robert Greene," by Charles Mills Gayley, Professor of the English Language and Literature in the University of California; "Homunculus," by Dr. Julius Goebel, Professor of German Literature and Philology in the Leland Stanford Junior University; "The Charge of Xenia in the Old Comedy," by Dr. Augustus Taber Murray, Professor of Greek in the Leland Stanford Junior University. Dr. Benjamin Ide Wheeler, President of the University of California, delivered the first annual address, on "The Place of Philology," discussing the relation of philology to the other disciplines, pointing out the dangers of pedantry and routine, and proclaiming the wide scope of the science. At the concluding business session, officers were elected for the ensuing year as follows: President, President Wheeler; Vice-Presidents, Dr. Ewald Fluegel, Professor of English Philology in the Leland Stanford Junior University, and Professor Clapp of the University of California; Secretary and Treasurer, Dr. John Ernst Matzke, Professor of the Romanic Languages in the Leland Stanford Junior University. Negotiations are in progress for the affiliation of the new society with the American Philological Association. The next annual meeting will be held in San Francisco in December, 1900.

CHURCHILL'S RIVER WAR.

The River War: An Historical Account of the Reconquest of the Soudan. By Winston Spencer Churchill. Edited by Col. F. Rhodes, D.S.O. Illustrated. In two volumes. Longmans, Green & Co. 1899. Maps and plans. 8vo.

The reconquest of the Egyptian Sudan was a military achievement remarkable first of all for the fact that unvarying and complete success attended every movement from the advance from Wady Halfa on March 16, 1896, to the defeat and death of the Khalifa in November, 1899. This success was mainly due to one man endowed with extraordinary organizing genius, seconded by able and zealous subordinates. It was accomplished with an economy of expense unequalled in the annals of modern warfare. The obstacles presented by the Nile, the desert, climate, cholera, and, above all, a foe well-armed and ably led and always superior in numbers, were formidable indeed. The perfection of the organization was shown by the precision with which the different operations of the campaigns were executed—railroads built, marches made, battles fought almost on a day and hour previously fixed upon. The English contingent sent to aid in the final attack on Omdurman reached Cairo on August 1, and the transports for their return were ordered to be at Alexandria by the end of the next month. The force, an infantry brigade and a cavalry regiment, ascended the river—by rail, steamer, and by marching—some 1,500 miles, fought a battle, captured a city, and a part of them were on duty in Cyprus on September 23. The purely military expenditures for the three years' operations of an army 25,000 strong were in round numbers $5,000,000. If the 500 miles of railway, 900 miles of telegraph, and a flotilla of steamers, permanent additions to the resources of the country, be included, the cost was $12,000,000. For this sum an enemy numbering 80,000 fighting men was annihilated, and a region one million square miles in extent was reconquered and occupied.

These salient features of the "river war" are clearly brought out in Mr. Winston Churchill's interesting volumes. His qualifications for his task as an historian are a military education, active service in the Indian frontier war, of which he wrote an account, good powers of observation, and the gift (a clear inheritance from his father, Lord Randolph Churchill) of a facile descriptive style, somewhat boyishly exuberant and discursive, but highly graphic. We are also reminded of his father in the entire frankness of his criticisms of the strategy of the generals—not excepting Lord Kitchener himself—an act of rare courage in a subaltern. An eye-witness and participant only of the campaign of August, 1898, his accounts of the preceding campaigns are taken from contemporaneous records, official reports, and especially the personal narratives of officers engaged in them. This latter fact, as well as the editing of Col. F. Rhodes, gives to his work a peculiar value, and justifies the modest hope, expressed in his preface, "that the story is at least as accurate as any other that is likely to be written."

A brief sketch of the rebellion of the Mahdi, Gordon's part in it, the history of the Dervish Empire and the preparations for its overthrow, is followed by an account, in greater or less detail, of every important step in the advance of the Anglo-Egyptian army. The attention is mainly directed, of course, to the actions; the preliminary movements, the composition of the attacking force, and the several parts played by the Egyptian, Sudanese, and British troops being chronicled with painstaking care. Numerous maps and plans, showing the routes taken by the different detachments, the physical features of the battle-fields, the positions of the opposing forces at different stages of the conflict, make the somewhat technical accounts easily intelligible to the civilian reader. But the less striking operations, though equally essential to success, are by no means neglected: the organization of the transport service, the coöperation of the gunboats and the building of the desert railway are carefully treated. An interesting chapter is devoted to the railway, to which more than any other one thing Lord Kitchener owed his final speedy victory. But for the aid given by the British reinforcements brought in ten days from Cairo to the camp at Atbara, the chances are that the Sirdar might have suffered the fate of Hicks Pasha in an overwhelming onslaught of the dervish army. Deserved praise is given to all engaged in the work, from the half-score of English engineers who superintended its construction, to the rank and file of the "Railway Battalion," 2,500 strong, whose "only qualification was capacity and willingness to work. They presented a motley appearance. Dervish prisoners, released, but still wearing their jibbas, assisted stalwart Egyptians in unloading rails and sleepers. Dinkas, Shillooks, Jaalin, and Barabras shovelled contentedly together at the embankments. One hundred civilian Sudanese—chiefly time-expired soldiers—were also employed; and these, since they were trustworthy and took an especial pride in their work, soon learned the arts of spiking rails and sleepers, fishing rails together, and straightening." "It is scarcely within the power of words," adds our author, "to describe the savage desolation of the regions into which the line and its constructors plunged. A smooth ocean of bright-colored sand spread far and wide to distant horizons. The tropical sun beat with senseless perseverance upon the level surface until it could scarcely be touched with a naked hand, and the filmy air glittered and shimmered as over a furnace." Nevertheless the work was prosecuted with unprecedented rapidity. The first spadeful of sand was turned on January 1, 1897, and forty miles were completed on May 8. Then the track-laying began in earnest, and by November 3, that is, in 179 days, the remaining two hundred miles were laid, "the work being accelerated nearly a month by the fortunate discovery of water" in two places. An interesting episode was the purchase of three American locomotives, necessitated by the great engineering strike in England; and in the course of a comparison between them and the British engines Mr. Churchill quotes one of the railway staff as saying: "They were the products of a higher class of labor than that employed in England. They represented greater talent, though less toil. While appearance was not neglected, no 'finish' was wasted on unnoticeable parts. Thus economy was increased and efficiency preserved." As for "Tommy Atkins," we are assured that when he travelled to the front he "was as anxious to avoid his country's locomotives as to preserve its honor."

Our author is not at his best when describing the campaign in which he took part. Not unnaturally he dwells at too great length on the incidents, sometimes trivial, of which he was an eye-witness. His account of the battle of Omdurman, especially, suffers for this reason, though there are some striking pictures to be found in it, as this of the advancing dervishes: "Eight hundred yards away a ragged line of men was coming on desperately, struggling forward in the face of the pitiless fire, white banners tossing and collapsing; white figures subsiding in dozens to the ground; little white puffs from their rifles, larger white puffs spreading in a row all along their front from the bursting shrapnel." Spirited, too, is the description of the charge of the Twenty-first Lancers, in which Mr. Churchill took part. The British were advancing to attack a small body of dervishes when

> "a deep crease in the ground—a dry watercourse, a *khor*—appeared where all had seemed smooth, level plain; and from it there sprang, with the suddenness of a pantomime effect and a high-pitched yell, a dense white mass of men nearly as long as our front and about twelve deep. A score of horsemen and a dozen bright flags rose as if by magic from the earth. Eager warriors sprang forward to anticipate the shock. The rest stood firm to meet it. The Lancers acknowledged the apparition only by an increase of pace. Each man wanted sufficient momentum to drive through such a solid line. The flank troops, seeing that they overlapped, curved inwards like the horns of a moon. But the whole event was a matter of seconds. The riflemen, fighting bravely to the last, were swept head over heels into the *khor*, and, jumping down with them, at full gallop and in the closest order, the British squadrons struck the fierce brigade with one loud fu-

rious shout. The collision was prodigious. Nearly thirty Lancers, men and horses, and at least two hundred Arabs were overthrown. The shock was stunning to both sides, and for perhaps ten wonderful seconds no man heeded his enemy. Terrified horses wedged in the crowd, bruised and shaken men, sprawling in heaps, struggled, dazed and stupid, to their feet, panted, and looked about them. Several fallen Lancers had even time to remount. Meanwhile the impetus of the cavalry carried them on. As a rider tears through a bullfinch, the officers forced their way through the press; and as an iron rake might be drawn through a heap of shingle, so the regiment followed. They shattered the dervish array, and, their pace reduced to a walk, scrambled out of the *khor* on the further side, leaving a score of troopers behind them, and dragging on with the charge more than a thousand Arabs. Then, and not till then, the killing began; and thereafter each man saw the world along his lance, under his guard, or through the back-sight of his pistol; and each had his own strange tale to tell."

The impression of the Sirdar left by the narrative is forcible, and not marred by too indiscriminate praise. He appears throughout a stern, unsympathetic man, unmoved in threatened disaster or in brilliant success, fertile in resources, with eye keen to observe the smallest details in every department; a martinet, but not a slave to red tape. In this particular his methods are in marked contrast to those of some other English commanders.

"Whereas, the field printing-presses of the Tirah Expeditionary Force regularly reported with pomp and ceremony the events of the day, down to the issue of a pair of boots to a native follower, and carefully prescribed the arrangements for the morrow —and these orders filtered down to the regiments through the Divisional Staffs and the Brigade Staffs, gradually becoming more particularized, until finally they were gems of minute thought—the Sirdar would come into camp, as he did at Royan, at about two o'clock in the afternoon, and say to one of his few staff officers, 'I think we'll push on another five or six miles,' and thereupon, marvellous to relate, six brigades of infantry, thirteen squadrons, forty guns, a great fleet of boats, and masses of transport would get up and roll forward into a new camp."

The readiness with which he adapted the means at his command to obtain a desired end is illustrated by an incident in the campaign of 1897. He ordered that a field telegraph should accompany the "Flying Column" sent to attack Abu Hamed. On the officer in charge objecting that there were no appliances for laying the wire, no spools to unwind it from, no saddles to carry it, and not even any transport animals, the General went to the spot where the telegraph plant was collected. Some donkeys were standing near by.

"He walked to the largest coil of wire, picked it up and approached the smallest donkey. He took the little animal's two hind legs in his left hand, and put them into the coil. He lifted the wire up until it passed around the donkey's back, like a horse-collar, only that it hung between the fore and hind legs. He caught hold of the loose end of the wire, and smacked the donkey with the other hand. The beast moved forward, tripping and stumbling over the wire, which began, albeit jerkily, to unwind. Then he walked abruptly back to his house. By this method the Field Telegraph accompanied the Flying Column."

Among the other pen-portraits to be found in the work is one of Gen. Hunter, now serving in South Africa: "Foremost in every action, twice wounded—once at the head of his brigade—always distinguished for valor and conduct, Hunter won the admiration of his comrades and superiors. During the River War he became, in spite of his hard severity, the darling of the Egyptian army. All the personal popularity which great success might have brought to the Sirdar, focussed itself on his daring, good-humored subordinate, and it was to Hunter that the soldiers looked whenever there was fighting to be done." Of Gen. Gatacre, who was defeated by the Boers in December, he writes: "A spare middle-sized man, of great physical strength and energy, of marked capacity and unquestioned courage, but disturbed by a restless irritation, to which even the most inordinate activity afforded little relief, and which often left him the exhausted victim of his own vitality."

Mr. Churchill does not hesitate to say that Lord Kitchener carried his economy too far in the matter of provision for the care of the sick and wounded. Referring to the alleged massacre of the dervishes after the battle of Omdurman, he impliedly charges him with neglect in not republishing at that time his former orders that the wounded were to be spared. "For I must personally record that there was a very general [mistaken] impression that the fewer the prisoners, the greater would be the satisfaction of the commander." Mr. Churchill's commendation of the Egyptian army is warm. He characterizes its two component parts, the fellah and the Sudanese, the one as strong, patient, and docile; the other as excitable and often insubordinate, but displaying "two tremendous military virtues. To the faithful loyalty of a dog he added the heart of a lion. He loved his officer, and feared nothing in the world." In his testimony to the bravery of the dervishes and the considerable military ability of their leaders, he agrees with other writers, though he gives the Khalifa a higher character as a ruler of the Eastern type than he probably deserves.

In the closing chapters are to be found a brief description of the campaign on the Blue Nile with which the war ended, and the Fashoda incident, together with a general survey of all the operations from a military point of view, and some forecasts as to the future of the reconquered territory. The history appropriately ends with a tribute to one whose name seldom appears in its pages, but to whom, possibly even more than to the Sirdar, belongs the chief credit of the great achievement. Summing up the work yet to be done in developing and civilizing the Sudan, he says, "To 'persevere and trust Cromer' is the watchword of the Englishman in Egypt." The appendices contain lists of staff officers, honors and promotions given, and two official documents. There are also admirable portraits of Lord Cromer and the leading generals, some sketches illustrative of incidents in the war, and numerous excellent maps and plans.

THE ENGLISH RADICALS.

The English Radicals: An Historical Sketch. By C. B. Roylance Kent. Longmans, Green & Co. 1899. Pp. xii, 451.

Mr. Kent's merit lies in the choice of his subject. There is real originality in the attempt to explore and explain the progress for about a century and a half of English Radicalism. The sources of information to which he has recourse are not, it is true, recondite; the information he professes to give is wanting in completeness; his thoughts are pretty much the commonplaces of modern English Liberalism. Moreover, while he often attempts to provide pictures of the heroes of the English democracy, his portraits are vague and unimpressive, and he does not possess the rare talent exhibited by masters in biography, such as Mr. Bagehot and Mr. Leslie Stephen, of using individual traits of character so as to make them the humorous and impressive illustrations of the general principles whereof eminent men become, whether consciously or not, the representatives. But the reviewer, who ought always to be in part the "benevolent reader" to whom at one time authors used to appeal, will treat Mr. Kent leniently. Our author's shortcomings are venial; the service which he has performed, by calling attention to a neglected side of English political history, is considerable. Any man interested in the constitutional annals of England will find it impossible to read through Mr. Kent's historical sketch of the English Radicals—or, in other words, of the men, whether thinkers or politicians, who, for some century and a half, have labored to turn the aristocratic institutions of England into a democracy—without feeling that the book has suggested to him a good number of thoughts, though they almost inevitably take the form of questions.

Why, for instance, is it that the fathers of the English democracy have left behind them no tradition? Wilkes, Cartwright, Horne Tooke, Hunt, Burdett, Cobbett, Place, Feargus O'Connor, Ernest Jones, all the leaders and would-be heroes of Radicalism, are forgotten. We should be surprised to discover that any one of the men we have mentioned, or a score more like unto them, were venerated, or even remembered, by the most violent of English democrats. No doubt this forgetfulness is in part an illustration of one of the most curious and not one of the most agreeable features of English character. Englishmen have no popular traditions. For fifty years and more, men of letters have been trying to interest the people of England in Cromwell and the creators of the Commonwealth. Such an infinity of labor and of moral and intellectual power has been expended on an object well worth achievement that some result has been produced: the English people have got a statue of the Protector. But though one might have supposed that, among Nonconformists at any rate, the Puritan leaders would be popular idols, it may well be doubted whether among any class of Englishmen there exists, or ever has existed, a Cromwellian tradition. Macaulay, indeed, possessed the magic power of painting pictures which, whatever their defects, impressed upon the memory of his readers the career of the men who were the subjects either of his eulogy or of his denunciation. But Macaulay's feat was the triumph of literary genius; it could not create a tradition. The names, no doubt, of the two Pitts are not only memorable but actually remembered. Yet there is no real tradition of these statesmen in the places where they lived.

The absence, however, of national traditions is not sufficient to explain the utter oblivion which has overtaken the Radicals of England. One is compelled to come to the conclusion that they never, in reality, moved the feelings of the generations in the midst of which they lived. The truth is

(and this is one of the most certain results of Mr. Kent's labors) that the mass of English Radicals were, till the time of Cobden and Bright, a very poor lot. Here and there a man appeared, such as Wilkes, who was a great agitator; but he and the men who resembled him were nothing but agitators, and agitators deficient both in statesmanlike views and in moral character. Then, again, we may fairly conclude that one reason at any rate why the earlier Radicals effected so little was that, while there were in every part of English public life plenty of abuses which needed amendment, the people of England did not till about 1815 feel themselves to be badly governed. In such matters comparison is everything, and, compared with the government of every other European country, the government of England was, during the eighteenth century and during the earlier part of the nineteenth century, excellent.

What, again, is the relation of Benthamism to Radicalism? On this point Mr. Kent on the whole sanctions the popular error that there is an inherent connection between the Utilitarian and the Democratic creed. The prevalence of this idea is easily accounted for. Bentham advocated constitutional changes of a democratic character. His disciples were known as philosophic Radicals. In 1830 they were all advocates of Parliamentary reform; they were most, though not all of them, democrats. It is natural, therefore, to conclude that there was an essential connection between Benthamite doctrine and democratic policy. This inference, nevertheless, is of most dubious validity. The character of the Benthamites is of itself sufficient to raise a doubt as to the democratic nature of their doctrine. Never did there exist a body of men who had less sympathy with popular sentiment, or indeed with sentiment of any kind. They distrusted special classes, such as churchmen, lawyers, land-owners, and the like, who, as Bentham assumed (and not without a good deal of reason), were likely in matters of legislation to be biassed by their private and sinister interests. But the older Benthamites at any rate knew nothing of what is now called trust in the people. They looked upon democracy as a means, not as an end. Most of them thought that the only available check on the self-interested legislation of particular classes was a thoroughly democratic constitution; but the most democratic of them, such as James Mill, refused to admit women to the exercise of political rights, and in this matter Bentham himself showed, it is said, a good deal of hesitation. There were, too, from the first, earnest Benthamites, such as John Austin, who insisted that general ignorance was the true source of misgovernment, and that what the people needed was not power but knowledge. The primary object, in short, of the Benthamites was the establishment, not of democracy, but of good government; and good government in their mouths meant the securing to each man of equal personal rights, and then allowing every one to seek his own happiness in accordance with his own judgment. The end of political institutions was, on the Benthamite view, the securing the greatest possible happiness (or, more accurately, the best conditions for achieving happiness) to the greatest possible number of citizens, and the chief means for the attainment of this end was, not democracy, but adherence to the principles of *laissez-faire*.

This explains both the political action of the Benthamite school and the practical conservatism which, as time went on, became a marked characteristic of leading Benthamites. The true glory of the school is, that when their influence was most powerful, they advocated measures which were really for the benefit of the nation, though disliked by the mass of the people. The New Poor Law, as it was termed in 1834, was in reality the outcome of legislative utilitarianism applied to the solution of a most pressing and difficult social problem. It commanded the enthusiastic support of the philosophic Radicals. The most democratic of their number, Francis Place, was eager to administer a new law which was stern enough in itself, so as to carry it out with the utmost completeness. The New Poor Law conferred greater benefits on England than any act of Parliament passed during the century; yet the New Poor Law, though the most beneficial, was the most unpopular statute ever passed by a Parliament which in any sense represented the people. It did more than administrative incompetence to ruin the popularity of the Whigs. Gratitude for destruction of rotten boroughs was swallowed up in indignation at the building of new poor-houses nicknamed "Bastilles."

It is certain that the thinkers who devised a policy hateful to the mass of the people, cared for good government far more than for deference to democratic sentiment. Then, too, as time went on, and a legislature representing the ten-pound householders enacted a large number of reasonable reforms, individual Benthamites became less and less democratic. Austin's last utterance was a powerful protest against any material change in the constitution of Parliament as finally settled by the Act of 1832. He foresaw, and with truth, that the individual freedom which he valued above all things, might be curtailed by a democratic Assembly. Robert Lowe was, in his powers and in his weakness, the last of the Benthamites. The one occasion on which he played a leading Parliamentary part was when, in 1866, he rallied all the Conservatism of the country against a moderate Reform Bill proposed by a Liberal Government. John Mill, it is true, united rather than blended Benthamite doctrine with democratic sympathy, but to achieve this end he departed more widely than he knew from the orthodox Utilitarian creed, and concealed both from himself and others his latent fear of democracy under his credulous conviction that the mechanical devices of Mr. Hare would make it possible to combine the merits of democratic sovereignty with the respect due to the rights of minorities.

Turn the matter, then, which way you will, it becomes, we maintain, clear that, though Benthamism had a democratic side, its connection with the democratic creed was accidental rather than essential. And this explains a point which obviously puzzles Mr. Kent as it has perplexed others. The Free Traders, at any rate as represented by Cobden, were, in their own eyes no less than in the eyes of their opponents, democrats; yet it is clear that they pursued aims different from the objects whose attainment had been sought for by Radicals of an older generation. There was, indeed, an avowed hostility between the Chartists, who really inherited the Radical tradition, and the League. Cobden preferred, even after the passing of the Reform Act, the intelligent but autocratic administration of Prussia to the unintelligent administration and Parliamentary freedom of England. He never understood the hatred of French and of English Liberals for Louis Napoleon. A *coup d'état* he seems to have thought might be pardoned in a ruler who had struck a blow at protection. Might not free trade be sometimes a greater blessing than freedom? Yet the attitude of the Manchester School, though it appears at first sight paradoxical, admits of easy explanation. It may well, indeed, be doubted whether Cobden or Bright had ever read a word of Bentham; yet Cobden, at any rate, inherited (unconsciously it might be) one-half at least of the Benthamite teaching. Legislation and administration which should produce the happiness of the greatest number and achieve this end by obeying the principle of *laissez-faire*, was his ideal; and, let it be added, this ideal, when followed, as Cobden pursued it, nobly, may be a very noble one, but it is the ideal of a Benthamite and an economist, and not of a democrat.

GOSSE'S LIFE OF DONNE.—II.

The Life and Letters of John Donne, Dean of St. Paul's. Now for the first time revised and collected by Edmund Gosse, Hon. M.A. of Trinity College, Cambridge, Hon. LL.D. of the University of St. Andrews. 2 vols., 8vo. London: Heinemann; New York: Dodd, Mead & Co.

Mr. Gosse devotes a chapter to that extraordinary fragment, "The Progress of the Soul," in which the vivacity of Donne's genius, the abundance of his fancy, and the vigor of his verse are displayed in a series of picturesque, often strikingly imaginative, and sometimes extravagant descriptions of the experience of a soul in its transmigrations from one body to another. Mr. Gosse calls it "a metaphysical narrative," which it is not, and his account of it shows his habitual misreading and misunderstanding of the poems before him. The value of his attempt at critical appreciation of this special poem, a poem characteristic alike of the eccentricities and of the genuine power of Donne's poetic faculty, may be inferred from this extract:

> "Our quotations," he says, "will suffice to show with what brilliant intrepidity he [Donne] will dart in a moment into the very shrine of imaginative expression. Here, as in his lyrics, the general aspect of the work is, as he said himself, 'sullen,' with the leaden colors of the thunderstorm; but ever and again the lightning plays amongst it in lambent and intolerable radiance" (i. 140).

The reader gradually ceases to be astonished at Mr. Gosse's apparent incapacity to interpret correctly Donne's plainest writing, but the incapacity becomes more and more unintelligible. A brilliant little poem of the lyrical period, known to all the lovers of Donne's verse, is an expostulation addressed to his mistress against her proposal to accompany him, dressed as a page, on a journey to the Continent. The mistress is a girl still so young as to be attended by a nurse at night. He bids her,

> "When I am gone, dream me some happiness,
> Nor let thy looks our *long hid* love confess."

It almost passes belief to find Mr. Gosse (i. 151) attributing this poem to the year 1606, when Donne had been married for five

years, and supposing Mrs. Donne, the mother already of three children, to be the person to whom it is addressed.

One single further example of Mr. Gosse's interpretations must suffice. Among Donne's poems is a set of verses in Latin addressed to a certain Dr. Andrews, in acknowledgment of the receipt from him of a manuscript copy of a printed book which Donne had lent to him, and which had been torn by Dr. Andrews's children. But Mr. Gosse has so misread the poem that he says:

"Dr Lancelot Andrews lent Donne a printed book, which fell into the hands of the children in the Mitcham house [Donne's residence], and was by them torn to pieces. It was a copy of Moenus, whatever that might be, and it had already passed to Paris, and on to Frankfort, with Andrews on his travels. I would venture to suggest that by 'Moenus' may be meant Molinus, or Molinaeus, Pierre du Moulin, with whom Andrews entered into controversy. Donne was obliged to have the whole volume copied and returned to Andrews in manuscript accompanied by a set of agreeable apologetic verses" (i. 107).

In his preface Mr. Gosse states that Dr. Jessopp offered him "the inestimable advantage of his revision." He should have added that he had neglected to make use of this inestimable advantage. Had he submitted his pages to Dr. Jessopp's revision, he would at least have been saved from the exhibition of some of his humiliating errors concerning this little Latin poem, for Dr. Jessopp, in his volume on Donne, has given a correct account of it (p. 51). He, however, supposes, as Mr. Gosse likewise does, that it was addressed to Dr. Lancelot Andrews, Bishop of Winchester, but the poem itself shows that the person to whom it was sent was a doctor of medicine, and not of divinity. Mr. Gosse's suggestion that the book to which the poem relates "was a copy of Moenus, whatever that might be," is derived from two verses of the poem which, in our ignorance of the circumstances to which they refer, are practically unintelligible:

"Transit in Sequanam Moenus, victoris in aedes;
Et Francofurtum, te revehente, meat."

They may be translated: "The Main passed over to the Seine, to the home of the victor, and goes, you carrying it back, to Frankfort." Only a guess at the meaning is possible. It may be that there is a pun on the word Moenus, as the name of the river, the Main, on which Frankfort stands, and as the name of the author of the book in question. But no book by an author of this name is known to which the reference can apply, nor is anything known of a journey to Frankfort by Dr. Andrews. At any rate, the suggestion of Molinus or Molinæus is unhappy and inadmissible. The faculty of wild guessing is, indeed, exhibited elsewhere by Mr. Gosse, and his misreading of this poem is not the only instance in which he is careless about his Latin. In the transcript of an inscription in a book given by Donne to the Benchers of Lincoln's Inn, we find "urbo" for *urbe*, "huc" for *hic*, "perdiscondas" for *perdiscendas*, "tamon" for *tamen*, "fero" for *fere* (ii. 114).

In his account of Donne's prose works, Mr. Gosse is not happier than in that of his poems. A single instance will suffice. The full title of one of the most curious of Donne's works is: 'Ignatius his Conclave; or his Inthronisation in a late Election in Hell. Wherein many things are mingled by way of Satyr. Concerning the disposition of Jesuites. The creation of a new Hell. The establishing of a Church in the Moon. There is also added an Apologie for Jesuites. All dedicated to the Two adversary Angels which are Protectors of the Papall Consistory and of the Colledge of Sorbon.' It was first published in 1611. It is a bitter satire on the Jesuits, ingenious in its design, abounding in strokes of wit and touches of humor, while it displays the enormous range of Donne's learning and the variety of his intellectual interests. Donne represents himself as in an ecstasy in which "his little wandering sportful Soul," having liberty to wander through all places, after visiting the heavens, arrives finally at Hell. Passing negligently through its suburbs, and proceeding to more inward places,

"I saw," he says, "a secret place where there were not many beside Lucifer himself; to which only they had title which had so attempted any innovation in this life that they gave an affront to all Antiquity, and induced doubts, and anxieties, and scruples, and . . . at length established opinions directly contrary to all established before." "Now to this place not only such endeavor to come as have innovated in matters directly concerning the soul, but they also which have done so in the arts and in conversation, or in anything which exerciseth the faculties of the soul, and may so provoke to quarrelsome and brawling controversies, for so the truth be lost it is no matter how. But the gates are seldom opened, nor scarce oftener than once in an age. But my destiny favored me so much that I was present there, and saw all the pretenders, and all that affected an entrance, and Lucifer himself, who then came out into the outward chamber to hear them plead their own causes. As soon as the door creakt, I spied a certain mathematician, which till then had been busied to find, to deride, to detrude Ptolemy, and now with an erect countenance and settled pace came to the gates, and with hands and feet (scarce respecting Lucifer himself) beat the doors and cried: 'Are these shut against me, to whom all the Heavens were ever open, who was a Soul to the Earth and gave it motion?' By this I knew it was Copernicus."

Never having heard ill of him, Donne says he might have wondered to find him there, but that the Papists have extended the name and punishment of Heresy almost to everything. Lucifer asks Copernicus who he is, and the astronomer answers in a finely poetic speech, concluding with his claim to be admitted as one of the greatest of innovators, "who have turned the whole frame of the world, and am thereby almost a new creator." Lucifer was perplexed what to reply. It seemed unjust to deny entry to one which had deserved so well, "nor did he think that himself had attempted greater matters before his fall," but it seemed dangerous to grant entrance to one of so great ambitions and undertakings.

"But Ignatius Loyola, which was got near his chair, a subtile fellow, and so indued with the Devil that he was able to tempt, and not only that, but (as they say) even to possess the Devil, apprehended this perplexity in Lucifer. And making himself sure of his own entrance, and knowing well that many thousands of his family aspired to that place, he opposeth himself against all others. He was content they should be damned, but not that they should govern."

He therefore undertakes to refute the claim of Copernicus, and does so in an exceedingly ingenious and in part a powerful speech, by which Copernicus was silenced.

We have given this abstract of the beginning of the little book, not so much for the sake of exhibiting its scheme, and the wittiness of it, as because it was needful for showing the manner of Mr. Gosse's dealing with this extremely clever and characteristic treatise. The following sentences need little comment:

"Donne, in consequence of having dazzled his imagination with the daring discoveries of the New Astronomy, falls asleep and dreams that he is at the gate of hell and sees all its rooms open to his sight. The lost souls crowd the vestibule, but a place is cleared from them and a throne set in the great central hall. Doors open at the back, and Lucifer appears leaning on the arm of his obsequious favorite, Ignatius Loyola. The demon sinks into the throne, and commands that the souls of the lost shall approach him to plead their causes. Copernicus comes forward by Donne's side in the darkness" (i. 255).

Every one of these dramatic particulars is of Mr. Gosse's invention. His fancy continues throughout to prevail over the fact, and he gives no real idea of the contents or purpose of this brilliant, animated, and effective satire, which he calls "a frivolous work," and designates as "a squib or series of squibs all composed of bitter jests and skirmishings." In a passage of curious confusion Mr. Gosse attempts to fix the date of composition of the satire by references in it to publications of Galileo and Kepler, but he takes no notice of a passage in the little book which is of special interest, as containing a very striking and curious prophetical forecast. We are not aware, indeed, that attention has hitherto been called to it. Ignatius concludes his speech against Copernicus in the following words:

"Let, therefore, this little mathematician, dread Emperor, withdraw himself to his own company. And if hereafter the Fathers of our Order can draw a Cathedral Decree from the Pope, by which it may be defined as a matter of Faith, *That the earth doth not move*, and an anathema inflicted upon all which hold the contrary, then perchance both the Pope which shall decree that, and Copernicus his followers (if they be Papists) may have the dignity of this place."

Twenty-one years after these words were printed, in June, 1632, the Holy Inquisition, in condemning the doctrines of Galileo, declared, "by order of the Pope," that "to say that the Earth is not the centre of the world and immovable, but that it moves with a diurnal motion, is a proposition absurd and false in philosophy, and expressly heretical."

The many letters of Donne which Mr. Gosse has reprinted, and the comparatively few which he has printed for the first time, are not only most important sources of information concerning the course of the events of his life, but are also often of great interest in their illustration of his other writings. Owing to the lack of exact dates in most of them, their chronological arrangement is difficult, but Mr. Gosse has succeeded, as we have already said, with Dr. Jessopp's help, in determining the proper position of most of them. This is good and useful work, but a good many obvious errors in the text of the letters formerly printed have been left uncorrected, while the text of the letters which are printed for the first time in these volumes shows too often that the editor is not highly skilled in the deciphering of the handwriting of the seventeenth century. Many of the letters stand greatly in need of extended annotation, but Mr. Gosse has shrunk from this duty. He says in his preface: "I have not attempted to annotate the Letters, which would be a labour quite apart from my present object;

but wherever names are quoted [Mr. Gosse means, whenever names occur] as those of men and women with whom Donne was brought into personal relations, I have endeavored to say enough about them to render each reference of this kind intelligible."

Occasionally, indeed, he offers some information in regard to matters or persons referred to, but sometimes of such a sort as makes the reader content that he does not offer more of it. For instance, in a letter of 1608 (i. 199), Donne is printed as saying: "Justinian the Venetian is gone hence, and one Carraw come in his place." "The Duke Joyeuse is dead, in Primont, returning from Rome, where M. Mole, who went with the L[ord] Rosse, is taken into the Inquisition, and I see small hope of his recovery (for he had in some translations of Plessis' books talked of Babylon and Antichrist), except it fall out that one Strange, a Jesuit in the Tower, may be accepted for him." On these words Mr. Gosse comments as follows: "Such a letter as this would bear an annotation more lengthy than it is possible to give in a biography. 'Justinian the Venetian,' for instance, was Giustiniani, the Ambassador of Venice; 'Carraw' (I suppose) Noel de Carow; 'M. Mole' may doubtless be identified with Mathieu Molé, the President; and 'Primont' is an Italianated way of spelling Piedmont." It would be difficult to find anywhere a passage fuller than this of confusion and error. Noel de Caron, not Carow, as Mr. Gosse gives it, was the Dutch envoy to England, who was long in residence there, and how he could have come in Giustinian's place is not easy to see. It was Marc Antonio Correr who was sent from Venice in 1608 as Giustinian's successor. The identification of M. Mole with Mathieu Molé is a most surprising feat of bold imagination and bolder ignorance. It surpasses belief that any one acquainted with the name of that famous and great man Mathieu Molé could fancy that he was likely at any time to travel to Rome in company with an English nobleman; that he, a Catholic, of whom it was proposed at one time to make a Cardinal, would be imprisoned by the Inquisition, and that he might be released in exchange for a prisoner in the Tower! It would not have been difficult to ascertain who this M. (that is, Mr.) Mole really was, for, although his name is not in the 'Dictionary of National Biography,' the remarkable and pathetic story of his life is well known to students of the period. It may be found in Fuller's 'Worthies of England,' and also in his 'Church History of Great Britain.' John Molle had had an early life of various adventures, and was a man of learning and accomplishment. When he was fifty years old, he was appointed by Thomas Earl of Exeter to be governor in travel to his grandchild, the Lord Ross. It is reported that their travels were not intended to pass the Alps, but a vagary took the Lord Ross to go to Rome, and Mr. Molle in vain tried to dissuade him. "To leave him were to desert his trust; to go along with him were to endanger his own life," for he had translated the book of the eminent Protestant controversialist Du Plessis-Mornay on 'The Visibility of the Church,' and had thus exposed himself to the displeasure of the authorities at Rome. No sooner had he and his pupil reached the city than he was arrested and cast into prison, where, in spite of great and many endeavors to secure his release, he was kept for thirty years, allowed no intercourse with any friend, and where at last, in his eighty-first year, he died. And this was Mr. Gosse's "doubtless" Mathieu Molé! It is a slighter matter, but what Mr. Gosse means by calling Primont an "*Italianated*" way of spelling "Piedmont" is not evident.

So from page to page the reader goes stumbling along over Mr. Gosse's errors, finding the journey through the volumes which promised so much far other than he anticipated. To sum up the character of the book, a sentence from one of Donne's letters will suffice: "I will adventure to say to you, without inserting one unnecessary word, that the book is full of falsifications in word and sense, and of falsehoods in matter of fact, and of inconsequent and unscholarlike arguings, . . . and of letting slip some enormous advantages."

Contemporaries. By Thomas Wentworth Higginson. Boston: Houghton, Mifflin & Co. 1899.

Many readers will be grateful for the resurrection of these papers, some of which have been a long time buried in the files of one or another periodical. It would have been most proper for Mr. Higginson to give with each the date and place of its original appearance. In a prefatory note he simply states that they are from the *Nation*, *Atlantic*, and so on, without indicating which was in this publication, which in that. The list does not include the *Outlook*, in which "The Eccentricities of Reformers" appeared not long ago. Some changes have been made where it might have been better, we think, to let the original form remain and make the necessary change or criticism in a note, after the manner of Ruskin in his 'Seven Lamps' and elsewhere. Such a method would have better furnished us with genuinely contemporary appreciations. All the changes we have noted are in the direction of a severer taste and a more cautious blame.

That several of these papers were originally obituary notices takes nothing from their worth. Possibly here and there we have reserves prompted by kindly feeling at a moment shadowed by the death of a great man. In some of them there is more mere information than there would have been if the writer had been self-stirred to his work. The first number of the series, "Ralph Waldo Emerson," is less adequate to its subject than the Phillips, which reaches the high-water mark, and some others. The amount of Emerson's preaching after his first return from England is unduly minimized. The word "sonorous" as applied to his oratory gives us a moment's pause. Dr. Hedge would, we think, have denied that Horace Greeley was "one of the first, if not the first, to claim for [Emerson] a rank at the very head of our American bards." Dr. Hedge took that honor to himself, and averred that he instigated Emerson to more frequent ventures in poetry. The remarks on Alcott have an unobtrusive flavor of depreciation. We read of him as "in a stately way penniless," and of his "high-souled attitudinizing." Of the "Summer School of Philosophy" it is neatly said that "there was plenty of summer, something of philosophy, and very little school." There is a mere allusion to Alcott's splendid behavior on the night of the attempted Burns rescue, but a note referring to the full account in 'Cheerful Yesterdays.' In the passage dealing with Emerson's and Alcott's mutual appreciation we would gladly have been told that Alcott's account of Emerson's manner of lecturing is the best ever written.

The article on Theodore Parker is a testimony to Lowell's courage in his editing of the *Atlantic*, in which it appeared soon after Parker's death. We miss in it the expected emphasis on Parker's anti-slavery work, than which Mr. Higginson admired nothing of his more. The lack is stranger measured by the fact that the article was written in the heat of the first Lincoln electoral campaign. The sketch of Whittier is a delightful interpretation of both the man and the poet, with little reference to that canny politician under the singing robes, with whom Pickard's biography shows a fascinated engagement. The assonance is possibly responsible for the coming of Whitman next to Whittier. This chapter differs a good deal from the original form. The drastic criticism on Whitman's priapism (with the suggestion that Whitman's broken health was the penalty of an immoral life) "glares through its absence" —the fine phrase of Emerson which Mr. Higginson thinks an improvement on the *eo ipso præfulgebant* of Tacitus. In fact, Mr. Higginson does his sternest criticism of Whitman by proxy, in his sketch of Sidney Lanier, whose description of Whitman's poems as "huge raw callops cut from the rump of poetry" is more suggestive of Whitman's worst than of Lanier's best manner. "An Evening with Mrs. Hawthorne" is very brief, but tells a charming story of Hawthorne's first reading of 'The Scarlet Letter' to his wife. With this personal experience must be classed the remarkable chapter, "A Visit to John Brown's Household in 1859." The visit was after the trial of Brown, and shortly before his execution. The story of the visit is a human document of imperishable significance.

The two concluding chapters somewhat mar the unity of the collection. "The Eccentricities of Reformers" is almost too amusing for the company which it keeps, and "The Road to England" diverges sharply from the main highway. Mr. Higginson is no Anglomaniac. If, like the vase in the fable, he boasts that he has been with the rose, there is some disparagement of the rose. For Lowell's "Certain Condescension in Foreigners" we have a certain condescension *to* foreigners. The highest praise reserved for any English face or voice or manner is that there was something American about it.

Finland and the Tsars, 1809-1899. By Joseph R. Fisher, B.A., Barrister-at-Law. London: Edward Arnold. 1899. 8vo, pp. xv, 269.

It is the melancholy fate of some peoples to attract the interest of the world only by their misfortunes. For centuries Finland was known chiefly as a battle-ground of Sweden and Russia, in their struggle for mastery in the north of Europe. Now, after a long period of repose, marred, if we except occasional famine and pestilence, only by the coast raids of the Crimean War, the Finns are driven from a happy and prosperous obscurity by the threatened extinction of their political li-

berties. To this menace the unusual emigration, present and prospective, from Finland to America, apparently is to be ascribed; for, although a late season and extensive floods last year caused great distress among the peasantry, the past ten years have on the whole been the most prosperous in the history of the country. In that time exports and imports have practically doubled; and the increase has been due as well to the diversification of industry as to the growth of productive capacity in particular lines. Progress in education has kept pace with, and indeed has usually outstripped, that in trade and industry. These results have been accomplished by a quiet, law-abiding, and loyal people, numbering less than 2,500,000, who, though scattered over a vast expanse of arctic territory, much of it "waterlogged" and not one-thirtieth arable, have, under a policy of "wise and salutary neglect," been permitted to work out their salvation in their own way.

The constitutional government of Finland begins with the statute called the Form of Government, granted by the Swedish Crown in 1772. By this statute, which was confirmed by the Acts of Union and Security in 1789, the principle was established that the country was governed by the king, subject to laws enacted by him with the advice and consent of a diet consisting of representatives of the four estates of the realm, the nobles, the clergy, the burghers, and the peasants. When, in 1809, the country was joined to Russia, Alexander I., who assumed the title of Grand Duke of Finland as an appendage to his imperial office, convoked the Diet, and signed an Act of Assurance by which the fundamental laws were ratified. A similar act has been signed by each of his successors. Alexander I. also exhibited his goodwill toward Finland by restoring to it the province of Viborg, which was ceded by Sweden to Russia in 1721. The Diet, however, was not again convoked till 1863. Meanwhile, the government of the country, except as to matters of foreign affairs and war, was conducted through a secretary of state for Finland, who resided in St. Petersburg, and by a governing body in Finland called the Senate, composed of the heads of public offices appointed by the Tsar, and possessed of executive, advisory, and judicial functions. By Alexander II. the constitutional privileges of the country were confirmed and enlarged. In 1869 he gave his sanction to a statute, called the Law of the Diet, by which it was provided not only that a fundamental law could be made, altered, interpreted, or repealed only on the representation of the Emperor and Grand Duke with the consent of the estates, but also that the Diet should be summoned at least once in five years.

The present trouble between Russia and Finland may be traced back to the adoption by Gen. Miliutin, Russian Minister of War, in 1873, of a new plan for the organization of the Russian army. This plan he proposed to extend to Finland by decree. Alexander II. refused to take this step, and caused the plan to be submitted to the Diet. It was adopted with modifications. The principle of universal liability to service was accepted, but the peace establishment was strictly limited; Finlanders were required to serve only in Finnish regiments and under Finnish officers, and certain sections of the act were declared to be included among the fundamental laws of the Grand Duchy. This result was highly displeasing to the military party of St. Petersburg. Alexander III., while he confirmed the measures of Alexander II., fell more and more under the influence of the party of unification and reaction. Imperial commissions were appointed for the purpose of bringing the laws of Finland into conformity with those of the Empire in the matter of postage, of coinage, and of customs duties. A deputation, consisting of the speakers of the four estates of the Diet, went to St. Petersburg to remonstrate, but was not received. In 1891 another commission, presided over by a Russian ex-Minister of Finance, was appointed to draw up "regulations" for the Grand Duchy.

Various measures of unification had been adopted when the present Tsar came to the throne. He signed the usual Act of Assurance, but it soon became evident that the unifiers held the avenues of approach to him. In June, 1898, the Finnish Secretary of State resigned because he was unwilling to sanction measures that were pressed on him. In January, 1899, a draft of a new military law, by which the Finnish armaments were to be quadrupled and their distinctive character destroyed, was laid before a special Diet, with an intimation that unless the proposals were accepted, summary measures would be taken. The Diet failing at once to yield, there was issued at St. Petersburg on February 15, 1899, an imperial edict by which the function of the Diet is reduced to the expression of its "opinion" on proposals for "the internal administration of the Grand Duchy"; and even in these matters the final "decision" is reserved to the Russian imperial council, unless it is made directly by the Tsar himself. Thus, by the stroke of a pen, the ancient constitutional government of Finland is annulled. A deputation of the Senate which visited St. Petersburg to present to the Tsar the unanimous protest of that body, was refused an audience. A deputation bearing the unanimous protest of the Diet was similarly repelled; as were also the bearers of a petition signed by 500,000 Finns, comprising practically the whole adult population. It is obvious, however, that if the process of assimilation continues to depopulate the country, its results to the army will be disappointing and to the Empire at large highly injurious.

Mr. Fisher, while he evidently sympathizes with the Finns, presents his subject candidly and temperately, and gives the text of important documents instead of a summary of them. That his treatment of topics is not always systematic is probably due to the fact that, to a great extent, he takes them up in the order of their development in the recent crisis. The book is well printed and the proof-reading is generally accurate. We observe on p. 57 the phrase "as we still see," for "as we shall see"; and on p. 86 the words "official the routine," instead of "the official routine."

The Nation.

NEW YORK, THURSDAY, FEBRUARY 22, 1900.

The Week.

The President in his annual message declared that it was "our plain duty to abolish all customs tariffs between the United States and Porto Rico, and give her products free access to our markets." Secretary Root made a similar declaration at greater length in his annual report, and for a short time everybody seemed to acquiesce. The Chairman of the Ways and Means Committee introduced a bill to carry these views into effect. Presently a growl was heard in another quarter. The protectionist fraternity, who had been seemingly asleep all the time that we were acquiring this foreign territory by war and by purchase, suddenly awoke to the fact that there was danger in bringing in a certain amount of tobacco and sugar and oranges free of duty. So they "organized" and sent a delegation to Washington to remonstrate with Mr. McKinley. It was a matter of indifference to them whether the islanders were to be citizens or subjects. The political status of Porto Rico was nothing to them. Taxation without representation, or with it, was quite immaterial from their point of view. What they would not put up with in any event was the admission of Porto Rican products to the United States free of duty. They were not nice about it. They had learned something of the President's character from the experience of the group of Congressmen who, as Mr. Boutelle said, went up to the White House just before the declaration of war against Spain, and "held a stop-watch over Mr. McKinley's head while he was engaged in determining what kind of a message he would send to Congress." This protectionist group, as we are credibly informed, told Mr. McKinley to "drop it," and said that they would defeat him in the coming election if he did not. And he did drop it.

We have no doubt that the conversation with the President reported by Mr. Henry Loomis Nelson gives a correct statement of Mr. McKinley's present attitude on the Porto Rico question. The substance of it is, that the Constitution of the United States does not apply to the island, that the people of Porto Rico have no civil rights except such as this country chooses to give them, and that our new dependencies must not be permitted to do injury to any of the protected interests of this country. Thus the President has been forced, much against his will, to tell what his policy is; or, rather, what his present policy is, for he may change again before the nominating convention meets. He is for Imperialism, and not for mere Expansion. His policy is not benevolent assimilation, but benevolent despotism. What freaks our despot may indulge in, no one can say. It was reported a few days ago that he contemplated declaring the insurgents in the Philippines outlaws, to be hanged whenever caught. This would be in the line of Imperialism of the old Roman sort, but the Romans, we believe, never made a pretence of benevolence in the application of it.

The Porto Rico bill is now before the House. In the Senate Mr. Cullom has secured consideration for the Hawaii bill. The two measures, therefore, are under discussion simultaneously in the two branches of Congress. The Cullom bill grants free trade to the people of the Hawaiian Islands; the Ways and Means Committee's bill imposes a tariff upon the people of Porto Rico. It will be interesting for the visitor in Washington to hear a Republican Senator maintain that people living on one group of islands under American rule should enjoy the benefits of free trade because that group is in the Pacific Ocean, and then go to the other end of the capitol and hear a Republican Representative argue that people living under the same flag on another island should be denied those benefits because their island is in the Atlantic Ocean.

The decision of the Board of General Appraisers, to the effect that the tariff laws of the United States did not apply in Porto Rico during the period of military occupation, appears to be partially in conformity with the decision in the case of duties collected in California during the Mexican war. It was then declared by the Supreme Court that, so long as war continued, the military government of California had power to levy taxes or to do any act which any government might do according to the recognized principles of international law. If the duties for the return of which suit was brought were collected during the continuance of the war, the General Appraisers have authority for their decision. If they were collected on merchandise transported from Porto Rico to this country, or from this country to Porto Rico, after the war terminated, the General Appraisers differ with the Supreme Court, as formerly constituted. Porto Rico is now under what the Supreme Court called a de-facto government, "which will, of course, exercise no power inconsistent with the provisions of the Constitution of the United States, which is the supreme law of the land."

In his argument in support of a tariff for Porto Rico, Mr. Dalzell of Pennsylvania was fairly driven by the logic of necessity to declare that such Territories as Arizona and New Mexico have no constitutional rights. He was asked whether Congress could prescribe free trade for Arizona and a high tariff for New Mexico, and he manfully asserted that it had the power to do so. If it ever had the power, it has certainly not lost it, and very delightful visions of coming tariffs for Arizona and Alaska will soon be floating before the eyes of protectionists. The industries of these Territories are all infantile, and it is certainly the duty of Congress to give them the blessings of a tariff as soon as possible. If a tariff is going to benefit Porto Rico so much as is claimed, certainly the poor neglected Alaskans appeal to our humanity; and, on the other hand, the laborers of the United States should not be exposed to the competition of the degraded Indians and half-breed Mexicans of the Territories. It may give something of a wrench to our traditions, and will desperately tax the ingenuity of the Supreme Court, to deprive these Territories of the Constitution under which they have supposed themselves to exist; but it is so supremely important to have it established that Porto Rico and the Philippine Islands are not in the United States or a part thereof, that it does not make much difference if some of the older Territories are also excluded. Mr. Dalzell deserves to be commended for his honesty; but the position which he is forced to take is likely to make many people comprehend the dangers involved in an imperial policy. They have laughed at the idea that to maintain a despotic government in our own conquests would react on freedom at home; but they can now see that the inhabitants of our Territories may soon be denied the protection of constitutional government.

Mr. Hepburn's report on the Nicaragua Canal bill is one more affront for the Administration from a Republican committee of the House. The President and Secretary Hay have just recognized in the most formal way the binding validity of the Clayton-Bulwer treaty. Now comes the House committee on interstate and foreign commerce, and declares that instrument to be a mother of dead dogs, and any American statesman a fool or traitor who admits the slightest obligation to respect its provisions. But we do not see how any sane man can be expected to pay any attention whatever to Mr. Hepburn's recommendations. He not

only insults the President and flouts the law and the settled traditions of our diplomacy, but falls violently foul of common sense. He would have a canal not neutral even in time of peace. "Discriminating tolls" are what he wants, so that our hated rivals may be crushed both in peace and war. This, of course, is simply a whoop instead of a report. It must be a little humiliating to the Administration, however, to have a committee of its ardent supporters emit such stark nonsense at the very moment it is trying to close a dignified negotiation for a civilized Isthmian canal. We must say, though, that Mr. Hepburn's rolling specification of all the things truly "American" involved in his wild plan, reads very like a plagiarism from one of Mr. McKinley's earlier tariff speeches.

The ship-subsidy bill purports to be a measure "to promote commerce and increase the foreign trade of the United States, and to provide auxiliary cruisers, transports, and seamen for the Government use when necessary." This is the declaration of its title. The bill excludes all coastwise vessels, all lake vessels, and all fishing vessels, except those engaged in deep-sea fisheries. Yet all these vessels are engaged in training seamen just as much and just as effectually as those engaged in foreign trade. Why, then, should they not have some part of the subsidy? If navigation is such a meritorious calling that it should be subsidized with the money of the taxpayers, surely the coasting trade and the lake trade ought not to be overlooked. We are not sure that the canal boatmen ought not to have a slice of the cake. They are certainly poorer than the International Navigation Company, and more deserving of sympathy. The carriers on the lakes and canals really furnish the cargoes for the ocean-going ships, without which the foreign trade could not be carried on. It seems invidious, therefore, to give all the plums to the ships that sail across the ocean, and none to those that sail from one American port to another.

There is plenty of evidence that the clause in the title to the bill about seamen is a pretence and a sham. Section four says that no subsidy shall be paid to any vessel unless one-fourth of her crew are American citizens, or persons who have declared their intention to become such, and have served three years on American vessels. One-fourth is not a very large proportion of American sailors to entitle a vessel to subsidy, but even this is neutralized by the next clause of the bill, which makes an exception in cases where this proportion of Americans "cannot be reasonably obtained." The person to judge of the "reasonableness" is any shipping commissioner, or officer discharging his duties, in a home port, or any United States Consul, or any officer discharging his duties, in a foreign port. It is safe to say that a certificate of reasonableness would never be wanting in a case of deficiency of American sailors, since no consul, or person discharging his duties, would take the trouble to scour the docks to see whether American sailors could be "reasonably" obtained, if the captain of the ship should declare that they could not be. The bill is full of jugglers' tricks, the half of which have not yet been exposed.

It is a disagreeable surprise that the House Committee on Foreign Affairs should have defeated the movement for consular reform in this Congress, and laid the whole subject on the table. The friends of this long-needed reform had been much encouraged by the fact that a good many business men, in the West as well as in the East, had become convinced of the necessity of action, and had tried to impress their views upon Congressmen. So long as "theorists" and "doctrinaires" were the only people advocating a change, there was little hope of any action. It now appears that the spoilsmen feel strong enough to refuse consideration to even a good representation of business men.

The proceedings before the Senate committee in the Montana case continue to disclose either venality or perjury, or both, to a disgusting extent. The latest charge is that an attempt was made to bribe one of the justices of the Supreme Court by his family physician, who named $100,000 as a consideration. The justice, like Cæsar, when the kingly crown was offered him, did thrice refuse. In fact, he says, he refused at once and unequivocally, but still kept on good terms with the doctor. This testimony is said to have been highly pleasing to the lawyers for the prosecution, while the lawyers for the defence were greatly amused by it. Another justice of the Supreme Court testified that Senator Clark's counsel came to him in great excitement, asking if it were true that an attempt to influence the court was taking place, intimating that $5,000,000 was to be employed. To this question the justice replied that such a report would not be confirmed by him, for he would kill any one that approached him with a bribe. That speaks well for the honor of this justice, but he was obliged to admit that he was not sure that the excitement of the counsel was not feigned, and that the question was not asked him in order to prepare his mind against the $100,000 story. The family physician, who had described his original suggestion as "a funny proposition," now says that the whole thing was a joke. No wonder that members of the Senate committee describe the affair as the most intricate case of corrupt politics ever known. The committee would have saved themselves much time if they had peremptorily refused to listen to the statements of men who admit that they are liars and perjurers.

One thing which worries many thoughtful Republicans in the central West is the Trust issue. They recognize that there is a great deal of humbug in the talk of the Bryanites about this matter, but they also appreciate the fact that many of the worst Trusts are profiting by Republican tariff legislation. A repeal of the duties on certain articles would deal the hardest blow at some of these Trusts that they could suffer, and more than one Republican Congressman feels the necessity of doing this. Representative Hemenway of Indiana is such a man, and he does not hesitate to speak his mind. He writes to the Evansville *Journal* that legislation to repeal duties on articles controlled by Trusts ought to be enacted, and that he has so told Chairman Payne of the Ways and Means Committee. He adds:

> "I have also stated to him that I believed the Republican party ought to act promptly where Trusts are formed to control any article that is protected. We cannot permit Trusts to raise the price of any protected article without being justly criticised, and, in my opinion, if Congress will act promptly in these matters, no Trust can successfully increase prices upon such articles as are protected."

Iowa Republicans are of the same mind. The Keokuk *Gate City*, whose editor was a member of the last Congress, recently remarked that "if Congress will hit a few specific Trusts like those of paper, tin, and copper by a prompt taking from them of the protection given them by high tariff duty, it will teach swift instruction to all other Trusts, and you will see how soon they will abate their pretensions," and went on to say: "The Republican party will not have the shadow of a chance to carry the Presidential election of this year if this Republican Congress leaves all the cormorant Trusts preying upon the American people next November as they are now." But is anybody simple enough to suppose that the protected interests will allow the tariff to be touched for this purpose?

The controversy in Kentucky is relieved, for the present at least, from the complication which the interference of the Federal courts would produce. Judge Taft of the United States Circuit Court has refused the application for an injunction to prevent the removal of certain State officers by the Kentucky Board of Elections. His refusal is based entirely on the legal principle laid down positively by the Supreme Court, that under no circumstances has a court of equity jurisdiction to interfere by injunction to prevent a removal from office, however fraudulent or unjust the threatened pro-

ceedings. The courts of Kentucky afford an appropriate remedy for the asserted injustice. They provide for proceedings to remove an officer by writ of *quo warranto*, and there is also a remedy at law to prevent usurpation of office. If in such proceedings any Federal question arises, a writ of error to the Supreme Court can be obtained. This leaves the dispute to be settled by the proper tribunals, and Gov. Taylor has already begun suit to restrain his rivals from acting officially.

The Democrats in the Legislature have taken the ground that their original, and decidedly irregular, action in deciding the contest for the office of Governor in favor of Goebel was sufficiently valid to determine his title. But they seem to have thought that it might be strengthened by "reaffirming" it; a step of doubtful policy. If the original decision was lawful, it will not be made more so by a reaffirmation; and if it was not lawful, the proper course would be to make a lawful one now. Probably they fear the consequences of admitting that Taylor has been Governor during the last few weeks; but that does not seem to be a material fact. The questions to be eventually decided by the courts are practically only two. The first is whether the action of the Legislature in deciding the contest in favor of Goebel was, in view of the fact that Gov. Taylor prevented a regular session by armed force, so irregular as to be void. The second, and really more important one, is whether, on a thorough examination of all the circumstances of the election, any decision by the Legislature in favor of Goebel can possibly be sustained. The courts cannot decide this question without very prolonged investigation.

Mr. Peckham's letter to the committee of the New York Legislature on taxation goes to the root of the question of taxing evidences of debt. His chief point is that any tax on such evidences must be paid out of the interest, and the rate of interest cannot be determined by statute It depends on the money market—that is, the capital market—of the world. Whatever that rate is, the lender of capital will get or he will not lend. Not only is it true that all taxes must be paid out of income, but they must also leave a certain fairly liberal proportion of the income for the owner. All effort made by the State, Mr. Peckham contends, to apportion a tax between borrower and lender is certain to be futile. "The tax must be paid out of the profit made by the borrower, and the net current rate of interest must be paid by the lender, or he will not lend. You may possibly prevent loans, you may drive capital out of the State, you may possibly bring about conditions in which each one having capital will be compelled to use it himself rather than lend it to one more capable of using it, you may greatly raise the rate of interest, because of the dangers of lending, but you will never be able to tax the lenders of capital so as to give to them a rate of interest less than that established by the law of supply and demand." This is forcibly stated, but Mr. Peckham overlooks the fact that one of the conditions affecting the market rate of interest is the extent of the field of investment. If the owners of capital demand a higher rate of interest than now prevails, some people who intended to borrow will not borrow, and in that way the field of investment will be contracted. In other words, there will be a decreased demand for capital, which would result in competition among capitalists for loans, with the natural consequence of a lower rate of interest. The difficulty lies in estimating the comparative effects of a number of causes, and economists generally regard the problem of the ultimate incidence of taxation as one of the greatest complexity.

A step has been taken in the direction of that "Religious Trust" which was advocated by President Hyde of Bowdoin College at the recent Church Federation Conference in this city. Representatives of six benevolent organizations, like the Home Missionary Society, have held a meeting to consider the idea of federating their work. It was admitted that the societies are over-secretaried; that officers hold the positions for life, and are sometimes retained after they have ceased to be efficient; that there are too many auxiliaries and collecting agencies, and too many salaried persons soliciting money; and that the proportion of collectors among the churches to laborers in mission fields is much too large. It was conceded, too, that there should have been long ago a division of territory between two societies engaged in similar work, and that there should be some body to which all such questions might be referred. A committee of one from each of the six societies was constituted, which these six are to increase to nine, to advance the common interests of the societies, to secure the fullest development of their resources, and the utmost economy and efficiency of their administration, with a recommendation that any questions arising between any of the societies be submitted to this committee. This settles nothing, but it may prove a valuable first step.

It was clear from the first dispatches that Lord Roberts had won a decided tactical success, and the later news indicates that the material results of his rapid and brilliant movement will be momentous. It is very evident that the Boers were surprised, and that their retreat was precipitate. Kimberley has been relieved, and once more put in railroad communication with the Cape, and, so far as the western border is concerned, the tide has distinctly turned in favor of the British. Colenso, too, has been occupied by Gen. Buller. It will now be possible to pursue the original plan of campaign, and march on Bloemfontein. In England, the success of Lord Roberts has been more than welcome. Although the newspapers have, no doubt, exaggerated the state of public anxiety, the country was suffering from the strain and from hope so long deferred, and will be much braced by the decidedly improving prospects of the campaign. If Lord Rosebery were to speak to-day, he would not adopt the alarmist tone which he fell into ten days ago. He seems to have formed the notion that the way to reunite the Liberal party and beat the Conservatives is to out-Jingo them; and, in his recent addresses, has put himself forward as the great Liberial Imperialist, ready to raise a standing army of 600,000 men, and spend money like water on guns and ships. His charge that Lord Salisbury has been and is still supine and not awake to the military needs of the empire, has probably this political motive behind it.

The Germans have found the colonizing of their Chinese acquisition, Kiao-Chau, by no means so easy a process as their first impressions led them to believe. Ugly rumors of widespread illness among the garrison, from the governor down, have been reaching Germany for some time past, and the death report has been comparatively only a little pleasanter reading than that cabled weekly from Manila. A review of the settlement's progress from October, 1898, to October, 1899, recently published by the Government, has failed wholly to reassure the German public as to the healthfulness of the new colony, since it suppresses the percentage of sickness among the troops. According to this document, however, malaria has not made itself seriously felt, and the situation of the colony is considered more healthful for Europeans than that of any other Chinese port. The admittedly large number of typhoid-fever cases is attributed to the sanitary sins of the Chinese, as well as to some recent excavations for building purposes. A good deal of space is given to describing the measures employed to care for the invalids and to prevent sickness in the future. Attention is also called to the plan to give the natives an independent government, under the careful supervision of German officials, which shall deal particularly with questions of agriculture and education. It is by this means, perhaps, that the German government is seeking to achieve in Kiao-Chau that success which it has been denied in its colonizing experiments elsewhere.

THE MORALS OF THE PORTO RICAN QUESTION.

"Free trade between the United States and Porto Rico is a moral question. It is *practical religion;* and our people can never supply the missing link in the moral education and religious training of this people without giving them an opportunity to earn a living, and without treating them as we treat other Americans." This is the language held by the United States Consul in Porto Rico, Philip C. Hanna. He declares that, "as an American," he believes the island should have "absolute free trade with all parts of the United States," and that he is convinced that "Porto Rico can never become prosperous until she can buy bread for her people without paying enormous revenue duties for the privilege of bringing that bread into the island."

This is a correct statement of the question that is now agitating the country and Congress, and exposing the President to daily insult and humiliation. Leaders in Congress go to the White House to ask Mr. McKinley if the moral law has changed since he said, last December, that it required us to give the Porto Ricans free trade. A self-respecting man would have shown such inquirers the door. Could a notoriously pious President, fresh from delightful intercourse with Methodist Bishops, submit to have his character as an honest man thus challenged in his own office? But Mr. McKinley is as meek as he is good. He told the Congressional delegation that our "plain duty" remained just what he said it was in his message; humanity demanded that we grant the Porto Ricans free trade; national honor required it, but, "as a matter of expediency," it would be just as well to vote for the bill intended to exploit and starve the islanders. In other words, when President McKinley solemnly and publicly acknowledged the moral obligation to establish free trade with Porto Rico, he did not think he would live to eat his own words—rather, have them crammed down his throat by angry tobacco-growers. His own attitude on this question confirms the worst that has been said about his moral cowardice. By lifting one finger he could make Congress do what he has declared it a national duty to do, yet he cowers before the merest bogey thrust in his face by a heartless crew, and lets "expediency"—*i. e.*, votes for his own reëlection—override "plain duty."

"A great metropolitan daily"—we believe that is the proper phrase—which has been painfully climbing from one side of the fence to the other, in its attempts to support the President in his Porto Rican business, plaintively says that "there is nothing to show" that the Porto Ricans themselves want free trade. We charitably withhold the name of a journal which thus confesses itself cut off from the ordinary channels of information. The newspapers of Porto Rico, whether in Spanish or English, whether of native or American ownership and editing, have been of one voice in saying that free trade is the sole salvation of the island. Only in the latest issues to hand had there come to be a hint, in their dispatches from the United States, that there was a possibility that Congress might repeat in Porto Rico the blunders and crimes of Spain, and it was easy to see what indignation the rumor excited. A telegram from the island ten days ago showed what mingled rage and horror the proposals at Washington had produced. Nothing to show that the Porto Ricans want free trade? Why, Commissioner Carroll's report is stuffed with evidence that all classes and parties of them want it—nay, demand it, as men demand the right to be allowed to live.

In one of the Commissioner's earliest reports he said, "It is proper here to say that Porto Ricans of all classes are united in urging that the markets of the United States and Porto Rico shall be as free, reciprocally, as those of New York and Jersey City." A "Congress of Porto Ricans" met in San Juan in November, 1898, and one of its declarations was in favor of "free and reciprocal commerce with the American Union." Two political parties were organized in Porto Rico last year; the platforms of both call for free trade. The "Republican party of Porto Rico" declared in March, 1899, that "Commerce should be free between Porto Rico and the United States." The plank in the platform of the "Federal party" asserted that "It is indispensable and just to abolish the customs tariff and to establish free commerce between Porto Rico and the rest of the Union." So we might go on with statement after statement by merchants and planters and bankers and manufacturers. "The Golden Dream of Porto Ricans" is the phrase used in describing one prominent native's plea for free trade, who added, "If that is not granted, we are all lost. There is no possible salvation."

This is undoubtedly the form in which the appeal is now reaching the hearts of Americans. It is not a debate about fiscal policies. It is no wrangle over constitutional interpretation. The simple question is, Are we going to deny the prayer of these thousands of fellow-beings who have no earthly help but in us? Are we going to be only a shade less cruel to them than Spain, and then boast of it, as the *Tribune* does? The hopes, the confidence, of the Porto Ricans are touching, as one reads their various expression. The planters of Mayaguez submitted a memorial, which concluded, "Knowing your good wishes, and the good wishes of the President of the great republic, we await with faith and enthusiasm the speedy change of the situation to one of prosperity for Porto Rico." Is Congress going to tell these helpless and trusting people that their confidence was misplaced—that they have simply changed tyrants? Is the President desirous of having his name become execrated in Porto Rico? The Republican party of that island declared that "The names of Washington, Lincoln, and McKinley are household words in Porto Rico." Is the last name now to be a household curse—a symbol of tyranny and bad faith? These are the questions which Congress must answer within the next few days. It must decide whether the heartless greed of a few selfish men is to outweigh the appeals and needs of a ruined people; whether we shall deliberately give the lie to all our fine professions of two years ago, and, whereas Spain chastised the Porto Ricans with whips, whether we ourselves shall chastise them with scorpions.

PASSAGE OF THE GOLD BILL.

The passage of the gold bill in the Senate has been anticipated as a certainty ever since the opening of the present session of Congress. The opposition to it has been feeble and listless, betokening a perfunctory rather than a vital interest in the question among the Democrats. It is nevertheless one of the most impressive events in our political history. Anybody who should have predicted four years ago a majority of votes at this time in the Senate for a bill establishing the gold standard, would have been considered a lunatic. Yet it has come to pass, and it is fresh evidence, amid some testimony of a contradictory kind, that the American people are, by slow degrees, gaining in wisdom and advancing toward a better estate.

The silver and the soft-money crazes of the past quarter of a century were born of the miseries and mistakes of the civil-war period. The legal-tender act was, as Chief Justice Chase acknowledged in one of his later opinions from the Supreme bench, a blunder. It added enormously to the cost of the war, it defrauded multitudes of men and women, and especially the wage-earning classes and the soldiers in the field. Worst of all, it poisoned men's minds, and introduced false conceptions of the nature of money, and entailed upon us a political conflict which at one time came near to producing general ruin and disorder. We are now at the end of that conflict, and the passage of the bill in the Senate with such small opposition is conclusive evidence of the fact. It will be impossible in the lifetime of the present generation to revive the silver controversy. There may be differences of opinion, more or less heated, concerning bank-note issues, but they will not be differences respecting the standard of value.

The Senate has substituted its own bill for the House bill on the same subject

which passed the latter body early in the session. The differences between the two bills, except in the matter of refunding the national debt, are not very important. The House bill is the better of the two, but it is not so much better, except in the particular named, as to warrant any long contest over the differences. The refunding section of the Senate bill is a kind of a cat in the meal-tub that will become lively in the approaching political campaign if the bill is finally passed with that clause in it. The Republican newspapers have been slow in apprehending the true inwardness of this measure, but, in proportion as they have taken pains to understand it, they have perceived the dangers which lurk in it. The scheme proposes to distribute $88,000,000 as a cash bonus to the present bondholders for the privilege of paying them a further sum of $240,000,000 in the next thirty years in excess of what they would otherwise receive. This is to be done under the pretence of reducing the rate of interest on the public debt.

The prime factor in the national finances at the present time is the surplus of income over expenditures. This is likely to be $100,000,000 per year unless Congress is wildly extravagant in its appropriations. It may be safely said that it rests with Congress to pay off the existing debt at the rate of $100,000,000 per year if it chooses to do so. It happens that $850,000,000 of debt will mature within nine years, so that the Government can pay it off by using its surplus receipts for that purpose. There may be a few short intervals in which money will accumulate in the Treasury, between the maturity of one class of bonds and another. Former Congresses and Secretaries have been very careful to preserve the Government's option of payment of the principal of the debt, and the result has been very fortunate for the Government at the present juncture. But now a new policy is introduced quite unheard of heretofore, and it is proposed to throw overboard all the advantage gained by the wise foresight of former administrations, both Republican and Democratic. It is proposed to give away the option of redeeming the outstanding debt, and to extend the principal of those early maturing bonds for thirty years, and pay a bonus for the privilege of doing so.

The largest part of the outstanding bonds consist of 4 per cents, maturing in 1907. These were issued by Secretary Sherman in 1877, and they amount to $553,000,000. The interest on them till maturity will be $188,000,000. The Senate bill proposes, instead of paying them at maturity, to issue new bonds in exchange for them bearing 2 per cent. interest and running thirty years. The whole amount of interest to be paid under this scheme on these particular bonds will be $331,800,000, being a loss to the Government of $143,800,000, besides the cash bonus of about $50,000,000. All this might be justified in the case of a nation which could not redeem its notes at maturity and stop the interest, but is wholly unjustifiable in the circumstances of the United States at the present time.

This is a sample of the refunding scheme. The other batches of bonds maturing within nine years bring the loss on the refunding operation up to $240,000,000, plus the bonus of $88,000,000. It is a reversal of our entire financial policy from the days of Hamilton to the present time, and is in itself astounding. We cannot conceive it possible that the House should agree to it. If it does, there will be many Republican seats emptied next November.

PLUNDERING THE CITY.

Were it not for the magnitude of the interests affected, the impunity with which the city of New York is plundered would be ludicrous. The number of persons directly interested in the spoils is not very great, and even those indirectly profited are a comparatively small minority of the population. But with all the protection supposed to be afforded by a scientific charter, property is practically helpless. The citizens are compelled to see the assessment of property raised by hundreds of millions of dollars, the rate of taxation advanced on this increased assessment, the number of officers constantly enlarged, and their compensation inordinately increased. It is estimated by the Comptroller that the operation of the new charter costs the citizens of Greater New York not less than $15,000,000 a year more than their former government, while there is nothing to show for it but a name. The old city was wastefully and extravagantly governed, and the effect of consolidation has been to spread waste and extravagance through the suburbs. Village constables that were contented with $400 a year have become city policemen at $1,400, and corresponding advances have taken place in all departments.

The latest raid on the city treasury is made under the provisions of the "labor law" of 1894. That act shortened the hours of labor in city work, and provided that "the prevailing rate of wages" should be paid. The chance for plunder was not at first perceived. The employees of the city probably realized that their positions were enviable, and it did not occur to them that the labor law would enable them to collect large sums on the ground that their compensation had been unlawfully small. But the legal profession does not lack members astute enough to discover every existing possibility of mulcting the city, and for a year or more these gentlemen have been getting up claims for back pay for mechanics and laborers. The amount of these claims is now increasing with startling rapidity, and the result to the city treasury may be compared with the effect of the dependent pension act on the Treasury of the United States. That act was sufficient by itself to bring the government to the verge of bankruptcy, and to cause a financial panic; for had it not been for that diversion of revenue the Treasury would not have had to provide for a deficit. When hard times return, the burden of taxation which is now being heaped on this city bids fair to be literally ruinous.

Theoretically the charter provides the city with guardians. Claims against the city are presented to the Comptroller, and he is, in the contemplation of the law, assisted in discharging his duties by the Counsel to the Corporation. The framers of the charter, however, did not extend their theories so as to provide for the not unlikely event of the Comptroller and the Counsel taking different views of the merits of a claim. In such an event—which occurred in the notorious aqueduct claims of O'Brien and Clark—the Comptroller is obliged to employ his opponent as his legal representative. The result is to make the Corporation Counsel practically the supreme auditor of the city. The present Comptroller resisted the payment of the O'Brien and Clark judgment so long as he could do so without being sent to jail for contempt of court. It has been assumed, although the fact is disputed, that various city authorities, including Comptroller Fitch, consented to the payment of $700,000 in settlement of the O'Brien and Clark claims, and that the Corporation Counsel was, therefore, authorized to confess judgment for the city. On the ground of these consents the courts held that claims must be paid which were pronounced by the special counsel retained by the city to be "without any foundations whatever in law, justice, or equity." It was frankly admitted that the true reason for settling was the probability that the Legislature would eventually compel the city to pay the whole of these claims if no compromise was reached. And in spite of the alleged consents, two justices, McLaughlin and Patterson, held that the confession of judgment by the Corporation Counsel was invalid, saying: "The property of the city cannot be used to prevent hostile legislation or to 'purchase peace' by preventing the prosecution of claims which have no legal existence." No more dangerous precedent could be conceived, it was added, "as it practically puts the disposition of the property of the city in the hands of the Corporation Counsel."

That seems to be the opinion which the Corporation Counsel now entertains of his powers. He apparently considers that such formalities as the advice of special counsel, the approval of the Aqueduct Commissioners, the consents of the Mayor and Comptroller, may be dispensed with. His theory is that his own con-

sent is all that is required in order to authorize valid judgments against the city to be entered, and he is acting on that theory to an extent which is staggering. It has been calculated that judgments against the city to the amount of $2,000,000 were obtained last year. That amount promises to be doubled during the year to come. The amount of the claims under the "labor law" filed so far this month is twice as great as in any previous month. In 1897, the city assumed the obligations of eighty-nine corporations consolidated by the charter, and the possibilities of claims from this source are boundless. The Corporation Counsel says that he is powerless to resist these claims, and that it is cheaper for the city to confess judgments than to contest them. However this may be, it is evidently desirable that some other consent than that of this officer should be required before claims unlimited in amount are fastened on the city.

PROF. MIVART AND THE CHURCH.

Prof. St. George Mivart has long held a peculiar position in the scientific as well as in the religious world. As a scientist, he has been one of the few distinguished investigators and students of his generation who have not been thorough-going evolutionists. Twenty years ago a perplexed theological student asked his professor for a good book to read on evolutionary theory. "Read Mivart," was the innocent reply; "he does give it to Darwin so!" On the other hand, Prof. Mivart has been held up as a standing illustration of the tolerance of the Catholic Church. Apologists have made much of him. The Catholic Church antagonistic to science? Why, look at St. George Mivart! No freedom of inquiry within the Roman communion? Prof. Mivart gives the lie to that calumny.

Well, this is all ended now, as Prof. Mivart has been formally excommunicated from the Church for refusing to recant his opinions and submit to his ecclesiastical superiors. The painful story is set out at length in the correspondence between him and Cardinal Vaughan, recently printed in the London *Times*. The Professor had published in two of the London reviews some exceedingly frank articles on Catholic liberty of opinion. He now says that he did so under a solemn sense of duty: he had been warned that he had not long to live; he felt that by his past writings he had influenced many persons in favor of views which he had come to believe erroneous, and that he ought not to go out of the world silent. So, he says, "I made my articles as startling as I could, so as to compel attention to them, and elicit, if possible, an unequivocal pronouncement." This he promptly obtained. The *Tablet* directed attention to his audacious articles, and Cardinal Vaughan speedily called upon him to declare his "reprobation" of his expressed opinions and his "sincere sorrow for having published them." His Eminence also demanded that Prof. Mivart sign a confession of faith, which he sent as "a test of orthodoxy," failing which "the law of the Church will take its course." Cardinal Vaughan no doubt intended to write in a kindly way, while discharging a disagreeable duty, but some of his language was most offensive, even unconsciously. Thus he calmly assured Prof. Mivart that it is "your moral rather than your intellectual nature that needs attention." In other words, if the Professor would only pray and fast, he would have no difficulty in reconciling contradictory propositions.

But the suspected heretic despised the ecclesiastical swords pointed at his breast. He had succeeded in eliciting the authoritative voice of the Church. Catholic by family ties and personal inclinations though he was, he could not stultify himself, and firmly wrote to the Cardinal: "I categorically refuse to sign the profession of faith." In the same letter he declared that it had now been made clear that "a vast and impassable abyss yawns between Catholic dogma and science," and that "no man with ordinary knowledge can henceforth join the communion of the Roman Catholic Church, if he correctly understands what its principles and its teachings really are, unless they are radically changed." In his final communication to Cardinal Vaughan, Prof. Mivart put the case in a condensed and forcible form, which we cannot do better than to reproduce:

> "The fact is, that all Catholic teachers about Scripture are embarrassed by antecedent affirmations which you cannot disown, glad as you would be to do so. The Council of Trent naturally fell into error because then modern science was but in its infancy; while that of the Vatican was no less mistaken because the great majority of its bishops neither knew nor cared anything about natural science.
>
> "But these truths you are not free to affirm because of the dogma of 'infallibility,' which clings to the Church like the fatal garment of Nessus, and will surely eat away its substance and reduce it to a mouldering, repulsive skeleton if that doctrine does not come to be explained away by dexterous Catholic theologians.
>
> "As to the old worn-out saying, 'There can be no discrepancy between science and religion,' it is quite true if religion is always careful to change its teaching in obedience to science, but not otherwise.
>
> "As to 'accommodations' and 'Biblical modes of speaking,' it is 'true,' or it is 'not true,' that the animals went up to Adam to be named, and so with respect to the story about Babel, etc.
>
> "Very many men and women are now anxious and distressed about their duty with regard to the Bible. What good end can be served by telling them it 'contains no errors,' while yet a multitude of its statements are altogether false?
>
> "By such a method the very foundations of religion become tainted with insincerity, untruth, and dishonesty."

We recount this sorrowful experience of Prof. Mivart's without the slightest animus against the Catholic Church. It is no worse, in principle, as respects freedom of opinion, than the Protestant Church. Many zealous Presbyterians are at this moment engaged in the attempt to put Prof. McGiffert out of their church for asserting Presbyterian tolerance and liberty. The difficulty lies not in one church more than another, but in the general principle of attempting to assert authority over reason. The Catholic Church does it at one point, the Protestant churches at others; but all do it. From the law of their being they are bound to do it. In all of them there are certain permitted laxities of belief, so long as these are not offensively proclaimed. You can practically enjoy every liberty except that of asserting in public that you are free. If you do that, the fate of Prof. Mivart befalls you. His case does not really prove that a man cannot be a scientist within the Catholic Church; it proves only that he must keep still about his "conflicts of religion and science." All the churches now substantially say, "Believe what you like in private, only conform publicly."

It is not pleasant for any communion to lose a man like Prof. Mivart. For the Catholic Church his excommunication is a peculiarly unfortunate event just at this time. At the very moment he is being excluded from fellowship, French Cardinals and the Pope himself are praising Father Bailly as a champion of the faith. Who is Father Bailly? He is the member of the Assumptionist Order who proclaimed that the condemnation of Dreyfus at Rennes was due to the miraculous intervention of the Mother of God in behalf of France and the French army!

THE MOTHER OF THE DUC D'ENGHIEN.

PARIS, February 7, 1900.

Count Ducos has found a catching title for a very ordinary book—I mean ordinary in a literary sense, for the subject itself is full of interest—'La Mère du Duc d'Enghien.' Who does not take a natural interest in the unfortunate young prince who was shot at Vincennes? and, consequently, who would not wish to know something about his mother? It is difficult to imagine a book that possesses the elements of the 'Mère du Duc d'Enghien' showing so much inexperience in the art of using such elements, such an absence of proportion in their development. Such as it is, the work deserves to be read, though it sometimes inflicts on the reader the necessity of going through pretentious and useless descriptions, and excursions into questions quite foreign to the matter in hand. The original documents which have served to compose this memoir come chiefly from the National Archives of the Palais Soubise, from the Archives of the Foreign Office, and the Archives of our Navy Department.

Louise Marie Thérèse Bathilde d'Orléans was born on July 9, 1750. Her mother was Henriette de Bourbon de Conti; her father, the Duke d'Orléans, was commonly called "le gros Philippe." He was fat, ordinary, very good-natured. The young princess took the name of Mademoiselle, reserved for the

first princess of the blood till she married. She was educated at the fashionable abbey of Panthemont. At the age of seventeen she was baptized (this sacrament was given to the princes and princesses of the blood only when they took officially their place in the royal family; Rome consenting to this deviation from its rule on account of services which she had received from the house of St. Louis). At their birth, the princes were merely *ondoyés*, as the phrase was and is still—a ceremony which now takes place when there is imminent danger of a newborn child's death before a priest can be summoned. King Louis XV. and his Queen Marie Leczinska took the young princess to the baptismal font.

Mlle. d'Orléans left Panthemont to take part in the wedding of her brother, the Duke de Chartres, with Mlle. de Penthièvre. She made the acquaintance of her cousin, the Duke de Bourbon, whom she was soon afterwards to marry, though he was younger than herself, being only fifteen years old when the marriage took place; but the young couple did not immediately live together. The young Duke took a little journey, and the new Duchess returned for a time to her convent. Laujon, who was familiarly attached to the house of Condé, wrote on this occasion a play called "L'Amoureux de Quinze Ans," which was represented at the theatre of Chantilly. The great passion manifested by the Duke de Bourbon at the time of his marriage, did not last long; at the age of sixteen he was not content with conjugal happiness. The manners of the time did not permit a vulgar fidelity; it was thought very bourgeois to be faithful. There was in the park of Chantilly, in what is still called "L'Île d'Amour," a naked statue of Love, minus his arrows and his wings, with a heart in his hand. On the pedestal was this inscription:

"N'offrant qu'un cœur à la beauté,
Aussi nu que la vérité,
Sans armes comme l'innocence,
Sans ailes comme la constance,
Tel fut l'Amour au siècle d'or;
On ne le trouve plus, mais on le cherche encore."

The Duke de Bourbon did not look long for him, thinking only of his pleasures, his amusements. The Duchess was mortified by her husband's numerous and changing caprices; but her vanity was more wounded than her heart. On the 2d of August, 1772, the Duchess had a son at Chantilly, who received the name of Duke d'Enghien—a small, delicate infant, so frail that it was for a moment doubtful if he would live. Soon afterwards, she was forced to dismiss one of her ladies, Mme. de Canillac, as she found out that the Duke de Bourbon had become too attentive to her. She could not prevent Mme. de Canillac from leaving the palace with the honors of war. The intimate friend of the Prince de Condé, the young Duchess's father-in-law, was the Princess of Monaco, of whom I have spoken at length lately. She wrote on May 3, 1773, to one of her friends from Chantilly: "Young Canillac has the *survivance* [reversion] of M. de Puységur, with the salary and the perquisites till he has the office. Mme. de Bourbon being very discontented, Mme. de Canillac retires. The Prince de Condé gives her a pension of two thousand a year." The Count de Puységur was at the time first gentleman of the bedchamber to the Duke de Bourbon. Such details explain what Paul Louis Courier said afterwards, in his famous pamphlets, of the court and the courtiers.

The Duchess de Bourbon frequented the balls of the Opéra, as did all the ladies of the court. Belleval writes in his Souvenirs in 1773: "It is affirmed that the Duchess de Bourbon has been exiled from Chantilly for an intrigue with the Chevalier de Coigny. He has received an order to join his regiment, and not to come back without the King's permission. It would be for the Duchess de Bourbon only *un prête pour un rendu* [a Roland for an Oliver], for the Duke de Bourbon, young as he is, already has had several mistresses." The young Duchess was living in circumstances which were no protection for her. Her brother, the Duke de Chartres, was notorious for his ill-conduct; her father-in-law lived in equivocal relations with Madame de Monaco; her own father was completely under the sway of Madame de Montesson; her young husband was entirely estranged from her. Madame d'Oberkirch, who was her intimate friend, tries to defend her.

"No woman," she says, "has ever been more unjustly judged; she keeps in her heart a deep and true love for her husband, though he makes her so unhappy. She has been accused of some adventures. I have never seen anything to justify it; at any rate there was in her affairs more giddiness than anything. If she forgot some rules of propriety, it was certainly because she tried to forget herself. She wished to tear from her heart the poisoned arrow."

This seems far too sentimental for a time which, though it prided itself on sensibility, was not very sentimental.

The Duchess de Bourbon spent much of her time at Chantilly, while her husband lived in Paris in the gayest company. In Paris, she inherited the charming Palais Bourbon, belonging to her father-in-law. She was so unfortunate as to become, one evening at a masked ball at the Opéra (these balls were at the time frequented by the best society), the occasion of a quarrel between the Count d'Artois and the Duke de Bourbon. The Count d'Artois tore her mask from her face. It was a grave insult, and though the Duke de Bourbon was neglecting his wife and lived almost wholly apart from her, he thought it necessary to avenge her. This duel made an immense noise at the time; it was bloodless, and the two princes fought, so to speak, for the gallery, like two fencing-masters. The Duchess de Bourbon was not brought nearer to her husband; a complete rupture took place some time afterwards. The King ordered the Prince de Condé to give annually to the Duchess the sum of 250,000 francs, and gave her the exclusive possession of a pension of 50,000 francs, which he had paid to the young couple since their marriage. As for the young child, the Duke d'Enghien, it was agreed that "the Duchess de Bourbon shall be allowed to see her son, either at Paris or at Saint-Maur, and shall take him to the play only when he has the permission of his father. The Duke de Bourbon shall send his son to her once a week." At the very moment when this arrangement was being made, the Duke de Bourbon had a child by a dancer of the Opéra, Mademoiselle Michelet, and he used his right as prince of the blood to give her the name of Bourbon. This child was christened in the presence of the old Marshal de Soubise and of Mademoiselle de Condé; she was well educated, and was married to a Montessus de Rully, first gentleman of the bedchamber to the Duke de Bourbon.

The total separation of the Duchess and her husband made a great change in her life. She had to reduce her household, and kept only one lady, Mme. de Sérent. She ordered her existence less as a princess than as a private person, appearing very little at court, and only in very official circumstances, giving much of her time to the Opéra, the French Theatre, the Italian Theatre, and even the small theatres, such as Nicolet's, now remembered only by its device, "De plus fort en plus fort." But the chief absorbing topic for her became mesmerism; she threw herself with a sort of passion into the new theories of animal magnetism. She fell under the influence of a man who was nicknamed the "unknown philosopher." He was a gentleman, born near Amboise, Louis Claude de St. Martin, who had been initiated by a Portuguese into a sort of mysterious doctrine in which Judaism, the Kabala, and Christianity were mixed up. This church had secret rites like free-masonry; Swedenborgian ideas were mingled with those of Saint-Germain. The Duchess de Bourbon, like many other great ladies, became an adept in this complex illuminism. She liked to believe in the "corps astral"—an astral body which abandoned the material body and transported itself freely in every direction.

In our day, the peculiar mental malady of which this sort of material illuminism is a symptom, would go under the name of hysteria or neurasthenia. There cannot be any doubt that the Duchess de Bourbon was neurasthenic. She was not mad, she was very odd, and presented the curious but not uncommon contrast of a sort of double existence—one subject to all the rules of decency, of reason, of natural instincts; another absolutely irrational, and subject to the most incoherent, illogical, and perverted influences. In so far she justified one of the hypotheses of Saint-Germain, which is the splitting in two of the human personality. She became in reality two persons in one. The peculiarities of this strange character became much more apparent when the Revolution broke out.

Correspondence.

THE CRIME OF '73.

To the Editor of The Nation:

Sir: I observe that Senator William E. Chandler opposes the currency bill because, he says, it does not remonetize silver and makes permanent the gold standard. He seems to have forgotten that he approved the act of '73 that dropped the silver dollar from the list of American coins because there were no such coins. In the report of the Director of the Mint (1896), page 461, is a letter from Mr. Boutwell, Secretary of the Treasury, dated April 25, 1870, addressed to the Finance Committee of the Senate, and accompanied by a report of Mr. John Jay Knox, Deputy Comptroller of the Currency, and a bill to revise the coinage laws of the United States. The report said:

"The coinage of the silver-dollar piece, the history of which is here given, is discontinued in the proposed bill. It is by law the dollar unit, and, assuming the value of gold to be fifteen and one-half times that of silver,

being about the mean ratio for the past six years, is worth in gold a premium of about three per cent. (its value being $1.03.12) and intrinsically more than seven per cent. premium in our other coins, its value thus being $1.07.42. The present laws consequently authorize both a gold-dollar and a silver-dollar unit, differing from each other in intrinsic value. The present gold dollar piece is made the dollar unit in the proposed bill, and the silver dollar piece is discontinued."

In response to Mr. Boutwell's letter the House passed a resolution requesting him to furnish the House with copies of all correspondence between the Department officers of the Government and other persons touching the bill and report. In the correspondence transmitted in compliance with this request is a letter (page 534) from W. E. Chandler, late Assistant Secretary of the Treasury, to Mr. Knox:

WASHINGTON, D. C., May 15, 1870.

DEAR SIR: I thank you for sending me a copy of your report and proposed bill for a revision of the mint laws. The necessity of such a revision has been apparent to every one connected of late years with the Treasury Department. The work has been admirably performed by you. You have happily secured and availed yourself of the suggestions of others, while impressing upon the codification that unity and completeness which can only result from the operations of one thoroughly informed mind. If the law is enacted it will result most beneficially. . . . (Signed) W. E. CHANDLER.

John J. Knox, Esq.

There is also a letter from Ernest Seyd of London, who had written a book in favor of the so-called double standard. (Just here I will say that, as a standard implies unity, the term "double standard" is a solecism—a contradiction in terms. One watch or one clock may be a standard of time; but two watches or two clocks, each keeping a different time, like a gold dollar and a silver dollar of different commercial values, furnish no standard of time or value. One only can be adopted for practical use.) Seyd, reviewing the bill by sections, says:

"Sec. 51. I now come to the most important part of the bill, that of the valuation, which, according to section 15, omits the coinage of the silver dollar and confirms the debased silver coinage of half-dollars and below, under the tender limit of $5. I am aware, of course, that, through the amendment of 1853, the same debased coinage was already established; but although the actual coinage of the silver dollar had practically ceased, still that piece was not abolished by law. As this new bill presumably repeals all previous enactments, I suppose that the total abolition of the silver dollar is contemplated. In my book ('Suggestions') I enter fully into the discussion of this matter, and show the gigantic consequences to international as well as national trade through the demonetization of silver, to which the United States would thus lend a helping hand; and for a number of years this subject of the abolition of silver as tender coin has occupied the attention of European economists."

This correspondence proves how false is the charge that the coinage act which was pending three years in Congress was surreptitiously passed; also, that the Nevada Senators voted for it with a full knowledge of what it contained. JNO. S. MOSBY.

SAN FRANCISCO, February 11, 1900.

MR. STILLMAN ON THE BOER WAR.

TO THE EDITOR OF THE NATION:

SIR: As a patriotic American, for years in close touch with English public opinion, I should like to say a word in reference to the (as it seems to me) extremely injudicious and unjustifiable unfriendliness shown by some of our people towards England in the question of the conflict with the Boer republics. I do not mean to appeal for gratitude on account of the moral support given us by England in the question of the Philippines—though knowing on safe authority that she saved us from complications which would probably have ended in a much worse state than the present—because there may be some to whom I would appeal who think, as I do, that we should not be in the Philippines. Gratitude is nowhere a national virtue, and is especially deficient in republican countries. The tie of blood is even less an obligation to friendly treatment, and probably not one in ten of our people sees far enough into the future of civilization to understand that the prevalent influence of England rather than that of any other of the European Powers, with its inevitable consequence of the heredity of the English-speaking races, would be for the benefit of the race at large; and the personal and chauvinistic greed of large sections of our States would prefer a very small bird in their own hands to-day to a large flight of larger game in the future. They cannot, or will not, see that England, everywhere she goes, is planting industrial and human interests which are growing and ripening not only for our race, but for all races of men. We have always been a short-sighted nation, and our greatest losses and disasters are due to that.

But there are two questions which ought to appeal to the two influential classes of Americans—those who look at the right and wrong of the thing, and those who regard the direct interests of the United States from any large view of them. I am of the former, but I understand the point of view of the latter. And as to the right of the matter, I have yet to see a broad and unprejudiced statement of the whole question, in which England and the present English Government (of which I am no supporter, but severely critical) does not appear worthy of our entire sympathy. The conclusive testimony may not be yet before us, but waiting for peace to liberate it; but what there is I have seen, and am completely satisfied that the Government neither desired nor contemplated war, but that the Boer Governments had decided before Majuba that they would expel the English authority from South Africa when the opportunity offered. But admitting that all the accusations of duplicity and bad faith on both sides are justified, and that both Governments were trying to deceive each other, the casting vote is in the Boer declaration of war and invasion of the English colony of Natal, with the declared intention of driving the English out of South Africa.

There are three reasons for withdrawing all sympathy from the Boers on account of this movement. The first is, that it is a proof that what they wanted was not independence but domination. If they thought themselves strong enough for an offensive war against England and the conquest of Natal, where is a majority of English, and Cape Colony, where there is only a doubtful majority, they were infinitely more capable of repelling any attack and conducting a successful defensive war. They acted as our Confederacy did in firing on Sumter—to fire the Boer blood in the Colony. In defending their independence against aggression, they would have had an invincible public opinion, in England even, in their favor. The second is, that in their restrictive measures at home they showed that they were not a majority, even in the Transvaal, and, therefore, as a minority seeking to dominate a majority, they deserve no support from a free people. And the third is, that they were, as in the case of our secession, attempting to substitute a retrograde civilization for one which was superior in every respect and more for the advantage of the races concerned. Throwing out all the words, declarations, and negotiations as liable to impeachment and mutually contradictory, the facts put the Boers in the wrong, show them to be aggressive and domineering.

The direct interests of the United States demand the maintenance of the English rule where it is maintained with justice and liberality, as the most just and liberal in government and in commerce of all the Powers that might succeed to the place England holds. Our highest interest all over the world (at home, if we would but see it, as well) is in the maintenance of free trade. Any other Power taking the place of England would be a protectionist Power. The stake of England in this war is at the least her African empire, and possibly that of India. If it were forfeited, the substitution of any other Power for England in either of those cases would be *pro tanto* a loss for American interests. No American political economist ought to question this.

A reason which lies farther in the future and deeper in gravity is, that when, in the normal course of political and commercial progress, England's internal resources fail her, or the development by peaceful growth of the western world passes her in the race, we come in as the principal heir of her commercial supremacy; while the sudden and violent collapse of England not only is the presage of terrible wars and interminable disasters, but must throw that estate into remoter succession and exclude us from our legitimate predominance in the future. The present prostration of England would mean the leaving us out of any account in the immediate future, for we have not yet made any adequate preparation for asserting our claims. The peace of the world in this juncture, and the best interests of humanity in the remoter, depend on the victory of England in this war.

Yours truly, W. J. STILLMAN.

DEEPDENE, FRIMLEY GREEN, SURREY, ENG., February 9, 1900.

MARY CHAWORTH'S DAUGHTER.

TO THE EDITOR OF THE NATION:

SIR: A friend in England writes to me under date of February 1:

"It is strange, but soon after your letter came, I think while I was actually reading it, I heard the church bell tolling, and soon learned, what indeed I had expected, that our dear old lady at the manor house had passed away. I think she would have been ninety-four next May, and she kept her mind and her sweet happiness up to the last. She was out driving last Friday (January 27), and unfortunately opened her carriage window and caught cold. She will be greatly missed here."

The death of this interesting old lady breaks a link with a great past, for she was the daughter of Mary Chaworth, whom Byron loved so hopelessly. In August, 1805, Mary Chaworth was married to Mr. John

Musters, who took the family name of the heiress. Byron saw her but once after the marriage. One day, in the autumn of 1808, shortly before his leaving England on the first Childe Harold's pilgrimage, Mr. Chaworth invited him to dine at Annesley Hall. The little daughter of his hostess was brought into the room. "At the sight of the child," Moore writes, "he started involuntarily—it was with the utmost difficulty he could conceal his emotion; and to the sensations of that moment we are indebted for those touching stanzas—

"'Well! thou art happy.'"

The date of this poem is November 2, 1808, and on the same day Byron wrote to his mother, announcing his intention of sailing for India in the following March.

As is well known, Mrs. Chaworth's marriage was not a happy one; she was separated from her husband, her mind became affected, and she died young, in 1832, from shock caused by the Reform riots in Nottingham.

Her daughter became Mrs. Hamond, and was lady of the manor of Swaffham, Norfolk, her eldest son being lord of the neighboring manor of Acre. It is all historic ground, the manor of Acre containing the picturesque ruins of Castle Acre, the stronghold of John de Warrenne, that Earl of Surrey whom Wallace defeated at the battle of Stirling.

I first met Mrs. Hamond during the winter of 1887, when I was a student at Newnham College, Cambridge. I had gone on a visit to some friends in Swaffham. On the Sunday morning, coming out of the old gray church, my friends introduced me to the lady of the manor as she sat in her carriage. It was a fine, bright, gentle face that greeted me, of a woman over eighty, but still vigorous, and interested in life. One of the ladies told her we had been reading Byron's "Dream" the evening before. "Oh, that was all nearly a hundred years ago," she said, smiling pleasantly. I saw Mrs. Hamond for the last time on a July afternoon a few years later, and before me as I write is her note, neatly folded into a small triangle and sealed with red wax, asking me to take tea with her. I had just then crossed the Atlantic for the third time, and to her, in her old-world village of Swaffham, I seemed to be a great traveller. Two of her sons were in the royal navy, one of them an admiral, and several of her grandchildren had gone to the colonies—Canada and Australia. I remember that as we drank our tea the talk was of distant lands, of America and farthest Asia. Some spicy Indian sweet was produced out of a Chinese jar to top off the feast. Around the room on the eye line there was a row of beautiful miniatures, and, before I left, Mrs. Hamond rose and pointed them out to me, lingering with some entertaining story over nearly every one. She supported herself on a gold-headed cane as she walked about, for she was very stout, with a figure like that of the Queen. There were several portraits of Lord Byron, and quite a number of miniatures of her mother, all representing a lovely woman, with a fair, girlish face. "My mother was a beautiful woman," she said simply.

Standing in the doorway of the elm-shaded manor house, gold-headed stick in hand, and clad in a black satin gown, her sweet old face set off with snowy hair and white lace cap, Mrs. Hamond was herself a picture. The westering sun cast a glamour over the venerable lady and the peaceful landscape, and all about there seemed to throb the greater glamour of an undying romance, of unrequited passion, pain, high thought—the wrack of genius.

MARY AUGUSTA SCOTT.

NORTHAMPTON, MASS., February 13, 1900.

MANGLING A CLASSIC.

TO THE EDITOR OF THE NATION:

SIR: I have just lit upon an instance of liberties taken with a classic in what should be a standard edition that seems to me amazing. Has any one called attention to it, or inquired for the responsible person? It is in Harper's Biographical Edition of Thackeray, and occurs in 'The Rose and the Ring.' That delightful Christmas book is "illustrated by the author," and Thackeray tells us in his introduction how the pictures came to be made, and how the story grew out of the pictures. Yet the publishers have introduced from somewhere several drawings not by Thackeray and not in sympathy with the text, and have done this with no word of warning to the reader, thus making Thackeray responsible for work he did not do. This is bad enough, but it is the tampering with the text which is serious. The page headings to 'The Rose and the Ring' are, as is well known, in rhyme, and form a sort of continuous accompaniment and comment on the story. In the Biographical Edition this begins all right:

"Royal folks at breakfast time.
Awful consequence of crime!
Ah, I fear, King Valoroso,"

and then—nothing; a blank, and the next couplet begins:

"Here behold the monarch sit," etc.

My memory tells me that conduct "but so-so" rhymed with Valoroso, and completed the sentence and the couplet, but I am deprived of any other authority for that fact. Why? Simply because a new chapter begins on the page where this information should appear, and printers do not like a page heading above a chapter heading; so, out goes the line. There are nineteen chapters to the story, and consequently eighteen lines are chopped out, sometimes the first line of a couplet, sometimes the second; and headless and tailless sentences are left to dangle in the air regardless of rhyme or reason. Who does these things? Or who should have seen that such things were *not* done and neglected his duty? One has heard of editing with a pitchfork, but this is editing with a cleaver.—Yours,

CASEY.

AMERICANA MINORA ET MAJORA.

TO THE EDITOR OF THE NATION:

SIR: The amusing and instructive British publication "Who's Who?" has prided itself for the last year or two on the increased accuracy and fulness of its transatlantic biographies. Far be it from us to be hypercritical. Some slight imperfections in proportion and detail, however, still remain. For instance, if the Hon. Grover Cleveland, who was chief executive for "1885-8," deserves mention still in 1900, why not a half-line for his namesake who officiated in "1893-6"? While Mrs. Burton Harrison has two entries and a careful up-to-date bibliography, a certain Mr. Benjamin Harrison is unknown in England. "His Honour Judge Robert Grant," all whose "frivolities" and "confessions" down to the current year are duly catalogued, will not disdain to shake the judicial ermine with a chuckle when he hears that a certain obscure schoolmaster, whilom yclept "Carolus Gulielmus," is invisible a thousand leagues away. Perhaps, however, some Yale man hath done this out of mere envy. At least, the youthful head of the rival Thinking-shop is carefully included in the conscientious "Addenda."

W. C. L.

ADELPHI COLLEGE, BROOKLYN,
February 10, 1900.

Notes.

Henry Holt & Co.'s spring announcements include 'Side Lights on English History,' edited from papers and diaries of the past three centuries by Ernest F. Henderson; 'Leading Documents of English History,' edited by Dr. Guy Carleton Lee of Johns Hopkins; 'The Memoirs of the Baroness Cécile de Courtot,' lady-in-waiting to the Princess de Lamballe, compiled by Moritz von Kaisenberg; 'His Lordship's Leopard,' an extravaganza by David Dwight Wells; 'The Open Road,' poems of the wayfarer, compiled by Edward Verrall Lucas; 'Memory,' by Prof. F. W. Colgrove, of the University of Washington; 'The Art of Debate,' by Dr. R. M. Alden; and 'Spanish Prose Composition,' by Prof. M. M. Ramsay.

'Man and his Ancestor,' by Charles Morris; and 'The Criminal: His Personnel and Environment,' by the Rev. August Drähms, are shortly forthcoming from the press of Macmillan Co., together with 'Sexual Dimorphism in the Animal Kingdom: A Theory of the Evolution of Secondary Sexual Characters,' by J. T. Cunningham; 'Politics and Administration,' by Prof. Frank J. Goodnow; 'Colonial Civil Service: The Selection and Training of Colonial Officials in England, Holland, and France,' by A. Lawrence Lowell; and 'Home Nursing,' by Miss Eveleen Harrison.

D. Appleton & Co.'s February announcements include 'Municipal Government,' by the Hon. Bird S. Coler, Comptroller of New York; 'A History of the Spanish-American War,' by Richard H. Titherington; 'The Principles of Taxation,' by the late David A. Wells; 'The Secondary School System of Germany,' by Dr. F. E. Bolton; and 'Some Great Astronomers,' by Edward S. Holden.

The Scribners will issue without delay the 'Memoirs of Princess Mary, Duchess of Teck,' based on her diaries and letters; in two volumes, with numerous portrait and other illustrations.

Elder & Shepard, San Francisco, will shortly publish 'Opportunity and I,' impressions of travel through the Eastern States and Canada, by Nellie Blessing-Eyster.

Mr. Henry Farrar, 36 Essex Street, W. C., London, proposes to publish the Marriage Registers of Saint Margaret's, Westminster (1538-1837), in three and possibly four volumes, super-royal 8vo, at a guinea a volume. This church was the mother church of St. Martin's in the Fields; St. Paul's, Covent Garden; St. Anne's, Soho; St. James's, Westminster; and St. George's, Hanover Square; being as well the parish church of

the House of Commons. There will be a complete index of persons and places for each volume. The edition is limited to 250 subscribers, and volume one will appear in July.

The second issue of Mr. H. Whates's uncommonly useful manual, 'The Politician's Handbook,' comes to us from Vacher & Sons, London. Primarily designed for the English market, this summary and digest of the diplomatic correspondence, Parliamentary papers, treaties, reports, and other Government documents of the year, has a value for student or editor anywhere. Under "South African Republics," for example, we have fifty pages of condensed and impartial information. "China" and "India" are fruitful entries. The editor has an "introductory review" for each leading document, in the nature of an exposition of the course of diplomacy. Here he hazards opinions with which he does not expect "general agreement"; but, in the compilation of material, "absolute impartiality has been attempted." The issue runs to 248 pages, as against 169 in the initial volume. It is a true friend at elbow.

We had a good word, and not brief, seven years ago, for Mr. Frederic Harrison's 'Annals of an Old Manor House' (Macmillan). While it has a technical side that is pretty stiff reading, the human historical is quite otherwise, and it was well advised to abridge the work, as has now been done, by leaving out the expensive colored plates and most of the illustrations and the genealogical matter. The result is a small and still pleasing volume. "And I now," says the author, of this Sutton Place where his father lived and died, "must add to these memories those of my mother and my brother Lawrence," who also successively lived and passed away there.

Nearly twenty years have elapsed since Jowett's translation of Thucydides appeared (in 1881), in two volumes, one of text and one of notes. The Master of Balliol expressed his indebtedness to W. H. Forbes of his college for general collaboration, and for having compiled the material for the dissertation "On Inscriptions of the Age of Thucydides." Mr. Forbes and Evelyn Abbott have now revised the translation and the dissertation in question (as also that on the Geography of Thucydides) in accordance with Jowett's desire, observing his request "to make no change or insertion of which they think he would have disapproved, and to retain the general character of the work." As published by the Clarendon Press (New York: Henry Frowde), the reprint fills two octavo volumes smaller than the original and omitting the notes altogether, since the revision of these also would have caused a serious postponement. The historical index fills nearly a hundred pages. This edition is fairly to be called popular, though handsome enough for any library; and it is put forth at a time when the fate of imperial ambition and the misery of war can be most profitably studied in pages of undying interest and power.

Mr. Edward Field adds to his numerous painstaking and authoritative Revolutionary works a transcription and annotation of the 'Diary of Col. Israel Angell, commanding the Second Rhode Island Continental Regiment during the American Revolution, 1778-1781' (Providence: Preston & Rounds Co.). Col. Angell was a brave and capable officer who served in Pennsylvania, New Jersey, and in his native State with distinction. His diary throws some added light on important occurrences, such as the evacuation of Newport and Arnold's treason; records familiar routes of travel, civil and military, in his day; affords glimpses of army discipline, and of the genus "patriot" in the service; is strong on the weather (some of it almost past endurance); genealogically alone was worth editing; and orthographically is capable of furnishing much innocent amusement. "La ffiat" and "fu-de-joy" are not more laughable than common deformations of the vernacular. André's name appears as "Andrew" and "Andrews." Mr. Field is naturally strongest in Rhode Island topography. In the last line of page 100 he fails to discern Suffern and Ramapo in "Soverens" (tavern) and "Ranomapough."

Mr. F. Stanhope Hill, Secretary of the Massachusetts Nautical Training School, has been moved to write 'The "Lucky Little *Enterprise*" and her Successors in the United States Navy' (Boston: The Author). The original *Enterprise*, a schooner, was built in Maryland in 1799. The present steam sloop-of-war *Enterprise*, the fourth of her name, was built in Maine, in 1873-76, and, unlike her belligerent namesake, has no recorded engagement. She has been employed in surveying the Amazon, under Selfridge, and deep-sea sounding under Barker, and is now the Massachusetts school-ship. Mr. Hill closes his interesting memoir with the just reflection that the modern *Enterprise* is doing as worthy service to the state as the vanquisher of the *Boxer*.

Volume iii. of the *Anglo-Saxon Review* (John Lane) is arrayed, as were its predecessors, in a gorgeousness quite beyond that of the lilies of the field; its six engraved portraits—Denon's fine Bonaparte, Gainsborough's Canning, Shelley and his wife, Paderewski, Mary of Lorraine—are of a high order of excellence; but when we pass to the letter-press, the distinction of the number seems to end. Perhaps the absorption of the editor, Lady Randolph Churchill, in the Boer war may account for the rather disappointing papers, some of which, like Señor Moret's on Spain, begin well and hold out hopes, only to dash them in the end. Even Mr. Mallock's interesting attempt to serve up Lucretius in Omar's quatrain, must, with its admixture of FitzGerald, Shakspere, the Bible, and Mr. Mallock himself, be pronounced only a *succès d'estime*. For more of translation and less of transfusion the first nine quatrains should be compared with the opening of the second book of 'De Rerum Natura.'

The activities of the classical department of Harvard University are well shown in the new (tenth) volume of the "Harvard Studies in Classical Philology" for the year 1899 (Boston: Ginn). It contains, in all, eleven articles, of which six are the work of members of the faculty. Prof. Greenough writes on "Some Questions in Latin Stem Formations" and on "The Religious Condition of the Greeks at the Time of the New Comedy," an interesting paper. Prof. Howard contributes a note on the mouthpiece of the αὐλός and a collection of metrical passages in Suetonius, while Dr. Gulick considers the Attic "Prometheus" and two passages in the "Birds" of Aristophanes (verses 14 and 167-170). The remaining five papers are by more or less recent students of the University, and constitute by no means the least interesting part of the volume. Especially noteworthy are "The Symbolism of the Apple in Classical Antiquity," by Benjamin O. Foster; "Greek Shoes in the Classical Period," by A. A. Bryant—an extended article which deals with one hundred and sixty citations on this subject from the literature of the fifth and fourth centuries, B. C.; and a "Study of the Daphnis Myth," by H. W. Prescott.

The Oxford University Press (New York: Henry Frowde) has arranged with the Paris house of Hachette to reprint in a single volume on India paper the 'Oeuvres Complètes de Molière,' following the text of MM. Despois and Mesnard in the collection of "Grands Écrivains de la France." The 647 duodecimo pages in double columns of agate type escape being bulky by reason of the famous thin paper of the Oxford Press; but, for those who want to take their Molière more familiarly, the publishers have packed away precisely the same matter in four little 32mo volumes of about 500 pages each, the width of a column, the whole enclosed in a box matching the wine-color binding. In both of these editions, of which the presswork is as clear as possible, the lines are numbered.

John Vanbrugh's life and works form the subject of No. vii. of the *Wiener Beiträge zur englischen Philologie*, edited by Schipper, Luick, and Pogatscher. The author is Dr. Max Dametz, and the book is evidently his doctor's thesis. In some two hundred pages Dr. Dametz reviews the life and personality of Vanbrugh, and follows with considerable detail his work as dramatist and as architect. He thus not only considers the literary activity of the author himself, but also passes upon the judgments of his critics; and he not only describes Vanbrugh's various architectural feats and determines his position among the world's architects, but even goes into minutiæ as to the progress and cost of the erection of such structures as Blenheim Castle. He has made good use of all the resources at his command, but has had to do without some important documents in the case, or to infer their contents from others that were published in antagonism to them. In spite of a certain immaturity of conception and of style, Dametz's work has considerable value, and must be greeted as a real contribution to our knowledge of Vanbrugh and his time.

The Consular Reports for January calls attention to the proposed establishment in this country of a branch office of a Berlin society organized for the reproduction of the masterpieces in the national galleries of Europe. A peculiar process employed "enables the reproducing artists not only to create true facsimiles of the original in every outline, by means of photography and steel etching, but also to produce the depth of coloring and the peculiarities of manner of each master by a special employment of the colors called heliotint, thus reproducing the characteristic handiwork of the artists." By the annual contributions of its more than 16,000 patrons—a list headed by the Emperor and Empress of Germany—the society's productions are introduced "into the homes of subaltern officers, teachers, civic employees, and people in the humbler walks of life, who, however, before becoming entitled to the privilege of receiving such art reproductions, had to sign the society's roll of membership and thus become active

agents in the missionary work of spreading culture in art."' Another aim has been "to foster the love of home and country by giving reproductions from famous masters which represent scenes from history," and this will apparently be the principal work of the American branch. There are also numerous reports on the manufacture of tiles in Europe and Asia, and several relating to South American topics, among others to the successful cultivation of small fruit and oranges in Paraguay, though a great part of the latter crop perishes for lack of means of transportation. Special commendation is given by our Consul-General at Rio de Janeiro to *yerba mate* (Paraguay tea) as a preëminently temperance drink. It has "all the stimulating and sustaining qualities of Chinese tea or coffee, without the detrimental effect caused by their constant and excessive use."

The Baltimore Association for the Promotion of the University Education of Women is prepared to offer a foreign fellowship of the value of $500 for the years 1900-1901. Preference will be given to Maryland women, or women identified with educational interests in that State. Applications with evidences of fitness should be addressed before March 31 to Dr. Mary Sherwood, chairman, The Arundel, Baltimore.

—There is a movement on foot at the University of Michigan to so organize and coördinate certain courses in history, political science, and related studies, as to meet more perfectly the peculiar needs of certain interests or careers. The faculty of the Department of Literature, Science, and the Arts has recommended to the Board of Regents the establishment of five special courses, the titles of which are to be: (1) Diplomatic and Consular Education; (2) Higher Commercial Education ; (3) Preparation for Newspaper Work; (4) Preparation for Pastoral Work and Public Philanthropy; (5) Instruction in Public Administration. Students that elect any one of these courses must see to it that, of the 120 hours required for graduation, 24 are in the field of modern languages and 40 are selected from certain specified courses in history, economics, sociology, statistics, international law, administrative law, general and commercial law, history of education, and philosophy. Except for the recognition of certain work (not to exceed 15 hours) done in the Law Department, these "special courses" are simply groupings of a part of the regular university work of the Department of Literature, Science, and the Arts, and the student who elects one of them is a regular matriculate, subject to all the regulations and tests that other students are. The new movement is due, in part, to a recognition of the needs of the times, and in part to a desire to avoid the defects of the system of free elections. It does not mean the introduction of the group system in place of that of free election, but it does mean (in these lines of work) the incorporation, within the elective system, of the advantages of the group system. In other words, students desiring, in their regular university course, to choose their studies in a way most advantageous to them in their future career, will enjoy the advantages of the direction offered by such courses and of the advice and counsel of the committee intrusted with their administration. Whether any special certificate or diploma will be granted in addition to the bachelor's diploma, is undetermined; but it is likely that one will be.

—The *Virginia Magazine* and the *William and Mary Quarterly* for January continue to throw interesting light upon colonial Virginia. The latter prints the will (1767) of Gov. Fauquier, who was an enlightened ruler, still held in esteem in Virginia. In it he said: "It is now expedient that I should dispose of my slaves, a part of my estate in its nature disagreeable to me, but which my situation made necessary for me; the disposal of which has constantly given me uneasiness whenever the thought has occurred to me. I hope I shall be found to have been a Merciful Master to them, and that no one of them will rise up in judgment against me in that great day when all my actions will be exposed to public view. For with what face can I expect mercy from an offended God, if I have not myself shown mercy to those dependent upon me?" He wished the slaves to be allowed six months in which to choose their own master, and expressly stipulated that the women should not be parted from their children. With this humane provision should be read the suggestion of Governor Berkeley, printed in the same number, that all the Northern Indians should be destroyed as a "great terror and example and Instruction to all other Indians"; and further that this may be done without charge, "for the women and children [as slaves] will Defray it," and enough men "from hence will undertake it for their share of the Booty."

—The *Magazine* also contributes something on colonial slavery. In 1672 the magistrates of Surry County decreed that as "ye apparrell comonly worne by negroes doth as well Highten theire foolish pride as induse them to steale fine Linninge & other ornaments, . . . from hence forth noe negro shall be allowed to weare any white Linninge, but shall weare blew shirts and shifts." The term negro-cloth was commonly used in plantation accounts for a coarse and generally colored goods. The punishment allotted as late as 1778 to a slave for murder must be read to be appreciated. The will of the Rev. Orlando Jones, the grandfather of Martha Washington, has value because it supplies definite information on that doubtful genealogy. Some letters written after 1789 give a fair picture of what William and Mary College was, and present a much improved situation over that described by Washington in the early '70s, when he thought of sending young Custis to that institution. President Tyler reviews Dr. Green's 'Word-Book of Virginia Folk-Speech,' and surely is in error when he claims that "agwine" and "high falutin" are "old Virginia speech, survivals of archaic English forms that have been lost in England." A reference to Murray would have prevented such a claim.

—The first volume of a 'History of the Scandinavians, and Successful Scandinavians in the United States,' compiled, edited, and published by O. N. Nelson, Minneapolis, has already been favorably noticed in these columns. This first volume, which originally appeared in 1893, has been completely revised and brought down to the present time, and, with a new edition of the second volume (1897), now forms a book of nearly 900 pages. New material in the work is an article by the editor on the "First Norwegian Immigration, or the Sloop Party of 1825"; matter dealing with Scandinavian settlements, churches, and schools in Minnesota; and additional biographies. Some twenty pages of Scandinavian-American historical bibliography have also been added, and some valuable statistical tables. The work as it now stands contains a reasonably comprehensive account of Scandinavian activity in America, from the coming of the Swedish *Mayflower*, the *Kalmar Nyckel*, to the Delaware River, in 1638, to the important Scandinavian settlements in the Northwest at the present day, particularly in Minnesota, Iowa, and Wisconsin. The editor estimates, on the basis of known statistics, that 1,500,000 Scandinavians have settled in the United States since the beginning of colonization. This immigration reached its maximum in 1882, when a total of 105,326 persons from Denmark, Norway, and Sweden is officially recorded. In 1898 this had dwindled down, however, to a minimum of 19,282. Approximate returns for 1899 show a total of 22,191. The last census shows the largest Scandinavian-born population in Minnesota, with Illinois, Wisconsin, and Iowa following in the order named. Of the cities, Chicago precedes, with Minneapolis and St. Paul next. The editor explains in his preface that, excepting church organizations, there are scarcely any Scandinavian institutions in this country. A third of the space, accordingly, is devoted to biographical records of individuals, many of them accompanied by portraits, representing almost every calling in the community. The whole work is the unmistakable record not only of the reality of Scandinavian effort in America, but of the sterling value of its influence upon the body politic in the making of a nation.

—With volumes lx. and lxi. the 'Dictionary of National Biography' (Macmillan) takes a long stride towards completion. The latter volume is pretty much given over to Kings and Dukes William, and to the great Williams tribe, including Roger, whose place, says the writer, "as a religious teacher, has, perhaps, been exaggerated by his eulogists. His views were not in advance of those of many of his contemporaries, . . . but he certainly had a firm grip of the necessity of the principle of toleration, and he was one of the very first to make a serious attempt to put that principle into practice." Whitefield, another worthy of both hemispheres, is here commemorated. While Bishop Wilberforce is treated by Francis Legge, his father was fitly assigned to Leslie Stephen, who reminds us that in 1786 William Wilberforce carried through the Commons a bill providing, among other ameliorations of the penal code, that hanging should be substituted for burning in the case of women. It was rejected in the Lords. Edward Wightman, by the way, was, we are told in the sketch of him, the last person burnt for heresy in England (1612), and was twice at the stake; and such curious and not unimportant facts so abound in this Dictionary as to suggest the utility of a subject-index. Take, for another instance, Whiston, author of what is still the accepted translation of Josephus, and one of the first, if not the first, to give lectures with experiments in London. He perhaps, too, furnished Goldsmith with the model for his Vicar of Wakefield. Richard Whittington, again, is singular in having been, though an historical character,

identified with the hero of a popular tale which "has been traced in many countries both of southern and northern Europe, and occurs in a Persian version as early as the end of the 13th century" (Whittington died in 1423). Many will learn for the first time that White's "Selborne" has been "bowdlerised" and so very extensively popularized among the young. The charm of the book, says his biographer, has never been unanimously accounted for. It still remains to explain its wide welcome among readers (like American) to whom "scarcely a plant or an animal mentioned in it is familiar, or even known but by name."

—Part second of *Masters in Art* (Boston: Bates & Guild Co.) deals with a greater and more universal artist than part first, and it is, therefore, natural that the selection of pictures for reproduction should seem less satisfactory. It is quite possible to give a fair view of the art of Van Dyck in ten selected plates, whereas the art of Titian is so varied that the same number of plates can hardly represent him otherwise than partially. The selection given is, on the whole, a good one, though each critic will have his own complaint of certain exclusions or inclusions. The "Assumption" and the Pesaro "Madonna" were, of course, obligatory, though they represent the most factitious and least temperamental part of Titian's production. The "Man with the Glove," "The Entombment," and the "Sacred and Profane Love" are, in their several styles, indubitable masterpieces of the first rank, while the "Madonna with the Cherries" and the "Madonna with Four Saints" of the Dresden Gallery are, if not quite the best, yet among the best of Titian's pictures of that type. There remain, as doubtful inclusions, "Alfonso of Ferrara and Laura Dianti," "Lavinia," and "Charles V. on Horseback." Of course, these are also good pictures, but when one balances them against the omission of any picture of the "Venus" type, of the "Bacchus and Ariadne" and "The Garden of Love"—above all, of the "Flora" and of that most divine of female portraits, "La Bella"—one is not satisfied with the choice. Why this last picture at least, one of the most famous in the world and justly so, was not selected in place of the "Laura Dianti" or the "Lavinia," neither of which is comparable to it either in beauty or technical merit, must remain a mystery. We have criticised the choice of pictures because there is really nothing else to criticise. Let us conclude with the statement that the publication maintains its promise of usefulness. The March number will be devoted to Velasquez.

—As our readers are aware, a commission of inquiry was recently appointed in France for the purpose of determining the steps to be taken in the reorganization of *lycée* studies. The results of this now appear in a volume ('La Réforme de l'Enseignement Secondaire,' Paris: Colin) prepared by M. Alexandre Ribot, President of the Commission, in which are included the points investigated, the conclusions arrived at, and some of the most weighty opinions of educational experts on the principal issues. It need hardly be added that the names alone (Berthelot, Lavisse, Poincaré, Bourgeois, etc.) are ample guarantee of the thoroughness with which the task has been carried out. In the direction of change, classical studies are, it seems, to lose their universally obligatory character through the admissible substitution of living languages taught chiefly on a practical basis; pupils aiming at scientific or commercial pursuits may consequently elect their studies somewhat more freely than heretofore, without the loss of academic status. This change is recommended in view of the altering conditions of modern life. M. Ribot, in the course of his exposition, goes the length of maintaining that want of Greek need be no bar to a useful medical or legal career; the victory of "moderns," therefore, awaits only a final sanction from Government. A more interesting question is involved in the examination of the causes of the diminution of pupils in Government institutions, with corresponding increase of the members intrusted to clerical guidance. While taking full account of the effects produced by local depressions in trade and agriculture, as well as by the raising of fees, etc., M. Ribot freely admits the influence of clerical prestige on numbers of parents who, under politically democratic conditions, still cling to social distinctions for the sake of what these imply in the after-life of their children. But it should also be insisted that the ecclesiastical institution is fully as often sought by shirkers of parental responsibility—because of the absorbingly exclusive attention given to their young charges by men whose profession means total detachment from worldly interests.

FITZGERALD'S EXPLORATIONS IN THE ANDES.

The Highest Andes: A Record of the First Ascent of Aconcagua and Tupungato in Argentina, and the Exploration of the Surrounding Valleys. By A. E. Fitzgerald. New York: Charles Scribner's Sons. 1899.

This handsome volume is a record, of which Americans may well be proud, of a series of expeditions in the Andes of Chili and Argentina around the loftiest summit of the whole range of the Cordilleras, the gigantic extinct volcano of Aconcagua. Mr. Fitzgerald, a young American who had already won his spurs in the Alps, and done some brilliant climbing in New Zealand, where he succeeded in making the first ascent of Mount Cook, or Ao Rangi (as it is sometimes called), set himself in 1896 and 1897 to explore and triangulate the region lying around Aconcagua and reach its pinnacle. Previous mountaineering expeditions to South America had, with one exception, devoted themselves to the remarkable group of peaks which lie near Quito, in the republic of Ecuador. Alexander von Humboldt, as far back as A. D. 1802, reached a height of about 19,000 feet on Chimborazo, the loftiest of these peaks; and, after other attempts, Edward Whymper, a well-known English climber, succeeded in reaching the top of Chimborazo, as well as Antisana, Cayambe, and the still active volcano of Cotopaxi. Attempts had also been made on Illimani, one of the very lofty Bolivian group near the city of La Paz, but it was not vanquished till 1898, when Sir Martin Conway, of the British Alpine Club, climbed it, and attained a point very near the top of its still loftier neighbor, Sorata.

The one exception to the neglect of the Chilian and Argentine Andes was the expedition of Dr. Güssfeldt, a daring German mountaineer, who, in 1883, without any regular guides, attacked the great mountain, and, with one of his untrained Chilian companions, forced his way to a point only thirteen hundred feet below the final peak. He had attacked the mountain from the north. Mr. Fitzgerald approached it from the south, and brought against it a much more adequate siege-train. His staff consisted of Matthias Zurbriggen, a first-rate Swiss guide, and of five Swiss and Italian mountain porters, while with him were three English companions, Messrs. Vines, de Trafford, and Gosse. The party carried with them tents and all sorts of scientific apparatus, as well as an immense supply of portable food. Modern invention has done nothing better for the traveller and climber than in the greatly increased facilities with which it has provided him in the way of nutritious provisions that can be readily carried in small space. Forty years ago such things hardly existed.

The party established camps at several altitudes on the slopes of the great mountain, and, by degrees, accustoming themselves to the rarity of the air and the other difficulties that opposed them, were at last able to make a serious attempt on it. These difficulties proved far more serious than any which climbers in the Alps, or even in the Caucasus, have to face. The extreme rarity of the air is only one among them. Intense heat while the sun shines alternates with frightful cold at night, and even in the day time when clouds cover the sun or a strong wind blows. Violent gales, from the northwest especially, are frequent. (Aconcagua is in latitude 32 degrees 39 minutes south, and therefore south of the area of tradewinds.) The gales carry showers of fine snow in the higher altitudes, and, in the valleys, still more trying clouds of volcanic dust, which blind the traveller and find their way into every part of his stores. The torrents that traverse the cañons are violent, and in the afternoon, when swollen by the melting of the glaciers, so full as to be impassable, or at any rate extremely dangerous. There is no shelter to be had from trees, so that a tent, unless it can be pitched in the shade of a rock, is exposed to a cruel sun. There are no trees (and hardly any vegetation) because the slopes and hollows are intensely arid, the severe climate giving plants no chance, while the springs are so often strongly impregnated with mineral substances that many of them are unfit to drink—that is to say, you drink them, or the streams which flow them, with the probability of an attack of diarrhœa or dysentery.

Such are the drawbacks to mountaineering in the southern part of the Cordillera, apparently even more repulsive than those which Mr. Whymper encountered in Ecuador, and Sir Martin Conway in Bolivia. However, Mr. Fitzgerald persevered. His first attempt failed from bad weather, the wind being exceptionally furious. On the second, Mr. Fitzgerald having got within about one thousand feet from the top, was stopped by exhaustion, want of breath, and violent nausea. His guide Zurbriggen, however, went on alone and reached the summit alone. Another attempt a month later had the same result, but on this occasion Mr. Vines, an English member of the party, accompanied by an Italian porter named Lanti, had just strength enough to push on and gain the top, where, in spite of the intense cold, he

remained for eighty minutes, obtaining a magnificent view, which reached more than two hundred miles north and as far south, and extended far out into the Pacific Ocean, the margin of which is about one hundred and fifty miles from the mountain.

Aconcagua, apart from its vast height and from the extreme difficulty of getting near it (for the higher region of the Andes is here quite uninhabited, except for one or two stations along the track across the pass by which men go from Mendoza on the Argentine side of the mountains to Santiago in Chili), does not present very formidable obstacles of "the climbing kind" to the practised mountaineer. It is an extinct volcano—long extinct, for there is now no trace of a crater at the top, the crater walls having no doubt been, perhaps thousands of years ago, broken down and so vanished. Like most volcanoes, like Chimborazo and Cotopaxi, like Fusiyama and Kilimandjaro and Mount St. Elias, like Elburz and Ararat, like Mauna Kea and the Peak of Teneriffe, like Etna and Hekla, its general slope from top to bottom is not very steep, and there is more than one way by which the summit can be reached without the familiar dangers of seracs, crevasses, ice-walls, and knife-edge arêtes. The adventures described here are therefore adventures of a very different kind from those which fill most of our Alpine books, and the record is one not of steeple-jack agility and steadiness of head, but of physical strength, endurance, and indomitable perseverance in facing the physical sufferings of intense cold, shortness of breath, headache, nausea, and the various maladies to which an abnormal diet, coupled with extreme climatic variations, is sure to give rise. These qualities have perhaps never been shown in higher measure than by Mr. Fitzgerald and Mr. Vines.

The former being obliged by illness to abandon the hope of reaching the very highest summits, Mr. Vines started with Zurbriggen and two of the Alpine porters for the great summit of Tupungato (21,550 feet, Aconcagua being 23,080 feet). He made four valiant assaults upon it, suffering rather less from the want of oxygen than he did on Aconcagua, but even more from hurricanes, the chief trouble of this range, where there seems to be rather less snow or rain than in the Alps and the Caucasus, but more violent and frequent storms of wind. Perhaps this is due to the great diversity of atmospheric conditions on the two sides of the range. The fourth attempt was crowned with a well-earned success. Tupungato is described as a prodigious dome, the sides heavily snowed in parts, but the upper convex almost free of snow—a remarkable fact considering its enormous altitude. There was no trace of a crater on the top, nor indeed of any recent volcanic action, but Mr. Vines saw signs of an eruption on another lofty summit some thirty miles away to the southwest. He describes the view as even more striking than that from Aconcagua.

The reader will naturally ask what sort of scenery these stupendous mountains offer to the lover of picturesque beauty or of grandeur. Though Mr. Fitzgerald does not directly treat of the point, we gather pretty clearly from his description of the district round Aconcagua, and from Mr. Vines's account of Tupungato and the valleys leading to it, what the general character of the landscape is. Evidently it has only one merit, that of savage and desolate grandeur. The proportions of the mountains are so vast, although the base from which they rise is lofty (for the terminus of the Transandine railway on the Argentine side at Las Vacas is 8,000 feet above sea level, and the Cumbre pass over which the track runs and under which the railway is to run to Chili is 12,800), that they make an overpowering impression upon the eye, and some of the precipices on the sides of Aconcagua are described as stupendous. But the valleys, being bare and stony, with no forests and scarcely any vegetation, are dreary to the last degree. The glaciers are not of great size or beauty. There is, in fact, no relief to the universal sternness and grimness of the landscape—less, it would seem, than in the Andes of Bolivia as described by Sir Martin Conway, though that region also seems far from picturesque in the proper sense of the word, and less also than in the Andes of Ecuador as described by Mr. Whymper.

The book is well written throughout, without any of those attempts at florid description or at forced fun which have sometimes been censured in the narratives of mountaineering expeditions. There are a good many reproductions of photographic views, many of them very well done, and greatly adding to the value and interest of the book; while the appendix contains an account of the minerals and fossils collected, from the very competent hands of Prof. Bonney of Cambridge (England) and of Mr. G. C. Crick.

Romances of Roguery: An Episode in the History of the Novel. By Frank Wadleigh Chandler. In two parts. Part I. The Picaresque Novel in Spain. New York: Published for the Columbia University Press by the Macmillan Company. 1899.

The favorite reading for entertainment throughout the world when our sober Pilgrims came to America, and for nearly a hundred years before and another hundred after, was tales of trickery and beggary, based upon the doings of certain merry knaves in Spain. These stories began in 1554, with the account of the blind beggar's assistant, Lazarillo de Tormes, and practically ended there with Periquillo de las Gallineras in 1668; but elsewhere they went on indefinitely, and the one of them which became the most famous of all, Gil Blas, the imitation by the Frenchman Le Sage of the Spanish work, did not appear in full till 1735. Suppose Ginés de Pasamonte, the escaped galley slave, who, as Master Peter, with his learned ape, so amusingly tricked Don Quixote, expanded to the dimensions of a volume, and he would represent the Spanish rogue of fiction at his best.

There is a general agreement as to the causes of the production of rogues on a large scale in Spain and the consequent rise of the Picaresque fiction, and no writer can add much to our knowledge of them. The two principal ones were the closing of the military career to large numbers of persons when Spain declined from the brilliant estate she had enjoyed under Charles V., and the paralysis of industry by the stream of treasure that had flowed in from America. We find Prof. Warren, in his history of the early novel, holding that people took to living by their wits not so much because they could get nothing to do, as because they were no longer willing to do it. Brunetière ingeniously suggests, in the *Revue des Deux Mondes*, that this may have been a crude and perverted evolution, in a world suddenly become commonplace, of the Spanish feeling of punctilio, which made the point of honor to consist in not working for a living, just as the great paladins and soldiers they admired, and the characters in the current Books of Chivalry, had not worked. If this were the case, a somewhat more lenient view would have to be taken of the rascals in question; their misdeeds would have to be ascribed to a perverted tradition.

The Rogue fiction, too, is represented as having been a reaction against the Books of Chivalry and the Prose Pastorals. Tired of those highly artificial productions, readers began to demand something nearer to life as they actually knew it. A surfeit of paragons of every possible and impossible perfection begot the anti-heroes, paragons of indecorum and iniquity. The Rogue story and the Pastoral, however, appear to have flourished side by side, since the first pastoral, Montemayor's 'Diana,' appeared only two years before 'Lazarillo de Tormes,' the first rogue story. Idealized shepherds, groves, and brooks were one form of relief from the excessive warfare; and humor, for which the ostensibly serious Spaniard has ever shown a great proclivity, was another. Even then the true and perfect knights of chivalry continued to prosper greatly, and the whole truth is that the various kinds of fiction, grave and gay, fantastically romantic and probable, flourished in company, as they always will flourish to suit various tastes and degrees of intelligence.

The period of the Spanish rogue is an interesting one under all aspects, and Mr. Chandler has done well to take it for his contribution to the series of Studies in Literature now being issued by Columbia University. There exists considerable writing on the subject already, and the authorities are quite accessible; little needed to be added, as a general statement of the case, to the chapter on this head in Ticknor's standard History of Spanish Literature. But there was wanting a full, separate treatise, and this want Mr. Chandler's monograph admirably supplies. He writes carefully, seriously, with close attention to his extensive mass of material, and, in spite of his alliterative title, appeals to the scholar more than to the general reader for entertainment. The research has been completed for a second part, to consist of a volume on Spanish influence in the other countries of Europe—France, Germany, Holland, and England—which should be equally acceptable.

The romances of Spanish roguery were the origin of modern realistic fiction, but it is probable that few readers are now able to get much more enjoyment out of the originals than that based on their historic interest. The number of metamorphoses and adventures they contain, in a single volume, is startling. One chapter alone will comprise more than enough to fit out a score of lively modern romances. Reeled off at such headlong speed, naturally the material is spread out very thin. It was apparently produced for persons who were unable to keep their attention upon any subject more than a few minutes at a time. The humor is in large part merely a gross sort of horse-play, which could now amuse only the

coarsest tastes. Noting, for example, that Pablo, the Sharper of Segovia, was once at the University of Alcalá, anybody who should turn to the book hoping to get some account of that famous seat of learning, would find only a lot of indignities, too disgusting to mention, put upon the hero, and then pranks in cheating housekeepers, and stealing from marketmen and shopkeepers that have no connection with any particular place or occupation in life. The favorite subject for joking in these books, beyond all others, is the avoidance of hunger, or, not merely hunger, but starvation. The picture of the boarding-school at Segovia, a school for young noblemen, too, is so cruel and woful that Nicholas Nickleby at Dotheboys Hall seems almost rolling in plenty by comparison. Lazarillo de Tormes, again, speaks of the absolute penury and silence in the house of the poor knight his master. "We would often pass two or three days at a time without opening our mouths to put into them a morsel of food or to speak a word." This situation is so grim and bitter that it is hard to see how it could contain anything akin to humor. It is well brought out in the essay of Arvède Barine (Madame Vincent) in the *Revue des Deux Mondes* on "The Beggars of Spain." "There are cases of starvation among the poor everywhere," she says, "but what is rare indeed is lords and ladies lacking for food in their noble castle halls. And yet more rare is the calm, heroic, stupid patience with which they endured the pangs of starvation till they fell fainting with weakness. It would have been a derogation from their dignity to go forth and make any active exertions for a dinner."

Mr. Chandler's plan of arrangement comprises a display of the causes giving rise to the Spanish rogue and to his literature; society as viewed through the rogue's eyes; the crude early forms of these stories; the emergence in them of personality, or a definite character in the adventurer as distinguished from his mere adventures; imperfect and allied forms; the decadence; and, finally, a very complete bibliography of the earlier editions of the books and of their translations issued in other countries. The author prints, too, a long list of the authorities he has consulted. The chapter on the decadence of the Picaresque novel is perhaps the best, as being the most interestingly written. The considerable section of the book entitled "Society through the Rogue's Eyes" collects from the entire range of the tales passages showing how each of the typical figures and occupations of the time was regarded. We have a mass of testimony in turn concerning the soldier, the lawyer, the doctor, priest, student, barber, innkeeper, and others, and also concerning those alien members of society, the Jew, the gypsy, and the Morisco or (forcibly) converted Moor. The process is a sort of shredding up of the literature. It is useful for reference, in that one can turn here and become well informed on the points named without ever reading the books themselves. But it is possibly a little too encyclopædic and prolonged; we might have been satisfied earlier of some of the positions established, and more evidence is produced than is needed. Herein, if at all, is suggested the vice of the "thesis," of "original work" under university direction, the mere counting-up or statistical method. But it is only very faintly suggested.

Statistics and Economics. By Richmond Mayo-Smith. Macmillan Co. 1899.

This work constitutes the second part of the author's "Science of Statistics," the former volume being entitled 'Statistics and Sociology.' There is no clear line separating economic from social phenomena, but a rough classification may be made according to the predominance of material elements. Figures concerning births, deaths, and marriages, for example, would not fall under the economic rubric, while it would include the statistics of the production, distribution, and exchange of material goods. Such a division is convenient for descriptive purposes, but it is not of scientific value. If legislation is to be guided by statistical returns toward definite social ends, the whole mass of social phenomena must be considered. In other words, the whole psychological nature and activity of man must be kept in view, if we are to determine the merits of any particular measure.

The purpose of this author, however, is predominantly descriptive. He ventures on few predictions, and confines himself, for the most part, to the classification of statistical returns, and to the selection from them of such as appear most representative. These again are compared, showing variations from period to period, and from place to place. As a result, we have a fairly systematic presentation of the principal economic phenomena, such as the consumption of laborers, the area and products of farms and mines, the quantity of capital, the amount of manufactures, the variations of price, the phenomena of wages, interest, profits, and finance in general. Of course, it is impracticable, in a single volume, to do more than take a cursory view over such a vast field as this, which is withal the scene of numberless conflicts between different observers. To take even such a view implies prolonged labor, and the rapidity of the onward march of industry is so great as to make figures obsolete as soon as they are gathered. The statistics of the past year, for instance, would differ so greatly from those of three years ago as to make the world appear almost to have changed its nature. We get the complete report of the census perhaps four or five years after it was taken, and by the time it is available for scientific use it is practically superseded.

Some valuable results might be obtained by the comparison of successive returns, but here the statistician is confronted by an insuperable difficulty. It is the first requirement of science that observations shall be made by observers trained to accuracy, but this is too commonly the last requirement of our public statistical bureaus. Every one knows how the last census of the United States was taken, and how the next one will be taken. In addition to errors caused by the incompetency of observers, there has been intentional coloring for partisan ends. As Mr. D. A. Wells pointed out, the census of 1890 had the effect of vitiating comparisons by introducing a false term in the series. Its mischief is thus not temporary, but perpetual; and it will continue to vitiate the conclusions of statisticians so long as it is used.

It is not the least of Prof. Mayo-Smith's merits that he frequently warns his readers of the fallacious character of the figures which he is compelled to lay before them, and it is worth while to specify a few particulars. In order to state a value for the land in the United States, the Census Bureau took the assessed values, and then increased them to such a figure as was thought proper by the officials. The results, as our author says, were valueless, and so were those presenting the growth of wealth in successive decades, as they were made on different plans. The statistics of land, of agriculture, and of production, he declares, are very imperfect, and it is doubtful if they can be made much more than estimates. Nor does he admit the possibility of measuring, by crude statistics, the efficiency of either capital or labor. In fact, he maintains, the attempt to get statistics of capital ought to be abandoned, for what returns we obtain are not only uncertain and unreliable, but also positively misleading. So of the gross product of industries, the methods employed in our census lead to most grotesque and irreconcilable results. Prof. Mayo-Smith himself states the total private wealth in France as 225 million francs, while he elsewhere gives the value of landed property in that country in 1882 as 91,584 million francs. For ordinary newspaper use, we fear, one statement would answer as well as the other, and the error, due probably to a slip of the pen, may some time furnish a Congressman with material for an impressive argument. We regret to see that Prof. Mayo-Smith does not allude to that monumental, and, we might say, classical, blunder of our Treasury Bureau of Statistics which was detected by Mr. W. C. Ford.

When the attempt is made to deal with statistics of price, we need not say that disagreement prevails. Jevons, it will be remembered, when he came to average his index numbers, employed the geometric instead of the arithmetic mean; but Laspeyres showed that this method would, in a typical case, prove that prices had not changed, whereas in fact they had risen 25 per cent. On the general subject of index-numbers, and the related one of the quantity theory of money, Prof. Mayo-Smith has much sound criticism to offer; but the subject is too technical for us to examine. The statistics concerning the amount of gold used in the arts and in general circulation are notoriously doubtful, and our Mint report states the recoinage of gold at about $15,000,000 in 1896, and $146,000,000 in 1897. As to wages and profits, the variations in statistical returns are of the wildest character. The census report of 1890 gave the average profit of capital invested as nearly 17 per cent.—a calculation pronounced by Prof. Mayo-Smith to be "a delusion and a snare." There is good reason for applying the same terms to reports in Massachusetts which made the return on invested capital 4.83 per cent. We cannot resist the conclusion that the main work of statisticians at present should be critical in character, and that time spent in drawing inferences from facts not scientifically ascertained is worse than wasted. Hence we must regard the chief value of such a work as this as consisting in the warnings and cautions of which it is to a considerable extent made up.

The Drama of Yesterday and To-day. By Clement Scott. 2 vols. Macmillan. 1899.

There is an ancient yarn, told in many varying forms of prose and rhyme, of a cheap-jack who, when he was asked what possible object there could have been in the manufacture of the articles which composed his stock in trade, replied that they were made to sell. Some such motive, encouraged, perhaps, by a certain joy of authorship, affords the most reasonable explanation of Mr. Scott's two bulky volumes. That they will find many readers is altogether probable. The modern daily press has created a voracious public appetite for the frivolous personal gossip in which they abound, but the real lover of the stage who wades through them in search of information, judicious comment, intelligent discrimination, originality of idea, a comprehensive grasp of salient facts, or, indeed, any of the expected fruits of long experience, will meet with nothing but weariness and disappointment.

Mr. Scott, for many years a voluminous contributor to different theatrical publications, is best known through his long association with the London *Daily Telegraph*, a pioneer in the journalism which deliberately substitutes quantity for quality. From first to last, in editorials and police reports alike, it has distanced all competitors in the trick of cheap and florid verbosity. It is not, therefore, difficult to guess where he acquired the fatal habit of that easy writing which, as Sheridan observed, makes such desperately hard reading. Speaking of his own achievements in the way of rapid composition, he naïvely remarks that a critic who cannot write a review in an hour and a half is not worth his salt. Speed, red-hot speed, is apparently, in his view, the main test of excellence. Upon this principle, evidently, he has compiled his book. Rarely, if ever, has there been published, even on theatrical topics, such an extraordinary mass of confused, irrelevant, and trivial matter. He has not only scoured the highways and byways, but has scraped the very gutters of theatrical life for items. And he has pitchforked all his odds and ends together with the most utter contempt for either order or proportion. Criticism, biography, anecdote, topographical reminiscence, time-worn jokes, Bohemian tittle-tattle, tragedy, comedy, the circus, and all sorts of miscellaneous padding are piled up in the vast heap, of which two-thirds is rubbish.

This is not to say that there is no good matter to be extracted from it by conscientious delving. The novice may discover therein copious quotations from old and modern writers of recognized authority upon dramatic affairs; excellent, if venerable, paragraphs about Macready, Cooke, Edmund Kean, Jerrold, and many other celebrities of the early part of the century, of whom Mr. Scott, of course, has no personal or exclusive knowledge; vast quantities of ill-assorted but generally accurate data about theatres, plays, and companies; and not a few hints as to the unfortunate ties existing between the stage and some of the men who write about it. But all these things are a thrice-told tale, or utterly worthless to the theatrical student, who values the stage mainly for its possible relations to art, literature, and life, not for its opportunities of social joviality. Mr. Scott, to be sure, talks much about the past degradation of the English theatre, and discourses fluently of the enormous improvement in its condition following upon the introduction of the Robertsonian comedy and the establishment of what he calls free trade in art. A good deal of what he says is true enough, but terribly trite, and his ideas about causes and effects seem to be of the vaguest. At all events, the importance which he evidently ascribes to the lucubrations of the *Daily Telegraph* will be mildly amusing to all who know the place which that journal occupies in the estimation of cultivated persons.

Of Mr. Scott's original contributions to his book it is difficult to speak tenderly and truthfully. Nothing is much more exasperating than the spectacle of wasted opportunity. He confesses himself an enthusiast, but enthusiasm for an art is scarcely a justification for writing about all the professors of it in terms of indiscriminate flattery and rhapsody. That he has had wide experience of nearly all branches of his subject is beyond question; that his natural powers of judgment have been quickened by it is only a fair presumption, but there is no trace of this in his expressed opinions. After reading his pages, one would think that there were not half-a-dozen indifferent performers among all the many hundreds whom he enumerates. All of them, in one way or another, are paragons of artistic proficiency. Most of them are veritable birds of paradise. It is to be noted, too, that such American performers as have visited London, or are likely to do so, are glorified with similar extravagant laudation. There is, however, one actress in whom, apparently, Mr. Scott sees flaws. The exception is notable and significant; her name is Eleonora Duse.

It is not worth while to pursue the subject further. It would not have been worth while to devote even so much space to it if the book were not a flagrant example of the worst kind of current stage literature. Nothing has contributed more to the present melancholy condition of the theatre than the misapprehension by the vast majority of writers for the daily press, both here and in England, of the true functions of theatrical criticism, in their absurd flattery of actors and actresses, than whom, as a body, no class of so-called artists is more vain or less competent. If the magnification of them as performers is mischievous, the adulation of them as individuals, simply because they are actors, is ignominious. In the serious theatre it is the play, the work of the author, that is entitled to first consideration, and the achievement of the actor is to be measured by the extent to which he has realized the author's design. The creator is greater than the creature. This is the artistic and true view, and the only one by which those who pretend to be friends of the stage and of actors ought to be guided.

The Cambridge Natural History. Volume V. Insects. By David Sharp, M.A., M.B., F.R.S. 1895. Volume VI. Insects. Part II. 1899. The Macmillan Company.

Though the cover to volume v. reads "Peripatus, etc., Sedgwick," nearly 500 pages of the contents are devoted to insects by Sharp. Almost 100 pages are required to describe the structure, habits, development, and general classification, before the subject is taken up by orders. In this part there is little that is original and at the same time important; but, on the other hand, it would be difficult to set out more concisely and clearly the main facts concerning the various topics that are taken up. The treatment is in popular form throughout, but accurate, showing a wide range of information and an intimate knowledge of the recent literature, which was, indeed, to be expected of the learned author.

"The words of Linnæus, *Natura in minimis maxime miranda*, are not a mere rhetorical effort, but the expression of a simple truth." This quotation shows the spirit in which the author approaches his subject; and, in the effort to set out the great wonders of insect life, he has produced a series of chapters that are never dull, and are free from objectionable technicalities while technical terms are freely used. The distinction is an important one, for there is no greater abomination to the layman than the technical treatment of a subject in a work that is presented to the reader for general information; while the same layman does not object to a technical term that is given a meaning intelligible to him the first time it is employed.

In discussing the separate orders, the author gives, first, a very brief definition of the group at large, and then discusses the characteristics of the main divisions, their peculiarities of development, and the life habits of the species in general. Contrary to the usual practice, the external structures which are used by the systematist are not given the leading place; but there is a free discussion of physiological peculiarities, of methods of reproduction, and of the modifications in alimentation, respiration, etc., induced by the circumstances under which the insects live. Seventeen pages are devoted to the "Aptera," which are ordinarily dismissed in a page or two at most, and it is shown here, following the maxim already quoted, that in these inconspicuous creatures there is a field for study and a wealth of peculiarities that render them worthy of much more attention than they have heretofore received. It is, perhaps, unfortunate that the author holds so closely to the term "Aptera," which, while perfectly applicable to the order intended, is equally descriptive of all the suctorial parasitica and of the Mallophaga. The term Thysanura, as employed by American entomologists generally, seems much preferable, though it does not conform to the terminations based on wing structure.

As the scope of the work embraces the insect fauna of the world, there is abundant opportunity to select as illustrations the most remarkable productions of all life zones, and this opportunity has been used to the full; not that there is a gathering of insect freaks, but of peculiarities of development resulting from local conditions. So, much space is devoted to the peculiar Roaches of the tropics, though in temperate countries they are remarkable for nothing except the numbers of certain species. In almost every case the fossil forms of the order under consideration are mentioned, making possible a connected history of its development. For the benefit of the special student of insects, tabular or synoptic statements in smaller type are given when deemed necessary. The order Neuroptera is retained practically with the Linnæan definition, though the author recognizes it as a heterogeneous aggregation, which he divides into eleven families. In

this he is somewhat out of line with the conclusions reached by American students, who have pointed out good characters for their ordinal separation. The truth is, that we have really a number of left-overs—the results of some of nature's early experiments, which were needed at one time, and which have in part lost connection with the stock from which they came. We may either group these remnants in one space devoted to odds and ends, or we can hold them apart in separate categories as they would have been held had the lines which they represent continued to develop. Hymenoptera deservedly receive the greatest consideration, some 260 pages being devoted to a description of their habits and peculiarities; and here the author is at his best in combining the scattered accounts given of individual groups or species into a connected and interesting whole.

It will not do to close this note without a few words concerning the illustrations. Perhaps the briefest statement concerning them would be that they are by far the best that have ever been published in a work of this extent, and that they really illustrate the text. It is all line and stipple work, clear in every detail. In addition, the pictures are also accurate, characteristic, and original, though some have been redrawn from published illustrations. Paper and presswork are all that they should be, but we have noted several typographical errors. The index is sufficient, and by the references to all orders under certain headings a uniform plan, consistently carried through, is indicated. The volumes form a positive addition to the library of the entomologist no less than to that of the lover of nature in general.

Brook Farm: Its Members, Scholars, and Visitors. By Lindsay Swift. Macmillan. 1900.

Much has been written about Brook Farm, if it is fair to judge from the eighty-six titles of Mr. Swift's "Bibliography," many of which include several or more particulars. It is true, however, that some of the titles and sub-titles touch Brook Farm in but the most incidental manner. Really, we have had, heretofore, only one book devoted to it, and that is Mr. T. Codman's unsatisfactory personal memoir. Mr. Swift has done his work so well that the task seems to have waited for his coming, and there can be no good excuse for any one's taking it up again hereafter. The complaint that is likeliest to be made against him is that of imperfect sympathy with the experiment; but, while it is easy to conceive that a more perfect sympathy might have been combined with an equal measure of critical detachment, Mr. Swift's treatment leaves little to desire. If no humorous aspect of the Farm escapes him, he is quick to find and praise whatever was noble and generous in its inspiration, and whatever was excellent or beautiful in the characters of those who took the leading parts.

Mr. Swift's arrangement of his material is a happy one. After a short chapter on the Transcendental Club, we have a longer one on the organization of the Farm, its buildings, grounds, industries, and household work, amusements and customs; a third on the school and its scholars; a fourth on the members; a fifth on the visitors; a sixth on the closing period. In the first chapter Emerson's criticism on the elder Channing, "His cold temperament made him the most unprofitable companion," suggests that he should himself have been another such, while we know that he was not. Channing's probing of Ripley as to "whether it was possible to bring cultivated, thoughtful people together and make a society that deserved the name," was regarded by Emerson as the original germ of Brook Farm. Its "causal and immediate antecedent, with all its wondrous experiences," wrote Ripley in a passage which seems to have eluded Mr. Swift, was a visit to Theodore Parker at West Roxbury in the summer of 1839. It is an amusing coincidence that the original owner of Brook Farm was the same Charles Ellis who brought Theodore Parker to Boston to lecture in the fall of 1841.

The account of the organization, work, play, and buildings of the Farm is sufficiently explicit on its several heads. That of the school and its scholars is mainly devoted to the Curtis brothers, George and Burrill, and Isaac Thomas (later known as Father) Hecker. It is Mr. Swift's habit to follow each of his *dramatis personæ* through their careers subsequent to their Brook Farm experience, and in this way he adds much to the bulk and interest of his book. His last word about Curtis is unfair. It is that he was never "so wedded to a cause that he was willing to suffer for it"; that he would do his reformatory work in "a comfortable manner." His experience in 1884 was not particularly comfortable, and he suffered sooner and later (thanks to his honorable and reformatory disposition) the loss of political honors to which he was not by any means indifferent. The treatment of Father Hecker is particularly kind, passing over silently his assault on Emerson, the most brutal upon record, except, possibly, one of Brownson's in his later writings. But when Mr. Swift comes to Brownson among the visitors at Brook Farm, he does not use him as if he loved him.

It is significant that so many of the Brook Farmers have attained to separate biographies, but Mr. Swift's comments upon Ripley, Hawthorne, W. H. Channing, Parker, Alcott, and so on, are as interesting as if he had had the first squeeze of the grapes. Margaret Fuller's progressive development is set forth in terms with which her most loyal champion, Col. Higginson, can find no fault, and Mr. Sanborn should be almost as well pleased with the treatment of Alcott. Charles A. Dana is handled just a little as if Mr. Swift were fearful of his ghost, but the last arrow in his quiver is one that sticks: Of all the associates of Brook Farm, "he departed furthest from its aspirations." Parker's relations to the Farm were more pecuniary and personal than social and ideal. One of Mr. Swift's few mistakes is that Parker died in 1859. May 10, 1860, is the right date. Mr. Swift's knowledge is in general so thoroughly assimilated that so strange a slip as that on page 130 is unique. Dr. Hedge is there spoken of as one of Ripley's "revered instructors in the Divinity School." Hedge was three years younger than Ripley, and graduated from the Divinity School two years after him. Mr. Swift's appreciation of Ripley is full and warm enough to satisfy the more exigent. For a last word we have reserved our due praise of the delicious humor of Mr. Swift's characterizations. It is abundant, with but here and there a little forcing of the note.

Pen and Pencil Sketches of Shipping and Craft All Round the World. By R. T. Pritchett. London: Edward Arnold.

The author of this little volume, who is marine painter to the Royal Thames Yacht Club, had the good fortune to make a long cruise in the yacht *Wanderer*, and around the world with the Brasseys in the *Sunbeam*. As a consequence, he has seen and sketched the craft of many countries and of many types, both savage and civilized, and in this book are reproduced in a pleasing manner a number of the sketches thus made. It is much to be regretted that the letter-press is not as agreeable to the eye as the representation of the limner's art.

The book begins, as becomes a loyal Englishman, with the royal yacht, the paddle-steamer *Victoria and Albert*, soon to be replaced by a craft of the latest design. The Victorian era is represented by many comparisons, but there are none more significant than those shown by the Queen's yachts at the time of her accession, and the one built for her in the last year but one of the century. When she succeeded to the throne, the royal yacht was a sailing vessel, ship-rigged, launched in 1817, and named the *Royal George*, of 330 tons burthen, and but 103 feet in length. The steam yacht just built, a new *Victoria and Albert*, for the Queen, has twin screws, forced draught, telephones, and electric appliances, with a length of 580 feet and 4,700 tons displacement.

After giving a typical sailing yacht in the *Britannia*, and the *Sunbeam* as a British auxiliary steam yacht, the writer represents the tea-clipper and cotton-brig of days gone by, and follows these with some interesting types of English coasting craft. Not the least successful of these crafts is the steam turbine life-boat, of a length of fifty feet and a method of propulsion which does not allow an entanglement with the wreckage of a stranded vessel. This type might be tried upon our own wintry coast with success when our ordinary methods fail, as they at times do. When our craft come under discussion the yacht *Vigilant* is chosen as a typical racing-craft, and the schooner, river barge, and pinkie as specimens of our coasting craft. The pinkie was not confined to the coast of Maine, as our author suggests, but was the characteristic craft of Block Island up to the sixties and afterwards. Ice-boats are not presented as exclusively American craft, but are also charged to Holland and, strange to say, to St. Moritz. The cat-boat of Newport and Long Island is not mentioned, though even more typical than the pinkie, and such characteristic steam craft as the Herreshoff launches and the whalebacks seem beyond the writer's ken.

The characteristic sailing craft of Bermuda, Norway, Denmark, Holland, and other European countries and waters are sketched and described, including the Venetian fishing-boats, with their richly colored sails; the rich dahabeahs and gyassi, with their graceful sails. It is but a step from the latter craft to the Arab dhows of the Indian Ocean, some of which do the slave-trading afloat that is left in the world. Of the other craft of the Asiatic waters the lateen-rigged Bombay yachts appeal

to the eye, while the sketch of the Ceylon outriggers brings us to a boat not distantly related to the catamaran of Brazil and the outriggers of the South Pacific Ocean. The Burmese rice-boats, however, are in sail, rig, and hull of their own kind—a singularity heightened by the system of reefing forward, viz., by taking out alternate cloths vertically from the bellying sails. Some of the many varieties of Chinese and Japanese junks and sampans are given. We miss, however, the Chinese dragon-boat and the Ningpo lumberer, while the house-boat, which has been so acclimated in China as to become a different species from the house-boats of the Thames and elsewhere, is worthy of mention. The Grand Canal of China alone exhibits a flotilla of water-craft that appeals to the eye, in furnishing both the strange and the picturesque.

However, the world is full of craft, and the choice made by the writer of the opportunities afforded him was, on the whole, excellent and interesting.

L'Allemagne Nouvelle et ses Historiens. Par Antoine Guilland, Professeur d'histoire à l'École Polytechnique Suisse. Paris: Félix Alcan. 1899. Pp. 356.

In this very readable book Prof. Guilland examines the characters and writings of Niebuhr, Ranke, Mommsen, Sybel, and Treitschke in the first line and of a number of other German historians in the second. In sketching the personal traits and estimating the personal qualities of the five writers whom he selects as chief representatives of the German school, the Swiss author is generally good-natured and sympathetic, and his criticism of their work is, in the main, appreciative. Of the political tendencies of the school, however, he disapproves strongly, and the exhibition and castigation of these tendencies is the chief purpose of his book. He regrets the disappearance of the cosmopolitan spirit of the eighteenth century, when Herder spoke of ancient patriotism as something "monstrous," and Lessing declared that love of country was "a heroic weakness which I am very glad not to possess." Between this attitude and the narrow and bitter nationalism of Treitschke there were many gradations; but the downward movement, in the author's opinion, began with Niebuhr and Ranke, "the forerunners," the one of whom traced the expansion of Rome in order to encourage the expansion of Prussia, while the other, in writing world-history, emphasized as its chief lesson the importance of nationalities and of their separate civilizations. Mommsen, too, according to Prof. Guilland's theory, wrote his Roman history with the incidental object of glorifying the ancient Germans and vilifying the Celts and their descendants; while his contemptuous treatment of the Roman republicans and his exaltation of Cæsar paved the way for Bismarck's realism and for Prussian militarism. Sybel further stimulated the narrow national spirit by reducing the French Revolution to the proportions of a raid upon property; and Treitschke, with his hatred of everything not German and his deification of success, is simply the logical product of the process that began with Niebuhr.

This whole movement, in Prof. Guilland's opinion, has been equally prejudicial to German historiography and to the German national character. German historians have become increasingly partial and untrustworthy. They have concealed the defects and exaggerated the merits of all the Prussian heroes from the Great Elector to Bismarck. They have caricatured the great men and falsified the history of other countries. At the same time, in teaching their countrymen to distrust theories and admire action, they have bred a realism that has deprived German science of its authority, and has thus undermined their own position. When the decision of the Berlin Academy, awarding the Verdun historical prize to Sybel, was quashed by William II., because, in his histories, Sybel had exalted Bismarck at the expense of William I., and when William II. himself assigned the prize to an obscure panegyrist of the Great Elector—then, in the author's opinion, Sybel fell into the ditch that he and his fellows had digged.

One at least of Prof. Guilland's main theses is open to question. A historian may be pardoned for magnifying his office; but we do not think that the German historians are so largely responsible as he holds them either for the creation of a German national sentiment, or for the national bumptiousness that has been manifested since the victories of 1866 and 1870. To us it seems that the German national movement, with all its results, good and bad, was not so much excited by the German historians as reflected by them. Again, his indictment of all the school, from Niebuhr to Treitschke, reminds us strongly of an indictment for conspiracy when the prosecution possesses direct evidence against but one or two of the accused, and the case against the others rests upon an assumption of complicity. Treitschke, we think, must be found guilty; but Sybel and Mommsen must be acquitted, and Niebuhr and Ranke should be discharged without a stain upon their scientific character.

The Augustan Ages. By Oliver Elton. Charles Scribner's Sons. 1899.

The present contribution to "Periods of European Literature," edited by Prof. Saintsbury, comes from Owens College, Manchester. Its design is to present a comprehensive, yet sufficiently detailed, view of the ground on which, as a critic has said, literary order strove for more than a generation to coerce literary freedom, and ultimately succeeded for a time. In this review the author passes from the France of Louis XIV. to the England of the Restoration and Queen Anne, and thence pushes his investigations into corresponding and contemporary areas of literary activity in Germany, Holland, Scandinavia, and Latin or Southern Europe.

According to Mr. Elton, the influence of æsthetic convictions, or of arbitrary formulas, during this period was fundamentally identical in all these countries, although various local conditions subsequently obscured the retrospect for students too near the field to view it in suitably critical and historical perspective. Critics who deal with comparative literature are nowadays in substantial agreement in the broad conclusion that the spirit of "classical" rationalism, distinctive of the so-called Augustan period, told upon thought chiefly by limiting the scope of artistic interests and effort, while expression was, by logical inference, subjected to a doctrine of steadily narrowing rules. To use M. Lanson's concise summary, "la raison dominatrice et directrice de l'âme humaine" is the key-word of the situation. The merit of Mr. Elton's volume, therefore, lies less in the incontestable soundness of its main propositions than in its endeavor to extend the process of generalization to writers so far asunder as Holberg and Filicaia. It is unfortunate that the small compass of the volume forbade the ampler use of illustrative quotation which its author's wide reading could so easily have supplied. But in this, as in many other works of kindred nature, we look in vain for that wider solution of literary problems which rests on a psychological basis. With the abundance of literary material at one's disposal, there is at the present time no very great difficulty in establishing the causes which determined and directed an artistic current in any one country at a specific moment or during a specific epoch. But the singular fact remains that in other countries, neighboring or distant, a similar wave of thought or feeling passes over the face of things, and, under apparently different conditions, makes for uniformity in the nature, and often the quality, of artistic productions. We have consequently still to seek the philosophical explanation of an almost simultaneous receptivity or mobility in widely distributed human intellect, not to be accounted for by the obvious influences of the imposing energy of genius, the combined efforts of a school, the tyranny of opinion, or the mere fluctuations of taste.

Throughout the course of his inquiry, Mr. Elton misses no opportunity of expressing his comprehension of treatments and methods which found but meagre sympathy with English students of a generation or two ago. "The ignorant dogmatism of Schlegel and some other Germans, who tried to sneer Racine out of court" (p. 100), sufficiently indicates the spirit of the author's criticism, in so far as France is concerned. And Mr. Elton is elsewhere equally undisguised in his dislike of cognate work in his own country, in which he sees nothing more than imitation, rhetoric, artificiality. Leaving the drama out of consideration, we may select the following example of his judgment on what others have taken as the supreme triumph of Dryden's lyrical power in the ringing measures of "Alexander's Feast":

"The deafening clatter of its shallow harmonies, commonest and heaviest in the anapæstic parts, the profusion of antithesis and Latinisms, and its violent trying to be strong, make it the type of rhetorical lyrics, and its popularity measures that tastelessness in the higher matters of poetry which distinguishes the age of good taste" (p. 237).

The above passage may serve to introduce the little we shall say of Mr. Elton's style, of its originality and emphasis. A narrower rhetoric than his finds difficulty in so shaping its canons as to include in their recognition "a mixture of supple adaptiveness and strong will" (p. 50), "the union, in a single regular sheet, of a rigid *cadre* with continual freshness of handling" (p. 296), "shapeless ebullience" (p. 386), or the more elaborately intermingled figures of the following sentence: "His [Malebranche's] vision and his tide of rapt devotion, his reference of all things and thoughts to a central fountain of light and warmth that bathes them, give him his glow and ease, and wing his ample and beautiful rhythms—perhaps the most po-

etical in French before Rousseau, yet never, like those of another prose Platonist, Giordano Bruno, foaming over with a tide of unmastered emotion" (p. 17). The same habit of mind, however, elsewhere suggests to the author the many apposite comparisons that so frequently brighten and color his pages.

BOOKS OF THE WEEK.

Adeane, Jane H. The Early Married Life of Maria Josepha Lady Stanley. With Extracts from Sir John Stanley's 'Præterita.' Longmans, Green & Co.
Alden, R. M. The Rise of Formal Satire in England under Classical Influence. Philadelphia: University of Pennsylvania. $1.
Alexander, Mrs. Thro' Fire to Fortune. R. F. Fenno & Co. $1.25.
Bailey, C. Lucreti de Rerum Natura Libri Sex. Henry Frowde. 3s.
Bailey, Prof. L. H., and Miller, W. Cyclopedia of American Horticulture. Macmillan Co. Vol. I. A-D. $5.

Henry Holt & Co.,

29 WEST 23D ST., NEW YORK,

HAVE READY:

THE FORTUNE OF WAR

By ELIZABETH N. BARROW. **A novel of the American Revolution.** 12mo. $1 25.

The action takes place during the last year of the struggle, chiefly in New York City, during the British occupation, partly aboard one of the Prison ships and partly in the camp of the Patriot Army at Morristown. There is a strong "love interest."

FOLLY CORNER

By Mrs. HENRY DUDENEY, author of "The Maternity of Harriott Wicken." 12mo, $1 25.

A story of love against reason in conflict with love conformable to reason. The author in this new book has fortunately thrown off the sombreness of her earlier work and brightened the story with flashes of humor. Mr. R. H. Stoddard in the "Mail and Express" said of her earlier novel: "It falls but little short of being a masterpiece . . . a remarkable work."

THE OPEN ROAD

Compiled by EDWARD V. LUCAS, editor of *A Book of Verses for Children*. Full gilt, in flexible green and gold covers. 16mo, $1.50.

Some 125 Poems of Out-Door Life by some 60 authors.

The Realist.

By HERBERT FLOWERDEW,

Author of "A Celibate's Wife." Crown 8vo.

Cloth, $1.50.

"One of the cleverest stories that we have read for a long time. . . . intensely interesting." —*Pall Mall Gazette.*

"Mr. Flowerdew has written a story of singular ingenuity and dexterous literary workmanship."—*Daily Telegraph.*

JOHN LANE, 251 5th Ave., N.Y. City

THE FUTURE OF THE AMERICAN NEGRO.

By BOOKER T. WASHINGTON.

Price, $1.50.

"In respect of distinction alike of style, insight, outlook, spirit, and manner, this discussion of 'The Future of the American Negro,' by Booker T. Washington, is as noteworthy as any book which has appeared during the year."—*Chicago Evening Post.*

SMALL, MAYNARD & COMPANY, Boston.

ELLIS & ELVEY,

Dealers in Old and Rare Books.

CATALOGUES of CHOICE BOOKS and ILLUMINATED MANUSCRIPTS published periodically.

Rare Early English Literature, Early Printed Books in Black Letter, Ancient Artistic Bookbindings, Rare Prints and Autographs, etc. Only fine specimens are dealt with.

29 NEW BOND STREET, LONDON, ENG.

F. W. CHRISTERN

(DYRSEN & PFEIFFER, Successors),

429 5th Ave., bet. 38th and 39th Sts., New York.

Importers of Foreign Books; Agents for the leading Paris Publishers; Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. New books received from Paris and Leipzig as soon as issued.

HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing here. Special collections formed, and fuller information supplied than from any other house. Books, both old and new, and relating to any subject, can readily be supplied, at very moderate prices.

Agents for Clubs, Libraries, and all private collectors.

187 PICCADILLY, LONDON, W.

First Principles in Politics.

By WILLIAM SAMUEL LILLY, Honorary Fellow of Peterhouse, Cambridge. 8vo, $2 50.

"The author discusses the foundation of the State and its origin. He contends that the only firm foundation on which the State can be built is moral law. . . . People imagine that the State can make laws or that society rests on contract and convention. In truth, man is invested with natural rights and encompassed by correlative duties, and the business of the State is to maintain these rights and obligations. Mr. Lilly is a powerful and fascinating writer, and his book is calculated to stimulate thought and excite fruitful controversy."—*Chicago Evening Post.*

The Nation.

NEW YORK, THURSDAY, MARCH 1, 1900.

The Week.

The Puritan conscience of New England found its first expression in the discussion of the Porto Rico tariff bill on Thursday, when Representative McCall of Massachusetts uttered his indignant protest against it. On Friday the same conscience again found expression in the vigorous speech made against the pending bill by Representative Littlefield of Maine, "because it is un-Republican, un-American, unprecedented, unwarranted, and unconstitutional." All accounts agree that this speech, like McCall's the day before, was one of extraordinary force and impressiveness, the two constituting a fine reassertion of Republicanism as it was in the earlier days—the Republicanism of Abraham Lincoln, John A. Andrew, and William Pitt Fessenden. It was characteristic of the change which has come over the party that Mr. Littlefield should have been followed by a Republican who objected to the statement of conscientious views, on the ground that such an expression of principle would do harm. Mr. Gardiner of Michigan said that "the speech of Mr. Littlefield and those of others in opposition would do mischief in spreading doubt and discontent among Porto Ricans." The President has pointed out to the people "our plain duty"; the Secretary of War, the Governor-General of Porto Rico, the President's Commissioner to the island, and the United States Consul to Porto Rico all agree with this view. But the protected interests have turned the Ways and Means Committee around, and forced the reporting of a bill directly opposed to that which was first favored by the Committee. And now any Congressman who believes that plain duty remains as much plain duty in February as in December, is told that he ought to keep quiet, because if he stands up for principle it will "spread doubt and discontent among Porto Ricans"!

In his speech defending the tariff bill for Porto Rico, Chairman Payne said that his original bill of January 19, granting the island free trade, had been changed "after consultation with Gen. Davis." This leaves certain awkward mysteries, on which we wish that Mr. Payne would throw light. Gen. Davis was before the House committee on insular affairs on January 8. He then advocated free trade for the island, and said that, under it, the people would be "quite able to support themselves." He must later have appeared before Mr. Payne's committee, for that gentleman distinctly said, when introducing his free-trade bill on January 19, that it was "along the lines *suggested by Gen. Davis.*" Chairman Payne added: "I think the bill expresses the general view of those who have followed the hearings. The essential point is that the legislation will aid Porto Rico without in any way injuring American interests." Now, what kind of "consultation" it was which induced Mr. Payne to execute his right-about we discover in the press reports of the later hearings before his committee. Thus, on January 31, Mr. Oxnard spoke against the bill as "a menace to the American beet-sugar industry"; Mr. Hill of Louisiana attacked it as a dangerous "entering wedge" for free sugar from Cuba and the Philippines; and Mr. H. S. Frye opposed it in behalf of the American League of Producers and the tobacco-growers. Mr. Payne would thus appear to have made a slip of the tongue on February 19; and his speech should read, instead of "after consultation with Gen. Davis," "after having the riot act read to us by the protected interests."

The argument of ex-Senator Henderson on the power of Congress to lay special taxes on Porto Rico, which was read at the anti-Imperialistic meeting at Philadelphia, is a singularly concise statement of the law of the Constitution as heretofore interpreted by the Supreme Court. The leading cases on the subject have been now pretty clearly stated, and it is evident that the chief reliance of the Imperialists will be on the principle that our government has sovereign powers beyond and outside of the Constitution. On this point Mr. Henderson makes some observations that may well arrest the attention of those who regard our Constitution as having outlasted its usefulness. Absolute sovereignty, he admits, rests with the people of the United States, but, he adds: "As an American, I am proud to know that the government of the United States is *not* unlimited in its sovereignty. . . . The Constitution was made by the people as a check upon their representatives. . . . A nation which possesses the power to govern itself, without dependence upon any foreign power or state, is properly denominated a sovereign state. The form of its government is wholly immaterial." As Judge Story puts it, the sovereignty of a nation or state may be absolute and uncontrollable in all respects, except the limitations which it chooses to impose upon itself. But the sovereignty of the government organized within the state may be of a very limited nature. And these limitations are designed to protect the rights of the people against the arbitrary acts of their rulers.

The imperialist or despotic theory of government, as stated by Representative Dalzell, ignores these distinctions. He expressed his sorrow that Mr. McCall thought that the American people could not be trusted to do justice unless "tied down by the terms of a written instrument." But it is not the people that are tied down; it is Representative Dalzell and his fellow-Congressmen, and President McKinley and his Commissioners, when they propose to disregard those fundamental rights of mankind which the Constitution was framed to protect. According to Mr. Dalzell, it is idle to inscribe the principles of liberty "on any parchment." The "flag" is enough to preserve these great principles. The guarantees of liberty "do not depend upon the Constitution for their strength and perpetuity." They do not need the support of the Constitution, for "no American Congress would dare to violate them in the face of the American people." It is evident that, according to this theory, all the praises that have been bestowed on constitutional, as opposed to absolute, government have been misplaced. Bills of rights and constitutional checks are superfluous. If they are unnecessary when Congress undertakes to govern colonies, they can certainly be dispensed with when it legislates for our own people. It would seem to follow that the Supreme Court is no more needed than the Constitution which it was created to expound. This doctrine may be convenient for the present purposes of the Republican party; but what would Mr. Dalzell say were the Democrats to get control of the government, and proceed to legislate in accordance with their views of what the people desired?

Prof. E. G. Bourne of Yale University raises in the *Evening Post* the question whether the pending Porto Rican tariff bill is not in conflict with that clause of the Constitution which provides that no tax or duty shall be laid on articles exported from any State. The question is an interesting one. It is evident that articles imported into Porto Rico from any of the States of the Union must be articles exported from those States. It is equally evident that if Congress lays a duty on such articles when they enter Porto Rico, it is laying a duty on exports from this country, which it is prohibited from doing. The doctrine of the imperialists, as announced by Representative Dalzell, is that the Constitution does not apply to Territories, and that there is nothing to hinder Congress from laying duties on imports into New Mexico or Alaska from the rest of the country. Any one who adopts this view of the Constitution would probably find no difficulty in maintaining that when Con-

gress lays duties on articles imported by Porto Rico from this country, it is not taxing our exports. The best way out of the difficulty is to let the Porto Ricans govern themselves, and lay such duties as they think best.

We regret to see that President Schurman, in his Chicago speech, has landed on the commercial basis of our doings in the Philippines, and finds a justification for them in the supposed fact that we shall sell more goods by virtue of our occupation of the islands. This is the Beveridge argument over again, to which Senator Hoar responded with the Saviour's reply when he was offered all the kingdoms of the world if he would pay homage to the spirit of gain: "Get thee behind me, Satan." We agree with Senator Hoar that no amount of trade or of pecuniary gain can compensate us for what we have done and are doing in the Philippines, and we deny that any net pecuniary gain will come to us from that quarter. Mr. Schurman's economical argument is entirely destitute of foundation. In order to show how needful it is commercially for us to hold the Philippines, he points to Africa as an illustration of the smallness of our foreign markets, and uses what is substantially an argument for grabbing any territory that we can lay our hands on. It certainly implies that we were remiss in not seizing some portion of Africa before it was all gobbled up.

Now, what are the facts about our trade possibilities in Africa? The chief trading countries of that continent are South Africa, where the war is now raging; Egypt, the Sudan, the Congo Free State, and the British possessions on the Niger. These countries embrace nine-tenths of the foreign trade of Africa, and every one of them is open to us without any discriminating duties or regulations of any kind. The only African countries worth mentioning which in any way justify Mr. Schurman's remarks about our "exclusion," are Algeria and the French Sudan and German East Africa. The French possessions have cost France ten times as much money as she has ever got out of them, and German East Africa has thus far been worthless to Germany. If we were offered as a free gift all the African possessions of both those countries, we could not afford to take them. Except as furnishing places for needy politicians, they are of no use. Even Great Britain has found her African colonies a losing game. Not only have they brought upon her numerous costly wars in Egypt, the Sudan, and Ashantee, but she is now engaged there in the bloodiest conflict she has seen since the war in the Crimea, and, according to the best financial authorities, the cost of it will wipe out all savings she has been enabled to make since 1879. In the latter year she began systematically to pay off the national debt. She set apart a fixed sum annually for this purpose. She will be obliged to borrow all this money afresh, and some of her statesmen say that her greatest troubles will come after she reaches Pretoria. Yet Great Britain is far superior to us in tact and experience in managing distant colonies and getting on with troublesome neighbors.

The Chinese Minister to this country has frequently indulged in his childlike and bland humor at our expense; and in his address in Philadelphia on Washington's birthday, he added a few more delicious touches of it. One was his account of the consular system of other nations, as built up and operative in China, and his dry suggestion that it would be "not unwise" for the United States to endeavor to secure trained consuls, who know something of the language and habits of the people among whom they are stationed. He did not refer to the fact that the bill for consular reform, urged by our leading commercial bodies, had just been ignominiously shelved in Congress; but it must have been in the minds of many of his hearers. The Minister was at his humorous best, however, in advocating an extension of the Monroe Doctrine to China. With grave show of argument, he reasoned it out that China is now much nearer to American possessions than Patagonia was in Monroe's time, and that really it is high time the Chinese empire were included in the American system. An appearance of Oriental innocence, veiling sly sarcasm, could no further go. The "late Col. Monroe" would appear very late indeed in the guise of stern moralist warning the Powers to keep hands off China.

We have the best of reasons for believing that Secretary Hay will soon inform Congress and the country of the details of his successful Chinese negotiation. As we understand the matter, what he has obtained from European Powers is a guarantee of our trade rights in China, not under the form of a treaty, but by means of an exchange of official notes. To have negotiated treaties would have been the work of months or years; the method adopted was both expeditious and effective. Of course, no other sanction than a moral one attaches to the agreement, but no other sanction, after all, binds nations to maintain treaties inviolate, or to respect the rules of international law. It is much to be hoped that Mr. Hay will speedily publish a full account of his highly important achievement. It would show the war-at-any-price men how vastly more renowned are the victories of peace than those of war. It would also, we think, by its heightening of the prestige of the State Department, help on the ratification of the Hay-Pauncefote canal treaty, upon which the Jingoes have been breaking their teeth.

The Senate currency bill has been substantially accepted by the House conferees, and there is every reason to suppose that the report of the conference committee will be adopted. The gold standard is enacted without any equivocation, and the Secretary of the Treasury is *required* to keep all kinds of money issued by the United States at a parity—this being a more explicit declaration than that of the Sherman act, which merely declares it to be the policy of the United States to do so. For this purpose the Secretary is authorized to sell 3 per cent. bonds to whatever amount may be necessary to maintain a gold reserve of $150,000,000. A division of issue and a division of redemption are established in the Treasury Department to have the sole charge of the currency function of the Government. No bonds can be issued to meet current expenses of the Government without special authority of Congress. These provisions are somewhat less satisfactory than those of the original House bill, but they will accomplish the object, which is to put the question of the monetary standard out of the field of controversy. This is so great an achievement that it is not much dimmed by the refunding scheme which the House conferees accepted after some resistance. The Republican party has in this respect reversed its own financial past, and endorsed the policy of a permanent national debt. This is one of the issues it will have to meet in the next campaign. It is true that the Secretary is only authorized, not required, to issue the new thirty-year bonds. He may elect not to do so, but in that event it will be a matter for wonder why the party should be willing to incur the odium of the permanent debt policy without availing of it.

The Republican and Independent newspapers which supported McKinley on the financial issue in 1896 are coming to perceive that this issue is settled by the assured enactment of the gold-standard law at an early day. Some of the party organs can hardly disguise their chagrin at the loss of an issue which once served them so well, and which until recently they had counted upon using as effectively again. Occasionally one takes the position of the Hartford *Courant*, that it is "real mean" for people to act upon the understanding, which has been maintained by every Republican in Congress, that the new law makes the gold standard permanent, whoever may be the next President; as the *Courant* puts it, it is "abominable politics" for Democratic newspapers to

say that it removes the country from danger from Bryan's heresies on the money question. But most editors do not waste any time in vain regrets over the abominable politics of the Democrats in this case, because it is a part of their creed that Democratic politics are always abominable. They are considering how the Republicans can carry the country after they have made the people believe that the money question is settled.

The central West was carried for McKinley on the financial issue only after a very hard struggle, four years ago. Republican and Democratic journals in that section do not conceal their feeing that the policy pursued by the McKinley-Hanna syndicate, of running the government in the interests of the protected classes, the subsidy schemers, and the Trusts which are protected by the tariff, is playing into the hands of the Democrats. The Indianapolis *News*, for example, says that "the thing to do is to kill the subsidy bill," alleging as one reason that "the Republicans are not so strong in the confidence of the country that they can afford to take chances." The *News* also confesses that "the Democrats are going to have the advantage of the Republicans in the approaching campaign on the Trust question, unless the Republicans do something at this session of Congress." It holds that "one thing at least they could do—unless the power of combined wealth really has the upper hand in the party: they could remove the tariff from every product which in this country is now controlled by a Trust." But, of course, the *News* knows perfectly well that the power of combined wealth which refuses the appeal for humane treatment from Porto Rico, will never allow the tariff to be overhauled in order to diminish the profits of the Trusts.

The decision of the Senate to take up the Quay case, by a vote which is regarded as assuring him the seat that he claims upon the appointment of the Governor of Pennsylvania, is no surprise to those who understand the potency of personal considerations in club life. For it is in their capacity as members of the finest club in the United States that a majority of men who do not consider Quay's claim a valid one, are going to pronounce it good enough to justify his return to fellowship. During his long term of service, the Pennsylvania boss has made many firm friends on both sides of the chamber, and has put many Senators under heavy obligations. He simply insists now that they shall show their friendship and acknowledge their obligations. Enough of them are apparently ready to comply, so that he may regard the matter as settled. That the Senate, in taking such action, will turn its back upon an interpretation of the Constitution which it affirmed less than two years ago, is a consideration which counts for nothing with the majority of the eighty-odd members of the club.

It is a great triumph for civilization that the leaders of the opposing parties in Kentucky should have agreed to submit all the questions at issue to the courts, and then abide by their decision. There is to be a speedy trial in the Jefferson Circuit Court of cases which involve the title to the Governorship; the matter will then be taken to the State Court of Appeals; either party will then be at liberty to carry the questions involved up to the Supreme Court of the United States, with a prayer from all concerned for the earliest possible hearing and determination; and, finally, "they will submit to and abide by all the orders and judgments of the courts made in said suits." In other words, the whole controversy is to be settled in an orderly fashion by the tribunals constituted to decide all such questions, and not by the resort to force which was so long threatened and so narrowly averted.

The sudden termination of the movement in the Bar Association to investigate the action of Justice Fitzgerald in appointing a receiver for the Brooklyn Wharf and Warehouse Company will, no doubt, cause exultation in Tammany Hall. It will probably be described as a vindication of the course of that Justice, although, when properly understood, it is nothing of the kind. The resolution presented proposed that an investigation should be made by the Assembly of the State. To the question asked by Mr. Boardman, if there was a man present who believed that any substantial result would be gained by taking the charges to Albany, there could be but one answer. The public understands the character of the Assembly and the character of the bosses who control it, and it has had recent experience of the character of investigations carried on under such auspices. If an impeachable offence had been committed, it would by no means follow that an impeachment could have been secured; and, in fact, the offence committed was rather morally than legally impeachable. To appeal to the Legislature under such circumstances would be useless. What is needed is an investigation such as the Bar Association could make, if it had the legal power to summon witnesses and compel them to give evidence—but that, unfortunately, it has not. It by no means follows, however, from the defeat of the proposed resolution that no good has resulted from the agitation. The fact that some 500 of the better class of lawyers attended the meeting, and the vigor of the opinions expressed by a number of those whose standing is of the highest, show how strong is the feeling that has been aroused. They indicate that whenever the opportunity comes to revolt against the present system of selecting judges, men will be found ready and eager to take part in the struggle.

Assemblyman Stewart has introduced a bill at Albany to prevent the publication of scandalous matter found on the person, or in the possession, of suicides, or persons dangerously wounded. It provides that all papers so found shall be sealed up and delivered to the county authorities, and that they shall not be published except by the order of a competent court. The need of such a law has been felt many times in this city. Persons who take their own lives are presumably insane. They have strange ideas of the conduct of their most intimate friends and relatives. They conceive that plots have been formed against them. They put these disordered fancies into writing, and, when they commit suicide, the papers found upon them are published in the yellow journals without the smallest regard to the feelings of the living. The charges made, or the reproaches uttered, by the dead cannot be refuted. The dead person cannot be cross-examined, and most frequently the persons injured by such communications are reluctant to make any defence of themselves. In fact, their only legal remedy would be by an action for libel against the offending newspaper. Mr. Stewart's bill ought to pass, and it ought to be supported by appropriate penalties for any unauthorized publication of such posthumous matter.

Gen. Roberts's success could not well be more complete. Since his movement began, he has swept on with swift energy and without a single check. Not only did he break through the Boer defences and raise the siege of Kimberley; he so massed superior forces that Gen. Cronje was forced to hurried flight eastward, and then, wonder of wonders, the British commander showed that he had an army more mobile than the fabulously mobile Boers; ran them down, surrounded them, beat off the columns coming to their relief, and finally compelled an unconditional surrender. Considering the magnificent distances, the nature of the country operated in, and the other difficulties, it is a feat of arms for which it would be hard to find a parallel in brilliant conception and overwhelming success. To the Boers the blow must be staggering. The best they can hope for now, if they persist in fighting, is the prolonged agony of an essentially guerilla defence, sure to be broken down in the end by the attrition of an enemy vastly stronger in men and resources. It is on all accounts to be hoped that an honorable peace may be arranged without further waste of life; but we fear the contrary.

THE PRESIDENT AND PORTO RICO.

The framers of the Federal Constitution took pains to give the President of the United States great power of initiative regarding legislation by Congress, and even greater power of thwarting attempted action by the legislative department which he should consider unwise. Much as they had suffered from the tyranny of a king, they realized that the National Executive must possess a large measure of authority if the new republic were to succeed. As Hamilton said in the 'Federalist': "A feeble Executive implies a feeble execution of the government. A feeble execution is but another phrase for a bad execution." In further discusion of the subject, Hamilton laid stress upon the dangers of "an unbounded complaisance in the Executive to the humors of the Legislature," saying on this point: "The latter may sometimes stand in opposition to the people, and at other times the people may be entirely neutral. In either supposition, it is certainly desirable that the Executive should be in a situation to dare to act his own opinion with vigor and decision."

For these reasons it was made a duty of the President that "he shall, from time to time, give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient"; and he was vested with the power of vetoing any bill passed by Congress, in which case it could not become a law except by passage a second time with a two-thirds vote in each branch. Of the first prerogative, Story says:

> "The duty of giving information by the President to Congress of the state of the Union, and of recommending measures, would seem almost too clear to require any express provision. But it is not without its use. It fixes the responsibility on the President; and, on the other hand, it disables Congress from taking any objection, that he is impertinently interfering with their appropriate duties. His knowledge of public affairs may be important to them; and the people ought consequently to have a right to demand it. *His recommendation of measures may give Congress the benefit of his large experience; and, at all events, may compel them to a just discharge of their legislative powers.*"

In accordance with this injunction of the Constitution, President McKinley, on the 4th of December last, gave Congress information respecting the condition of Porto Rico, and recommended the measure of legislation for that island which he judged necessary and expedient. His conception of national duty in the matter was clear, and his language was explicit. He concluded his discussion of the subject with these positive words:

> "The markets of the United States should be opened up to her products. Our plain duty is to abolish all customs tariffs between the United States and Porto Rico, and give her products free access to our markets."

In due course of time the Republican majority of the House Committee on Ways and Means reported a bill carrying out the President's conception of national duty by giving Porto Rico free trade. Within a month, however, some influence compelled all of the Republicans on this committee except Mr. McCall of Massachusetts to eat their own words, and report a substitute bill imposing a tariff. Hardly had this change of base at the capitol been executed before it was reported that the President had also altered his position. Next day it was announced that he had not changed; then that he had; then that he "adhered to his views," but would sign a bill directly opposed to those views. Throughout the debate last week in the House, he was quoted first one way, and then the other. Supporters of the new tariff scheme declared that he was for taxing the people of Porto Rico; advocates of the original free-trade policy insisted that he talked as though he believed that plain duty remained the same in February as it had been in December.

So humiliating a spectacle as this has never before been presented by any President. It disgusts alike the members of his own party in Congress, and the people throughout the country. The nation has been educated to expect and demand from its Executive a clear statement of national duty, and the exercise of his great influence to secure the discharge of that duty by Congress. It admires and respects the President who thus exercises his high prerogative—who does what Grover Cleveland did in 1893, when he convened Congress in special session to rescue the national finances from threatened ruin by demanding the repeal of the Sherman silver-purchase act, and then stood firm as a rock when intriguers of the Gorman brand in his own party cooked up a scheme to evade duty by a weak compromise, letting it be known that he would never give his consent to anything short of the absolute repeal which the exigency demanded.

There was one course open to Mr. McKinley by which he might have saved his self-respect. It was pointed out, the other day, when Mr. Bromwell, a Republican Congressman from Ohio, who favors the policy advocated by Mr. McKinley in December, said in the House: "If the President of the United States, since his message to Congress in December, has obtained information which shows that conditions are different to-day from what they were then, it is a solemn duty that he owes to this house and the other house of Congress that he should communicate that additional information to us, that we should not be dependent upon conversations and interviews of individual members of this house with the Chief Executive for the information upon which we, as a legislative body, are to act." But Mr. McKinley has not done this. He has simply made it plain that he has no will of his own; that he is ready to declare his conviction of duty to Congress, and then sign a bill utterly opposed to the course which he advised; in short, that he is the nerveless creature of the syndicate which is now running the government for its own selfish ends, and that the people no longer have that great safeguard of our institutions—an Executive who knows his duty, and who is not afraid to do it.

THE ISSUE OF IMPERIALISM.

The address delivered by Carl Schurz on Thursday evening in Philadelphia, at the conference of the Anti-Imperialist Organization, was, of course, characterized by that clearness and vigor of expression which always distinguishes one of his speeches. It shows the remarkable comprehension of the principles upon which this republic was founded, and of real "Americanism" as it was understood from Washington's day to Lincoln's, which has repeatedly enabled this citizen of foreign birth to illuminate the national situation and to expound the duty of the country.

Beginning with some references to Washington which were appropriate to the anniversary, Mr. Schurz went on to apply the principles of action which governed his conduct to the problems that have grown out of the war with Spain. He first pricked the bubble of that familiar humbug that "Providence" is responsible for our having the Philippines on our hands, and showed that the conquest of those islands "was deliberately planned with a cool calculation of profit." He proceeded to set forth the way in which the policy thus initiated has been carried out. He demonstrated the fact that the Filipinos were at first deceived as to the attitude of our Government toward them, and were led to believe that we meant to help them to freedom and independence, precisely as we had helped the Cubans to reach the same goal. The evidence which he collated is convincing, and fully justifies the conclusion that to all intents and purposes the Filipinos were our allies; that they were entitled at our hands to every consideration due from one ally to the other; that they expected their independence because they believed the American people to be an honest people, and the American government to be an honest government; and that we permitted them to entertain that belief while acting as our allies against the common enemy.

Mr. Schurz repelled with righteous indignation the Imperialist claim that the Filipino war is due to those in this country who have from the first insisted that we should live up to our pledges, instead of to those who have attempted that "annexation by force" which President McKinley himself declared, in a message to Congress two years ago, "could not be thought of, because, according to our code of morals, it would be criminal ag-

gression." It was for the maintenance of this, the old American code of morals, that Mr. Schurz pleaded in the closing portions of his address. He insisted that "the case is *not* finally settled, and that it will not be finally settled until it be settled aright."

Bishop Potter early pointed out that the vital question in this whole controversy was not what we should do with the Philippines, but what they would do with us. Mr. Schurz set forth some of the things which they are doing to us —how we already "hear the scoffing levity with which the Declaration of Independence and the high ideals of liberty and human rights which so long have been sacred to our people are made sport of; how the teachings of Washington and Lincoln are derided as antiquated nursery rhymes, and how the Constitution, when it stands in the way of grasping schemes, is lightly brushed aside with the flippant word, that 'constitutions are made for men and not men for constitutions.'" He laid stress, but none too much, upon the great principles which many good people are losing sight of, that there are things—among them the arbitrary ruling of foreign populations as subjects—which may be done by monarchical or aristocratic governments without making them less strong as monarchies or aristocracies, but which cannot be done by a democracy based upon universal suffrage without fatally demoralizing it as a democracy; and that what a democracy needs most, to insure its stability, is that element of conservative poise in itself which can be furnished only by popular faith in the principles underlying democratic institutions, by popular reverence for high ideals and traditions, and by popular respect for constitutional forms and restraints.

Mr. Schurz concluded by warning the Imperialists not to delude themselves by thinking that if those who oppose them are beaten now, they will surrender. He declared that the appeal for the righting of this great wrong will be taken to the people; that it will be kept there, and, if need be, renewed year in and year out; and that "it will give you no rest, as the slavery question gave us no rest, until finally settled aright." The Anti-Imperialists will wage this fight, because the upholders of the Declaration of Independence and of the Constitution, the followers of Washington's and Lincoln's teachings, although they may be called "traitors" or "bores," will not give up the belief that the American people are an honest people; and, like the anti-slavery men, they will not cease to appeal to the popular conscience.

It was a happy coincidence that, on the very day when this appeal for justice was made by Carl Schurz at a meeting of Anti-Imperialists in Philadelphia, the same appeal was heard on the floor of Congress from a Republican member who represents that district of New England which is peculiarly distinguished for independence of conviction and adherence to conscience. The whole issue of Imperialism is involved in the pending controversy in the House over the imposition of a tariff upon the starving people of Porto Rico. Mr. McCall of the Cambridge (Mass.) district made an earnest protest against our adoption of the very policy which England so long pursued toward Ireland, with such results that "generations will fail to obliterate the bitter memories of the oppression and wrong which rankle in the hearts of the Irish people"; and asked his party colleagues, "Do you want to make Porto Rico our Ireland?" He "branded with all his energy this hateful notion, bred somewhere in the heathenish recesses of Asia, that one man may exercise absolute dominion over another man or one nation over another nation." He closed with this fine expression of confidence that the right will at last prevail:

> "A half million men gave up their lives that their country might stand clothed in the resplendent robes of constitutional liberty, and that we might have a government of laws and not of men for every man beneath the shining folds of the flag. All the sweet voices of our history plead with us for that great cause to-day, and I do not believe, sir, that this nation will tolerate any abandonment of that principle which has made her morally, as she is physically, without a peer among the nations."

REFORM IN PHILADELPHIA.

The result of the election that took place last week in Philadelphia is extremely encouraging. The difficulties to be overcome by the Municipal League, a body of independent voters, were very great. The machinery of the Democratic party in that city has fallen under the control of the Republican politicians, and the law providing for minority representation has thus become a means of making the power of the majority more absolute. Under this law, the Republicans named ten candidates for city judges, and the Democrats six. The leaders of both parties being in collusion, under ordinary circumstances the sixteen candidates whom they nominated would be sure of election. Relying on the advantage given them by the law, these leaders determined to have magistrates of their own stripe. The Republicans refused to renominate a judge who had ventured to hold Mr. Quay for trial on the charges growing out of the People's Bank failure, although his merits were unquestioned, and substituted another candidate for one who had shown signs of independence. The Democrats, adopting the same course, refused a renomination to two judges, one of whom had been active in seeking to bring to trial some election officers who had been accused of allowing false voting.

In addition to the advantages which the law and the collusion of their leaders gave to the politicians, they had vast resources in the shape of fraudulent votes. The actual falsification of elections is not now a serious evil in New York. No doubt a certain number of votes are cast by those having no right, but the understanding between the leaders of the opposing parties does not often go to the extent of arranging for fraudulent voting. In Philadelphia, however, the evidence is conclusive that outrages of this character have been systematically perpetrated. No one remembers an honest election, and in some wards the number of illegal votes has probably been as great as that of the legal ones. In one division of the Seventh Ward, the number of legal voters is computed at about 100; but the election officers returned 252 votes as cast at the election last year. At the election last week, last year's election officers being now in jail, the total vote was 99. In another division, which last week gave the "Quay" candidate 216, the Republican vote last year was 332.

We lately commented on the purchase of poll-tax receipts by the party managers, their practice being to have these receipts used as evidence of the qualification of the bearer to vote. Out of some 30,000 receipts of this character turned in by the Republican city committee, all but 2,557 were finally rejected by the Receiver of Taxes as invalid. So vigorous was the attack of the Municipal League on this abuse, although its representatives were not permitted to inspect the lists, that the Republican committee withdrew its applications for receipts in several wards. In the month of January, 1900, while the Municipal League was bestirring itself, about 7,500 of these poll-tax receipts were given out. In January of the previous year 21,000, and in November nearly 35,000 were issued. In spite of this reduction, it is computed that in one of the corrupt wards there are still outstanding several hundred more of these receipts than there are voters in the ward. Fortunately, sufficient evidence was procured before the late election to justify the arrest of one of the officers who had certified to the genuineness of the signatures to one of these fabricated lists, which probably led to their abandonment by the Republican politicians.

In spite of all these obstacles, and of the still more formidable one arising from the apathy or hopelessness of the well-to-do citizens of Philadelphia, the Municipal League won a notable victory. It elected four magistrates, three of whom had been refused renomination by the politicians. The Republicans, of course, elected their candidates, but by reduced majorities, the highest vote obtained by any of the candidates being about 100,000. The highest Independent vote was over 45,000, and the straight Municipal League candidates averaged 26,500; while the Democratic vote was

about 32,000. An analysis of the vote cast shows that the Republican managers must have contributed about 15,000 votes to the Democrats, leaving the regular party vote only about 20,000. In fact, the Municipal League appears to have displaced the Democrats as the minority party in Philadelphia, and it will thus become entitled to a portion of the offices under the law giving minority parties representation.

This result shows, incidentally, that even so poor a measure as that for the representation of minorities in Pennsylvania may become available for independent voters, if they are sufficiently in earnest; at least, when the managers of the regular parties are so unprincipled as they have shown themselves in Philadelphia. It shows also what can be accomplished by a few earnest reformers who have sufficient virtue to disregard the sneers and ridicule of "practical" men, and who will make no bargains with politicians known to be corrupt. Perhaps in no city in the country is the work of reform so difficult as in Philadelphia. The control of the Republican party has been so absolute, both in the city and in the State, that the Democratic party has almost ceased to oppose it. In New York the contests between the parties are, to a considerable extent at least, genuine struggles, in which each party may make some appeal to Independent voters. But in Philadelphia the Independent voters have had to form their own organization and fight their own battles, and the fact that they have succeeded so well will encourage the friends of good government everywhere.

EQUALIZING THE STATE TAXES.

A bill has been introduced in the New York Legislature by Senator Elsberg which offers a very happy solution of the problems arising from the present system of collecting State taxes. This system is theoretically correct, and complies with the maxim that taxes should be collected with the least possible expense to the taxpayer. To put it briefly, the State Tax Commissioners now ascertain the assessed value of property in the several counties of the State, and then apportion the State tax accordingly. The local authorities then simply add their proportions of the State tax to their levies, and pay over these percentages, when collected, to the State treasury. Nothing could apparently be more equitable; and nothing could be in practice more unjust.

The mischief arises from the fact that the system makes it for the interest of every county or local taxing authority to make its assessment as low as possible. The lower its assessment, the less the proportion of taxes to be paid to the State, and the temptation to which assessors have been subjected has been irresistible. In spite of the fact that they are required by law, under the penalties of perjury, to assess all property at its fair market value, they have persistently undervalued real property to an outrageous degree. In many of the rural counties, real estate has been systematically assessed at less than one-half and sometimes at less than one-fourth of its value. Until recently there was a kind of unwritten law that real estate in New York city should be assessed at not more than two-thirds of its value, and similar customs prevailed in other cities. Hence it became necessary for the State Tax Commissioners to revise these local assessments in order to correct the grossest of the inequalities—a process in which the city of New York regularly had its assessments raised, although it is quite probable that they were more nearly just than those of most of the communities whose burdens were lightened. The task, although necessary, was invidious, and its performance has been invariably attended with complaints from every quarter.

While this abuse has attracted public attention, there is another, and more serious one, which has passed unnoticed. It arises from the taxation of bonds and mortgages. Whatever opinions may be held concerning the propriety of taxing mortgages, no one contends that they should be taxed at a higher rate than real property. But the practice of assessing real estate at less than its value unavoidably led to the over-taxation of mortgages. No assessor was willing to declare under oath that a good bond for the payment of $1,000, secured by a mortgage on real estate, was actually worth only $500, or $666. Hence whatever bonds the assessors discovered in the possession of taxpayers were listed at their face value; and as the rate of taxation is the same for both real and personal property, such mortgages were taxed at a rate materially higher than that imposed on real estate. As the mortgages discovered were generally owned by women and children and lunatics, while other owners felt justified in evading such unfair taxation, the burden imposed on helpless people has been even more onerous and inequitable than it would in any event be while real property is undervalued.

The remedy proposed by the bill to which we have referred is very simple, and whatever opposition the other tax bills before the Legislature may encounter, this one deserves general support. What the bill proposes is to make the Commissioner of the Land Office and the Commissioner of Taxes a State Board of Apportionment. This Board is to determine the proportion of State taxes in each county, "in the ratio of the gross amount of taxes for all purposes (except State and school purposes) laid in each county in proportion to all the counties, on assessed values of property, during the tax year immediately preceding the imposition of such State taxes." In other words, the State becomes altogether indifferent to the vagaries of local assessors. They may make out their counties to be rolling in wealth, or on the verge of starvation, as they please; all that the State requires of them is a statement of the amount of their tax levy, and on that amount the State collects its percentage. It goes without saying that expenditure is practically the best test of income, and the presumption is irresistible that a community which taxes itself heavily is able to bear a corresponding part of the expenses of the State government. In fact, this system is practically an income tax on the counties, with none of the possibilities of evasion which make income taxes ordinarily objectionable. No doubt communities raising large sums by taxation would complain, but it can hardly be denied that such communities are presumptively wealthy, and better able to contribute to the revenues of the State than those where the taxes are small. But it is quite possible that such communities might find that their burdens were no heavier than before, while the perennial quarrels between State and local officials concerning assessments would be terminated.

The West End Association of New York city, which advocates this bill on the ground above set forth, contends also that it will not only encourage, but almost force, economy in every tax district of the State. "If a county is economical it pays less State tax, and if it is extravagant it pays more. If the State is extravagant every county will pay more, and every taxpayer will know just how much more." Possibly this view is too hopeful as to fostering the disposition to economize in local governments, but it is certainly highly desirable that the attention of taxpayers should be constantly called to the great increase in the expense of the State government. In no way can this be more effectually accomplished than by having the cost of this government appear on every tax bill, and the measure under discussion should contain a provision to that effect. The measure also provides that every county and city shall have power to prescribe the class or classes of property upon which taxes shall be imposed. This is a desirable application of the principle of local option in taxation, and if it can be adopted it will be a great gain. But it has nothing to do with the main feature of the bill, and should be sacrificed if necessary to secure that most desirable reform.

ÉMILE FAGUET.

NEW YORK, February 21, 1900.

The French Academy, having elected a politician, a vaudevillist, and several men of the world, has at last bethought itself to

take in a man of letters. For several days, in fact, M. Émile Faguet, already a brilliant critic and eminent professor, has found himself an Immortal to boot, thanks to the election which assigns him, beneath the cupola of the Palais Mazarin, the place held by Victor Cherbuliez.

Those who have seen, on the Boulevard St. Michel, the singular outlines of this careless and jolly bachelor, as he daily comes along, with swinging gait and elastic step, balancing his cane and whistling a tune, to seat himself on the terrace of the Café Vachette, will no doubt be surprised at the Academy's reception into its "salon" of a man so little decorative, with such a bad figure, and who so often forgets to brush his hat. Those, however, who have followed the literary movement of the past twenty years will be still more surprised that the Academy waited so long to choose a writer who is both the most intelligent and the most popular representative of contemporary French criticism.

Americans who judge of the place that certain critics occupy in French public opinion by the importance of the rôle which chance has made them play in the United States, are in danger of committing a slight error of perspective. M. Brunetière (to cite but a single name) does not absolutely exercise all the influence which many ascribe to him. Outside of the Catholic seminaries and universities and the Vatican, where he has just been lecturing so brilliantly before the cardinals, M. Brunetière has more readers than disciples. His imperious and dogmatic eloquence impresses more than it persuades the public, and his talent inspires greater admiration than his judgment does confidence. Many read or listen to him only to contradict; and what authority he possesses he has arrogated to himself rather than gained by way of recognition.

M. Faguet, on the contrary, owes his to the spontaneous suffrages of students and the literati who, in reading his books, discovered that this writer was a master, erudite, delicate, witty, full of original and, what is better worth, of just ideas. He had struck, in speaking of classic writers like Corneille and Racine, so fresh a note and so personal a tone that the attention of students was instantly arrested by this critic, so little resembling bygone professors such as Villemain and Nisard, and still less certain professors of the present day. Thus when, about 1890, the university youth, in an inexplicable fit of disorder, amused themselves by *conspuer* the masters who displeased them, amid the various cries with which they filled the amphitheatre of the Sorbonne that of "Vive Faguet!" resounded not infrequently. M. Faguet was then professor of rhetoric in a Paris lycée. The pressure of public opinion as well as the choice of the administration carried him with a rush to the University, where he was received with enthusiasm, and where, ever since, his popularity has been on the increase.

Hitherto his career had been that of the majority of French professors. Born in 1847, at La Roche-sur-Yon in La Vendée, where his father, too, had been a professor, he attended the École Normale Supérieure, where he earned a fellowship. He then taught in different provincial lycées, passing as chance promoted him from La Rochelle to Poitiers, Moulins, Clermont-Ferrand, Bordeaux, and finally Paris, which in France is the aim and goal of almost all functionary ambition. He seems to have been in no hurry to enter letters. When his first work, on 'French Tragedy in the Sixteenth Century,' appeared he was thirty-five years of age—two more than M. Brunetière, six more than M. Lemaître. But it was not this erudite book (his Doctor's thesis, too) which made him known, nor even his earliest articles as journalist and dramatic critic, produced in the intervals of his teaching, after the manner of so many French professors whom journalism has attracted and absorbed, like About, Prévost-Paradol, Sarcey, for example. His book on 'The Great Masters of the Seventeenth Century,' which came out in 1885, had, on the contrary, a serious success in University circles, and revealed to the expert the birth of a new critic. But the "great public" knew him not. To arouse the distraught and lazy attention of the great public, in France as elsewhere, something more than a good book is needful—a book which, in one way or another, excites the passions, shocks the prevailing sentiment, and provokes a bit of scandal. To obtain this result, a critic has but one means—to attack somebody violently. M. Brunetière owed his first notoriety to his vigorous campaign against naturalism. M. Lemaître was a celebrity the morning after he had written a ferocious article against the favorite novel-writer of the unlettered bourgeois, George Ohnet. In French slang this is called a slashing (*éreintement*). M. Faguet chose for his *éreintement* a man who, although he died a century ago, is more alive than many contemporaries, in virtue of the animosities he excites and the admiration he has retained—Voltaire.

Voltairianism has been one of the religions of our century. The university generation of 1848, that of Edmond About and Sarcey, the freethinking bourgeoisie, the provincial anti-clericals, fanatical and rather narrow-minded men, of whom Flaubert immortalized the type in M. Homais, have never ceased to swear by Voltaire; and it was they whom M. Faguet was to wound in touching him. Now he handled Voltaire familiarly and even brutally, scandalizing them as if by sacrilege. The book, 'The Eighteenth Century,' which contained his attack, and which appeared in 1890, tended, for the rest, in a general way, to depreciate the eighteenth century in favor of the seventeenth. He defined it as a childish century (*siècle enfant*), and taxed it with having the "impulsiveness, indiscreet ardor, curiosity, malice, intemperance, verbiage, giddiness," etc., of that age. As for Voltaire, who formed the subject of one of his principal chapters, he showed him unveiled, with his defects, his pettinesses, his meanness, while not denying a single one of his merits. "He was," said M. Faguet, "a very primitive man of his sort; he was profoundly ignorant of the distinction between good and evil. His was the dryest heart that was ever seen, and the nearest to a non-existent conscience on record."

This judgment aroused tempests. Old Voltairians were grieved by this irreverence, and some accused M. Faguet of being animated by confessional prejudices and reactionary passions. Sarcey was distressed, and Anatole France appeared surprised. Voltaire's enemies, on the other hand, uttered shouts of triumph, reckoning on a new and brilliant recruit for their party. But M. Faguet did not deserve the rage of the one or the felicitations of the other. Although by temperament and perhaps by education, he seemed rather to lean to the side on which M. Brunetière was already doing battle, he soon showed that he was a free spirit, saying what he thought true without regard to the party which applauded. At the same time that his book was denounced by Voltairians, it was interdicted in the Jesuit colleges. Since then his studies on the sixteenth century and the nineteenth have assuaged wrath, and proved to his readers, daily a greater number, that the new critic wished merely to be a critic, and to bring to the appreciation of works that impartiality and "clarity of conscience" only to be had by one who, in M. Faguet's words, "is strong enough to detach and abstract himself." This independence and freedom of mind permits him to study with the same serenity, and almost the same sympathy, men as different as Bossuet and Calvin, Proudhon and Joseph de Maistre. These qualities, too, have been the source of the authority which he has won, and the confidence shown him by a public that knows him to be not seeking to maintain theses, but to explain and define men and books.

In this he succeeds marvellously, thanks to a penetrating intellect and a gift of exposition which renders clear the obscurest systems, and comprehensible the most enigmatic men. Auguste Comte and Taine, Renan and Stendhal, have been both analyzed and defined in a manner to satisfy the most exacting. His portraiture is faithful and true, without condescension and without rhetoric, but not without an ironical indulgence. One feels that he sees justly and sees the whole. Some weeks ago, having to deliver at the École Normale a eulogy on Sarcey, he did it so completely and finely that nothing could be added to it. When Victor Cherbuliez died, M. Faguet was the only writer in the French press to produce an article on him worthy of the subject, and this article was a masterpiece.

His style has sometimes been criticised; and indeed I should not advise a foreigner to imitate it. It is, like M. Faguet himself, a little "irregular," capricious, and eccentric. Speaking of Calvin, he said: "I have a weakness for writers who have, in writing, somewhat of the spontaneous freedom of speech." In this phrase he defined his own style, which is precisely conversation: free, brisk, animated, with unexpected hits, hardy familiarities, and charming eccentricities. In this vein he chats at the Café Vachette, or in his courses at the Sorbonne, or in that brilliant weekly feuilleton in the *Journal des Débats* in which, talking of the dramatic art, he has succeeded in consoling readers for the loss of Jules Lemaître. And to this spontaneous and offhand mode of writing or speaking we owe those piquant formulas, those improvised definitions, which abound in him, and which give his style something animated and direct that few writers possess in the same degree. Thus, for instance, wishing to characterize Stendhal, he calls him "un déplacé," who is, "in the first half of our nineteenth century, as if in a house where he doesn't know his way about, and in a dress which he wasn't made to wear." And he adds: "And he nurses an ill temper, and thereby contracts a certain oddity and pretty bad manners." Of Théophile Gautier he says everything in the sentence, "He sets out from nowhere, and just there he arrives." He writes incidentally of Balzac:

"Balzac had no wit at all." Finally, in his celebrated chapter on Voltaire, this phrase suffices to explain the emotion of the Voltairians: "The prince of wits became the god of imbeciles."

It is sometimes said, regarding contemporary French criticism, that France has no longer a Sainte-Beuve; and truly, for Sainte-Beuve is, as a matter of fact, dead. But if one chooses to observe that France possesses to-day critics named Brunetière, Lemaître, Gaston Deschamps, Gustave Lanson, and Émile Faguet, who, each in his own vein and with his special talent and temperament, have continued the work of the author of the *Lundis*, it must be allowed that France can await without too feverish impatience the rising of a new Sainte-Beuve.

OTHON GUERLAC.

Correspondence.

THE CRIME OF '73.

TO THE EDITOR OF THE NATION:

SIR: Col. John S. Mosby contributes to the *Nation* of February 22 extracts from letters of Hon. William E. Chandler (now one of the few Republican champions of bimetallism) and Ernest Seyd, written to the Comptroller of the Currency in 1870 or 1871, in reference to changes then contemplated in our mintage laws, most of which Congress proceeded in 1873 to enact; Mr. Chandler's letter commending the new coinage code generally, while Mr. Seyd especially addressed himself, deprecatingly, to the "abolition of the silver dollar."

These letters, as Col. Mosby explains, were part of a large volume of correspondence of the Secretary of the Treasury and the Comptroller of the Currency with other persons entitled to deference, which was laid before the House of Representatives by the Secretary, George S. Boutwell; all relating to those proposed changes in the coinage. Other portions of that correspondence are quite as instructive, but no part of it is as widely known as it should be; the communication in which the Secretary of the Treasury forwarded it to the House being now a very rare document indeed. The pendency in Congress of the gold bill gives a certain momentary vitality again to the old story of the "crime of 1873"; possibly it will win a momentary hearing for a few other selections from those views of authorities on finance and coinage which the Congress of 1873 had before it.

Several letters which the Secretary communicated to Congress were written to him by Robert Patterson, formerly Director of the Mint, and at the time connected with the Fidelity Trust Institution of Philadelphia. In one of these letters Mr. Patterson observed:

> "The silver dollar, half-dime, and three-cent piece are dispensed with by this enactment. Gold becomes the standard money, of which the gold dollar is the unit. Silver is subsidiary, embracing coins from the dime to half-dollar; coins less than the dime are of copper-nickel. The legal tender is limited to the necessities of the case."

Dr. H. R. Lindeman, another ex-Director of the Mint, writing to the Secretary, advised against a suggested increase of the size of the silver dollar, and added: "It would be better, in my opinion, to discontinue its issue altogether. The gold dollar is really the legal unit and measure of value." (He recognized that the gold standard had been enacted into law by the act of 1853.)

J. Ross Snowden, also ex-Director of the Mint, wrote a letter in which he commented on the proposed demonetization of the silver dollar. He did not favor this, but he confessed that the silver dollar had disappeared, and that, if longer coined, it would "not be used as a circulating medium, but only for cabinets."

Franklin Peale, formerly chief coiner at the Philadelphia Mint, commended the abolition of the half-dime and three-cent piece, and added: "Neither is the silver dollar desirable; its coinage should be discontinued. It is not wanted for change, which a proper silver coinage would supply."

George F. Dunning, lately Superintendent of the United States Assay Office at New York, noting the proposed abrogation of the legal-tender quality from the silver dollar, suggested that the dollar, if still issued, would be only a subsidiary coin, and would best, therefore, be reduced to 384 grains. James Pollock, who was then and for a long time had been Director of the Mint, was of the same opinion, and cited an expression to the same effect in his annual report of 1861.

Four officers of the San Francisco Mint, joining in one letter, combated the suggestions of changing the weight of the silver dollar, and advised that it be dropped entirely.

It should be remembered that the text of this discussion was a House bill dropping the silver dollar, with the silver coins smaller than the dime. The House committee which reported the bill proposed, by an amendment, the substitution of the larger coin which was actually adopted afterwards and received the popular name of "trade dollar"; whereupon the House referred the whole new scheme to the Secretary of the Treasury, with directions to obtain and report the views of authorities on finance and coinage respecting each of the proposed changes. Part of the result was the letters mentioned above and the Secretary's letter to the House transmitting them. My recollection is that most of the letters to the Secretary and the Comptroller were written in 1871. I have before me only memoranda of their contents which I made in 1896.

The only copy I have ever seen of this communication of the Secretary of the Treasury, containing the copies of letters which the House desired, was in the hands of the Hon. John P. Irish of California, who used it with much effect in speeches for the gold standard in the Presidential campaign of 1896. He said that, after a long search for the document in Washington and elsewhere, he had by chance found this one copy at the San Francisco Mint. I have heard of a very few other copies since. BENJ. CARTER.

WASHINGTON, D. C., February 26, 1900.

Notes.

Dodd, Mead & Co. publish directly Count Tolstoy's new novel, 'Resurrection,' and 'The Transvaal Outlook,' by Albert Stickney.

Fresh announcements from the Macmillan Co. are 'Essays in the Monetary History of the United States,' by Prof. Charles J. Bullock of Williams College; 'Economic Crises,' by Edward D. Jones; and 'An Outline of Political Growth in the 19th Century,' by Edmund H. Sears.

Houghton, Mifflin & Co. will soon make a volume of the late Edward Rowland Sill's prose and letters.

'The Essentials of French Grammar,' by Prof. C. H. Grandgent of Harvard, will be issued directly by D. C. Heath & Co., Boston.

The tiny "Beacon Biographies" of Small, Maynard & Co., Boston, have suggested a parallel series of "Westminster Biographies" which this firm will issue in conjunction with Kegan Paul, Trench, Trübner & Co., London, beginning with lives of Defoe, Wesley, and Dryden. In time for the Exposition will be 'A Woman's Paris,' with directions about living, service, cabs, churches and theatres, shopping, dressmaking, etc., with illustrations.

A. C. McClurg & Co., Chicago, have in press 'The Private Memoirs of Madame Roland,' edited, after Bosc's translation, by Edward Gilpin Johnson, and 'Historical Memoirs of the Emperor Alexander I. and the Court of Russia,' by the Countess de Choiseul-Gouffier.

Stebbing's Life of Sir Walter Raleigh, which made its appearance some eight years ago, has just been reissued by Macmillan, with a frontispiece portrait of its subject after the Duke of Rutland's miniature, and fourteen pages of the abundant authorities, carefully indexed for the pertinent sections or passages—a real service to the student. There is also a page of corrigenda, for which we find it hard to account, since, if the original plates are before us, some of the corrections (as of single letters or figures in a date) could easily have been made in them.

Mr. Charles A. Keeler's 'Bird Notes Afield' (San Francisco: Elder & Shepard) is a collection of thirteen popular essays on the birds of California, followed by an appendix containing a "Key" to the Land Birds of California, and brief descriptions of the 204 species here formally treated. During the last five or six years we have had popular bird books galore, treating of the birds of the eastern United States as a whole, or of some particular sections of them, each after its own kind, mostly good and some excellent, and each no doubt filling its niche in a "long-felt want." But Mr. Keeler's is the first book of this kind relating to any part of the Pacific Coast region, and is in its way most excellent. The style is graceful, and the author writes because he has something to say. He is not only a bird-lover, but a full-fledged ornithologist, and his charming descriptions of bird-life in nature are tempered with accuracy of statement. His opening essay, "A First Glance at the Birds," is a delightful presentation of the general features of the bird fauna of California, while the other essays relate to special seasons or localities, as "A Trip to the Farallones," "A Day on the Bay Shore," "March in the Pine Woods," etc., and are each of unusual merit and interest, as regards both their ornithology and their literary style. The "Key" and descriptive list forming the appendix should be a welcome aid to those who "wish an introduction" to the "familiar birds in their native haunts" of the State of California. It is a surprise, however, to

find such a book as this without an index.

What has been already done in some schools, and what may be looked forward to, in beautifying the school-room, is well described in a little book, 'School Sanitation and Decoration' (Boston: D. C. Heath & Co.), by Prof. Burrage of Purdue University, and the Supervisor of Drawing for Massachusetts, Mr. Bailey. The chapters on sanitation are rather slight, but they will serve to call the attention of committees of women's clubs (who are largely carrying on this good work) to what is essential on this subject. On color schemes for walls, and on the right pictures to choose for holding the attention of the children, the book is an excellent guide—as also in the difficult problem of what can be done for the country school, where interest is hard to awaken. But the most interesting feature of the book is the reproductions which it gives of school-work done by children of different grades under the influence of the art atmosphere to which they have been accustomed. The difference in beauty between the ordinary written exercises of the school-room and those which are here exhibited, must be seen to be believed in. It is difficult to predict what a change may be made in the hard practicalness of the American nature if the children in the schools are thus to have aroused in them a feeling for the beautiful.

By choice of a committee appointed by the town on the eve of the 250th anniversary of its incorporation, Rev. D. F. Lamson has written a 'History of the Town of Manchester, Essex County, Mass., 1645-1895,' and the town has published it. The book is not one of the best of its kind, less through the fault of the historian than through the defect of his material; Manchester not presenting so many points of historic interest as some other towns. The emphasis is where it generally is in such local histories—on the several wars to which the town has contributed men, and on ecclesiastical matters. In 1838 Edward Everett claimed for the town a survivor of Braddock's defeat, but Mr. Lamson cannot authenticate the doubtful honor. In the Revolutionary war the town seems to have done its full part, both in the preliminary Committee of Correspondence and on the embattled field. Quite as proud was its distinction in the anti-slavery time when, before the days of the Republican party, there was a Manchester Abolition Society more than one hundred strong. As in Marblehead the fishing business made way for shoe-making, so here it made way for cabinet-making, the growth of Gloucester as the great fishing centre operating in either case injuriously to the fishermen. Later the cabinet-making succumbed to the competition of the Boston market, and the town suffered a decay from which it has been only partly rallied by the influx of summer residents. The first of these was Richard H. Dana, the poet, to whom four generations of his descendants have succeeded; but to Dr. Cyrus A. Bartol is given the credit of having been the chief Uitlander, a child of light, whose wisdom in his generation has not been surpassed by the children of this world. The sea change which the name of the town has undergone began with James T. Fields. But "Manchester by the Sea" is a title which has no legal standing.

In his 'History of Trade between the United Kingdom and the United States' Mr. Sydney J. Chapman has merely outlined the subject, and, therefore, gives an impression of not having mastered the multitude of facts necessary to a full comprehension of it. It is true, in a sense, that tariff legislation in the United States has been directed against the industries of England, but it is more true that commerce has overcome such an artificial barrier, and the English market has ever been our best market. The rise of Germany as a great manufacturing nation, and the adoption of protection by the Continental Powers, have modified the ascendancy of England's commerce, but have not been able to alter its preëminence in the trade of the world. If the United States is to take the first place, as seems inevitable, it will be through its natural advantages and not through its tariff. We wish Mr. Chapman had dwelt upon the causes of the commercial power of both countries. It is not enough to quote figures, and to take a few references from Wells and Taussig, while neglecting the history of commercial policy on both continents. The all too sketchy quality of the work is evident when the later chapters are compared with those of Noyes, who understands his subject thoroughly, and maintains a just balance between the natural and the political elements involved in the development. The publishers of Mr. Chapman's book are Swan Sonnenschein & Co., London (New York: Macmillan).

Prof. W. Watson of the Royal College of Science in London has produced 'A Text-Book of Physics' (Longmans), which, by means of full explanations of matters of difficulty, sets the principles of the subject in as clear a light as a one-volume treatise could well do. Here and there it becomes almost brilliant. We notice in it, too, sundry recent items that probably here make their first appearance in a text-book. Yet we cannot say that it is the ideal treatise we are awaiting from the hands of some man born for such sort of work. In his 896 pages of fine print, the author might have found room for less meagre tables of constants and for references to the classical memoirs. In places the distinction between words and facts is not sharply drawn. Occasionally we meet with such statements as that "Thales, who lived about the commencement of the Christian era, discovered that amber, when rubbed, acquires the property of attracting light bodies." Possibly some German higher critic may have suggested that the report of Diogenes Laërtius about that discovery may refer to some later, unknown Thales. But, if so, this late Thales was not the first discoverer of a fact mentioned as well known by Plato, in that passage of the "Timæus" which almost anticipates Le Sage's conjecture about attraction; and no critic has impugned the authenticity of the "Timæus" since Schelling abandoned his doubts about it. To say that Thales of Miletus lived about the commencement of the Christian era is like saying that Roger Bacon lectures on physics in the Royal College of Science with mediæval exactitude about ancient history.

Drs. Fowler and Godlee's 'Diseases of the Lungs' (Longmans) opens with many good plates and diagrammatic drawings, showing the anatomy of the chest-walls and their contained viscera, and their relations one to the other. Following this is a chapter on general physical diagnosis, and then the diseases are taken up one by one in the usual order and minutely gone into. The chapters on tuberculosis, as was to be expected, are particularly full. The value of the open-air treatment and of sanatoria is fully recognized, but the value of the "sanatorium treatment" in addition to the fresh air does not seem to us sufficiently so. All possible processes that may occur in the lungs or elsewhere as the result of lung trouble are described at greater or less length. We were much disappointed to find no mention, even, of the value of the X-rays in the diagnosis of diseases of the lung and pleura; though there is a skiogram of the hand in the chapter on pulmonary osteo-arthropathy.

The third volume in A. Parmentier's 'Album Historique,' published in Paris by Armand Colin & Cie., deals with the 16th and 17th centuries, of which fifteen hundred engravings after contemporary prints, paintings, and other works of art or of useful manufacture, buildings, etc., exhibit the popular dress, lodging, furniture, weapons, religion, education, commerce, agriculture, industries, fine arts, etc. Many of these facsimiles or engravings could, of course, be replaced by better copies by means of modern processes, but they serve well enough the purpose of comparison for a large number of European countries. The accompanying text gives a general view of the civilization of the period, and as heretofore there are very full indexes.

An historical account of the teaching of speech to the deaf, by Dr. Alex. Graham Bell, is begun in the *Association Review* for February. The earliest attempt in this country seems to have been at Rowley, Mass., in 1679, when, according to the church records, a Mr. Philip Nelson pretended to cure a deaf and dumb boy. Francis Green of Boston, however, was "the pioneer promoter of free schools for the deaf—both in England and America, the first parent of a deaf child to plead for the education of all deaf children"; and an interesting description of his efforts to this end, beginning in 1781, is given. They included two anonymous publications, one entitled 'Vox oculis subjecta'; the other, a translation of the Abbé de l'Épée's 'Method of Educating the Deaf and Dumb.' Among the other contents are extracts from the report of Mr. Lars A. Havstad, who was sent by the Norwegian Government to inspect the schools for the deaf in this country, and a suggestive paper on the use and abuse of the memory in education.

The *National Geographic Magazine* (Washington) for February opens with a description of some geographic features of southern Patagonia, with a discussion of their origin, by M. J. B. Hatcher. Particular stress is laid on the unique position of the continental watershed, which, nearly throughout Patagonia, lies far to the eastward of the main range of the Cordilleras, and in many instances extends even beyond the lowermost foothills of the mountains. It was the ignorance of this fact which led to the boundary dispute between Argentina and Chile. A summary is given of the three years' kite work of the Weather Bureau. Nearly four thousand observations were taken at elevations of from one thousand to eight thousand feet, with the result, among other things, that "the mean rate of diminution of temperature with increase of altitude was found to be five degrees for each one thousand feet." Prof. W. M. Davis

contributes a suggestive paper on practical exercises in geography, in which he shows how high-school scholars may be led to form, through simple observations, right conceptions of the shape, rotation, size, and orbit of the earth, latitude and longitude, and the seasons.

The only article of general interest in the *Geographical Journal* for February is Mr. Weld Blundell's account of his notable journey last year through southern Abyssinia to Khartum. He dwells upon the pitiful condition of the people under Menelik's rule. The march of an Abyssinian army (and war is chronic) means the laying waste the country through which it passes, leaving the inhabitants reduced to semi-starvation. The valley of the Blue Nile, now a part of the Egyptian Sudan, is described as an immense range of country, producing "cotton, coffee, tobacco, and iron, copper, and gold, with a healthy climate, and above all an industrious population, with nothing wanted but greater inducements and improved communication to be brought within the circle of British commercial enterprise, and developed to the highest degree of prosperity." Among the scientific results of the expedition was a collection of three hundred different species of birds, fifteen being new to science—an extraordinary exploit, since, as there was a shortness of cartridges, each bird had to be examined with a field-glass before it was shot, to make sure that it had not already been secured.

The leading article in the *Revue des Deux Mondes* for February 1 is by a member of the States-General of Holland, Dr. A. Kuyper of Amsterdam, who writes on the "South African Crisis" from the fulness of his knowledge, and with the eloquence flowing from deep-rooted faith in the cause which he defends and in the ultimate triumph of justice. His candid admiration for the English character adds to his horror and regret for the moral depth to which the besetting charm of national imperialism has dragged that great people: *Bien bas choit qui était monté le plus haut.* But "through the [moral] decadence of England human progress would lose one of its finest organs." In an interesting passage the striking analogies between Roman Cæsarism and the British imperialism of to-day are pointed out with a warning finger. Dr. Kuyper believes that nothing but extirpation of the people can prevent the final freedom of the Boers. England may succeed in disarming the men, but she cannot destroy the fecundity of Boer women; and "as long as the lioness of the Transvaal, surrounded by her cubs, shall roar against England from the summit of the Drakenberg, the Boers will not be for ever subdued."

M. von Brandt, the well-known German diplomatist, writing on the same theme in the *Rundschau* for February, takes the view that a final defeat of the English would seriously harm the cause of civilization. He does not deny that the war might have been avoided without hurting the vital interests of either party, nor does he palliate the motives or the ways and means of the English Government. But he believes that the success of the Boers would give rise to graver apprehensions for the future than a dearly-bought victory of the British arms. In the latter event, he reasons, the price paid would, for a long time to come, check the imperialistic tendencies of ruthless statesmen and slacken the pace of British politics, and the world's peace would not be endangered. In the interest of humanity he wishes that, after the first military successes of the English, a disinterested Power, like the United States, may, by its mediation, put an end to the dishonorable war, on the basis of the maintenance of Boer independence and the assurance of sufficient rights to the outlander population.

It is becoming evident that the modern current in the higher education in Prussia, signal instances of which were mentioned in our recent notes on the Technische Hochschule of Berlin and the University of Göttingen, is spreading over the Empire. Not only have technical institutions in other States, like Karlsruhe (Baden) and Darmstadt (Hesse), been granted the *Promotionsrecht*, in imitation of Berlin, while Munich and Stuttgart are expected soon to follow suit, but Strassburg is planning to enlarge its university by the addition of a technical faculty, and Jena is in receipt of a gift, from members of industrial firms, for the establishment of an institute for technical physics and technical chemistry, after the pattern of Göttingen. All this is in accordance with the Emperor's wish to move the technical schools into the foreground, because "they have great problems to solve—not only technical, but also great social problems."

Mr. F. Gutekunst, Philadelphia, sends us a remarkably fine imperial panel photograph of the late John Codman Ropes, the military historian. The intellectual strength and honesty of the man combine with the reflective mood and attitude to make an exceedingly attractive memorial of him.

—President Eliot's annual Harvard report is exceptionally stimulating reading. It has to tell of new admission requirements which enable high-school pupils to postpone deciding whether they will go to college or not; of two-fifths of the students now achieving their A.B. in three years without any falling off in the standard; of the putting in operation of a scheme of retiring allowances for the teaching corps; of the latest (Randall Hall) experiment in cheap commons, with students for waiters. The benefactions of the year 1898-99 to the University exceeded a million and a half, but 15 per cent. of the great Edward Austin bequest, or $76,500, "went to pay the civil and military expenses of the United States Government"—thanks, perhaps, to the strenuous Harvard alumni, Roosevelt and Lodge, as much as to any two men that could be named. "The ill-considered legislation which produces such inexpedient results ought to be at once repealed," justly remarks President Eliot, who has also to record the docking of the bequest of Mrs. Carolin Brewer Croft by $7,975, "the amount of the legacy taxes paid in England." The woman question reappears in the application of a Bryn Mawr graduate to be admitted to the Law School. She was told that she might, via Radcliffe, take the course and the examinations, but neither be registered nor receive a degree; and it does not appear whether she was satisfied with the half-loaf. On the other hand, "Mrs. Williamina Paton Fleming was appointed Curator of Astronomical Photographs, and in that capacity her name appeared in the University Catalogue for 1898-99. It is believed that Mrs. Fleming is the first woman who has held an official position in Harvard University. She is well known to astronomers as the discoverer of a remarkable number of new variable stars."

—The Doubleday, McClure Co. give us in excellent book form Miss Ida M. Tarbell's 'Life of Lincoln,' begun as a series of articles in *McClure's Magazine*. The striking feature of the earlier papers was a painstaking effort to gather new facts concerning Lincoln's ancestry and his childhood. Although many of the discoveries were of slight importance, the aggregate made a story considerably softened from that which had commonly been accepted. There is much less of extreme penury in his early circumstances, and the life and early education are more nearly the average of that of pioneers in the settlement of the great West. The nature of Miss Tarbell's task naturally led to the careful saving of minutest bits of evidence, and the collection of letters and oral statements almost indiscriminately; but so much had been done in that direction before, that there is a distinct value in gathering counter statements and corrections. The chaff can be winnowed out later, and the result will ultimately be a Life searched microscopically as almost never before. The same method applied to Lincoln's later years has brought to light many letters, his own and those of collateral acquaintanceship, and in an appendix of two hundred pages the official records have yielded up the shortest and most trifling telegrams along with more important matter. The author then worked over the whole, and, by putting Nicolay and Hay, Herndon, Lamon, McClure, and others under contribution, has filled out all periods to proportionate fulness. Miss Tarbell has shown no little skill in doing this, and has used good taste as well. She has intelligently appreciated the attractive traits of Lincoln's character and made them properly dominant. A judicious reader may skip the less important details in the two octavo volumes, and keep in current sympathy with the development of a great character. This is aided by the typography, which distinguishes plainly the compiled material. The book deserves, on the whole, the popular welcome which its earlier form received, because it satisfies in an honest way the craving for details of Lincoln's wonderful career. The most important of the illustrations are a series of photograph portraits of Mr. Lincoln at different ages. The publishers' part is well done. The only noteworthy slip in proof-reading is the repetition of a whole line at the top of page 25 of the first volume.

—Those who will not admit that all knowledge is confined within the British Museum and the Bodleian Libraries, have recognized for some time that the real successor to Henry Bradshaw as the working master of English bibliographic lore is in charge of the Althorp and other bookish treasures recently housed in the beautiful Rylands Library at Manchester. In his volume on 'Early Printed Books,' Mr. Gordon Duff proved his right to this position, and his command of the new data and the new deductions which have added so materially, within the last few decades, to our knowledge of the productions and the workmanship of the fifteenth-century printers. In the Sanders lectures delivered last year at Cambridge, England, Mr. Duff took the opportunity to bring together and explain the details upon which is based our increased acquaintance with the English "fifteeners." The result is an important

addition to the history of the beginnings of printing and bookselling in England. Blades's exhaustive volumes remain, of course, the authority of prime value, but Mr. Duff adds seven books to those enumerated by Blades, giving a total of ninety-eight printed by Caxton in England. It is now thought that three of those in Blades's list were produced after Caxton died, and that two of those printed at Bruges did not appear until after his departure for England. Two varieties of type have also been added to those represented by Blades. There can be little doubt that the list of Caxton's books is still incomplete; but, as Mr. Duff points out, it is not the mere number of books he printed between 1477 and 1491, but the fact that he edited almost every book he issued and translated twenty-five or more of them, which makes Caxton's career so remarkable.

—The probability that we know of only a part of the output from Caxton's press is very nearly a certainty as regards his successor, Wynkyn de Worde. De Worde printed at least sixty-eight small tracts, in addition to his larger books; of forty-seven of these, only a single copy, often imperfect, is known to be in existence. The manner in which these books have been preserved is well illustrated by the 'Sarum Horal,' printed by William de Machlinia about 1485. Eight leaves of this little service-book exist at Oxford, seven are in the British Museum, four at Lincoln, and two at Cambridge. All of these came from worn-out copies of the book which had been used as waste by a contemporary binder in stiffening the covers of other books. Competition in the printing trade began in London in 1480, and the result was a very marked immediate improvement in the quality of Caxton's work. Presses had been set up at Oxford and at St. Albans a year or two earlier, and before 1501 there were at least six master-printers who had tried to supply the English demand for books. Their efforts seem to have been unsuccessful, for many commissions were sent to printers at Paris, Venice, Rouen, and elsewhere for books wanted by the English buyers. They also had to meet the competition of the stationers, who imported books printed to their order and with their imprint, and also of travelling salesmen from the Continent, who seem to have distributed considerable numbers of foreign printed books in the provincial towns.

—The author of 'Kraft und Stoff,' recently deceased, at the age of seventy-five, was not only a thoroughly scientific man, but also an exceedingly interesting personality. The healing art seems to have been a sort of professional patrimony of his family: his grandfather, father, uncle, his oldest brother George, and he himself were medical practitioners. There was also in their mental constitution a rich poetic vein, an heirloom of the Frankish-Alemannic Odenwälder, still famous for the wealth and beauty of their traditional sagas. George was only twenty-one when he wrote a tragedy, entitled "Danton's Tod: Dramatische Bilder aus der Schreckenszeit," a work revealing great imaginative power and replete with vigorous and vivid descriptions of the "Reign of Terror," but with the lack of artistic moderation peculiar to the productions of the transitional storm-and-stress period in German literature. There is no doubt that he would have achieved distinction as a man of letters if he had not died at the age of twenty-five, as a political fugitive in Switzerland, just as he was beginning a course of lectures on comparative anatomy at the University of Zurich. Also his sister Luise, who was fifty-one years old when she died on November 28, 1877, attained considerable celebrity as a poet and novelist, and, by her popular treatise on 'Die Frauen und ihr Beruf,' which has passed through half-a-dozen editions, became one of the most efficient social reformers and pioneers in opening new fields of industrial activity to women in Germany. A younger brother, Alexander, still living, professor at Valenciennes, and afterwards at Caen in France, has embodied the results of his special studies of English and French literature in two works, 'Geschichte der Englischen Poesie' and 'Französische Literaturbilder,' each in two volumes.

—Ludwig Büchner, the fifth of seven children, and as a boy remarkable for his clear intellect, tender feeling, and lively fancy, showed in early youth a strong love and critical appreciation of literature, and it was expected that this latter proclivity would determine his future career and secure for him a prominent place near the summit of Parnassus. His younger brother Alexander and his sister Luise had already appeared before the public with some success as authors when Ludwig suddenly produced his 'Kraft und Stoff,' which was at once accepted by the Frankfort publisher Meidinger and made a great sensation. A fierce controversy arose over it, and the wiseacres in the senate of the University of Tübingen put their heads together and decided that the author of such a work should not be permitted to lecture in the medical faculty of that institution, and that the *venia legendi* should be withdrawn; thus furnishing another illustration of the inviolability of German academic freedom as expounded by Prof. Münsterberg. It is not possible here to follow Büchner's scientific career from this first brilliant success to the time of his death. There is, however, a collection of his lyrical poems and dramas and critical essays entitled 'Der neue Hamlet,' which reveals another feature of his intellectual character, and to which we call attention because it was published under the pseudonym of "Karl Ludwig," and is therefore not generally known as his literary production, although it contains the fragment of an autobiography. The title of the volume is well chosen, for there was in his nature, as here disclosed, a strong conflict between the born idealist and the philosophic materialist, which often gave him pause and made him think that he had missed his calling. His last two works, just issued by Emil Roth in Giessen, are 'Am Sterbelager des Jahrhunderts: Blicke eines freien Denkers aus der Zeit in die Zeit,' and 'Im Dienste der Wahrheit: Ausgewählte Aufsätze aus Natur und Wissenschaft.' The first of these volumes is a second revised and enlarged edition sent by the author to the press just before his death, and adorned with his portrait as frontispiece. The second volume was found among Büchner's posthumous papers, and consists of fifty-one articles, which had appeared in different periodicals from 1891 to 1899 and been arranged by him chronologically for publication under the title they now bear.

—Vittorio Bersezio, whose death at Turin was announced last week, was one of the most eminent Italian men of letters of the past half-century. Born near Coni in 1830, he displayed such precocity that at the age of eleven he wrote the *libretti* of lyric plays which were performed. Going, while still a lad, to Turin, he began to write for the press, and was at different times in the employ of Valerio and Brofferio, the radical leaders. When the Revolution broke out, in 1848, he enlisted and served in the campaign in Lombardy. Then he resumed his literary work, writing for several journals, from the dignified *Rivista Contemporanea* to the satirical *Fischietto*. His "Political Profiles," sketches of the leading Italian public men of the early fifties, gave him a reputation. But mere journalism did not content him. He wrote a series of novels ('La Famiglia,' 'L'Amor di Patria,' 'L'Odio,' etc.) which were successful in Italy, and were translated, some of them at least, into French and German. He also tried his hand at writing plays, of which "Micca d'Andorno," "Romulus" (acted by Salvini), "Le Pasque Veronesi," and "Il Perdono" were written in literary Italian, and several others, more popular still, in Piedmontese dialect. Finally, he devoted himself to writing the Life of Victor Emanuel II., which he published in eight volumes (1878-'95), under the title 'Trent' Anni di Vita Italiana'; a work too diffuse to rank among the first, but still full of valuable matter, with the impressions and reminiscences at first hand of an observer of the period described. In these days, when one short story in a magazine is supposed to confer perpetual fame on its author, it is wholesome to record, even briefly, the career of Bersezio, who excelled as journalist, novelist, playwright, and historian, but always went forward in search of higher achievement, and never contented himself with applause for work completed.

—In writing on Bábar for the 'Rulers of India' series (Clarendon Press), Prof. Stanley Lane-Poole deals with a career which centres about Samarkand quite as much as about Delhi. The early ambition of Bábar was to found an empire in the valleys of the Oxus and Jaxartes. He bent his course to the southward only after repeated failures in the land of his birth had proved that the route to India offered the line of least resistance. The life of this hero and conqueror falls, then, into very distinct sections. For the historian of India only the last twelve years are available, while the biographer finds in Bábar's earlier struggles and vicissitudes a subject which, though of comparatively little political consequence, is full of dramatic personal interest. No leader of Islam during the first century which followed the death of the Prophet showed more dash and intrepidity in spreading the Koran than Bábar displayed during the twenty years, 1494-1514, in his attempt to create for himself a state after his own heart. When every effort had failed, he changed his purpose with the utmost versatility, and in less than a decade brought millions upon millions of Hindus beneath his sway. Bábar is eminently a hybrid character, and Prof. Lane-Poole, in a single paragraph, thus brings out the complexity of the elements which he represents: "He is the link between central Asia and India, between predatory hordes and imperial government, between Tamerlane and Akbar. The blood of the two great scourges of Asia, Chingiz and Timúr, mixed in his veins, and to the daring and restlessness of the nomad

Tatar he joined the culture and urbanity of the Persian. He brought the energy of the Mongol, the courage and capacity of the Turk, to the listless Hindu; and, himself a soldier of fortune and no architect of empire, he yet laid the first stone of the splendid fabric which his grandson Akbar achieved." No reference to Bábar, however fragmentary, should pass over unmentioned the celebrated autobiography which he left to be edited by his son Humáyún, and which has furnished all writers on his period with the best part of their facts. He wrote his memoirs in his native tongue, Turki, but the work was soon translated into Persian and exists in many codices. The English translation by Leyden and Erskine has put within the reach of those who are unlearned in Oriental languages one of the most delightful books of adventure ever written by a conqueror. Prof. Lane-Poole has drawn largely on this prime source for the materials of his excellent handbook.

—Part ii., vol. xxvii., of the Transactions of the Asiatic Society of Japan, contains matter of great interest to students of the Japanese language, of the Romanization of Asiatic tongues, and of the history of printing. It is a study of the work of the Jesuit Missions Press in Japan, the result of the researches of Sir Ernest Satow in the public libraries of England and the Continent, concerning those books printed in Japan at the end of the sixteenth and the beginning of the seventeenth centuries. Mr. Satow came to Japan in the early sixties as a student-interpreter. He is now British Minister in the Japanese Empire. In a pamphlet privately printed he gave the full results of his researches up to the year 1888, but since coming to Japan he has been fortunate enough to discover two other works printed on the same press, probably at Nagasaki. The first of these is an abridgment of the 'Tai-Héi-Ki,' a celebrated historical work of the fourteenth century. The second is a small volume of fifty-eight leaves printed in Roman type, and bearing the imprint "In Collegio Iaponico Societatis Iesu, Anno 1600," and is identical in substance, but not in type, with that numbered eleven in his pamphlet, and preserved at Rome; but the one edition in Chinese characters and *kana* script was for the use of native converts, and the other in Roman letters for missionaries not familiar with Chinese characters or the Japanese syllabary. It is a compend of Roman Catholic theology and doctrine, and was evidently intended for the Samurai or educated classes. The spelling of the Romanized Japanese words is that of the Portuguese grammar and lexicography of the period. After five pages of introduction, Mr. Satow gives a glossary of six pages, a photolithographic reproduction of the title-page of the book, and sixty-one pages of its text. Japanese versions are here found of the Lord's Prayer, the Apostles' Creed, and the Ten Commandments, which, with the articles of the Roman ritual, may be useful for comparison with modern translations. It is an interesting question whether the Jesuit missionaries in Japan, some of whom had also been in Korea with the Japanese army of invasion, took the hint for the use of movable or "living" type from the Koreans, with whom they had been common centuries before they were known in Europe. The first ascertained use of movable type by the Japanese was in 1598. A private reprint of Sir E. Satow's paper has just been deposited in the Boston Public Library.

GRAHAM'S SOCIAL LIFE OF SCOTLAND.

The Social Life of Scotland in the Eighteenth Century. By Henry Grey Graham. London: Adam & Charles Black. 1899.

The social and economic sides of history are comparatively new subjects of inquiry and description. Ancient chroniclers and modern chroniclers, too, till the present century, were so much occupied with political events and with the personal incidents relating thereto, as hardly to notice the modes, habits, and practices of daily life, or to describe the beliefs and notions which men entertained. If they wrote of what passed in their own time, such matters were too familiar to seem to need description. If they wrote of the past, they held it beneath the dignity of history to take account of such trivialities. Macaulay was one of the first to depart from this hallowed usage, and the famous sketch of English social life in the time of Charles the Second with which his History of England opens, has stirred many authors to imitation, so that the English are now pretty familiar with the ways of their ancestors from Tudor times to the present. Mr. McMaster and Mr. Edward Eggleston are among the American writers who have trodden the same path with success. For Scotland not much has been done, save in one or two of Walter Scott's novels, where incidentally the features of social life are touched upon. The subject lay out of the beaten tracks; and though there was a considerable Scottish literature in the last century, from which an impression of Scottish life might be drawn, the ornaments of that literature, with the exception of Allan Ramsay and Robert Burns, were all Edinburgh men, and reproduced the manners of their city rather than of their country. However, there comes now a new writer, a Scotchman, and indeed (as we gather) a Scottish clergyman, who gives us in these two solid volumes a large mass of information about his country in the eighteenth century, the first century in which that turbulent little country had enjoyed comparative peace, and the opportunities which peace gives of advancing in material prosperity.

He covers a good deal of ground, passing in review the society and manners of the rural districts, those of the cities, and especially of Edinburgh and Glasgow—the latter a very small town past the middle of the century; the land system, with the relations of rural classes and care of the rural poor; the Church and the various dissenting bodies which broke off from it and went on apart from it; education in schools and universities, crime and social order, the progress of industry and trade. On each of these topics a great variety of matter, often curious, has been brought together with commendable diligence, so that the book is really a valuable repertory of facts, most of them drawn from books which, in this country at least, can hardly be procured. The merit of the work lies in the abundance of the facts collected. It is clearly written, with few efforts at literary display; and (except perhaps in the ecclesiastical part) it betrays no bias either national or sectional. It might perhaps have been improved by the introduction here and there of summarizing paragraphs, presenting the generalized conclusions to which, in the author's view, the facts he has collected point. However, the main thing was to bring together the facts. The reader, having an ample store of them here provided, can generalize for himself at his pleasure.

Mr. Graham justly remarks on the great unlikeness of Scotland to England at the time of the Union. To the traveller of to-day, the two countries seem to present few points of difference. The dialect of the common folk is no doubt unlike that of southeastern England, but not more unlike than is that of Lancashire or Devon. The landscape is generally rougher or sterner in its character, and the towns are built rather of stone than of brick. The parish churches are less picturesque, for the Presbyterian Reformers dealt less tenderly with the old fabrics in Scotland than the Episcopalian reformers did in England, and the country was so much poorer that the churches were at all times inferior. But perhaps the most patent difference between the countries is that in Scotland it is chiefly whiskey, in England chiefly beer, that is the drink of the people—a difference which Mr. Graham shows to be not very ancient. These are trifling divergencies when compared with the broad and striking contrast which the poverty and squalor of Scotland, its plain form and rigid practice of religion, its social habits and ideas, furnished to the wealth and comfort of England, to its easy-going ecclesiastical ways, to its different ideals of life and thought, as these two countries stood in A. D. 1707, when the Treaty of Union welded them into one kingdom, and when, according to Mr. Graham, the diversity of speech was so great that Englishmen and Scotchmen scarcely understood one another. The fact is, that in 1707 Scotland was one of the most backward countries in Europe in every respect but one. Her population was very small, scarcely exceeding a million, and was almost entirely rural. It was extremely poor, for only a small part of the land was tilled, and the industries were insignificant. There was little trade and practically no shipping. But the race was highly intelligent and energetic, having in the two preceding centuries produced a surprising number of men of literary distinction; and the provision of education for the people, albeit scanty, and far inferior to that which the enlightened policy of John Knox and his friends of the great reforming era had planned, was yet better than that which existed in England, or in most parts of Continental Europe. Accordingly, when peace was assured in the Lowlands after 1689—for the Jacobite rebellions of 1715 and 1745 caused only temporary perturbations—and when the union with England in 1707 had thrown open trade with the English colonies, and brought the two parts of the island into closer commercial relations with one another, there began a progress which, slow at first, had in twenty or thirty years increased the value of property, raised wages as well as rents, and given a stimulus to every department of national life.

The steps by which this took place, and the remarkable parallelism in the development of industry and trade on the one hand and the growth of theological enlightenment on

the other, are well traced by Mr. Graham. He notes one fact of interest to tourists in Scotland. In the first half of the eighteenth century it was one of the barest and dreariest parts of Europe, the old forests having been, especially in the Lowlands, almost entirely cut down for firewood, so that house timber was hardly procurable. But about 1760 the now more progressive landowners began to plant trees on a great scale, and the large woods which may now be seen in all parts of the Lowlands, except, of course, on the higher and steeper hills, are entirely due to the taste for forestry which then grew so popular. Scotland has to-day less of the aspect of a wooded country than the centre and west of England, because few clumps of trees stand about in the fields, and there are hardly any hedgerow trees at all. But the woods are both extensive and fine, though Scotland must admit one serious inferiority to England: she has no pieces of really old forest, dating from the Middle Ages. There is nothing more beautiful in England than the sylvan scenery of the New Forest in Hampshire, of Wychwood Forest in Oxfordshire, of Savernake Forest in Wiltshire, of Sherwood Forest in Nottinghamshire, not to speak of others which, like Needwood in Staffordshire, have preserved fewer fine trees. In Scotland the traveller finds nothing to compare with these, nor indeed any relics of really ancient wood, save here and there among the huge clumps of fir trees in the Highland glens.

Religion and ecclesiastical affairs have been a conspicuous factor in Scottish life ever since the Reformation of the sixteenth century. It was in Scotland far more than in England a really popular movement, and left a deeper impress, which was still further deepened by the struggle against prelacy from 1638 till 1690. Calvinistic theology has done so much to mould the character of the people that Mr. Graham very properly devotes to this part of his subject a large share of his space. He paints in colors perhaps almost dark the fanaticism, the dogmatism in matters of belief, and the vehement intolerance of the Presbyterian masses in the opening years of the century —phenomena which were the natural result of the ferocious persecution to which the Covenanters had been subjected by the later Stuart kings. He remarks, with perfect truth, that, so far from the clergy having led or terrorized the laity, as Mr. Buckle (who was sometimes almost as ignorant as he was self-confident and positive) supposed, the clergy were really controlled by the laity, who displayed an interest in theology greater than that of any other contemporary European people, and hardly to be paralleled even in rural New England. He describes the gradual decline of Calvinistic stringency which went on from 1720 to 1770, and which, in the Presbyterian Church established by law, was accelerated by the growth of the Seceders and other Dissenting bodies. All the free churches in Scotland have arisen, not from any spirit of change, but from adherence to old ideas and customs. The same remark has been made of most of the Dissenters in Russia. The Cameronians held to the Covenants of the seventeenth century, and disapproved the Established Church because it had not renewed those Covenants. The Seceders of 1737 quitted the church in protest against the intrusion of ministers into parishes by lay patronage against the will of the people; and the later and greater Secession of the Free Church in 1843, commonly called the Disruption, had the same cause.

As the seceding bodies were those which clung most tenaciously to the Calvinistic dogmas and the ancient simplicity of worship, their departure gave a freer course to latitudinarianism in the state church, so that by 1780 no small part of its more educated clergy as well as laity were deemed to be virtually Arians or Socinians. With these men, of whom Dr. Blair and the historian Robertson, principal of Edinburgh University, are the persons now best remembered, and with a knot of cultivated lawyers and some university professors, such as Adam Smith and Thomas Reid, began the brilliant literary era of modern Scotland, which lasted down till, in the first decades of the nineteenth century, the influence of London drew the bulk of Scottish literary talent away from Edinburgh, leaving comparatively few men of science and learning in Scotland, except those who were kept there by university chairs. And this epoch (1770-1810) was, by an interesting coincidence, that which saw the meridian of Scottish poetry in Burns, and the dawn of Scottish romantic fiction in Walter Scott. Before it closed, a change came over the spirit of the Scottish church. The so-called "Evangelical Revival," beginning about 1790, a little later than it had begun in England, drove out the "moderate" theology of Robertson and his contemporaries, and it was not till about 1870 that the influence of German and Dutch theologians, and especially of the new school of Biblical criticism, began to tell powerfully on Scotland. At present that school is dominant there, and the Scottish Presbyterian clergy stand amazed at the stringent orthodoxy and intolerance of critical methods which they note in the Presbyterians of the United States and of Ireland.

It is in this part of his book that Mr. Graham may perhaps be thought to fall rather below the level of an objective and dispassionately philosophical historian. Recounting with grim pleasure the instances, numerous enough, of bigotry, superstition, and harshness among the fanatical and ultra-orthodox ecclesiastics and laity of the first half of the eighteenth century, he makes too little allowance for the causes which had made them what they were, and does less than justice to the earnestness and devotion which half redeemed their faults. Puritanism, with all its drawbacks, has been a potent force in stimulating Scottish intellect and strengthening Scottish character.

There is much else in the book that well deserves attention and commendation, and many of the facts it notes are full of significance. Though Scotland was so rude, there was far less highway robbery there than in England; and the much greater mildness of the criminal law was accompanied by a much greater rarity of crime (except infanticide). But serfdom among coalminers and salt-workers lasted down till 1799. Political liberty scarcely existed, and the representative system was a farce. There was very little coin in circulation, and the roads were impassable till after the middle of the century. Indeed, it would be hard to imagine a region more unlike the prosperous industrial lowlands of to-day than Scotland was one hundred and fifty years ago. To have brought out so clearly and so fully the condition of his country, and the beginnings of the process by which she emerged from her misfortunes and became one of the most progressive and cultivated parts of Europe, entitles Mr. Graham to the gratitude of historical students, and enables us to recommend his book to American readers as one of the best of its kind that have appeared for a good many years.

SKRINE'S HEART OF ASIA.

The Heart of Asia; A History of Russian Turkestan and the Central Asian Khanates from the Earliest Times. By Francis Henry Skrine, formerly a member of H. M. Indian Civil Service, and Edward Denison Ross, Ph.D., Professor of Persian in University College, London. London: Methuen & Co.; Philadelphia: J. B. Lippincott Co. 1899. Pp. xi+444.

There has long been much need of a scholarly yet readable account within reasonable limits of space of the Russian advance in Central Asia and of the past and present condition of the Turkoman tribes. The older history of Central Asia, too, has been a picturesque blank for most of us. Vague ideas of the conquests of Alexander, of the Oxus and Jaxartes—*amnes fabulosi*—of Prester John and Tamerlane with his "pampered jades of Asia," of sultans of Casgar from the 'Arabian Nights' and "Merou's bright palaces and groves" from 'The Veiled Prophet of Khorasan,' have jarred against newspaper paragraphs about Merv and its mervousness, Afghan and Pamir boundary squabbles, trans-Caspian petroleum, and railways to China. We have had books of travel, more or less untrustworthy and biassed; we have had Sir Henry Howorth's great 'History of the Mongols,' and others of lesser repute; Col. Yule illumined Marco Polo and Cathay; ten years ago Lord (then Mr.) Curzon's 'Russia in Central Asia' appeared; but there was nothing by which the ordinary reader could arrange his jumbled ideas and string his facts, real and ideal, on a thread solid enough to carry them. 'The Heart of Asia' undoubtedly fully meets this need. It sums up past history and present condition with admirable thoroughness and clearness. The amount of detail which its learned authors have packed into a single volume is equalled only by the scholarly accuracy which they show, and the readableness which they have attained. The sources upon which they base are excellent. Both Prof. Ross and Mr. Skrine have personal knowledge of Central Asia; and Skrine's part of the work, the description of government, of development of railways, of commerce, and of the social life, is from his own observations throughout. Prof. Ross has made the fullest use of Russian and Mongol authorities, which in itself would give the book high value; he has used at first-hand the Arabic and Persian chroniclers, though with a leaning to the Persian which neither the scientific historian nor the Arabist will much approve—the Persian version of at-Tabari, for example, can have no authority beside the original—but which is excusable in a professor of Persian; students of the later Roman Empire generally find it expedient to get behind Gibbon to his sources, and D'Herbelot is respectable but

antiquated. But such points are of slight importance; the thoroughness and first-hand quality of Prof. Ross's work are a credit to English scholarship.

The first part of the book consists of a history of Central Asia from the earliest time to the Russian occupation. From the oldest mention of Bactria in the inscription of Behistun the story is briefly traced through the conquests of Alexander and the vicissitudes of his successors, through the Huns, the Parthians, and the Romans, and the Sasanides to the Arab conquest. From that point much greater detail is given, and what may fairly be claimed to be a hitherto unwritten chapter in the history of Islam is unrolled before us. The work of the great conqueror Qutayba b. Muslim is given at length, and then the story of eastern Islam is told, as it might have been followed from the basins of the Oxus and the Jaxartes. The ground covered is in part common to all Muslim historians, but the standpoint is novel. In other books we see the Arab waves of conquest flowing out into darkness among races we know nothing of; some echoes of China and of wandering Turkoman tribes reach us, but it is as of the land beyond the mountains. Our thoughts bear most upon the valleys of the Euphrates and the Nile and upon the Inner Sea. And when, in later times, there come the waves of Mongol invasion—the Seljuqs, Chingiz Khan, Timur Leng—they break out of darkness we know not how. What they are, whence they come, why they come, are mysteries. But in this book all that is clear. We are put among those very tribes in their own camping-grounds. The tangled skein of their genealogies is unravelled. The causes of their migrations, this way and that, are made plain. We see Chinese and Muslim envoys meeting in diplomatic warfare at their courts, and the Great Wall of China turning them from the east to flood the west. Then the long course of Russian conquest begins, and is traced in its development of fatal necessity till Geok Teppe falls and the boundary of three empires is fixed in the Pamirs.

The only pity in all this is that the great compression of space produces a false feeling of Central Asian life as though it had consisted of nothing but wars and rumors of wars, of alarms and excursions. We have to remember that, from time to time through it all, the weavers were busy in Samarcand, Muslim law was expounded, endless commentaries on the Quran written, and poetry and art flourished. Otherwise it is as though we had a history of the squabbles of the Italian republics which took no thought that Dante and Petrarch and Boccaccio were living then.

The second part of the book is by Mr. Skrine, and is a description of Central Asia as he has seen it, and of the work which Russia is accomplishing there. The railway system is traced in detail, and the history is given of how it has been built up until now a gap of only 450 miles separates it from that of India. The province of Transcaspia is described, with the method of government and of administering justice which has been worked out for the nomad Turkomans. The railway is then followed from Askabad to Merv, thence to the protected native state of Bokhara, and finally to Samarcand. These are names full of old romance, and all the magic has not passed from them under Mr. Skrine's pen. Samarcand itself is a word to conjure with. Alexander was here, and here he killed Clitus; Timur lies buried here under his slab of dark-green jade. Naturally, this part of the book has not the original interest of Prof. Ross's work. Travellers have been there before and have told what they saw; no one before has written the history from beginning to end. Yet Mr. Skrine's impressions have an interest of their own. The Russians, for him, are not Mr. Kipling's Bad People, nor does he think with Vámbéry that their government is tyrannous and a failure. He is almost enthusiastically pro-Russian, believes that Russia has been compelled by its circumstances to advance, and that it has no designs upon India. As to this, the latest events on the Persian Gulf and the Afghan frontier may hint a doubt. Much that he says has value for us in our present straits. Some things illuminate especially the logical impossibility of our position. For example, he quotes Skobeleff: "Our Central Asian policy recognizes no pariahs. Herein lies our superiority over the English." And Kurapatkin: "The assumption of sovereignty over alien nationalities must not be attempted without very serious deliberation, inasmuch as such become, on annexation, Russian subjects, children of the Tsar, and invested with every privilege enjoyed by citizens of the empire." All this only illustrates the old fact that the more autocratic a government, the better it can assimilate foreign elements; and the less citizenship amounts to, the more easily it can be bestowed. The value of Roman citizenship had fallen low when it was extended over the Roman world, and the value of Russian citizenship must be equally low when it can be given to the Tekke Turkomans. When the English Parliament has vanished, the Indian "fellow-subject" may become a full British subject, but it may be a question if his status will be much raised by that. And when the American Congress has finally ceased from troubling, then, perhaps, a great white Tsar at Washington may bless subject children of half-a-dozen shades invested with every privilege that will be left to American citizens.

Again, here are two passages in no connection, but interesting when brought into connection: "The Romans had entered on the career of foreign conquest which seems inevitable in the case of a powerful republic." This is somewhat cynical, and also commonplace; but what about this? "For communities which have arrived at a high pitch of civilization, conquest is an anachronism, and assimilation with a subject race an impossibility." Either no powerful republic is highly civilized, or it is inevitable for every powerful republic to attempt the anachronistic. This is an exercise in formal logic, but it has also some claim to consideration as sense.

To return to Mr. Skrine, he would gladly see an Anglo-Russian alliance, but he finds two great obstacles: there can be no permanent alliance between an autocracy and a system of popular government; nor between a system of close protection and a system of free trade. Here, too, is sense: *de te fabula narratur.*

Of detailed criticism of this book, there can be little; it is far too good to have faults picked in it. Yet the following points may be worthy of consideration in the new edition, which we trust will soon come. On pp. 131, 133, we have the old story that Omar Khayyām, Nizām al-Mulk, and Hasan b. as-Sabbāh—the Old Man of the Mountain—were schoolfellows together. If Prof. Ross will look at the matter again, he will probably find that the story is chronologically impossible — Nizām al-Mulk was assassinated, an old man of 77, in A. H. 485, Omar died in A. H. 515, and Hasan in A. H. 518—and that the supposed evidence for it is very late. The note on p. 366 gives the impression that the Shī'ites have no *Sunna.* That is not so; they have a *Sunna,* but it is different from that of the so-called Sunnites. As to the note on p. 35, it must be a distinctively Persian idea that "Hijra" refers to Muhammad's *separation* from his family. The root permits that interpretation, but the word is regularly taken as meaning *migration, i. e.,* Muhammad's migration from Mecca to Medina. We should be glad to know Prof. Ross's authorities for his view. The character assigned on p. 69 to the Umayyad Khalifa Omar b. Abd al-Aziz is very dubious; Prof. Ross might consult Von Kremer's 'Culturgeschichtliche Streifzüge.' On p. 93, line 19, Ustādsīs should be read for Khazim; a volume reference is needed in the note on p. 225; p. 240, foot, Amu Darya should be read for Sir Darya, and a reference would be in place to De Goeje's paper on the old course of the Oxus. The first sentence on p. 388 is obscure to unintelligibility—its face-meaning is the opposite of what is wanted. On the religious tolerance, and even anti-Muslim tendency, of Chingiz Khan and Timur it is possible to refer now to the paper by Smirnow in the *Actes du onzième Congrès Internat. des Orientalistes,* troisième Sect., pp. 143-157. Joseph Stylites on p. 26 should be Joshua the Stylite, so far as that unknown author has any name for us.

The book has 34 excellent illustrations. Nineteen of these are from sketches by Verestchagin, and the rest from photographs. There is a very good general map of Central Asia, and a sketch-map of the Russian advance. A special map to illustrate the Muslim conquest and mediæval times would be of service; Spruner-Menke is not always at hand.

A Thousand Days in the Arctic. By Frederick G. Jackson. Harper & Bros. 1899. 8vo, pp. xxiv, 940. Maps and illustrations.

The expedition of which this is the diary, was fitted out by Mr. Alfred C. Harmsworth, the well-known English newspaper proprietor. Its object was originally Polar exploration; but when the supposed northward extension of the Franz-Josef archipelago was disproved, and the expected base of operations thus shown to be non-existent (much to the credit of all concerned) work was not discontinued. The author of this volume and his companions devoted themselves most successfully to the survey of the archipelago, the recording of meteorological and magnetic observations, and the exploration of the natural history and geology of the region.

This work was carried on under difficult conditions. In addition to the usual discomforts of the Arctic regions—low temperature, storms, darkness, and isolation—the swift currents between the islands kept the ice constantly in motion, while rapid and extreme changes of temperature, from intense

frost to the slush and humidity of a sudden thaw, were experienced to an extent not known in other parts of the Arctic. The expanses of open water due to these changes, on the other hand, were beneficial in attracting animal life, especially polar bears and walrus, which gave the explorers frequent opportunities for hunting and large supplies of fresh meat, to which their very general exemption from ill health was probably due. The number of bears killed the first year was over sixty, but the second year only twenty-five, and the third year only twelve, showing, as the author justly remarks, that hunting had greatly reduced their numbers, and that if it were continued it would take but a few years to kill off all the large game of the vicinity.

The expedition sailed from the Thames July 12, 1894, on the *Windward*, a bark-rigged vessel with very feeble auxiliary steam-power, and drawing somewhat less than eighteen feet when loaded. They proceeded to Archangel for supplies, and then to Yugor Strait, where thirty dogs were taken aboard. After some delay, due to grounding on a mud-bank, the party finally sailed for their destination August 16, and reached Cape Flora, Northbrook Island, September 7. This is near the southern and western end of the group, and winter quarters were established with the utmost practicable speed. The season proved early, and, the *Windward* being unable to get away, her crew were obliged to winter, adding considerably to the responsibilities of the commander of the expedition.

The exploring party consisted of Mr. Jackson, Dr. R. Koettlitz, surgeon and geologist; Harry Fisher, naturalist; J. F. Child, mineralogist; and four men. Except the commander, none of them had had any Arctic experience, and his had been but moderate. A novelty was the employment in their sledging of three small Russian ponies, which proved to be superior to dogs, and are regarded by Jackson as eminently adapted for Arctic work. Two sledge journeys were made in the spring of 1895, and on the 3d of July the *Windward* was released from the ice, and started on her homeward voyage. A little later, explorations were attempted in a whaleboat, and the party, after some successful work, were very near disaster in stormy weather, but finally reached the winter quarters in an exhausted state. A very singular phenomenon was observed on the 30th of July, when the sky, between nimbus clouds and the horizon, seemed to be filled with white non-luminous strips resembling laths, irregularly distributed, and for which no explanation is even suggested. Another sledge journey was undertaken in March and April, 1896, when some new land was discovered and much surveying done.

On June 17, 1896, the great event of the expedition occurred. A man was seen on the floe three or four miles south southeast from Cape Flora, and Jackson hurried to meet him. It proved to be Nansen, and his faithful companion Johansen was not far off:

> "They had a lump or two of evil-looking walrus meat and two or three draggled-looking looms (guillemots) in their kayaks, which was all the food they had with them, poor chaps. . . . . A more remarkable meeting than ours was never heard of. Nansen did not know I was in Franz-Josef Land, as I did not leave England till a year after he started on his expedition, and I had not the smallest idea he was then within hundreds of miles of me; in addition to that, Nansen was very uncertain indeed as to what part of the world he was in" (p. 513).

Jackson believes that if their ammunition had held out, Nansen and Johansen might have lived through another winter in Franz-Josef Land, but that they could not have crossed in their leaky canvas canoes the belt of open water and moving ice which separates the western extreme of the group from the nearest part of Spitsbergen by a distance of more than one hundred and sixty miles. In this opinion we think him entirely justified. In fifteen months the Norwegians had travelled seven hundred miles, or an average of fifty miles or less per month, over comparatively solid ice. Allowing for storms and other delays, three miles a day was a good average for their progress when actually travelling. At this rate the minimum time of crossing to Spitsbergen would have been fifty-three days, if we take no account of wind or currents. They could not have carried food for this period in their canoes, nor is it likely that they could have supplied themselves by the way. In fact, the meeting with the English party at Cape Flora must be regarded as providential, and, humanly speaking, the salvation of the two wanderers from the North.

On the 26th of July the *Windward* arrived with news, provisions, and other supplies, but, to Jackson's disappointment, instead of more ponies some useless reindeer were sent, which died almost immediately. On the 7th of August she left, taking Nansen and his companion to Vardo. Another winter passed, and in March, 1897, another sledge trip was made, reaching latitude 80° 56′ and involving the usual hardships. The mass of the western land of the archipelago was encircled by the explorers' track. The last of the faithful ponies succumbed on this occasion. Open water, slush, and wet were the cause of much discomfort and delay. On the 8th of May they reached Cape Flora on their return. On the 22d of July the *Windward* arrived for the last time, and the expedition started home August 6, and on the 3d of September arrived in the Thames.

The work is written without literary skill, and might have been condensed in some parts with advantage. The ordinary statistics which might have been formulated in a few pages have to be searched for, and are often not to be found; for instance, the tonnage of the *Windward* is nowhere stated. For reference the book would have been much improved by fuller headings to the chapters, since the index, though voluminous, is far from good. The weight of the volume amounts to a positive discomfort, as it cannot be held for more than a few minutes in the hands. These criticisms made, we can freely express our admiration for the courage, persistency, and good fellowship which seem to have animated the whole party; the frank and unaffected manner in which Mr. Jackson has related his adventures; and our appreciation of the solid results obtained, in spite of the inexperience of practically the whole party. The work done, if less brilliant, is far more useful and serviceable to science than much of that which has been widely praised and lavishly rewarded.

The volume is generously illustrated, and contains excellent appendices on the ornithology, botany, geology, palæontology, and meteorology of Franz-Josef Land. The record of auroras is remarkably complete. A chapter on scurvy supports the theory that this disease is due to the ingestion of ptomaines in minute quantities, in connection with salt food. That this may be one of the causes is entirely probable, but that ptomaines alone are capable of producing scurvy will hardly be believed by those who have had the opportunity of observing the diet of many northern tribes. The observations of this expedition have put a quietus on plans for using the Franz-Josef archipelago as a base for polar research. Taken in connection with the work of the *Fram*, they go far toward proving that these islands are simply a cluster on the border of a deep polar sea, and that there is no reason for supposing that any other land of consequence lies to the northward of them. The elimination of an unfit route is almost as great a boon as the discovery of a possibly fit one. At present (barring drifts like that of the *Fram*, not to be counted on as necessarily successful), practically only the Smith Sound route remains advisable. This has been for some time the belief of many Arctic experts, and Jackson's discoveries go far toward making the consensus of opinion unanimous in this respect.

History of the Civil War, 1861-1865; Being Volume VI. of the History of the United States of America under the Constitution. By James Schouler. Dodd, Mead & Co. 8vo, pp. 647.

Mr. Schouler's new volume is a successful effort to condense the history of the civil war into the compass of a single handbook. Such a plan excludes the extended debate of open questions whether of fact or of policy, and demands rather the narrative of events as the author conceives them to have been, without the presentation at large of the evidence or the reasoning which underlies his conclusions. It is only in this way that handbooks can be made, and history brought within the scope demanded for textbooks in colleges and secondary schools. The sources and the discussion of them will be reached in another way.

Mr. Schouler's work is marked by an earnest national spirit, inspired by undoubting faith in the cause which Mr. Lincoln represented, and a full conviction that the President's course was that which the outcome proved as wise as it was patriotic. The book represents, therefore, the general conclusions to which the mass of the people have come who heartily upheld the national cause against the great rebellion. This is not done in a perfunctory way, but is based upon broad study of the period, assisted by personal recollection and experience of the author.

Anticipating the real usefulness of the book in the scope above indicated, a few minor errors may be noted by way of assisting in making it more complete. Speaking of the period of the assembling of forces preparatory to the first battle of Bull Run, the author says: "Johnston and Beauregard were two of the five generals now ranking highest in the Confederacy" (p. 77). Only four "generals" had then been appointed. Beauregard was a brigadier in the Southern Provisional Army, and was promoted to the rank of general later, for his services in this battle. (The same error is repeated on p. 88.) Mentioning Sherman, Keyes, Hunter, Burnside, Heintzelman, Franklin, and Howard, as officers who took part on the national side in the same

battle and afterward attained distinction, Mr. Schouler adds, "But Daniel Tyler, the brigadier under whom these served on the present march, although himself from West Point, had seen little active service, and gained no later renown" (p. 78). Only the first two of the list given were subordinates of Tyler. The army was constituted of five divisions, of which Tyler's was one, and all these were under the immediate command of General McDowell.

We are told (p. 85) that after McClellan's campaign of Rich Mountain in West Virginia, "Rebellion never again penetrated the Kanawha Valley, but was forced eastward of the mountain frontier into Virginia proper." The actions at Rich Mountain and Carrick's Ford were not in the Kanawha Valley, from which the Confederates were not driven till McClellan had assumed command at Washington. They reoccupied the Kanawha Valley in the early fall of 1862, and were again expelled in October of that year.

The statement that Gen. Harney was relieved of command in Missouri because he did not comply with a request of Gov. Yates of Illinois for arms from the St. Louis arsenal (p. 91) is inaccurate. Neither Harney nor Lyon had authority to fill requisitions from State Governors except upon orders from the War Department. Yates asked Secretary Cameron for such an order, and got it. Meanwhile Harney had been relieved for other reasons, and Lyon, being in command when the order to supply Yates arrived, obeyed it. In the scramble for the best arms for the volunteers, in which the executives of all the States took part, it was a necessity to keep the distribution in the Secretary's own control.

On page 204 it is said that "when Johnston was disabled [at Seven Pines], Lee, who had counselled much at Richmond headquarters, now took the Virginia command for the rest of the war." Lee was already, by order of President Davis, in command of all the forces in Virginia, of which the Army of Northern Virginia was a part. He now took personal command of that army in the field. The somewhat obscure relation of these officers was analyzed in the *Nation* of December 23, 1897, under the caption, "Lee, Johnston, and Davis."

The battle-field of the second Bull Run is said (p. 211) to have been "in the Wilderness." We think that proper name was always confined to the small region around Chancellorsville, south of the Rapidan. The name, whether a proper or common noun, would not apply to the battle-field about Groveton.

In the footnote to page 315, the author says: "Sherman and some other commanders found fault with agents of the Sanitary Commission for coming to the front with local gifts to distribute, and refused them entrance unless they would divide their good things among all the troops." By "the Sanitary Commission" should be meant the United States Sanitary Commission, *par excellence* the great agency of private philanthropy in the war. This never discriminated in favor of troops from particular States or places. Local organizations for aiding special troops were comparatively small, when they existed, and should be carefully distinguished from the great one.

In describing Lee's preparation for the campaign of Gettysburg, we are told (p. 351) that "Longstreet had now brought back his contingent from the West to the Rappahannock line." Longstreet did not take his corps to the West till after the Gettysburg campaign, and they did not return till the spring of 1864. Longstreet had been personally detained by operations on the south side of the James, near the Atlantic Coast, so that he was not at Chancellorsville, but was on his way to join Lee.

Mr. Schouler has not unravelled the vexed question of the immediate cause of Hooker's request to be relieved, June 27, 1863. He says: "Halleck overruled him, . . . by refusing to let him abandon Maryland Heights and use its garrison elsewhere," and, "piqued to the quick, Hooker, after a brief discussion by wire, gave vent to his ill-smothered anger by asking to be relieved at once from his command" (p. 356). It is necessary to distinguish between Harper's Ferry in the angle of the Potomac and the Shenandoah, in Virginia, and Maryland Heights on the north side of the Potomac, opposite the Ferry. Maryland Heights, overlooking and commanding Harper's Ferry, had been regarded as a citadel to the latter since Jackson's capture of that place in the previous year, and had been carefully fortified to be held by a small garrison. The Ferry was a large post of some ten thousand men. On the 24th, Halleck had informed Hooker that the troops in Harper's Ferry and vicinity were subject to his orders. On the 26th, Hooker asked if there was any reason why Maryland Heights should not be abandoned. Halleck answered on the morning of the 27th that the Heights had always been regarded as important, and much expense and labor had been used in fortifying them; he therefore could not approve their abandonment except in case of absolute necessity. Hooker's dispatch asking to be relieved gave, as the ground, that his original orders required him to "cover" Harper's Ferry and Washington, which he was now unable to do. It said nothing of the previous question as to Maryland Heights. A separate dispatch, sent immediately before, assumed that Halleck had refused to allow him to use the garrison at Harper's Ferry, which was not true. No better is the common statement, which Mr. Schouler repeats, that Meade was, in this respect, given authority refused to Hooker. Meade asked on the 28th, "Am I permitted, under existing circumstances, to withdraw a portion of the garrison of Harper's Ferry, providing I leave sufficient force to hold Maryland Heights against a *coup de main*?" Halleck answered: "The garrison at Harper's Ferry is under your orders. You can diminish or increase it as you think the circumstances justify." Not a word in this was inconsistent with Hooker's instructions.

The mention of a gunboat "under Col. Ellet of the Marines" running the gauntlet at Vicksburg (p. 381) is not exact. The Ellets did not belong to the corps of marines, but were army volunteer officers. Gen. Ellet's fleet of gunboats was organized by him under special authority from the Secretary of War.

Burnside is said (p. 442) to have entered Knoxville "by slow marches." His march from Kentucky over the mountains was remarkable for its steady, long marches, every day, making a high daily average. The statement on p. 455 that "a prime object" of his movement was "the reinforcement of Rosecrans toward Chattanooga" is incorrect. Had that been the purpose, the union of the two columns might have been made before starting, for they moved simultaneously. The liberation of East Tennessee was Burnside's task. His protection of Rosecrans's flank as both advanced was an incidental result.

After retreating from Gettysburg and crossing into Virginia, Lee made his way up the Shenandoah Valley, not down, as is said on p. 481.

These are mostly trifling corrections, but a book which may deservedly be a guide to the studies of the young and to the general reader, will be made still better by removing even the little blemishes in the narrative.

The County Palatine of Durham: A Study in Constitutional History. By Gaillard Thomas Lapsley, Ph.D. (Harvard Historical Studies, vol. vii.) Longmans. 1900.

It is hardly to be wondered at that the study of mediæval history should never have flourished in this country. It has seemed too remote from the interests of practical life; and it has been usual to say that the materials are inaccessible. That this latter difficulty is not insuperable has been shown by the repeated rummagings in the archives of Simancas by American scholars, who have hit upon subjects attractive to their people; and with regard to very many matters which certainly need investigation, the difficulty has been greatly exaggerated. For the current respect for "unprinted documents" is rapidly becoming a mere superstition. As the long rows of the "Monumenta," of the "Rolls Series," of the "Patrologia," of publications like those of the Surtees Society or the École des Chartes creep further and further round our library shelves, the dust begins to settle upon them, and it will soon be as notable an achievement to find something hidden in Pertz as to print a new fragment of material. It is, therefore, chiefly the apparent want of connection between mediæval and modern life which explains the phenomenon to which we refer; and that it should have this result is the most natural thing in the world. It may be doubted whether even scholarly Germany has produced any considerable treatise on the Middle Ages which has not been prompted by some supposed bearing of the subject on the fortunes of the German people itself.

And yet there is one mediæval field in which American scholars have already done substantial and fruitful work, and that is the domain of English legal institutions. The 'Essays in Anglo-Saxon Law' of Mr. Henry Adams and his associates, the 'Anglo-Norman Procedure' of Mr. Bigelow, and 'The Common Law' of Mr. Holmes, preceded the rise of the new school of legal history in England; and Mr. Chief Justice Holmes, in particular, may in some sort be looked upon as the spiritual parent of Professor Maitland. But this exception illustrates the rule, for legal history is the one part of mediæval life which is of interest to any large number of cultivated Americans. Even the most utilitarian of law schools cannot altogether dispense with history. Yet even this particular impulse seems almost exhausted just now; certainly Mr. Thayer's 'Development of Trial by Jury'

stands almost alone among the legal publications of the last few years.

Mr. Lapsley's treatise on the County Palatine of Durham, now before us, marks, let us hope, the beginning of a fresh movement towards historical investigation which shall not be limited to law and legal procedure, but shall concern itself with the whole range of mediæval English life. It is the literary first-fruits of the labors at Harvard of Prof. Gross, whom Mr. Lapsley very properly refers to as his "friend and master." This means—and the point is important—that it is the direct outcome of college and graduate school training; for it is as part of the ordinary work of the historical departments of our universities that the study of the Middle Ages must find its home, if anywhere. Only if the ordinary intelligent American undergraduate can be made to realize that modern history is but half understood without some knowledge of its background, can we expect mediæval studies to flourish in this country.

Certainly it is a matter for congratulation that so important a feature in the constitutional structure of mediæval England as the Durham palatinate should have been first critically examined and elucidated by an American scholar. Mr. Lapsley's production is a model of what such work should be. First thoroughly grounded in general constitutional lore; next becoming master of all the printed sources accessible in libraries; then collecting a great mass of additional information at the Record Office; and finally, with infinite patience, disentangling the involved threads and systematically arranging his material so as to answer every question that the subject can well suggest, Mr. Lapsley has produced a treatise which is likely long to remain authoritative, and which will enormously facilitate the toils of future historians.

The three English palatinates of Durham, Chester, and Lancaster enjoyed an amount of local independence quite unknown in the rest of England. They were, indeed, the nearest analogues to the great fiefs of France that England produced; and the question of their origin and character is really one of wide significance, since its answer throws light on both sides of the Channel. Mr. Lapsley shows good reason for believing that it was Bishop Hugh de Puiset or Pudsey—the name is just the same as that of the Dr. Pusey of our own time—who was the real founder of the palatinate. Dr. Stubbs long ago, with one of his happy phrases, referred to this great prince prelate of the early years of the thirteenth century, who "lived in three-quarters independence between the Kings of Scots and English." We now learn what exactly was the conjuncture of circumstances which enabled Hugh de Puiset to place his court on a level higher than that of any other feudal court in England. As to the sources of the Bishop of Durham's authority, Mr. Lapsley comes to the familiar conclusion in these evolutionary days—foreshadowed in the autobiography of Topsy: like everything else, it "growed." Reverence for St. Cuthbert and the needs of border defence combined to create a great franchise; and when, in the time of Henry III. and Edward I., the lawyers felt the need of some special term to describe the situation, they borrowed from Champagne and the Rhine the word "palatinus," which had the additional merit of being vague.

The one overmastering intellectual influence discernible in almost every page of the book is that of Professor Maitland. It is this which gives it the legal turn that is so very noticeable. It is the growth of the palatinate judiciary, and all the difficult questions which arose from its position at once of parallelism and of subordination to the royal courts—from the largest issues concerning competence down to the details of enforcement—which mainly engage our author's attention. And here, so far as we can judge, his conclusions are usually solidly supported and soundly argued. It is true that there are other aspects of the position of the one princely bishopric of England which deserve some attention; but Mr. Lapsley has probably done well to limit his field. As it is, his range is wide enough; and within that range—though there are points on which we might be inclined to interpret somewhat differently the evidence with which he presents us—his success is as nearly as possible complete.

The Redemption of Egypt. By W. Basil Worsfold, M.A., Barrister-at-Law. Longmans. 1899. Pp. xvii+333. Illustrations.

Pyramids and Progress: Sketches from Egypt. By John Ward, F.S.A. With an Introduction by the Rev. Professor Sayce. London: Eyre & Spottiswoode. 1900. Pp. xx+288. Illustrations.

Egypt has proved of late a fertile mother of books. "With notes and preface, all that most allures the pious (*lege* patriotic) purchaser," England pours them out like the Nile stream itself. They range from excellent through very indifferent, but each may fairly claim to have brought out some one fresh aspect at least of a strangely monotonous and simple yet many-sided and many-colored life and land. In no other country do the old and the new, the East and the West, join so nearly. Scraps of the epigram and the moralizing of the Greeks and Romans rise involuntarily as we turn the pages of each new book. The superstitions teeming from the soil, the something always new from Africa, the land the gift of the river—all the worn old phrases of the schoolroom—come back and range themselves with railroad bridges of American iron, guard-tents with kilted Highland sentries, *kūkī*-tourists in swarms, and donkeys that answer to Washington and Yankee Doodle. With each new book the picture grows in some details; fresh colors come out; present and past become more real. Seldom has a country been so described and fared so well with its describers. From the classic works—classic in senses which seem different and still are the same—of Herodotus and Lane, through all the ruck of tourists with an itch for proof-sheets and immortality, the spirit of the land—a spirit, in spite of all, of beauty and strangeness and peace—has shown its power, and even the merest turner of a hackneyed phrase is touched and changed to something less commonplace. The old soil from century to century makes its people for itself, and makes over, too, the ever-gathering crowd of describers for its people.

Mr. Worsfold is an English barrister with a taste for sketching and architecture, a keen eye for industrial developments and possibilities, trained experience as a traveller and book-maker, and a not too insistent personality. He does not bore his reader with the hairbreadth escapes of the tourist in hotels and on donkeys; he writes of what he has seen as artist and publicist. His book is one of great external beauty. His drawings, both those in black and white and the chalk and water-color sketches, have been admirably reproduced. Scattered among them are only a few photographs of the machine-made and process-cut order. His own work is marked by a curious combination of architectural drawing and impressionism which is original and refreshing. His matter, also, has high interest and value. As a lawyer Mr. Worsfold is naturally attracted to legal things, and his account of the different courts in Egypt and of the extent to which the English reforms have succeeded and have failed is the work of a specialist. With the courts administering Canon law, he tells us, only the merest beginning has been made; and yet their need is plain when we learn that the judges in them prefer to hear a string of claims in five, ten, or twenty cases, and will then adjourn to a future sitting the hearing of the corresponding string of defences. Even in the civil courts the education of the native judges can only be slow. Referring to Nubar Pasha's famous dictum, "Justice and water," Mr. Worsfold sums up with truth, "The great reservoir of Shellâl with its ancillary canals will speedily give Egypt 'water'; but the Egyptians must give themselves 'justice.'" In describing the educational system—an excellent chapter—he similarly brings out an essential point, the necessity of education for girls. It is useless to educate the boys so long as their future wives are left untaught; after marriage the one pulls the other hopelessly down. This is the true solution of the old problem how the washed and taught Oriental can be kept from returning again, as he always hitherto has done, to his Orientalism. And these are things which we, too, must now learn, and which make the value for us of books like this. We have not space to pursue further details.

Nor can we delay over the account of cotton as king, of the condition of the Fellahin, who seem very well able to take care of themselves, of railways under the burden of the *Caisse*, of sugar and finance, of local government and irrigation. There is little in all that of beauty and peace, though much of learning, of balanced good sense, and of observation. But the real book for the author, we are persuaded, lay in that charming half which tells of the architecture of Egypt, ancient and mediæval, as art and history, and which lingers lovingly over the work of long-dead craftsmen who had wrought in a sad sincerity. Mr. Worsfold is no great antiquary, and we may be thankful for it, though he occasionally, as an educated Englishman must, tells us things that he has found in his Strabo or his Herodotus. But it is evident that for him ancient, just as mediæval, Egypt is a study in art and not a jumble of Pharaohs, mummies, and pseudo-comparative religion. He gives us an exquisite crayon sketch of the Pyramids, and labors to analyze their æsthetic impressiveness. Before this problem we must leave him with regret and commendation.

Mr. Ward is a different man and has written a different book. It has a very useless three-page introduction by Prof. Sayce, a facsimile of a fourteen-word letter from

Lord Cromer accepting the dedication, and an immense store of illustrations from the publications of the Egypt Exploration Fund, from photographs, and from sketches and paintings. These have in no way the distinction and freshness of Mr. Worsfold's drawings, and yet they constitute the chief value of the book. In it the appeal to the patriotic public is more pronounced. It tells us about the Sirdar and Lord Cromer until we are weary, and Dr. Petrie becomes like to Aristides the Just. It takes thought also for the tourist; to him it may prove very useful. Mr. Ward is curiously swayed between the Pyramids and the Sphinx and the comforts of the Saltmarket to be found in the Mena House hotel. He has roughed it in Egypt, and he gives entertaining tales of those adventures—the best part of the letter-press of his book; but his eye is keen for strategic hotel sites, and Mr. Thomas Cook is a potentate of only lesser sway than the Sirdar. To others than tourists it is his last thirty pages that will most appeal. These give a really full account, with plans and photographs, of the modern "binding of the Nile" with its three curbs of stone, the great reservoir at Assuan, the lesser at Assiut, and the Cairo barrage. It is the most complete and detailed description of the actual work that we have seen as yet in popular form.

The Caroline Islands. By F. W. Christian. New York: Charles Scribner's Sons. 1899. 8vo, pp. xiv, 401; maps and illustrations.

The author of this work was at one time a resident of Samoa and associate of Robert Louis Stevenson, a cultivator of economic plants, and a student of Polynesian philology. His studies led him to Tahiti and the Marquesas and, in 1895, to Micronesia. The present volume contains an account of the last named journey with a summary of its results.

The Caroline archipelago extends for nearly two thousand miles between the parallels of 5° and 10° north latitude, east of the meridian of 134° east from Greenwich. It comprises more than thirty minor groups of coral or volcanic islands, a number of which exhibit notable eruptive masses of columnar basalt. It is inhabited by a mixed race, a cross between round-headed, light-colored Malay folk and the long-headed, almost black, crisp-haired, earlier islanders, the so-called Melanesians. The people of different islands exhibit marked differences of character, some being hospitable, kindly folk, others surly and suspicious, while in general all are fine specimens of physical development, deeply attached to their tribal independence, obedient to their chiefs, and vehement haters of the Spaniard. The commercial products are few and not very important: copra or dried cocoanut meat, pearl and tortoise-shell, and ivory nuts. In Ponapé and some of the other islands flourishing Methodist missions existed when, in July, 1886, the Spanish flag was raised. Within a year Catholic missions were started, and the inevitable friction that followed resulted in the final expulsion of the Protestant missionaries, and the confiscation of much mission property, for which, in 1890, an indemnity of seventeen thousand dollars gold was demanded by the United States and paid; more serious consequences were hostilities between the Spanish authorities and the natives, which came to a head in 1887, and have continued intermittently until now. The Spanish suffered severe losses from time to time, and it remains to be seen if the transfer to Germany and the consequent diminution of the *odium theologicum* will bring peace to these sturdy islanders.

For many years curious stories have been told, by wanderers visiting these regions, of massive stone fortifications, breakwaters, and canals, existing upon Ponapé, Ualan, and other islands, the handiwork of some race unknown to the present islanders. The exploration of some of these ruins is, to the general reader, the most interesting part of the work done by Mr. Christian. The late J. S. Kubary, well known to ethnologists, had, as an agent of the Godeffroys, somewhat earlier visited these ruins, and the two explorers were fortunate enough to meet, exchange impressions, and come to a common conclusion in regard to them.

The two principal groups of ruins are situated upon Ponapé and Ualan respectively. In the former case the stone constructions occupy an area of some eleven square miles, including the canals and spaces which separate over fifty walled islets, and an enormous breakwater on two sides, protecting this Micronesian Venice from the breakers of the Pacific. The enclosures or walls are generally rectangular in plan, with a slightly retreating outer face, sometimes reaching a height of 40 feet and a thickness of 8 to 18. The chief Ponapean group of ruins is on the southeast side of the island, next to Metalanim harbor. Here, acording to native legend, two deified heroes, Olo-chipa and Olo-chopa, built by magic spells the breakwater of Nan-moluchai and the island city it shuts in. They caused the great masses of stone to fly through the air like birds, each settling into its proper place. The stones, which often weigh several tons, are natural prisms of basalt, and, according to Kubary, were rafted down from the Not district on the north coast of Ponapé, and by means of rollers, inclined planes, and main strength hauled into place. They are laid alternately longitudinal and transverse to the plane of the wall, without any kind of mortar, and hold their positions by their weight alone, like children's blockhouses. The legends of Ponapé tell of the conquest of the island by a fierce Melanesian people who destroyed the earlier culture, and whose leader ruled with a rod of iron, after his death becoming the war god, Icho-kalakal of the present inhabitants. An upper-caste and a lower-caste language still exist on the island, and two of the principal clans trace their descent from the conqueror.

The enclosures appear to be partly fortresses, partly temples or holy places, and partly mausoleums. The author considers the group of Nan-matal, on Ponapé, as a town built out of the water by a sea-faring race, not, as Hale thought, a land city which has sunk. He agrees with Kubary that the stone buildings are the work of a long-headed black race preceding the present inhabitants, and that they afford no evidence of subsidence. Excavations in what are regarded as tombs resulted in the discovery of shell beads, fishhooks, axes of the Tridacna shell, needles, pendants, and carved shell bracelets. A bit of obsidian and a single fragment of iron also turned up, together with many fragments of human bones. A cemetery on the main island was also visited. It is by legend referred to a dwarf negrito race said to have preceded both Polynesian and Melanesian populations. Subsequently on Lele, an accessory islet of Kusaie or Ualan, other ruins, similarly titanic, but ruder and less extensive, were visited and measured.

The ethnologic information given is rather scrappy, as the author seems to have been less interested in this than in the philologic branch of his investigations. Nevertheless, much that is curious may be gleaned from his narrative. One of the most interesting items describes the huge perforated limestone disks which form a unique kind of aboriginal money, on the island of Yap. He finds the language bearing traces of Sanskrit and Dravidian as well as Malay and even Mongolian root-words, and enters into wide comparisons which seem to justify this conclusion.

The book is lavishly illustrated and well printed, and may be regarded as a valuable contribution to the knowledge of a rapidly diminishing race daily losing their aboriginal characteristics, many of which will be for ever lost to science unless other students soon follow to gather the remaining fragments while they may.

Voces Usadas en Chile. Por Aníbal Echeverría i Reyes. Santiago: Imprenta Elzeviriana. 1900. Pp. xxii+246. 12mo.

In these days, when the Anglo-Saxon of the "strenuous-life" sect insists upon giving new ideas and new vices to Filipinos and Samoans by way of the cannon and the sword, it is refreshing to discover evidences of the peaceful triumphs of the English tongue in lands far distant from the place of its birth. For this reason, were there no other, the study of "Chilianisms" whose title is given above deserves more than passing notice. The author is a lawyer of Santiago, whose scholarship is vouched for by the University of Chile and by Dr. Rodolfo Lenz, the well-known Americanist. The bibliography (pp. 1-11) surprises us with the proof it contains of the thoroughness with which, both with respect to the contributions of the aborigines to the speech of their conquerors, and with respect to the independent developments of Spanish and Portuguese speech upon the soil of the New World, the provincialisms of Mexico, Central and South America, Cuba, etc., have been studied upon the spot.

Echeverría's book, the best yet published in Chile on the subject, will be of great value to the philologist on account of the phonetic, morphologic, and lexicographic data to be found in the first part. Most interesting, perhaps, are the "vulgarisms"; here the havoc played with Castilian sounds, accents, and genders is most apparent. In *urse* it is difficult to recognize *dulce*, while *poirio* is rather unlike *podrido*, *éi* unlike *ahí*. But it is the psychological and sociological facts revealed in a book like this that are of most importance. The up-to-date character of Echeverría's vocabulary is proved by its inclusion of "bordereau," "Boers," and "Uitlanders." French and Italian have naturally had some influence upon the Chilian language, but the inroads of English have surpassed them both. To other languages than the latter, or at least not to it directly, are due: *Automóvil*, *bambino*, *bébé*, *bonhomía*, *buqué* (*bouquet* of wine), *crême* (*cream* of society), *diva*, *dilettante*, *fanciulla*, *grippe*, *madonna*, *menu*,

mercì, rêverie; German has given *bock, kirsch, talweg* (and a few other mining or topographical terms).

Some of the English words are somewhat disguised. Not at first sight would one recognize all of the following: *Breack* (*brake*, carriage), *cocke* (*i. e.*, coke), *chelin* (shilling), *espich* (speech), *macadan* (macadam), *monis* (money), *panqueque* (pancake), *queque* (cake), *stater* (*starter*, in a race), *turista* (tourist), *ulter* (ulster). To give the full list of English words adopted into the local and general speech of Chile and their sociological and psychological significances would be, in a sense, to sum up the story of our race. *Sport* is there, writ large; in this most English-like of all South American countries *el football* has met a hearty welcome, and the vocabulary fairly bristles with the technical terms belonging to the game. We find also *cricket, lawn-tennis, box* (also *boxear* and *boxeador*), *skating-rink*, etc. The sports and industries in which the horse is a factor give *four-in-hand, handicap, sweepstakes, hack, paddock, cab, tandem, stud-book, turf, match, meeting.* Society is responsible for *at home, club, fashionable, flirt* (and the verb *flirtear*), *dandy, high-life*, and a few others. Politics furnishes *bill, budget, speech, leader, self-government*, but the "boss" has apparently not yet reached Chile. A certain marked feature of Anglo-Saxon civilization contributes, in characteristic fashion, *bar, bitter(s), brandy, coctail, gin, grog, punch, whisky.* Trade and commerce have supplied *clipper, dock, coke* (*cocke*), *check, express* (train), *steamer, stok, wagon, yacht, tranway*, etc. *Schilling* is there, and *schocking*, but not "shilling shocker." Among words that may almost lay claim to world-citizenship may be mentioned the following: *beefteck, bulldog, baby, clown, dollar, humbug, interview, kodak, lunch, Miss, Mister, picnic* (here *Pic Nic*), *plum-pudding, struggle-for-life, toast, whist, gentleman, Lloyd, snob.* From English the Chilians, not quite like the French, get also their *watter-closset.* The United States in particular is responsible for *Lager beer, pilsener, coc(k)tail, rocking-chair, Mormon, lynchar* (to "lynch"), *Yankee.*

Of the words of American Indian origin in the list many have to do with quite local matters and objects, but others, *ají* (pepper), *cacique, charqui* (*jerked* meat), *chicha, Gaucho, paco, puma, puna, pampa*, are more widely known, belonging to other Spanish-American dialects as well. The much-discussed *gringo* means in Chile "an Englishman," and the Othomis of old Mexico are remembered in *Otomías*, "barbarities, wantonnesses." There is even a warning for the would-be constructors of the Nicaragua Canal, for, in Chile, *Panamá* has come to signify "fraud." May the warning avail something!

No. 27 in the Heroes of the Nations.
Charlemagne.
(Charles the Great.) The Hero of Two Nations. By H. W. CARLESS DAVIS, All Souls', Oxford. Fully illustrated. 12mo, $1.50.
Charlemagne, King of France and Emperor of the West, was the most powerful Monarch of his time. In addition to his military genius, he gained a great reputation as a statesman, legislator, and promoter of learning and of the arts. Mr. Davis has made a careful study of the authorities, with the object of giving as lifelike presentment as possible of the man who founded the Community of Western Christendom.

To Have and to Hold

By MARY JOHNSTON

Author of "Prisoners of Hope." With 8 Illustrations by HOWARD PYLE, and Others.

Crown 8vo, $1.50

PHILADELPHIA PRESS:

"One of those fortunate works of fiction that are predestined to extraordinary success. . . . It can be safely said that none of the fiction which has sold by hundreds of thousands in the past two or three years equals in literary merit, in freshness of plot, in the delineation of character, in fertility of invention, and in all the qualities that engage and hold the attention, this most pleasing and satisfactory of contemporary romances."

THE BROOKLYN EAGLE, speaking of Miss Johnston's two novels, pronounces them

"Tales that are wonderful for their sustained strength, wealth of color, beauty of style, originality of conception, and poetic atmosphere, and asks: At what fountain of inspiration has she drunk so deeply that her spirit flies so high and so strong?"

NEW YORK TRIBUNE:

"One of the best historical romances we have had from any contemporary writer of fiction on either side of the Atlantic. . . . The action is always interesting and sometimes it is thrilling. . . . It is all good history and good romance, blended with art and animated by that spontaneous inspiration without which art is useless."

NEW YORK MAIL AND EXPRESS:

"Colonial Virginia is a happy hunting-ground for the novelist. It offers greater contrasts, brighter colors, wider possibilities than does the North, with its more uniform grayness and lack of wide social diversities.

"Miss Johnston's fertility of invention, her ingeniousness of construction, has found full play in her tale. . . . She knows how to write, and how to describe."

Important New Books.

Joan of the Sword Hand.

By S. R. CROCKETT, author of "The Lilac Sunbonnet." "The Raiders," etc. 12mo, cloth, illustrated, **$1.50.**

A captivating romance of the fifteenth century. "Joan of the Sword Hand" is a charming young princess, who is none the less charming for her ability to defend herself and her kingdom when the necessity arises (as it does more than once) by her dexterous use of the sword. Especially does this accomplishment serve her in good stead when, secretly and in disguise, she visits the court of the royal suitor who has been chosen for her, determined that unless her heart sanction it, the marriage shall never take place. As might be expected, the adventurous Princess Joan falls in love with some one else, and her adventures thereafter are many and exciting.

Stevenson.

A Literary Monograph. By L. COPE CORNFORD. 12mo, cloth, **$1.25.**

This is the second volume in the new and important series of literary monographs, biographical and critical. The subject of the first was Matthew Arnold, by Professor Saintsbury. Others will follow at regular intervals by W. E. Henley, Augustine Birrell, Andrew Lang, Alice Meynell, and others.

Mr. Cornford is well qualified to speak on Stevenson, and has treated him from a point of view refreshingly new.

The Kendals.

A Biography. By T. EDGAR PEMBERTON. 8vo, cloth, with many illustrations, **$3.00.**

This is the story of the life—chiefly the professional life—of Mr. and Mrs. William Hunter Grimston, known to the world as Mr. and Mrs. Kendal. Few actors and actresses have so deservedly won their way to the affections of the people as have this talented couple, and it is reasonable to suppose that their admirers in both England and America will be glad to learn more about them. The present biography is written by one who has known them intimately for many years.

Hazlitt and Lamb.

Edited by WILLIAM CAREW HAZLITT. 12mo, **$1.25.**

Most of the letters and papers in this volume have never been published. The material has been carefully edited by W. Carew Hazlitt.

At all bookstores. Postpaid on receipt of price.

Publishers, New York.

The Nation.

NEW YORK, THURSDAY, MARCH 8, 1900.

The Week.

The House of Representatives passed last week, by a vote of 172 to 161, the bill imposing a tariff upon Porto Rico. Six Republicans refused to support the measure. Two other Republicans who stood with them in opposition, and four Democrats who would have voted on the same side, were absent, and pairs could not be arranged for them. If they had been present, the division would have been 172 to 167. Four Democrats voted with the Republicans. If they had stood with their party, the bill would have been beaten, in a House with every member accounted for, by 168 yeas to 171 nays. The success of the measure was thus due to the reinforcement of the bulk of the Republicans by two Democrats from Louisiana, one from California, and one (Sibley) from Pennsylvania. The two Southerners and the Westerner frankly confessed that they voted with the Republicans for a tariff on a starving people because they were afraid that their constituents would suffer from the competition of our new possessions. The bill now goes to the Senate. The duty of all who have fought it while it was before the House is to keep up that fight. Indeed, they should now redouble their efforts to avert the national disgrace involved in the enactment of the bill into a law. The contention should be made in behalf of the national honor. Questions of Constitutional construction are interesting subjects for discussion, but the issue of good faith in redeeming our pledges to a suffering people is the fundamental one.

One of the most grotesque features of a debate which has called out a rather unusual amount of cant, has been the claim that the Porto Ricans would starve unless they were heavily taxed. No doubt, it was said, they would like to be relieved of taxation; but it was absolutely impossible for us to carry out our benevolent intentions without making the Porto Ricans furnish the money for it. We propose to "give" them good roads, public schools, improved police, etc., which will require the creation of many offices, to be held by Americans not born in Porto Rico. These officers must of course be paid, and it is thought to be highly unreasonable and shamefully ungrateful for the Porto Ricans to object to being taxed for the purpose of paying them. It was gravely stated in Congress that, while the American people were a generous people, they had not the slightest disposition to tax themselves for the benefit of their new subjects. In fact, "Destiny" had once more to assume responsibility. It was very sad that the Porto Ricans were suffering; but, in the first place, we were bound to make them pay for the process of benevolent assimilation; and, in the second place, we were going to be extremely careful that no Porto Rican claims should be allowed to have weight against American interests. Unfortunately for the success of this appeal to the absolute necessities of the case, it was pointed out that the people of the United States had always regularly taxed themselves for the support of Territorial governments, and had never regarded it as too great a strain on their generosity. In Arizona, for instance, there is a Governor whose salary is paid by the federal Government; and there are other Territorial officers supported in the same way. There are four judges, receiving $12,000 a year, with provision for their clerks and bailiffs. There are numerous other contributions made by the general Government for Territorial purposes, at least $40,000 being appropriated for education.

The action of the House of Representatives on Friday in voting, after only forty minutes' debate, to put more than $2,000,000 in the President's hands, "to be used for the government and benefit of Porto Rico," as he may think best, can be described only as an outbreak of hysteria. It is three months since Congress met and Mr. McKinley urged the immediate doing of our duty by this new possession, and, after letting the whole winter pass without doing anything, the Republican managers suddenly propose to put a great sum of money in the President's hands, to be disbursed in the island at his pleasure. This is no decent way to conduct a government. The system of voting money out of the Treasury by the millions, to be spent at the discretion of the Executive, is all wrong, and ought to be abandoned. As regards the principle of the bill, that, too, is wrong. Porto Rico asks justice, not charity; the keeping of our national pledges to give her freedom of trade with us—not grants from our Treasury as to a poor relation. The island must be helped, and some appropriation for its benefit ought to be made, but what the situation demands most is self-help, and that can come only from giving her the rights of trade which were promised her by the representative of our Government, a year and a half ago.

The McKinley Administration proposes to give Porto Rico, when it belongs to the United States, worse treatment than the last previous Republican Administration gave the island when it belonged to Spain. The President is forcing the passage of a law imposing 15 per cent. of Dingley tariff rates upon the Porto Ricans. On the 31st of July, 1891, Mr. Harrison issued a proclamation announcing the consummation of a reciprocity arrangement between the United States and Spain, by which sugar, molasses, coffee, and hides were to be imported from Porto Rico into the United States free from any duty whatever, while a list of 75 articles produced or manufactured in the United States were to be imported into Porto Rico free of duty. Is it any wonder that Representative Crumpacker of Indiana, who stood out to the last for treating Porto Rico as well now as we did ten years ago, finds himself the most popular man in the State which repudiates McKinley with scorn?

Secretary Root is left in a most unenviable position, both as public man and lawyer, by the definite statements now made in Washington that he himself drew, or, at least, approved, the bill taxing Porto Rico. One such statement comes directly from a member of the Ways and Means Committee, in search of a scapegoat. As a matter of political expediency, or elementary morality, Mr. Root's action needs only to be compared with his own words of last December, to show that he has made a huge blunder, which, for a politician, is worse than a crime. And as a great lawyer especially chosen to give the President expert legal advice on the whole question of insular government, what a humiliating thing it is for him that a country attorney from Connecticut should have had to instruct him in the Constitution! The truth is, however, that the pretence of laying a duty on Porto Rican goods solely in order to get a decision from the Supreme Court is the sheerest humbug. A case is already on the calendar involving the whole question. These pretended Constitutional scruples are transparent after-thoughts. The real anxiety was to find out, not if the Constitution extended to Porto Rico automatically, but if the President could be brought to his knees by Protection, *ex proprio vigore*. It is clear now that he can be.

Senator Davis has actually introduced amendments giving Porto Rico free trade, by the process of extending to the island such provisions of the Constitution as regulate taxation and prescribe its uniformity. Mr. Davis is a good lawyer, and his plan is cleverly designed to prevent a case coming before the Supreme Court. If the Republicans are wise, they will adopt this or some similar method of keeping the mat-

ter out of the courts pending the campaign. Otherwise, all their platforms and speeches will have to be written with an *if*. "This is the Republican policy *if* the Supreme Court does not declare it unconstitutional." What sort of battle-cry would that be? Senator Davis is one of Mr. McKinley's right-hand men, and his amendments ought to be taken as representing the Administration's policy—that is, its latest policy: it has a new one every day. We are the more inclined to believe this because we observe that the chairman of the State Republican committee of Indiana has flatly told the Executive—*i. e.*, Senator Hanna—that Indiana is lost to the party unless the Porto Rican policy is reversed.

The project for our buying the Danish West India Islands will not gain much strength from the recent struggle over the Porto Rican tariff bill. Yet we hear from time to time that the negotiations are still going on. The latest report is that an offer of $3,500,000 has been made to Denmark, conditioned, however, upon the willingness of Congress to appropriate the money. No reason has been advanced for our having the islands at all, if they were offered to us for nothing; or even if Denmark would give us a bonus for taking them, as she could well afford to do. A more worthless lot of real estate it would be hard to find, except in the great Libyan Desert; and as for the naval advantages which are supposed to belong to the islands, they no longer exist for us since we have Porto Rico, their nearest neighbor. It ought to give the Republicans a feeling of goneness when they ask themselves what kind of tariff they shall enact for the Danish Islands. Santa Cruz produces both sugar and oranges. Although the quantity she is capable of producing is smaller than that of Porto Rico, the principle is the same. If the islands were bought by us, we should have to fight the whole battle over again, with the chances of finding McKinley on both sides of the question.

Prof. John B. Moore of Columbia University contributed to the *Times* of Sunday an article on the Isthmian Canal and the Hay-Pauncefote treaty which ought to have a pretty wide circulation throughout the country, and especially among Senators and Representatives in Congress. He reviews the whole subject from the standpoint of international law, and reaches the general conclusion that the pending treaty ought to be ratified. He holds that the policy of a neutralized canal such as the treaty provides for is the historic policy of the United States, and that the opposing theory, rampant in the Hepburn report, is a new conception, in conflict with that historic policy; that if the Clayton-Bulwer treaty were abrogated, the situation would not be materially altered, since the neutralization of the canal is guaranteed by various other treaties; and that the Hay-Pauncefote treaty, while adhering to the policy of neutralization, gives important advantages to the United States in the way of local control and protection against lawlessness and disorder, which we should not have under preëxisting arrangements. The treaties which Nicaragua has made with foreign Powers, guaranteeing equality of rights and privileges in the use of any canal across her territory, are enumerated with their respective dates, all of which would be in full force even if the Clayton-Bulwer treaty were abrogated. Such treaties exist with Spain, France, Great Britain, and Italy; and the question naturally arises, What would these Powers say or do if the principles of the Hepburn report were sought to be carried into effect by us either with or without the consent of Nicaragua? We are now seeking to maintain the rights of trade secured to us by treaty with China, against the possible encroachment of those European Powers which have effected lodgment on her coast. How does that situation differ from the one which has been created in Nicaragua by similar treaties? The only way to set aside those treaties is for us to annex Nicaragua by force, and to defy the Powers whose rights with her we propose to nullify.

Mr. Isaac Seligman has pointed out a defect in the pending currency bill. Section 2 provides that United States notes when redeemed are to go into the reserve fund until exchanged for gold, and, while there, are to be counted with the gold in making up the reserve of $150,000,000 which is not to be exceeded. If the gold in the reserve fund should fall below $100,000,000, the Treasury might sell $50,000,000 worth of bonds, and the reserve fund would then consist of (say) $95,000,000 of gold previously held, $50,000,000 gold paid in for the bonds, and $55,000,000 of notes redeemed through the action of the reserve fund, making $200,000,000. But, under the "maximum" reserve provision, $50,000,000 of the notes would have to be turned over to the general fund of the Treasury, becoming applicable to any of the purposes of the government. Should expenditures exceed revenue, these notes would certainly be paid out, and almost as certainly be presented for redemption in gold, and the "endless chain" would again make trouble. Bonds could be sold, as bonds were sold before; but, while insolvency was thus averted, panic and disaster were not. In Mr. Seligman's opinion the insertion of the words, "together with the redeemed notes held for use as provided in this section," will vitiate much of the good effect which this law is expected to accomplish. On this point there should be no room for any possible uncertainty or difference of opinion, and if it is too late to change the bill before it passes, it should be immediately amended by removing the dangerous provision for counting notes as part of the gold reserve.

Boycotting has reached an acute stage in Chicago. It grows out of the strike in the building trades. A few weeks ago the dealers in plumbing supplies entered into an agreement with the building contractors' council not to sell to any plumber who had not signed the rules of that council, which renounces the demands of the plumbers' union. Now the plumbers' union has voted that no union plumber in the United States shall handle material sold by these Chicago dealers. To avoid this boycott the dealers say that they will remove all the distinctive marks from their material, so that the boycotters will be obliged to keep track of all the lead pipe that is shipped by them to any part of the country. This would add greatly to the expense of enforcing the boycott, and would lead in many cases to boycotting the wrong goods. It is said that the sales of plumbing material in Chicago have already fallen off to such an extent that the business is now conducted at a loss, and that the end is not in sight.

The battle by boycott must come to an end some time, by the exhaustion of one or the other party, perhaps both; and then it will be necessary to go back to the beginning and settle the dispute by arbitration or by the surrender of one of them. The workingmen are trying to enforce a rule that nobody shall get a job unless he belongs to the union, and they will admit to the union only such as they choose. In other words, they are imitating their superiors in many parts of the country in seeking to form a Labor Trust, intending to subdue the employers one by one. The latter, seeing that each one must endure a strike supported by assessments levied on the employees of the others, naturally unite to resist. A strike is followed by a lockout, and then a boycott is succeeded by an anti-boycott. It will be strange if the sequel does not embrace rioting, murder, and incendiarism, as was the case in the great street-car boycott at Cleveland last year. All this teaches the lesson that the boycott is not a remedy for anything, and that it only aggravates the evils it is intended to cure, by forcing neutrals to join in a quarrel in which they have no interest, and where they can only incur loss.

The attempt to introduce the principle of municipal ownership in Boston has met with disaster from the obstacles which must always hamper such attempts. It seems to be impossible in the government of a large city by uni-

versal suffrage to prevent offices from being regarded as political spoils. It is hard enough to contend against the theory in small communities, and the same is certainly true in national affairs; but with the vast and heterogeneous population of our largest cities the struggle against corruption is far more difficult. Mayor Quincy was not deterred by the warnings of experience, and ventured on a number of these socialistic experiments. He established a city printing-office, a city ice department, an electrical construction division, and a general city repair-shop. Mayor Hart finds that these bureaus are too expensive a luxury for a city as heavily in debt as Boston. When the market price of ice was $3 a ton, it cost the city nearly $60 a ton to procure ice through the municipal department. The printing done for the city at its office is found to cost from 20 to 50 per cent. more than when done by contract. The electrical and repair departments showed the same results; in one case work, for which a private contractor submitted a guaranteed estimate of $40, costing the city $300 when done by its own bureau. The heads of these bureaus found that if they discharged men for improper conduct or inefficiency, some outside influence was potent enough to reinstate them, and it is safe to say that, until the politicians retire from business, influence of this kind will continue to be potent. Mayor Hart has abolished two of these departments, and the saving promises to be so considerable that the others will have hard work to justify their continued existence.

The financial world has lately been startled by revelations of rottenness in the affairs of the Third Avenue Railroad Company which have reduced the market value of its shares to less than 50, from a maximum last year of about 240. This maximum, of course, was largely speculative, but the stock was, no doubt, fairly worth 150 before it fell among thieves and was stripped and left bleeding as we now see it. A suspicion has been growing during the past week that, in the wrecking of this property, Tammany Hall has had very much the same share as it had in that of the Erie Railway in the time of Tweed and Sweeny. Now we learn from some correspondence that passed between Mr. John D. Crimmins and Mr. A. J. Elias last summer that the former, viewing with his practised eye as a contractor, a shareholder, and a politician, the work of changing the motive power of this road, perceived that there was great waste of the company's resources, and inferred that some political party was at the bottom of it. He communicated his suspicions by letter to Mr. Elias, the Vice-President of the company, and added: "I doubt very much if there has ever been a public work or a work for a corporation where there was so much loitering as there is on this work." Mr. Elias made use of the *argumentum ad hominem* in his reply, saying that there was as much if not more loitering on the Eighth Avenue line, which Mr. Crimmins built, than on the line which Mr. Crimmins had ventured to criticise, but he (Mr. Elias) would give prompt attention to any want of diligence on the part of the contractors. The fact that the contractors were allowed a commission of 15 per cent. on the amount spent for labor would serve to account for the loitering and the prolongation of the work; but the question is yet to be answered, Why was such a contract made, why were these contractors employed, and why were they allowed to loiter and prolong the time for completing their job? Some persons say that these contractors were Tammany men, and that they alone could control the permits for street opening, and hence that their employment was a necessity; in other words, that the company was blackmailed. This, if true, does not excuse the officers of the company. It rather adds something to the gravity of the charge against them of betraying the interests of their shareholders that they did not resist the attempted blackmail, and appeal to the courts, the public, and the Legislature for protection..

The withdrawal of Lord Rosebery from the Scottish Liberal Association, of which he has been President for twenty years, is the most considerable event that the Boer war has produced in English politics. The withdrawal was caused by the dissatisfaction of the Scotch Liberals with Lord Rosebery's position in reference to the war, which has been that of a rather ardent supporter of Mr. Chamberlain's position. In other words, he not merely sustained the Government in carrying on the war, but he believed that the Government was right in taking the steps which antedated the declaration of war by the Boer Government. Here he was in conflict with Mr. Campbell-Bannerman, Sir William Harcourt, John Morley, James Bryce, and nearly the whole Liberal party. It does not follow that he will join the Conservatives or the Unionists, but his withdrawal from the Liberals at any time, for any reason, could not fail to be an event of importance.

The Chancellor of the Exchequer estimates the deficit in the revenue for this year and next at £60,000,000. This deficit is to be met by increasing the taxes to the extent of £12,317,000, by taking £4,640,000 from the sinking-fund for terminable annuities, and by borrowing £43,000,000. The income-tax is to be increased one-half, making it a shilling in the pound, or 5 per cent.; 2d. a pound is to be added to the tea duty, 6d. a gallon to that on spirits, a shilling a barrel on beer, 4d. a pound on tobacco, 6d. a pound on cigars, and a shilling on the stamp-tax on certain brokers' contracts. The suggestion was made that the additional revenue might be easily obtained by a tax on sugar, but it was not listened to, and half the increase in taxation will fall on the incomes of the classes which have most favored the extension of the British Empire by force of arms. As the war may cost twice the estimated amount before it is concluded, the burden of taxation bids fair to be heavier than it has been during the memory of most Englishmen now living. The country is now highly prosperous, but when hard times recur, the taxes will be severely felt. It has been intimated that a large indemnity might be exacted from the Dutch Republics, but Sir William Harcourt pointed out that the problem of getting such an indemnity paid was not to be easily solved.

Russia's steady advance in Asia is marked by one mile-stone more in what appears to be her practical absorption of Persia. By the usual means of railway concessions and a guaranteed loan, Russian control of Persian trade and government is now assured; and the secular desire of Russia for a seaport on the Indian Ocean will be gratified as soon as the rails can be laid to Bander Abbas on the Gulf of Oman. This stealthy march forward, on the line of England's communications, as it were, could not have been so easily accomplished but for British preoccuption in South Africa. The Czar has professed strict neutrality and great friendliness, and protested that he could never think of taking advantage of England's African embarrassments; but his agents have nevertheless pressed quietly forward in Afghanistan and in Persia. The inhabitants of the latter country are represented as eager for a Russian protectorate. "When will the Russians come? When will the White Czar deliver us?" These are said, by a Russian officer in Teheran, to be the eager questions of the natives. He added, in his report to the Minister of War, that "one division of infantry and a couple of Cossack regiments would suffice to keep in check the whole of Persia." But there is another side to the extension of Russian military rule. In Sebastopol, three weeks ago, forty-three officers of the Russian navy were put on trial for corruption and bribery, in connection with the purchase of supplies for the Black Sea fleet. At almost the same time was confirmed the sentence of degradation and exile, for embezzlement, of Gen. Ilovaisky and several Cossack officers. Peculation has been historically the cancer of absolutism. The Russian armies were almost paralyzed in the Crimean and Turkish wars by dishonest administration; and, as the empire extends, opportunities for corruption multiply.

DEEDS, NOT WORDS.

President McKinley's speech at the Ohio Society's banquet in this city on Saturday evening was a very thesaurus of phrases which may be applied, like so many blisters, to his own conduct in the past two weeks. "We must choose between manly doing and base desertion." Who says this? The man whom the whole country has seen running away from his own words like a frightened rabbit. "Partisanship can hold few of us against solemn public duty." But Mr. McKinley is himself one of those few. He could read in Monday's Chicago *Times-Herald*, edited not by an enemy, but by a personal friend and benefactor, not by a Democrat or Mugwump, but by a stanch Republican, the following truthful account of what the President of the United States did when partisanship came into collision with what he himself had declared to be "solemn public duty" to Porto Rico.

"A majority of Republicans were opposed to the principle of the bill and faithful to the thought and purpose of the President's message. The defeat of the bill was imminent and the prestige of the Republican majority in the House was in peril.

"Then the President was appealed to. It was represented to him that nothing could save the party from humiliating division and defeat but some sign that he receded from the recommendation of his message. The leaders of the party were permitted to suggest that he had changed his mind. But this was not sufficient to bring the recalcitrants into line. The President was again appealed to, and, under pressure from the party leaders in the House, he *personally urged several Representatives* to support the bill, so as to preserve an unbroken Republican front in the House.

"Thus was the grievous blunder committed."

In what atmosphere, surcharged with adulation, must the President live not to know what the people are saying of his lamentable display of moral cowardice? The country is ringing with it. Republicans are torn between rage and disgust over his ignominious retreat. And yet he is so armed in triple brass of egotism that he dares, on the heels of his own humiliating exhibition of weakness and recreancy, to prate once more of "duty"! A runaway colonel might with as good grace exhort his regiment to be brave. If it could ever have been said that the President's words were half-battles, it must now be admitted that they are whole defeats. He ought to beware how he excites the laughter or scorn of his hearers by performing again on his tinkling cymbal of "solemn public duty."

The truth is, Mr. McKinley mistakes the time of day. He talks as if it were still February, 1899, instead of March, 1900. His pious descriptions of the blessings we were going to bestow on our national "wards" were all very well a year ago, but now we are translating his fine words into action. To-day it is *res non verba;* and what is the thing we see? "It is not possible," gravely asserts President McKinley, "that 75 millions of American freemen are unable to establish liberty and justice and good government in our new possessions." That may pass for a belated platitude; but the actual situation is, that American freemen are trying to establish justice in Porto Rico—and their President blocks the way. There is no chance for a quibble here. Mr. McKinley himself laid down officially the proper way in which to establish justice in this particular one of our new possessions. He was on record. He was committed morally. Yet, with the country eager to support him, with his party press appealing to him to live up to his own words, with Congress bursting with desire to do justice to Porto Rico, he deliberately chose to play the part of an oppressor. And then he added insult to injury by coming to New York to declare: "The liberators will never become the oppressors!"

The Spanish language has a word which it applies to such grandiloquent hypocrisy. *Música, música,* Spaniards cry, when they hear a man trying to cover up foul deeds with fair words. This is the indignant and scornful cry which will resound throughout Porto Rico when the natives read of the President's betrayal, followed by his flood of noble sentiments. Already the dispatches show the consternation approaching despair which reigns in this particular one of the islands we wrested from Spain. Our Governor-General told Congress that, so far, American occupation had been a curse to the natives. But they had held on in hope that, at last, we would keep faith with them. What must their feelings be when they discover that the President of the United States has broken his plighted word? If they were strong enough, they would undoubtedly take up arms against American rule, and they would be justified in doing it if the American Revolution was justified. It is of no use for the President to affirm that "there can be no imperialism." The Porto Ricans know better; they are suffering from it.

In one respect, the President's speech is a good sign. Like his recommendation of a $2,000,000 appropriation for the Porto Ricans, it shows that he is in a panic. The open revolt of conscience Republicans, and the open exultation of the Democrats, have revealed to him his monumental blunder. He sees thousands of votes endangered; and, with Mr. McKinley, a vote imperilled means a solemn obligation to retain it if possible. But what he must see is that no half-way measures will do. His message asking for $2,000,000 is already seen by the country to be only a small trick. There is neither statesmanship nor charity in it; it does not touch the root of the trouble as law, and, as a gift, would be only a form of pauperization. No, the only thing for Mr. McKinley to do is to take Mr. Kohlsaat's advice, admit that he has made a dreadful mistake, turn square about, and urge Congress to give the Porto Ricans free trade. This might seem an awkward performance for the President, after what has passed, but we are sure that he would be able to say that his conduct throughout had been straightforward and consistent. At any rate, inconsistent or not, ruin lies for him in any other course.

THE GOVERNMENT OF HAWAII.

These are cheerful days for the Democratic members of Congress, as compared with the sorrowful yesterdays when their blundering policy made them the butt of their opponents' ridicule. It is now their turn to laugh at the embarrassments in which the Administration has involved the Republican party; embarrassments so great as to cause a Republican Representative to beg the Opposition not to make them unbearable. The debate on the bill establishing a Territorial government in Hawaii, which has finally passed the Senate, gave Senator Tillman of South Carolina an opportunity to expose some Republican inconsistencies, which he improved with unfeigned delight. As he observed, when he got his adversaries on the prongs of his pitchfork, he did not care which side they took, and on the present occasion he had them "right there." If, as the bill in its original form proposed, the government of Hawaii was to be placed in the hands of an oligarchy of the white races, the Republicans ought to recognize the wisdom of the South Carolina law which aimed at a similar result. If the policy was right in one case it could not be condemned in the other; and if it was wrong in South Carolina, it must be wrong in Hawaii. Accordingly, Senator Tillman proposed that the South Carolina law be adopted word for word in the organic law of Hawaii. This amendment the Republicans could not, for very shame, adopt; but Senator Tillman's exposures were not without effect.

It was somewhat unguardedly admitted by the Republicans, at the beginning of the debate, that apprehension was felt that other people besides Americans might get control of the government. As Senators Platt and Cullom stated, there was danger that the "Anglo-Saxon element" might be overruled. The population of the islands being now estimated at 150,000, and the Americans numbering only between 3,000 and 4,000, this danger could not be disregarded. There has been "friction" between the Americans and the other inhabitants, and, in the words of Senator Platt, the other elements "may conceive the idea that they can run the government by votes as against the Anglo-Saxon people and the Anglo-Saxon idea, and they will be liable to be influenced by demagogues—people who still hold, in a way, to the old monarchy—and there is great danger that all Anglo-Saxon influence there may be overturned." Accordingly the bill, which was

evidently concocted by the ruling oligarchy in Hawaii, provided not only a qualification of intelligence, but also a property qualification for voters. No one was to vote at all who could not read, write, and speak either the English or Hawaiian language—although the Germans number 1,500, the Portuguese 15,000, the Chinese 21,000, and the Japanese 24,000; and no one was to vote for members of the proposed Senate who had not, in addition to this qualification, real property valued at $1,000, or an income of $600 a year. No person, moreover, could be a member of either house of the Legislature who did not possess a certain amount of property. With these precautions, with a governor appointed from among the residents of the islands, with the present judiciary maintained, and with the selection of nearly all the officers by the governor, the dominant element felt that their position would be reasonably secure. As the former Attorney-General of Hawaii remarked, "Unless some means were adopted to control the native vote, the Territorial Legislature would probably pass quickly into the hands of the natives"; and "even the Portuguese, as against the Anglo-Saxon, could exclude the latter from taking any part in legislation." The original bill was unquestionably well calculated to prevent this result.

This well-laid scheme, however, has been sadly marred by the Senate; and Senator Morgan, who had elaborated it in conjunction with the Hawaiian rulers, now frantically shouts that he would advise the people of Hawaii to remain as they are for a hundred years rather than accept such a plan of government as the Senate has created. In point of fact, the revelations made concerning the conditions under which "contract labor" prevails in Hawaii rendered the bill odious. The statutes of Hawaii have provided that any person refusing to serve his master shall be "compelled" to carry out his agreement of service; and that if he shall refuse, he shall be imprisoned at hard labor until he "consents." If he "consents," and does not serve satisfactorily, he shall be fined, and imprisoned at hard labor until his fine is paid. As evidence was produced showing that in some cases the contract laborers were "docked" of half their pay of $12.50 a month—without board—such fines might involve imprisonment for life at hard labor. The Senate appears to have made thorough work in prohibiting this abuse, and, getting in the mood for securing some of the recognized rights of American citizens, it struck out the property qualification required of voters for members of the Senate. The courts, instead of remaining in the hands of the present Government, are to be assimilated to other Territorial courts, and it is worthy of notice that the judges are to be paid by the United States, although no concession of this kind has been thought admissible in Porto Rico. Hawaii is to have a Delegate in Congress, like other Territories. It is to have the same freedom of trade as the other Territories. In short, as the bill leaves the Senate, it practically establishes a Territorial government on familiar lines, and seriously interrupts the plans of the American oligarchy to maintain the government in their own hands. It also paves the way for two Senators and a Representative in Congress, and three votes in the Electoral College, at some future time.

COUNTING THE COST.

Following the rejoicings in London over the relief of Ladysmith, the warning voice of the paymaster is heard in its appropriate corner of the House of Commons. What he tells ought to have a sobering effect after the effervescence of the good news passes off. The naval estimates were presented by Mr. Goschen a few days ago. They call for $42,000,000 for new battle-ships and cruisers, the entire naval expense for the year 1900-'01 being placed at $150,000,000. Mr. Goschen said that Russia was preparing to expend $21,000,000 for new construction, and France nearly the same amount. In order to keep England up to the mark she had hitherto fixed for herself, she must make her expenditure equal to that of any two of her rivals. In this way the sum of $42,000,000 was reached.

Two weeks ago the Under Secretary for War made a preliminary statement of the needs of his department. He said that the present regular force consisted of 109,000 regulars in the United Kingdom, to which he proposed to add 30,000 immediately. Then he proposed to put under training the present volunteer forces, amounting to 328,000, and to add 50,000 more to their number, so as to have 517,000 men trained to arms or undergoing training in the course of the next few months. "Personally," he said, "I believe the figure will approach more nearly 600,000 men than 500,000." Mr. Campbell-Bannerman asked for some estimate of the expense of this enormous increase of the British land forces which, if carried into effect, would approach the magnitude of the great Continental armies. He insisted that the question before the country was one of policy rather than of armament, because the policy to be pursued always fixes the measure of the armament. If the policy is one of aggression, the army and navy must be made to correspond with it. "I ask," he said, "that whatever we do, we shall not, in our realization of the facts now before us in South Africa, in our discovery of the difficulties we have to meet there, rush into some great project of military development, which I believe would be the very worst thing that could happen to our country." At the same time he acknowledged that the proposals of the Government were much more moderate than the advice given by the public prints.

On Thursday the war estimates were presented to the House. They are even more moderate than those which the Under Secretary had foreshadowed. They provide for an increase of the establishment to 430,000 men, and a total net expenditure of $307,000,000, against an establishment of 184,853 men, and an expenditure of $103,000,000, as originally voted for the current financial year, showing an increase of 245,147 in the number of men, and of $204,000,000 in the money expenditure. The foregoing figures for the current year do not include the supplementary estimates of October and February for the present Boer war. They are for the future permanent establishment of the British army. Added to the naval estimates presented by Mr. Goschen a few days ago, they mount up to $450,000,000 for fighting purposes alone. And this comes within seven months after the meeting of the Hague conference, which was called for the purpose of securing a reduction of military and naval expenditure, or a cessation in the increase thereof. And now England is on the eve of trebling her military expenditure and adding many millions to her naval.

Of course this wild plunge, if taken, will be because of the war in South Africa, and for no other reason. The Boers, being on the ground and the first to take the field, had secured a very advantageous position, and were thus enabled to make their men count two or three for one. So when the British dashed against the Boer fortifications they were hurled back several times with severe loss. England's enemies on the Continent began to prick up their ears and ask themselves whether this was not a good time to reopen the Egyptian question, or the Chinese question, or some other question in some quarter of the globe. The British public began to grow nervous. There was a sudden overhauling of the War Department by the newspapers, and a demand for reasons why these Boers had been allowed to get in a position of such superiority at the outset of the war. Public opinion, which, one year ago, would have killed any scheme for an increase of the army, and trampled under foot any ministry which should have adopted that policy, is now favorable to, nay demands, a greater increase than the ministry brings forward; and this increase costs three times the money that the British taxpayer is accustomed to spend. So we see for the thousandth time that when a nation takes up the sword, it never knows how or when it may lay it down. It may be led, in its own despite, into paths of folly which, in its sane moments and under ordinary conditions, it would have regarded with scorn, and even with horror.

Undoubtedly the new armament of England will be made a reason and an excuse for the United States adopting the same policy. It will be said that, with a force of half a million men, England can send an army to take possession of our precious Nicaragua Canal. That will be made an argument, not for ratifying the Hay-Pauncefote treaty, but for adding to our army and building twice as many fortifications on the line of the canal as we originally intended. But there is an element in our politics that is able to offer an effective opposition to a large standing army. It is composed of the workingmen's organizations, and there has been evidence lately that this element is making itself felt in the military committees of Congress. Let us hope that it may solemnly warn Congressmen that it will vote for no man who votes for increasing our military establishment. Reorganize it, make it as efficient as you please, but if you would prevent wars, prevent the army from growing in numbers.

THE REUNITED IRISH PARTY.

In the manifesto of the recently elected chairman of the Irish party in the House of Commons, the occasion and aim of the reunion of the Irish factions which have been quarrelling and helpless for nine years past are clearly to be read, in the lines or between them. Much is made of the extremity in which England was thought to be a month ago. That was Ireland's opportunity. No man could tell, said Mr. Redmond to his fellow-Irishmen, what might not be accomplished by a resolute and united body of eighty Irish members in "the greatest crisis in the memory of living man" which had "arisen in the affairs of the Empire." The great British successes in South Africa have already taken most of the pith out of that argument. But the need of doing something to restore the confidence of the Irish people in their representatives at Westminster, and to set flowing again the contributions of Irishmen all over the world, remains the chief reason for burying the bitter quarrels. Mr. Redmond frankly laid great stress upon this motive, and asked for subscriptions to "the Sessional Fund of the Irish Parliamentary party."

Many gibes and sneers have been called out by this appeal for funds. They are, however, both unfounded and vulgar. As long as members are not paid, and as long as Irish nationalists send, and must send, men of small means to represent them in Parliament, it is entirely proper that their support, while in attendance upon the House, should be provided for. O'Connell used to receive such support—his "rent," as it was half-humorously, half-tauntingly called. For this he was exposed to many Tory insults, which, of course, he repaid with interest. But there could really be no doubt about the propriety of his receiving money from his constituents. Greville, who was, at first at least, no friend to O'Connell, said that the funds put at his disposal were "a tribute nobly paid, and nobly earned." The real question is, not whether the Irish members should be maintained, but whether their present programme promises any substantial good to those who send them to London and support them there.

The answer to be found in the manifesto is not wholly explicit. It may be doubted if the Irish party speaks its whole mind in it. Irish Home Rule is referred to only casually, and as a kind of dream not officially abandoned. What Mr. Redmond definitely promises to work for is further land legislation for the relief of Irish farmers, and some measure of University education for Catholic Ireland. These demands are shrewdly made. Lord Salisbury has already gone further in legislation against Irish landlords than Mr. Gladstone ever dared or was able to go. So Mr. Redmond's appeal is *ex concessis*. He says to the Government, You have admitted the principle; you have gone half-way towards carrying it out; now go the whole way, and give us "the universal establishment of compulsory purchase of an occupying proprietary." As for a Catholic University, Mr. Balfour argued stoutly last year for a Government grant to establish one or more such institutions. Here again, therefore, Mr. Redmond is ploughing with Conservative oxen.

Behind this outward and avowed programme, lie deeper questions, harder to answer. Is the Irish people substantially united in support of its Parliamentary representatives? Is it heartily committed to political agitation as the best means of securing what it wants? There is good reason to doubt whether either of these questions can be answered by a round affirmative. At one extreme, there is the literary party of Young Ireland—the Celtic School—Kelts, they prefer to spell themselves. They are distinctly languid as respects the political remedy. They propose to witch and wheedle Englishmen with their indigenous poetry and romance and drama. An outsider might doubt whether their instrument is better fitted to placate than to infuriate, but at any rate they believe in it. At the other end of the line is the physical-force party. This remains supremely indifferent, really contemptuous, in the presence of Irish Parliamentory reunion. Here, for example, is the ominous note sounded by the *United Irishman:*

> "Day by day Parliamentarianism is becoming more discredited by the people whom it befooled for over twenty years. The picture of 40,000 farmers meeting and beating the forces of the British Empire has imprinted itself upon the brain of the Irish nation.
>
> "The burgher with his rifle guarding the land of his fathers appeals more powerfully to the Irishman than the member of Parliament with the begging-bag, suffering for his country in the House of Commons. Between unity and extinction our Parliamentarians did not hesitate. Between unity and starvation they did not falter for an instant in their choice. As the *Evening Herald*, Mr. Redmond's mouthpiece, explains, 'unity' was necessary because 'funds have only empty boxes, American support has become estranged, and at home subscriptions for any purpose died a sudden death.' 'This state of affairs,' adds our ingenious contemporary, 'could not continue.'
>
> "As to the future of Irish Parliamentarianism we have no fear. It can never again humbug Ireland into believing that the establishment of a glorified vestry in Dublin means the triumph of Irish nationality."

What is the outlook, then, for the Irish party in Parliament? A leading Liberal writes us privately that he thinks the Irish will hold the balance of power in the next Parliament. This certainly seems probable, yet, after all, it will be a very different thing from the balance of power which Parnell held. For one thing, obstruction can no longer, under the new rules, be made so deadly a weapon to extort terms as he made it. Furthermore, we shall not soon see the Irish party making and unmaking ministries on the question of Home Rule. Home Rule may be said to have been dropped from the Liberal programme; surely the Conservatives will not be bidding for the Irish vote, as they were in 1886, with promises of modified Home Rule. It seems highly probable that there will be a distinct rejuvenation of the Irish party in Parliament, and that it will be able to wring a succession of "doles" to agriculture and to education from a reluctant Government.

THE DECLINE OF TEACHING.

The recent death of Miss Porter, who for half a century conducted a well-known school for young women at Farmington, Conn., calls attention to one of those far-reaching changes which have done so much in these fifty years to transform American education. It is at least a curious coincidence that the development of the modern science of pedagogy, with its array of physiological and psychological data, should have been accompanied by a distinct decline in the prominence of the teacher. No one, we suppose, will question that the number of great teachers is decidedly less now than it once was, and that the depleted ranks are not being adequately filled up.

While this dearth of teaching power, notwithstanding the persistent efforts to overcome it, is characteristic of all departments of education, it is especially noticeable in the colleges and universities. Perhaps in no single respect, indeed, does the average college of the present day contrast more sharply with the college of a generation or two ago. The histories of most of our older institutions record the names of many distinguished men who, over and above their additions to knowledge in their respective fields, left upon their students marked individual impressions as teach-

ers. The names of Nott at Union College, Hopkins at Williams, Wayland at Brown, Tyler at Amherst, during the period when all these were small colleges, are enough to cite. That the equipment of such men for their specific duties was sufficient was, for the most part, assumed without question; but it is as instructors, rather than as scholars, that they are most fondly remembered. In the minds of the older graduates, their figures assume, with the lapse of years, somewhat of heroic proportions, and their determining influence upon thought and life is constantly recalled.

That such conditions no longer generally prevail is, we suppose, matter of common observation. With all the excellence of their work, comparatively few instructors to-day get much hold of individuals in their classes. To be sure, the average college or university teacher is immensely industrious, and exceedingly learned. His students acquire a much greater body of positive facts than formerly, and their knowledge is commonly of a more practical sort. But somehow he rarely succeeds in awakening the personal affection which marks the work of the great teacher, or in making for himself a name as other than a sound scholar, or a good lecturer, or an attractive writer. It is by the knowledge he has imparted, or the stores of erudition he has made available, that he is most remembered, rather than by his skill in stimulating an interest in intellectual things, or by the large and inspiring qualities of his mind and heart.

The causes of this change are, doubtless, to be found in the same forces which have, in recent years, given to higher education so great a lift. The rise of the university, with its emphasis on specialized learning as the only learning worth having, has set a premium on intensity rather than breadth of attainment. Notwithstanding his praiseworthy knowledge, industry, and devotion, the modern university instructor, especially if he has been trained within the last twenty years, rarely has much of the broad outlook upon things which was so noticeably characteristic of the older culture. In intellectual matters, he is likely to feel himself tyrannized by men older and more learned than himself, and to be abnormally sensitive about slight deficiencies. The drudgery of the classroom, the slow and painstaking dealing with individuals, are too often regarded as a burden, to be shifted as much as possible upon the shoulders of younger men.

The new view of the teacher's functions seems to have, also, the stamp of official approval. Broadly speaking, pronounced ability as a teacher, unaccompanied by the production of at least one learned work, is not a passport to distinction. It very rarely leads to promotion. In other words, the higher the standard of the institution, the less place it seems to have for men and women whose chief power is their ability to teach. It is the making of books, and not the training of the young in habits of thought and work, that holds out to the teacher of to-day the main promise of reward.

It is useless, of course, to cry over spilt milk, or to sigh for a revival of the particular methods and manners of former days. The watchword of modern higher education is scholarship; and so long as scholarship of a technical and exacting sort offers the only avenue to distinction, young men and women are little likely to be turned aside from it. It cannot be idle to remember, however, that the present régime brings evil, as well as good, in its train. With all the successes of the college and university, and the fruitfulness of their service in every department of life, it cannot be denied that their influence upon many is appreciably narrowing. Valuable as are the products of concentration, concentration, nevertheless, implies restricted vision. It is not a favorable indication of the trend of things that the few great teachers and intellectual guides who are left to us should so often, both in and out of college circles, be a bit lightly regarded. Perhaps it is no longer true, among the better class of college men, that enthusiasm is "bad form"; but it too often is true that instructors who aim most at getting hold of the men under their charge, and care least about becoming eminent specialists, have to overcome a pervading distrust as to their soundness and authority.

Ideal as the figures of the notable teachers of the past generations may have become, one cannot doubt that they had hold of education by the right end. Culture, as they viewed it, was learning dispensed through a large mind. It was fact and theory, accurate investigation, and assured knowledge, lighted up by a strong and vivid personality. It is this clear impression of personal power, winning the regard of those upon whom it falls, that the higher education among us most needs.

THE MOTHER OF THE DUC D'ENGHIEN. —II.

PARIS, February 22, 1900.

The relations of the Duke and Duchess de Bourbon were of a singular character. They led separate existences. She lived in the Élysée. Hearing that her husband had bought the estate of Nointel, near Paris (it belongs now to a wealthy stockbroker) for the sum of two million and a half of francs, and that he was embarrassed to pay the amount, she generously offered to advance it to him; he accepted the offer, and it was the occasion of one of the visits which he made to her. Soon afterwards the Duke left France with his father, upon the fall of the Bastille. He was one of the first to give the signal for the emigration. He took with him his son, the Duke d'Enghien, whom his mother was never to see again. The Duchess completely espoused the ideas of her brother, the Duke d'Orléans, who openly declared himself a champion of the Revolution. The Élysée, like the Palais Royal, was a centre for the partisans of the new ideas. The Duchess severed all her relations with the House of Condé, and remained in France; she left Paris, however, and spent some time in Strasbourg, where she found her philosopher Saint-Martin and her friend Madame d'Oberkirch. She returned to Paris in 1790, and entered into relations with a monk, Dom Gerle, prior of the Chartreuse of Pont-Sainte-Marie, who had passionately joined in the Revolutionary movement. (Dom Gerle figures in David's famous picture, "The Oath of the Tennis-Court.") We see her also in communication with an inspired prophetess, a reformer of the church, Suzette Labrousse, and another prophetess, Catherine Théot, who called herself "the mother of God."

The Duchess de Bourbon's character was the most singular mixture of absurdity, one might say folly, and of generous sentiments. When the confiscation of the fortune of the Condés was pronounced, she wrote to her husband a long letter (the text of which is given in Count Ducos's volume), inviting him to return to her house in France, and to dispose of all her fortune. As she had not emigrated, her property had not been confiscated. The Duke de Bourbon sent his answer, through a friend, M. de Nolives, March 27, 1792. He thanked her for her generous offer, but explained that it was impossible for him to return to France. M. de Nolives writes a curious letter to the Duke de Bourbon on April 8: "As soon," said he, "as I received Monseigneur's letter, I wrote to the Duchess de Bourbon, to ask for an interview, having a communication to make to her on your behalf." He tells how the Duchess received him, how she showed some irritation at not having a letter from her husband, only a verbal message. He had no difficulty in explaining that letters were not very safe under the Terror. The Duchess complained of having received no news of her son, no letters from him:

"I had heard people say that Mme. la Duchesse was devout, but I could not imagine to what an extent. There are few nuns who can be compared to her. Her language is absolutely mystical, her exaltation is extreme. She sees everywhere the hand of God; speak of anything else, and her mind wanders. It is a pity that with wit, grace, and all the faculties she has, she should have so far lost her bearings (the phrase is permissible). She is as democratic as anybody, not by wickedness, but by devotion."

M. de Nolives sensibly adds that it would be proper for the Duke d'Enghien to write from time to time to his mother.

Count Ducos gives extracts from the reflections which the Duchess de Bourbon wrote on the events of the Revolution. They are inspired by a sort of religious fatalism; the horrors which she sees committed under her eyes appear to her the consequence and the punishment of a guilty past; the victims seem to her hardly less to blame than the executioners. The time came when she had need of all her philosophy. The Convention voted the arrest of all the Bourbons still remaining in France. She was thrown into prison at Marseilles, with her brother, the Duke d'Orléans, and her nephews, the Duke de Montpensier and the Count de Beaujolais, and the Prince de Conti. The Duke d'Orléans was sent back from Marseilles to Paris, and

soon after, notwithstanding all the pledges he had given to the Revolution, was guillotined at the same place as Louis XVI. (November 6, 1793). The Duchess de Bourbon had to announce the execution of the Prince to her nephews. She sent, twelve days afterwards, a petition to the Convention, which is an astonishing document. In terms of the greatest humility, without any allusion to the terrible loss she had sustained, to the persecutions of which all her family were the object, she begged the Government to accept for the nation the gift of all her property, expressing only the hope that the income of it might be spent for the widows and orphans of the defenders of the nation. She simply asked to be set free, and that she might preserve the means of living and of recompensing her devoted servants. This request was accompanied by a minute inventory of all her property, which was very large (the Élysée Bourbon was valued at 1,100,000 francs; Petitbourg at 1,200,000, etc.). The Citoyenne Bourbon (such was her name then) explained also in her request that she could not have influenced her husband and her son to become *émigrés*. The Convention took no notice of these offers, the State being already in possession. The Élysée was presently sold to a Mlle. Hovyn, who was a sort of undertaker for all the public festivities of Paris. The death of Robespierre probably saved the Duchess de Bourbon from the guillotine; she remained, however, in prison after the ninth Thermidor, and it was only two years afterwards that the Convention ordered that she should be set free. An income of 180,000 francs was allowed her out of the revenues of her sequestrated estates. The Prince de Conti was also allowed to leave his prison; the two young and innocent brothers of Louis Philippe, the Duke de Montpensier and the Count de Beaujolais, were retained in captivity.

The Duchess de Bourbon was allowed to live at Petitbourg, but, after the *coup d'état* of Fructidor aimed at the royalists of the Chamber, a decree obliged the Duchess d'Orléans, the Duchess de Bourbon, and the Prince de Conti to leave France. A pension of 100,000 francs was promised to the Duchess d'Orléans; that of the Duchess de Bourbon was reduced to fifty thousand francs. This Duchess wrote an account of the journey which she made from Paris to Barcelona. It serves as the preface to two volumes in which she published her correspondence with a certain M. Ruffin, the officer chosen by Augereau to conduct her to the frontier, and who was to remain in relation with her after their journey. This extraordinary journal did not deserve to be published, being very unworthy of a person who had been so long in the most tragical situation. It is half sentimental, half burlesque; it is childish in many parts, in others it becomes ridiculous and repulsive. It pretends to be humorous, but it simply proves that the Duchess de Bourbon was in a very unsettled state of mind. She talked religion and theology with the young officer Ruffin, she sought to convert him and to work for his salvation, and so was brought to begin with him a correspondence that was to last for many years. "For nearly fifteen years, she made controversial attacks on him."

At Barcelona she was welcomed and was received by the Captain-General of the province. She occupied first a sort of château with her sister-in-law, the Duchess d'Orléans, who had also made the journey from Paris to Barcelona. After a while, the two sisters-in-law took separate houses, one at Gratia, the other at Soria, in the neighborhood of Barcelona. The Duchess de Bourbon had no companion but a lady, the Countess Julie de Sérens, a secretary and his wife, M. and Mme. Gros. Her chief amusement seems to have been writing to Ruffin and receiving his answers. Ruffin left the army to hold a small office in Paris. The Duchess entreated him to enter into communication with Saint-Martin, and sent him elaborate plans for the reformation of humanity. He was not as enthusiastic a reformer as she, but did not like to discourage her too much.

The Duchess's relations with her son completely ceased; once only she wrote to him from Spain. The Duke d'Enghien answered her politely. The mother had become an admirer of Bonaparte, but her admiration certainly received a great shock when she heard of the execution of her son at Vincennes. Yet when the Duke de Bourbon wrote to her from England a letter on the terrible subject, she sent him a most extraordinary answer. "Why," asked she, "did my son not believe me? Why do all his family think of nothing but the glories of this world? and why do they forget that the glory of Heaven is acquired by renunciation in all things, by the most profound humility, by forgiveness of injuries, and even by the love of our enemies?"

The French army took Barcelona, and on the 11th of April, 1809, the Duchess de Bourbon charged Gouvion-Saint-Cyr, the French commander, to transmit to Napoleon a letter in which she told him that she had been ten years in Spain, and that it would be a great consolation to her to end her life in France, "with friends who inhabit the *ci-devant* province of Meaux," or in any other place which he might designate. "The wishes I should form there would be all for the glory of France and for your Majesty, of whom, Sire, I am the most humble and obedient subject." Gouvion-Saint-Cyr added to this letter a report on the Princess, her mode of life, her singularities; the Emperor made no reply. In 1812, the Duchess published two pamphlets, 'Thoughts of a Believing Soul on the Christian Religion, Practised in Spirit and Truth.' The year after she published the 'Correspondence between Mme. de B. and M. R. [Ruffin],' on their religious opinions. In 1812, Napoleon authorized the Duchess de Bourbon to go to Rome with the Prince de Conti and the Duchess d'Orléans, but they preferred to remain in Spain. Immediately after the abdication of Napoleon, in 1814, the Duchess de Bourbon left for France, and found all the royal family in the Tuileries. She received the Hôtel de Valentinois in exchange for the Élysée, which had, under Napoleon, become State property. She did not leave France during the Hundred Days, but remained at Rosny till the battle of Waterloo. During the Restoration she went very little to court, and saw only a limited number of friends. She maintained very good relations with the Orleans family, and constituted the Duke d'Orléans and his sister, Madame Adélaïde, her universal legatees. To Madame Adélaïde she left the magnificent hôtel in the Rue de Varennes where she died January 10, 1822, and which has now become the Austrian embassy.

Correspondence.

THE ANGLO-SAXON WARS.

To the Editor of The Nation:

Sir: The closing years of the century reflect little honor upon the Anglo-Saxon race. The Spanish-American and English-Boer wars are examples of folly and crime, nearly equally indefensible. The alleged "humanitarian" reason (had it been sincere) would not have justified, would inadequately have excused, the action of the United States; while the ultimatum of and invasion by the Boers furnished England the plausibility she would otherwise have been without. President McKinley could have prevented the war with Spain, but the desire of a second term seems to have smothered his conscience. The selfish political egoism of Mr. Chamberlain is responsible for the war in the Transvaal. Lord Salisbury was opposed to and would have prevented it, had he possessed a tithe of, for example, ex-President Cleveland's resolute will.

I greatly admire the English, and for this reason am filled with sorrow and indignation when they stoop to courses unworthy of themselves. I do not, however, forget their grand general record. You have observed the much expressed so-called "sympathy for the Boers." Erase "sympathy for the Boers" and substitute "antagonism to England," if you would arrive at virtual truth. And such would be the case were the relative conditions of the opposing peoples reversed. This hostility is not of to-day, and owes its origin to no present occasion. It is of long standing, unreasonable, malignant, and can have its root in but one soil, that epitome of infinite psychic contraction, envy. Envy is a mortifyingly common phase of human emotion, despicable, and moving *pari passu* with mendacity. Few men will acknowledge the feeling, preferring to give it some less objectionable name, since it necessarily implies consciousness, latent or patent, of the inferiority of the envier, the superiority of the envied. John Kerd.

March 2, 1900.

THE PROTESTANT PRINCIPLE.

To the Editor of The Nation:

Sir: In your comments upon "Prof. Mivart and the Church" in the *Nation* of February 22, you say that "the Catholic Church is no worse, in principle, as respects freedom of opinion, than the Protestant Church." The case of Prof. McGiffert, and many others of a like character, may be cited to emphasize the obvious fact that in the Protestant Church the great body of opinion is rigidly conservative, old mistakes and prejudices survive, there are heresy hunters, and Assemblies and Synods where the conclusions of modern science and modern theological thought are repudiated as emphatically as they are by Cardinal Vaughan. To admit this is one thing, to say that these acknowledged facts represent the *principle* inherent in Prostestantism is quite another.

Dr. Frederic Henry Hedge, in his essay on "The Two Religions," has graphically traced the antagonistic principles which bi-

sect the history of the Christian Church—Pauline and Petrine, legal and liberal, the Greek Fathers and the Latin Fathers, private judgment and an infallible oracle. Private judgment means the right of the individual to think, to reason, to draw conclusions from facts and evidence even though they contradict opinions and dogmas consecrated by time and authority. The Reformers in principle appealed from authority to reason, and surely this is the Protestant principle. True, the Protestant Church, as an organization, an assembly, does not act consistently upon this principle, but, after all, it does influence, or rather guide, the mind of the Protestant world, even though it be unconscious of the leading. And perhaps, after all, it is better to follow the example of Erasmus and introduce changes gradually and cautiously. God's plan seems to be to work by evolution rather than by revolution or cataclysm. There is a suggestive paragraph by Canon Liddon which seems to explain very much of the phenomena of modern religious development:

"The restless mind of man cannot but at last press a principle to the real limit of its application, even although centuries should intervene between the premise and the conclusion." JOHN T. ROSE.

CAZENOVIA, N. Y., February 28, 1900.

THACKERAY'S 'THE ROSE AND THE RING.'

TO THE EDITOR OF THE NATION:

SIR: The assertion of your correspondent "Casey," in the *Nation* of February 22, that the publishers have introduced into the Biographical Edition of 'The Rose and the Ring' "several drawings not by Thackeray," is not warranted by the facts. It is true that several of the illustrations in this edition did not appear in the first edition, but, nevertheless, they are reproductions of drawings made by Thackeray for 'The Rose and the Ring.' I write advisedly, having personally inspected the original MS. and drawings. The English issue of the Biographical Edition contains the headlines at the beginning of chapters, omitted in the Harper publication, but, like the latter, omits several lines apparently forced out because of the difference in paging between this and the first edition.

WILLIAM H. LAMBERT.

PHILADELPHIA, March 2, 1900.

BABOO LATIN.

TO THE EDITOR OF THE NATION:

SIR: Permit an admirer of Wordsworth to ask the writer of the admirable but too brief review of the translations into Latin ('Florilegium Latinum' and two other volumes) a question. It is this: Supposing Prof. Butcher's translation of Wordsworth's Ode had been recently discovered—say by Mr. Flinders Petrie—as a fragment of a lost classic, how would it be translated into English? Would not the commentators see in *carcer* only the Roman prison, and set to work to discover what young scamp of good family, going to the bad, was referred to? Would any scholar see in

"puero mox carceris ingruit horror crescenti"

anything more than the prison of the body? Would scholars rejoice that they had discovered a Roman Wordsworth? I leave your reviewer to say whether they would have found any suggestion of the prison of the spirit which is meant by Wordsworth—convention, custom, what Goethe calls "das Gemeine," and M. Arnold "Daily labour's dull Lethæan spring." It is impossible, as your reviewer says, to translate Wordsworth's spirituality into a language without equivalents; and, therefore, accomplished scholars might find a better use for their valuable time.

Looking at translations into Latin in general, and without special reference to the volumes now mentioned, what would Horace say of them, if he could revisit the world and condescend to use the language of Barbarians? Might he not smile and whisper, "Baboo Latin"?

AN ADMIRER OF WORDSWORTH.

STEPHEN, MINN., February 20, 1900.

[Our general agreement with the conclusions of our correspondent must not prevent us from pointing out that it would be unfair to judge of Prof. Butcher's version from the fragment of it which we quoted (and quoted for a different purpose than that which our correspondent has in mind). If we had nothing left of Wordsworth's ode except

"Shades of the prison-house begin to close
Upon the growing boy,"

guesses at its setting might vary widely. And our correspondent will remember that, even in Latin prose, to say nothing of Virgil and Lucretius, *carcer* was actually used of the prison of the spirit in the body. A Roman, we think, reading the whole context, would not have misunderstood Prof. Butcher's further extension of the metaphor.—ED. NATION.]

"INDIAN HARVEST."

TO THE EDITOR OF THE NATION:

SIR: Though the above expression was once in vogue in New England for about a century, yet it has escaped alike the attention of lexicographers and of writers on the subject of Americanisms. Perhaps its existence was unknown; perhaps, if known, its meaning was thought to be too obvious to require definition. Upon examination, however, it is found that its apparent meaning is not a possible one. The history of the term is shown by the following extracts:

"It is ordered that all the inhabitants of Dorchester shall at or before the 22th of this instant march sufficiently Ringe and yoke all their Hogges and other swine and . . . the order of yoakinge to continue vntil Indian Haruest and ringinge." March 1, 1641-2, *Dorchester Town Records*, in *Boston Records* (1883), iv. 46.

"It is ordered, that Mr Deputy, . . . should go & keepe Cort at Pascataque, . . . And two bigger Corts are to bee kept there, the one between the English & Indian harvest, & the other in the spring." May 10, 1643, *Mass. Col. Records*, ii. 37.

"Itt was ordered thatt whatsoever pigs under 3 quarters of a yeare olde shall be found in the corne unyoaked, no fence being downe, the owners of them shall pay 6d apeece. This order to be in force no longer then till Indian harvest be inned." July 1, 1644, *New Haven Colonial Records*, (1857), i. 142.

"The Court haue ordered, that they, the said Indians, shall pay to him, the said Gabriell Fallowell, or his assignes, the sume of foure pounds, viz, forty shillings the next Indian haruest, and the remaining forty shillings Indian haruest come twelve month, in good and current pay." March 7, 1664-5, *Plymouth Col. Records*, iv. 82.

"The survayors of Cattell and Fences are required to take care this order be attended: and to haue halfe the Fines for their seruis: the Fynes are to take place this yeare till the end of indian harvest and begin agayne the first of aprill next." June 4, 1669, *Watertown Records* (1894), p. 96.

"We have also had a great and sore Drought, which threatened the Spoiling of our Harvest, and thereby an Encrease of the Scarcity that hath been amongst us; But this 4th of *August*, God hath given us an Abundance of Rain, Blessed be his Name, and we have our English Corn generally housed with us, and divers have gone to the Towns that were burned down, to Reap the Wheat, and what they had there Sown last Winter. . . . Our *Indian* Harvest is like to be very Fruitfull, that Grain is now sold at two Shillings Sixpence the Bushell." 1676, in S. G. Drake's *Old Indian Chronicle* (1867), p. 282.

"Capt. John Williams, being sumoned, apeared at the county Court at Plimouth, September 16th, 1690, to answer his presentment for selling severall pots of cyder to the Indians, in Indian harvest last past, & at sd Court thereof convict, is sentenced to pay a fine of five pounds in money." October 7, 1690, *Plymouth Col. Records*, vii. 308.

"Lt. Colonel Hilton . . . proposed to the Council that Dover and Portsmouth should each send out the same number [of men to hunt Indians] in course, which will last till the Indian Harvest is over." September 23, 1707, *New Hampshire Provincial Papers*, ii. 566.

"P. M. visited old David Monanaow, Indian, he tells me he was 104 last Indian Harvest." March 23, 1737, Rev. E. Parkman, *Diary* (1899), p. 25.

From this evidence it is clear that there was a distinction drawn between the Indian harvest and the English harvest, and that the former was later than the latter. Now if by English harvest is meant the harvest of the English colonists, and if by Indian harvest is meant the harvest of the Indians, why should the English have gathered their harvest earlier than the Indians? The only grain raised by the Indians was maize, while the English cultivated not only maize, but also wheat, barley, and rye. The latest of these to be harvested was maize. The maize-fields of the Indians must often have adjoined those of the whites; and to suppose that the grain planted by the Indians required a longer time to reach maturity than did the same grain planted by the colonists, is manifestly absurd. Hence the expression in question cannot have the meaning which apparently attaches to it, and we must seek a different interpretation.

It is needless to urge that the word "corn" has a wide latitude of meaning. "As a general term," says Dr. Murray in the Oxford Dictionary, "the word includes all the cereals, wheat, rye, barley, oats, maize, rice, etc. . . . Locally, the word, when not otherwise qualified, is often understood to denote that kind of cereal which is the leading crop of the district; hence in the greater part of England 'corn' is = *wheat*, in North Britain and Ireland = *oats*." In the seventeenth century in this country by "English corn" was meant wheat, that expression being frequently used in contradistinction to "Indian corn," which, of course, meant maize. Where the word "corn" alone occurs, unqualified by English or Indian, the context must be relied on to tell whether wheat or maize is meant; and often it is impossible to tell with certainty. If now by English harvest we understand, not the harvest of the English, but the grain chiefly raised by the English, in other words, wheat, and if by Indian harvest we understand the grain peculiar to

the Indians—that is, maize— we have an explanation which fits in with the facts, and which does not involve an absurdity. Under this interpretation, the above extracts do not necessarily refer to the Indians at all—and, as a matter of fact, not more than two do seem to refer to the Indians—but may only indicate the different grains and the difference in time between the harvesting by the colonists of their wheat and of their maize. ALBERT MATTHEWS.

BOSTON, March, 1900.

Notes.

Among the spring announcements of Charles Scribner's Sons we select 'Practical Agitation,' by John Jay Chapman; 'The American Stage,' by William Archer; 'Smith College Stories,' by Josephine Dodge Daskam; 'Our Native Trees, and How to Identify Them,' by Miss Harriet L. Keeler; 'The Toiling of Felix, and Other Poems,' by the Rev. Henry van Dyke; and 'Fifteen Years' Sport and Life,' by W. A. Baillie-Grohman.

Dr. Weir Mitchell's 'Autobiography of a Quack,' Ernest Seton-Thompson's 'Biography of a Grizzly,' and Capt. Joshua Slocum's 'Sailing Alone Around the World,' will all graduate from the *Century Magazine* to book form on March 24.

Mr. Frederic Bancroft's 'Life of William H. Seward,' in two volumes; 'The Northwest under Three Flags,' by Charles Moore; and 'The Elements of International Law,' by Lieut.-Col. George B. Davis, are among Harper & Bros.' announcements for the current month.

Macmillan Co. will publish immediately 'The War in South Africa; Its Causes and Effects,' by J. A. Hobson, recently the South African correspondent of the Manchester *Guardian;* 'The Making of Character: Some Educational Aspects of Ethics,' by Prof. John MacCunn; 'The Care of the Child in Health,' by Dr. Nathan Oppenheim; and a "Primer Encyclopædia," in small volumes devoted to single topics, such as 'The History of Language' (by Henry Sweet), 'Dante' (by Edmund G. Gardner), 'Organic Chemistry' (by Prof. W. Ramsay), 'A History of Politics' (by Prof. E. Jenks), etc.

A scrap-book, 'Sidelights on American History, from the Discovery of America to the Civil War,' by Thomas S. Townsend, is in preparation by the author.

The Dodge Publishing Company, New York, announce 'For My Musical Friend,' essays on music and music study, by Aubertine Woodward Moore; 'Tiny Tunes for Tiny People,' by Addison F. Andrews; 'Memory Pictures of Puget Sound Region,' by Beth Bell Higgins; 'The Gentle Art of Cooking Wives,' by Elizabeth Strong Worthington; and 'Alice's Adventures in Pictureland,' by Florence A. Evans.

Carl Glucksmann, No. 14 East Forty-fifth Street, New York, will be the American agent for the portfolio of forty photogravures commemorating the Rembrandt Exhibition at Amsterdam. Many of the subjects have never before been reproduced. Dr. C. Hofstede De Groot furnishes the letterpress and a complete descriptive catalogue.

Forbes & Co., Boston, will soon publish 'A Book of Verses,' by Nixon Waterman.

Messrs. Scribners' uniform edition of Mr. Frank Stockton's novels and stories, liberally conceived, and executed with much elegance, has been extended since we last reported upon it by four volumes, viz.: 'Ardis Claverden,' 'The Great War Syndicate, etc.,' 'The House of Martha,' and 'Pomona's Travels.' The same house has issued Part I. of Mr. Kipling's reluctant reproduction (as against unauthorized and unfaithful exploitation) of his journalistic letters of travel, 1887-1889, 'From Sea to Sea.' They are, in fact, whatever seeds of promise they contain, not to be contemplated with entire satisfaction from their author's present summit. Not being works of imagination, too, they cannot well be illustrated by the elder Kipling; hence three heliogravures of actual scenes are substituted.

With Macmillan Co. we are still more in arrear. Of their two Shaksperes the Eversley series, edited by Dr. C. H. Herford, has, with its tenth volume, come to a conclusion, while the "Larger Temple" (of the Messrs. Dent) has proceeded to a sixth. Critical comment on both we defer to a more convenient opportunity; each speaks for itself on its face. The two volumes, 'A Desperate Character, and Other Stories,' and 'The Jew, and Other Stories,' complete the fifteen volumes of Constance Garnett's conscientious translation of Turgeneff's novels. That all these works are now made accessible in English from one hand is a very considerable boon; and if something of the aroma of the original is occasionally wanting in this version, the great Russian artist might easily have fared worse in other hands. The pocket "Temple Classics" run on with Earle's 'Microcosmographia' combined in a single volume with Healey's 'Characters' of Theophrastus, Shakspere being in a sort a connecting link; Defoe's 'Journal of the Plague Year'; Mr. Romesh Chandra Dutt's condensed versification of the 'Ramayana,' as a companion volume to his translation of the 'Mahabharata' already ventured in this series; Tennyson's 'Princess' from the fifth edition, and early poems (1830-'33); and 'The Earlier Monologues of Robert Browning.' Each of these charming volumes has its frontispiece portrait. Finally, in Mr. A. W. Pollard's "Library of English Classics," stately in form, but wonderfully cheap in price, already begun with Bacon's Essays and Sheridan's Plays, we have Sir Thomas Malory's 'Morte Darthur' in two volumes—"the first English classic," as the present editor points out, "for our knowledge of which we are entirely dependent on a printed text," viz., Caxton's, whose preface is here retained. The admirable feature is (besides the needful glossary) a full index of proper names, with itemizing.

We have received from the Delegates of the Clarendon Press (New York: Henry Frowde) the first four volumes of the Oxford Classical Texts (Plato, vol. i.; Thucydides, vol. i.; Lucretius, and the Minor Works of Tacitus). These volumes, compact, handy, business-like, printed in clear-cut type on good paper, and wonderfully free from errors of the press, would be singularly attractive in their simple neatness, even if they did not bear, as they do, the names of some of the very best classical scholars in England.

That the English take their pleasures seriously, if not sadly, appears from a glance at 'Standard Whist,' by Annie Blanche Shelby (Herbert S. Stone & Co.). Here are expounded and enforced the principles and rules of the modern scientific game, with a rigor which would have satisfied Sarah Battle, and with the authority of the American Whist League and the American Whist Congress. The manual is very compact, while the type is large and clear; and, as the book is convenient for hand and pocket, it seems altogether fitted for the use of those who look on whist-playing as something to be carried on in sober earnest and not with frivolity.

Mr. Nicholas Paine Gilman has long devoted himself to the study of coöperation and profit-sharing, and in his latest publication, 'A Dividend to Labor' (Houghton, Mifflin & Co.), he gathers facts and figures showing the extent to which employers in various countries have shared their gains with their workmen. Mr. Gilman's ideal is that of a partnership between masters and men, so far as gains are concerned, and he looks on employers who pay extra wages according to their own discretion and not as a duty, as still not free from the bonds of iniquity. "The function of the modern employer has not yet been sufficiently moralized"; and in urging this truth Mr. Gilman is earnest and convincing. His excursus on Robert Owen seems hardly necessary in a work of this kind, which is made up largely from the returns contained in various official publications. The general result is certainly very impressive, and highly encouraging to those who look forward to a permanent adjustment of the relations between masters and men on a pacific basis. We incline to the opinion that most readers will be surprised to find how great has been the progress made in this direction.

A very readable account of current methods and problems of taxation, expenditure, and fiscal management is given by Prof. W. M. Daniels of Princeton University, in 'Elements of Public Finance' (Henry Holt & Co.). While the work "owed its origin to the want the author experienced in finding a suitable text for his classes," it will be found convenient by many who are not college students.

The publication (1883-1891) of the rare or unpublished works of Alessandro Manzoni, undertaken by the late Ruggiero Bonghi, was interrupted with the fourth volume by the death of that indefatigable scholar and statesman. The choice of a successor, which lay with Senator Pierino Brambilla, fell upon Giovanni Sforza, journalist and historian, already a Manzonian student, who, in 1898, produced a fifth volume. The new editor has now published the first of ten volumes which will consist very largely of "chips" from the workshop, and will have at least the value, as Vittorio Ferrari points out in the *Perseveranza* of February 12, of demonstrating the scrupulous care bestowed by Manzoni upon his writings, where the uninitiated are filled with admiration for the "spontaneity of the casting." The new volume has a letter on Romanticism, which Manzoni considerably modified. Others will contain an unpublished scheme for a new botanical nomenclature, and annotations on the Milanese-Italian vocabulary of Cherubini.

Frau Dr. Foerster-Nietzsche has caused 1,500 copies of volume i. and 1,400 of volume xi. of the collected works of Nietzsche in a new edition to be destroyed, because of incorrect use of the manuscript.

The manuscript collection of the Boston Public Library has just been enriched by the gift, on the part of his widow, of the late Rufus Wilmot Griswold's manuscript correspondence, which had in part been

printed in the memoir published just before his death by his son, the late William McCrillis Griswold. Some 1,200 pieces range from the year 1830 to 1870. Correspondence of John Brown with the Boston friends more or less privy to his Harper's Ferry design has been given by one of their number, Col. Higginson, to the same institution. It embraces 207 letters.

The annual report of the Geological Survey of Canada, which has just been published, fills a volume of 1,078 pages. In the summary report of the director, George M. Dawson, it is stated that the general index to the earlier reports, which has been in process of compilation by Mr. D. B. Dowling for some time, has been completed and is in the hands of the printer. It contains about 31,000 references alphabetically arranged, an analytical key to localities geographically arranged, and an enumeration of all analyses and descriptions of minerals. The most important of the special reports is that of Alfred Ernest Barlow on the geology, physical features, and natural resources of the region in the vicinity of Lakes Nipissing and Temiscaming, comprising the county of Pontiac, Quebec, and portions of the district of Nipissing, Ontario. This report is accompanied by two maps on a scale of four miles to an inch, and is illustrated. A report by William McInnes treats of the geology of a tract of 3,456 square miles lying to the west of Thunder Bay, Lake Superior, comprising portions of Rainy River and Thunder Bay districts, Ontario. Other special reports are on the mineral resources of New Brunswick, by L. W. Bailey, and on the surface geology and gold-bearing deposits of the "eastern townships" and adjacent portions of southeastern Quebec. Elfric Drew Ingall contributes his annual report on mineral statistics and mines, from which it appears that the mineral product of 1897, as compared with that of 1896, showed an advance of nearly 27 per cent. This was due to the continued expansion of the mining industries of British Columbia, and the increased production of gold, silver, copper, and lead in that province.

The much lauded German university system has its seamy sides. One of them is revealed by a correspondent of the *Frankfurter-Zeitung*, who points out that the income of the many "extraordinary" professors is so small that they find it hard to subsist, even as bachelors, and if they wish to marry they have to join the officers and other fortune-hunters in search of a wealthy bride. Thus the poorer men who aspire to academic honors are in danger of being crowded out by those who happen to have well-to-do parents.

The students of the University of Berlin appear in no very favorable light in a pamphlet recently issued by one of them, Hermann Kantorowicz. He relates that, of 5,000 students connected with the University, only 335 made use of the circulating library connected with the Akademische Lesehalle, though the subscription for a term is less than twenty cents. Of the books taken out, 68.4 per cent. were fiction, with Sudermann, Fontane, and Spielhagen in the lead. Of French works, Zola's and Prévost's were most in demand, while English works were never called for in the original. The works of Shakspere, Goethe, Schiller, Lessing, and Kleist were altogether asked for only seven times in two months, and the writer attributes this to the distaste for the classics which the system of teaching them in the German schools inspires. It is likely, however, that in this case the students are not as black as painted, as they may prefer to buy clean, new copies of the classics in the cheap editions of Hendel, Meyer, Reclam, etc., who offer them in clear type and on good paper at 2½ to 5 cents a volume. The Reclam library alone has, since 1867, issued over 4,000 numbers, the demand for which keeps forty-three fast presses busy, and turns out the classics by the hundreds of thousands. Of Schiller's 'Wilhelm Tell,' for instance, 619,000 copies were sold in thirty years.

In Russia women have been for some years employed as apothecaries' clerks, and it is said that the public as well as the apothecaries themselves manifest a preference for them over men. In Germany, too, a movement in this direction has been started, the Würtemberg Minister of Education having resolved to give women a chance to secure the necessary instruction and pass examinations. On this subject the Berlin review, *Die Frauenbewegung*, has an article by Dr. W. Wächter, which gives the impression that, if women do secure this privilege, it will be anything but a sinecure. German apothecaries' clerks have to undergo a very severe course of studies, and, when they receive a position, they are expected to be on duty from seven or eight in the morning to ten or eleven at night, besides attending to the night bell every other night, if not every night. For all this they receive from fifteen dollars to eighteen dollars a month, with board and lodging, or thirty dollars to thirty-seven dollars without board and lodging. In a few exceptional cases an assistant may receive as much as fifty dollars a month. Under such circumstances it is hardly a wonder that young men do not crowd into this field of employment. It is, indeed, the difficulty of getting assistants, especially in villages, that has made many of the apothecaries willing to consider the candidacy of women. Dr. Wächter, however, sounds two notes of warning. Women clerks, he urges, should under no circumstances accept lower wages than the men, and they should, if possible, organize for protection; nor should they ever consent to act, when business is slack, as assistant to the apothecary's wife, thus enabling her to dispense with a servant.

—The February issue of the Bulletin of the New York Public Library contains some letters of James Monroe, a selection from a large number presented to the Library by Mr. John L. Cadwalader. They do but whet the appetite for more, as they are of high interest in matter and for the personal characteristics of the writer. The first three of the series were written to John Dawson of Virginia, and treat of the interminable disputes into which Monroe found himself plunged on his return from his first mission to France. His own intemperate language and some unseemly occurrences at a public dinner in Paris were naturally reported to his prejudice, and he undertakes a defence, even hinting at a duel with the man whom he looks upon as his opponent. But his unutterably base betrayal of the Reynolds charges against Hamilton, the late Secretary of the Treasury, had already placed Monroe in a position where no explanation would suffice, and where, under the code of the day, he must fight or slink away. He preferred the latter course; and he patched up his second quarrel in the same manner, shielding his public behavior under his lengthy 'View of the Conduct of the Executive,' a work published in Philadelphia, but never sold outside of Virginia. Gallatin intervened also, and thus saved Monroe from being "pitted against this contemptible rascal," Morris, who had, after all, merely repeated what had been known in France. These earlier letters of 1798 are followed by eleven letters written between 1801 and 1808, which show Monroe to be still on the defensive and still busy in explaining petty criticism. He suffers from "certain calumnies" which are continually reappearing, and somehow his explanations never fully explain—a fact of which he appears to be conscious. Later, he explains why Pinckney was allowed to continue with him in the Spanish negotiations, and expresses Napoleon's wish to promote an adjustment—a wish so fully exposed in Henry Adams's masterly history. Balked in his endeavor to reach a settlement, Monroe turns upon Livingston, and, in a cipher letter to Madison, denounces him: "There is much reason to suspect him of the grossest iniquity. . . . Be assured that he will poison what he touches. . . . In short he is the man of all others whom you should avoid, as most deserving the execrations of his country." The cause of this outburst was a suspicion that Livingston wanted the English mission, whither Monroe was now bound. There his success in diplomacy was no better, and, three years later, in 1808, he is again in Virginia, treating attacks upon himself with "silent contempt," and distributing among his correspondents thirty-six-page letters of explanation. The long letter, dated July 13, 1808, is worth a careful reading, for it is as personal as it is historic. Monroe was hurt, was opposed by a "cabal," was a Presidential possibility, and was for the moment cool to Jefferson and "out" with Madison. The letter is the outline of an address to be issued from a committee in praise of his conduct, and is a most remarkable document.

—Mr. Ellery Sedgwick's 'Thomas Paine' in the "Beacon Biographies" (Boston: Small, Maynard & Co.) is a notable addition to that interesting but rather uneven series. The writer brings to his task a more judicious temper than that manifested by any of Paine's better-known biographers heretofore. "It is difficult," he says, "to write of Paine without enthusiasm," and fortunately he does not succeed in doing so; but he gives us no rhapsodies. Neither have we any of those impossible theories and explanations which disfigured the elaborate apology for Paine to which Mr. M. D. Conway devoted so much patient zeal. Such mare's-nests as that Paine wrote the Letters of Junius and the Declaration of Independence, and that Gouverneur Morris deliberately plotted against his life, are passed over in silence or but lightly touched. The most ingenious advocacy does not serve Paine so well as the simple truth. The rapid movement necessitated by Mr. Sedgwick's restricted space heightens the interest of his narrative. For some reason Paine's English years, 1787-1792, make a better story than the American, 1774-1787. There is ample praise for his American service, while his mistakes are frankly conceded, as where his attack on Silas Deane is called

"a colossal imprudence." For his failings there is such consideration as they deserve, and no excess. The emphasis on Paine's religious writings is disproportionately slight for their historical importance, but the treatment of them is intelligent and just. It is a pity that Paine's most signal date, that of the publication of 'Common Sense,' January 10, 1776, is misprinted in the body of the book; but it is right in the "Chronology." The book is an important one as doing Paine even justice, and should be widely read.

—Messrs. Kegan Paul, Trench, Trübner & Co. have begun the publication of a series of little illustrated books on Egyptology and Assyriology which are intended to serve as short and popular introductions to the larger works on these subjects. Four volumes have appeared, three by Dr. Budge and one by L. W. King, M.A., both of the British Museum. The characterization of these is easy. Vol. i. is by Dr. Budge, 'Egyptian Ideas of the Future Life,' and its first lines will tell the reader what he has to expect: "The Egyptians believed in One God, who was self-existent, immortal, invisible, eternal, omniscient, almighty, and inscrutable; the maker of the heavens, earth, and underworld." This extraordinary statement is backed by unverifiable quotations from a now obsolete and always dubious authority, the 'Religion und Mythologie' of Brugsch. The rest of the book is of much the same type. Volume ii., 'Egyptian Magic,' is also by Dr. Budge, but is not vitiated to such a degree by fundamental misconception. It is a most readable and interesting account of Egyptian amulets, magic pictures, names, ceremonies, with tales of ghosts (some creepy enough), and dreams and enchantments where, most evidently, more is meant than meets the ear. And, in truth, the reader will often find it hard to tell whether he is reading the volume on religion or on magic; if the Egyptian ever tried to keep them apart, he failed lamentably. All of which is a warning that Dr. Budge's ideal monotheism cannot have sat very heavily. For the different usages and rites many excellent parallels are adduced. Yet, in all this, the reader will do well not to pin his faith too closely to the various "translations"; the more modern and philosophical they seem, the less are they to be trusted.

—To the third volume not even such qualified commendation as this can be given. It is also by Dr. Budge—'Easy Lessons in Egyptian Hieroglyphics.' Its ease is illusory; it can do nothing but puzzle and mislead. It ignores absolutely all the progress that has been made in determining the grammatical structure of the Egyptian language, and makes the absurd statement that, until all Egyptian texts have been published, "it is idle to attempt to make a final set of grammatical rules." No one, it may be replied, professes to have made such "a final set," but most conscientious workers have come to recognize that Egyptian must have been under grammatical laws, and that it is the duty of the student to discover what these laws were. Further, that it is the duty of the teacher to put before the learner a simple and clear outline of these laws so far as his knowledge of them has attained. But this book leaves us in grave doubt as to the state of Dr. Budge's own knowledge of Egyptian grammar. Certainly, when he does venture upon any details, as in dealing with the alphabet, the confusion is twice confounded. Thus, on p. 15, he gives us A, Á, Ā, I, U as belonging to the alphabet, in spite of the perfectly assured fact that the signs he so renders stand for consonants, and that there are absolutely no vowels in the Egyptian script except some uncertain final forms. This Dr. Budge himself admits on p. 146; so how the student is to understand, or can understand, these alphabetic forms, passes our wit. When he is further told, as on pp. 35 and 38, that there is no *e* in Egyptian, but that it has been added in the transliterations to enable him to pronounce the words more easily, he will feel the approaches of paresis and give up for good either Egyptian or Dr. Budge. We hope it will be the latter, and that he will then turn to the only trustworthy guide to Egyptian in English, or any other language, Erman's 'Egyptian Grammar,' in the "Porta Linguarum Orientalium." It is with relief that we take up the fourth volume, 'Babylonian Religion and Mythology,' by Mr. King. It can be heartily commended as simple, clear, popular, and yet scholarly and accurate. Within its limits it is abreast of the most recent research, and shows, what was known before, that Mr. King is one of the best of the younger Assyriologists. It also shows that the day of amateurism in English Assyriology is past, though English Egyptology seems still to be under the same unhappy spell that has so long controlled it.

—Mr. George Neilson's 'Annals of the Solway until A. D. 1307'—a little book of some seventy pages recently reprinted from the Transactions of the Glasgow Archæological Society by Messrs. MacLehose of Glasgow—is an excellent example of what may be called the new antiquarianism, combining as it does minute information concerning a particular locality with a competent knowledge of the best recent work in mediæval history and philology. Scholars like Mr. Neilson can do much not only to put local antiquities on a scientific footing, but also to enrich our general histories. He shows very conclusively, for instance, from a consideration of early nomenclature and cartography, that the original "Solway" was the "Sul-wath" or "muddy ford" at Eskmouth, which formed the passage from England to Scotland on the most frequented of all western routes. The Scottish end of it is still marked, he believes, by the Lochmabenstone, the lonely granitic boulder which stands a few yards above high-water mark on the seashore in Gretna parish, and which during the fifteenth century marked the place of meeting of the Warden courts for the administration of March law. It was not till the seventeenth century that the name Solway came to be attached to the Firth of the sea which lies between the Mull of Galloway and St. Bees Head. Mr. Neilson brings together all the incidents, authentic and traditional, which make the shores of the Solway so full of patriotic and romantic interest to every Scot, and presents them in a style at once scholarly and entertaining. As there are only a hundred and fifty copies of this work for sale, every library which appeals to a Scots constituency must make haste to secure one. The only fault we have to find with an otherwise exemplary performance is that there is no mention of 'Redgauntlet' even in a footnote. How Mr. Neilson can set forth the "four chief kinds of salmon fishing on the Scottish side of the Solway" (p. 52, n. 7) without referring to the Laird of the Lakes and Mr. Joshua Geddes, passes our comprehension; unless, indeed, the spearing of salmon was a sheer invention of Sir Walter's, and Mr. Neilson's piety prevents his telling us so!

—Léopold de Saussure's interesting 'Psychologie de la Colonisation Française dans ses rapports avec les Sociétés Indigènes' (Paris: Alcan), is a sweeping criticism of the French method of dealing with the indigenous populations of French dependencies. It is based upon the hypothesis, amply verified by experience, that mental characteristics of races are hereditary, accumulated through the lapse of ages, and incapable of being hurriedly changed or altered; that language, institutions, religion, and other phenomena in the life of society are to be regarded as the expression of this gradually developing race-mind, and consequently cannot be successfully improvised for the occasion, nor displaced in favor of systems evolved by a higher culture-stage. The author asserts that the French, and, indeed, all nations of the Latin stock, are deficient in ability to set aside theory and adapt themselves and their policy to prevailing conditions. In the case of the French, the doctrine of "assimilation," to which they owe so much of their colonial ill-success, dates from the famous school of dogmatists which preceded the Revolution. According to the theories of these philosophers, human beings were units, essentially alike and reasonable, a certain number of which, taken collectively, formed a given race. Deviations from the highest civilization (*i. e.*, that of the French nation) were due to mistaken reasoning. To elevate a people, therefore, it was only necessary to set clearly before them the beliefs and institutions of the highest civilization; they then would recognize the faultiness of their own system, and gratefully adopt the new. This generous project was called assimilation. In pursuance of such a theory and policy the French have vainly, and with most awkward and absurd consequences, attempted to impose their language, judiciary, etc., upon the various indigenous races which have come under their sway. In this they are likened to the Spaniards and Portuguese, and contrasted with the great colonizing peoples, the Romans and the Anglo-Saxons. Abundant facts are cited to prove the author's thesis.

LECKY'S MAP OF LIFE.

The Map of Life; Conduct and Character. By William Edward Hartpole Lecky. Longmans, Green & Co. 1899. Pp. xv and 328.

Mr. Hardcastle, of Goldsmith's immortal "She Stoops to Conquer," boasts that half the differences of the parish were adjusted in his parlor by the aid of "a little philosophy"; and the impertinent suitor, who still mistakes his intended father-in-law for the landlord of the Buck's Head, retorts, "Well, this is the first time that I ever heard of an innkeeper's philosophy." And the modern reader or hearer of this exquisite eighteenth-century comedy of errors feels that Goldsmith's wit derives half its charm from its curious old-world flavor. What does Hardcastle mean by philosophy? The term is not precisely the word that comes

naturally, in the sense in which Hardcastle uses it, to the lips of the Englishman of to-day, whether he be a squire or an innkeeper. Yet, and this is the point to which we would direct attention, there was not a man among Goldsmith's contemporaries who failed to catch his meaning. That a little philosophy would aid one in getting through the difficulties of life was one of the fundamental beliefs of the eighteenth century. The brilliant verses of Pope, the sententious morality of Johnson, the comedy of Goldsmith, the easy didacticism of Addison, all taught the same moral, and asserted or implied that the true way to escape misfortune and to insure a modicum of happiness amid the chances and dangers of life was to follow the guidance of "philosophy"—a term which, in the mouths of men of the eighteenth century, meant the application of thoughtful common sense to the practical problems on the solution whereof the happiness of civilized human beings depends.

Turn again to Hardcastle. He gives us a good enough specimen of the philosophy in which he trusted: "There was a time, indeed," he says, "I fretted myself about the mistakes of government, like other people; but finding myself every day growing more angry, and the government growing no better, I left it to mend itself." Here we have the comic rendering of Johnson's solemn conviction that the happiness of mankind was almost unaffected by forms of government or schemes of legislation, and the good-humored version of Candide's "mais il faut cultiver notre jardin." We touch upon one of the points as to which all the men who belonged in spirit to the eighteenth century agreed. True wisdom consisted, they all held, in the application to human affairs of a little philosophy. In England, the last and most effective preacher of this creed was Sydney Smith, but, though he died in 1845—three years later than Dr. Arnold of Rugby—he belonged in spirit to a bygone age, and had lived on into the midst of a generation who hardly understood his point of view or spoke his language. Consider the earnest teachers or preachers of different schools who really gave its tone to the earlier and middle portion of the nineteenth century. Take, as examples, Coleridge, Arnold, Newman, Maurice, Carlyle, and J. S. Mill. It were difficult to name together men who differed more widely in character, in education, or in their views of life. Yet a critic may be certain that in no part of the works of these eminent writers and thinkers will he find that their disciples are recommended to rely on thoughtful common sense for guidance through the intricate maze of human existence. Faith, fervor, enthusiasm, earnestness—all the forms, in short, of exalted feeling—are admitted by the teachers of the nineteenth century to be powers, and to be entitled to respect. But, in the reaction against the prosaic rationality of a preceding age, they all, consciously or unconsciously, rated at a very low value the dictates of the commonplace every-day philosophy which commended itself as much to the piety of Johnson as to the worldly sagacity of Horace Walpole.

Here, however, as in other fields of thought, the closing years of the nineteenth century betray a tendency to return towards the convictions of the eighteenth. Of this moral reversion Mr. Lecky's 'Map of Life' is a sign. It is an attempt, made by a man of eminence, to impress once more upon the world the importance of testing the conduct of life by the standard of philosophic common sense. His book is easy to read; it is interesting in itself; it is still more interesting as a sketch (and a perfectly truthful sketch) of the view of the world taken by a man of letters who, though a student, has mixed with society, and, though devoted to the study of history, has always shown a keen interest in public life. But, after all, the main interest of the book, to a thoughtful reader, will be found to lie in its suggesting the question, How far does the improvement of society arise from adherence to the maxims of common sense; or how far is it due, in the main, to those bursts of feeling or enthusiasm which, at particular eras, lift sometimes individuals and sometimes whole societies above the level of their ordinary every-day existence?

For those who believe that social progress is in the main due to the practice of enlightened prudence, the 'Map of Life,' and the class of literature to which it belongs, will appear to have a very solid value. Nor can any sensible man doubt that Mr. Lecky's book, while it can do no harm, may do much good. For it is impossible to deny that the precepts it contains are sound, and the reflections which it suggests are true. Open it anywhere at chance and you will find something which it is just as well should be said about some topic of practical importance. Look, for example, at the reflections on the relations of members of Parliament to their constituents. We cannot doubt that, after reading Mr. Lecky's pages, any one will feel that he understands a little better than he did the moral difficulties of an M. P.'s position, and, further, that it would be well if both representatives and electors cultivated the spirit of moral considerateness which pervades Mr. Lecky's counsels. Take up a totally different topic and consider what Mr. Lecky has to say upon marriage. The subject is a well-worn one; we cannot expect from our author anything which is at once very new and very true. His calm truthfulness makes the maintenance of paradox to him an impossibility; yet if his advice and thoughts are not very novel, they are, as far as they go, sound, and if the mass of Englishmen or Americans habitually looked upon marriage in the rational and sensible manner recommended by Mr. Lecky, human happiness and prosperity would undoubtedly be increased.

Exactly the same thing holds good as to his remarks on the oldest, and, on the whole, the most serious, subject of human thought, namely, death. It is certainly well to be reminded again and again that death is terrible chiefly through its accessories. It is well, again, to have our attention aroused to the difference between pagan and Christian views of mortality. They each may be made to contribute something to that calmness with which every man would wish to meet his end. On such a subject all truths are of necessity truisms, but it is an error to suppose that the meditation on truisms does not greatly, under certain circumstances, facilitate right action. The more, in fact, one reflects on the 'Map of Life' and books of a like character, the more one becomes convinced that they can and do, within certain limits, give real guidance to individuals, and aid in the progress of social improvement. One-half, at least, of the mistakes made by men in their own career, and a good deal more than one-half of the defect in the working of political institutions, is due to the patent neglect of obvious truths. Our readers, at any rate, need not be reminded that in England, in the United States, and, indeed, throughout the civilized world, misgovernment and corruption, wherever it exists, may be ascribed in ninety-nine cases out of a hundred to the widespread disposition to neglect, in the transaction of public affairs, maxims which every man who does not want to end his career in the bankruptcy court, obeys in the management of his private business. Nor is it less clear that the habit of following in public affairs the dictates of common sense, the application to the interests of the community of "a little philosophy," does in fact keep towns and states from ruin. There is, then, a great value in that practical philosophy in which the wisest men of the eighteenth century placed implicit trust.

But though this is true, no one can hold it to be the whole truth. In the life of individual men there occur, more constantly than the world supposes, crises which religious teachers call conversions, though such seemingly sudden changes of character are less sudden than they appear, and do not invariably take a religious form. But, whatever their form, these crises assuredly offer an opportunity for moral improvement—the chance, so to speak, of a new birth, which seems to be, and perhaps is, quite independent of prudential morality. What may be conjectured to be true of individuals is still more certainly true of societies. It is to the periods of faith or fervor that any historian must ascribe the changes which have revolutionized the world. The rise of Christianity, the Crusades, the Reformation, even the French Revolution, doubtful as is the amount of the benefit which its noisy rhetoric and bloody violence bestowed upon mankind, did for a time at least raise whole societies to a level which they could never have reached by the practice of prudential morality. Every movement, indeed, which has really aided human progress, has been the parent of innumerable petty amendments in the conduct of life. But these small social ameliorations which delight men of common sense are rather the results than the cause of that sudden advance towards a higher level of social existence which is really due to the inspiration of enthusiasm. Franklin owed a great deal to the Pilgrim Fathers. He, too, constructed his map of life, and in some respects it was a good chart enough for men who, living in an unenthusiastic age, needed a little philosophy to point out to them the roads which lead towards the practical happiness of individuals and of states. But it must never be forgotten that it is only after an heroic generation has, with reckless energy, removed the impediments to human well-being, that men of sense can reap the practical fruits of a revolution which they themselves could never have carried through.

From one point of view, therefore, it is natural, and even reasonable, that thinkers who reflect on the course of history should rate somewhat low the worth of the sound and slightly prosy truisms propounded by the class of writers of whom Mr. Lecky is a very favorable representative. Yet this depreciation of moral commonplaces may easily be carried a great deal too far. Enthusiasm or faith is at bottom neither a virtue nor a vice, but a power. Its true

worth depends on its being guided by wisdom, and there is no better test by which to discriminate the faith which every one recognizes as good, from that dangerous enthusiasm on which all the best thinkers of the eithteenth century looked with profound distrust, than to examine whether the passionate feeling which we are called upon by men of one school to admire, and by men of another school to dread, does or does not lead to actual, palpable improvement in the conduct of life. We all know that the periods of faith have worked no small amount of evil. Religion has been but too often the parent of persecution. The Crusades led to an almost unlimited waste of life, and, what was far worse, encouraged the worship of more than one false ideal. Most Protestants will assert (and, as we hold, with reason) that the Reformation not only purified the religion of Europe, but also indirectly but certainly set up in Protestant countries a new ideal of intellectual and moral sincerity. Yet the wars of religion, culminating in the lengthy and almost useless horrors of the Thirty Years' War, constitute a fearful set-off against the benefits reaped by mankind from the enthusiasm or faith of heroes such as Luther or Calvin.

If we want, then, to know what the mass of men have really gained from an age of enthusiasm, we must consider what is the nature of the practical morality to which it ultimately gave rise. Did it, in the long run, make ordinary commonplace men better and wiser than their forefathers? What, to use Mr. Lecky's phrase, was the map of life by which, after the emotions that cannot from the nature of things be lasting in the lives either of individuals or of societies had cooled down, men adopted for their guidance? The ordinary morality, in short, which finally prevails in any society, tests the worth of the great movements of which that morality is in reality the product. Books like Mr. Lecky's 'Map of Life' have, then, a real value and importance; they are not, it is true, the cause of any great changes in men's way of thinking, but they are the record of the results which have been gained during periods of passion or fervor. They are, too, something more than mere records. The practical philosophy which authors like Mr. Lecky inculcate, if it does not rouse men to heroic efforts, does distinctly tend to prevent them from falling below their own recognized ideals. Their interest and their merit is that they in fact afford to commonplace persons a real though not profound philosophy of life.

NEW BOOKS ON MUSICAL TOPICS.

A Biographical Dictionary of Musicians. Compiled and Edited by Theodore Baker. G. Schirmer.

Beethoven. By Frederick J. Crowest. E. P. Dutton & Co.

Wagner. By Charles A. Lidgey. E. P. Dutton & Co.

Recollections of Johannes Brahms. By Albert Dietrich and J. V. Widmann. English by Dora E. Hecht. Scribners.

Wotan, Siegfried, and Brünnhilde. By Anna Alice Chapin. Harpers.

Old Scores and New Readings. By John F. Runciman. London: Unicorn Press.

Dr. Baker justly claims that no other work of similar scope can compete in completeness, freshness, and accuracy with his 'Biographical Dictionary of Musicians.' It is a book of 653 pages in double columns, and the editor has evidently spared no pains to make it superior to its predecessors. Heretofore Riemann's 'Musik-Lexicon' has been the standard, and it remains so as a dictionary of musical subjects; but in its biographic department it is less complete and universal (at least in its fourth edition, 1894—the fifth has not yet reached this country) than Dr. Baker's, which, as was to be expected, pays more attention to American musicians than foreign writers have done. Dr. Baker has also done wisely in giving somewhat larger relative space to living musicians than to those whose career is ended, and many of whom are described at length in special works. Of these special works he gives a list after each composer—a list which is usually more international, and in some cases (Wagner, for instance) much more complete, than Riemann's. In other cases there are serious omissions: H. F. Frost's little volume should not have been omitted from the naturally scant Schubert bibliography; and under the head of Anton Seidl it was unpardonable not to refer to the sumptuous memorial volume written by his friends and published by the Scribners a year ago. Nearly 6,000 biographies are given, three hundred of which are illustrated by pen-and-ink vignettes by Mr. Gribayédoff. The editor apologizes for a lack of completeness in this respect on the ground that it was difficult to procure photographs; but this does not explain why Emma Eames, Nordica, Lilli Lehmann, and Sembrich are not pictured. Emma Calvé, the greatest French vocalist-actress of the century, is not even represented by a biography.

Mr. Frederick J. Crowest, editor of a series of books entitled "The Great Masters," opens it himself with a biography of Beethoven, whom it has become customary to accept as the master of masters, though, to be sure, Bach and Handel surpassed him as choral writers, Weber, Wagner, and Bizet in the field of opera, Chopin and others in pianoforte music, Schubert, Franz, and others in lyric song, leaving him only the symphony in which to assert his supremacy. In view of the prevalent high opinion of Beethoven, it is rather strange that there has been hitherto no handy short volume telling English readers the story of his life and the most interesting things about his best-known compositions. This, Mr. Crowest has undertaken to do, and has succeeded very well, having taken his information from so many sources that even experts will here and there come across a fact or two new to them. Of special value to students are the appendices, especially the first, which gives a bibliography including not only books but magazine articles. Appendix B gives a list of the published works, chronologically arranged; C sums up the principal incidents in Beethoven's life, and D describes briefly the personages associated in any way with him.

The second volume in Mr. Crowest's series —'Wagner,' by Charles A. Lidgey—is not entitled to the same praise. The life of Wagner was so full of romantic incidents that it seems almost impossible to make an uninteresting story of it; yet the author has accomplished this remarkable feat in seventy-four pages. Nor are the chapters devoted to Wagner's art principles and operas any more interesting. They are mere compilations without any new points of view. This book, in brief, has no good *raison d'être.*

Admirers of Brahms will welcome the Recollections of Dietrich and Widmann, which together make up a sort of biographic mosaic including the years 1853 to 1896. Prof. Dietrich was an intimate friend of Brahms during the years when the latter was emerging into fame with the aid of Schumann, while Dr. Widmann accompanied the composer on several of his trips to Italy. A melancholy interest attaches to the pages describing the last days of Schumann, and the grief of the widow, who wrote to Dietrich two years after the composer's death: "People always say that time heals wounds; I do not find that true, for I feel the loss daily more painfully, and no longer know any happiness in life." From Brahms himself, notorious for his aversion to writing, Dietrich received a surprising number of letters, which he prints, though few of them present any points of interest. Not that Brahms lacked the brains to write an entertaining letter. Many of the details given in this volume prove his interest in other things besides music; but, like Chopin, he could not make up his mind to write a note, though he was indefatigable in writing "notes."

One of the oddest things in regard to Brahms is the contrast between his personality and his music. Nothing could be more austere, conventional, and devoid of humor than his compositions, whereas he himself was unconventional to the point of rudeness, and constantly playing pranks or cracking jokes. Dietrich relates how, "with the boisterousness of youth, he would run up my stairs, knock at my door with both fists, and, without awaiting a reply, burst into the room." His jokes were sometimes not understood, and gave offence; nor was his biting sarcasm relished by its victims. Widmann writes that "the short, square figure, the almost sandy-colored hair, the protruding under-lip which lent a cynical expression to the beardless and youthful face, was striking and hardly prepossessing." In later life, however, his face acquired an expression which reflected his strong mentality, and it is said that a school geography printed his head as a type of the Caucasian race. His only personal defect was that he was very near-sighted; yet he used to remark that this had its advantage because it allowed him to see many more beautiful women than those who had keener vision.

Among the most interesting pages in the book are those in which Brahms's operatic projects—which never came to anything—are described. Brahms, unlike Wagner, Verdi, and all other modern composers, believed in the old opéra-comique style, in which only the climax, and those parts of the action where words alone do not suffice, are set to music, the rest being spoken. At the same time, he had a high opinion of Wagner, calling himself one day, in the course of conversation, "the best of Wagnerites," and observing that his comprehension of the Wagnerian scores was probably more profound than that of any contemporary. Verdi, too, he admired, and once, when Bülow had spoken disparagingly of the "Requiem," Brahms said, "Bülow has made a fool of himself for all time; only a genius could have written that."

Miss Chapin's love of Wagner's operas is

so absorbing that she cannot get away from them. To her 'Story of Rhinegold' and 'Wonder Tales from Wagner' she has now added a third book discussing "the divinity of Wotan, the humanity of Siegfried, and the divinity in humanity of Brünnhilde." Inasmuch as there are many who are as indefatigable in reading about Wagner as some are in writing about him, this last book of Miss Chapin's will doubtless be welcomed by such as like to look below the surface of things.

Mr. Runciman's 'Old Scores and New Readings' is a collection of entertaining papers on musical topics which must be cordially commended to the attention of all lovers of the art who like to be stimulated to thought, and are not afraid to be shocked once in a while by an opinion outrageously opposed to everything they have ever heard and believed. The author is one of the leaders among the new school of English critics who are making life a burden to Joseph Bennett and other veterans in the profession. Early in his career he involved the *Saturday Review* in a law suit by some indiscretion. That was six years ago, and he has since toned down a little; yet he is not afraid to refer, in the book now before us, to one of the English idols, the late eminent Macfarren, as "the worst enemy music has ever had" in England; and he will arouse much indignation by his remarks on the "Messiah." Not that he underrates that oratorio or its composer; he rather overrates them; but he tells his countrymen bluntly (and truly) that the real "Messiah" is practically unknown, and that its vogue in the provinces is due to the fact that it has become a Christmas institution, like plum pudding and mince pie. Greatly as he admires Handel—the real Handel—Mr. Runciman points out his enormous debt to Purcell, England's "last great musician" (1658-'95), and quotes with approval Burney's opinion that, "in the accent of passion, and expression of English words, the vocal music of Purcell is . . . as superior to Handel's as an original poem to a translation." Mr. Runciman's general attitude is well illustrated in the remark, anent the latest phase of German music, that "it is high time for a return to the simplicity of Mozart, of Handel, of our own Purcell; to dare, as Wagner dared, to write folk-melody, and to put it on the trombones at the risk of being called vulgar and rowdy by persons who do not know great art when it is original, but only when it resembles some great art of the past which they have learnt to know."

Perhaps the best of Mr. Runciman's twenty essays are those on six of Wagner's operas. They show much more true critical insight than the comments of any of the German essayists, be their name Hanslick, Ehlert, Ehrlich, Chamberlain, Porges, Wolzogen, or what not. He begins one of his essays with the statement that "'Lohengrin' has been sung scores of times at Covent Garden in one fashion or another; but I declare that we heard something resembling the real 'Lohengrin' for the first time when Mr. Anton Seidl crossed the Atlantic to conduct it and other of Wagner's operas. . . . Mr. Seidl came all the way from New York city to show us how out of sweetness can come forth strength"; and he specifies the reasons for this judgment. In the paper on "Siegfried" he remarks that "the music Siegfried has to sing is the richest, most copious stream of melody ever given to one artist"; and he has some eloquent pages regarding the scenic charms of these operas, closing with the words that, "had Wagner not lived in Switzerland, and gone his daily walks amongst the mountains, the 'Ring' might have been written; but certainly it would have been written very differently."

The real secret of Brahms's success Mr. Runciman has summed up in six pages better than any one else has done it. There are also interesting papers on Tchaikovsky, Haydn, Mozart, Schubert, "Fidelio," Verdi, "Italian Opera, Dead and Dying," Dvorák, Lamoreux and his orchestra, all of them worth reading and rereading, though justice is not done to Schubert and Dvorák.

FISKE'S DUTCH AND QUAKER COLONIES.

The Dutch and Quaker Colonies in America. By John Fiske. Boston: Houghton, Mifflin & Co. 1899. 2 vols. Pp. xvi, 294, 400.

Mr. Fiske is building up in a leisurely way his series of works on American history, already reaching considerable proportions. Between the early period of colonization and settlement, treated in part in the 'Discovery of America,' 'Old Virginia and her Neighbors,' and the 'Beginnings of New England,' and the later period dealt with in the 'American Revolution' and the 'Critical Period,' there has been left as a gap in the series the story of the middle colonies, and of New France and the French and English rivalry. The first of these lacunæ has now been supplied by the two volumes on the Dutch and Quaker colonies; the second, carrying the narrative as a whole down to 1765, where the 'American Revolution' begins, Mr. Fiske hopes to fill in two years. When completed, the successive works will form a connected account of American history, from the discovery of the continent to the establishment of government under the Constitution.

The history of the middle colonies is not commonly thought of as, in the ordinary sense, particularly interesting. Not that there is an absence of interesting episodes or a lack of local color. About the Dutch life in New York, especially in its earlier years, there is not a little that is distinctive, and much that is picturesque. The simplicity and canniness of William Penn and his followers give to the annals of Pennsylvania an undoubted charm, different, at least, from anything to be found elsewhere. But aside from details, and taking the middle group as a whole, there is undeniably an impression among students, reflected in the works of historians themselves, that the time and place are not attractive. The story must be told, of course, but there is rarely much zest in either the telling or the hearing of it. There is no strenuous and long-continued moral struggle, as in New England, no growth of a dominant type of character out of peculiar social conditions, as in the South. In the early period, at least, there is a poverty of distinguished names. The very cosmopolitanism and many-sidedness of middle colony life, while often an agreeable relief from uniformity and monotony, make against individual prominence, and render the course of events less easy to follow.

Bearing in mind the limitations of his aim, it seems to us that Mr. Fiske has done all that a writer can do to make the story of the Dutch and Quaker colonies interesting, and to bring their history into vital touch with that of their neighbors to the north and south. For such a task, by no means easy, Mr. Fiske has certain preëminent qualifications. First of all a philosopher, he values the broad view. Truth means to him, in fact as well as in theory, an understanding of things in their relations; and events which, by most writers, are dealt with in isolation, are viewed by him as inseparably bound up with all that ever has been. He is never in a hurry to have done with a subject, never willing to leave it until he has turned upon it every ray of light, however remote, that he thinks can illumine it. This broad and deliberate character of his historical method is nowhere better exhibited than in the work before us. A chapter on the mediæval Netherlands, another on the Dutch influence upon England (with the author's respects to Douglas Campbell, of course), a third on Verrazzano and Henry Hudson, and a fourth on the Dutch West India Company —in all, nearly one-half of the first volume —are deemed necessary to explain the conditions and principles of Dutch colonization before we reach the time of the patroons, when the systematic exploitation of New Netherland begins. Similarly, fifty pages of volume ii. are devoted to tracing the career of William Penn down to the time when he obtained the grant of his province. Critics will certainly differ as to the wisdom of giving so much space, relatively speaking, to matters of this preliminary sort, and we ourselves can but think the allotment excessive; but there can be no question that the plan gives the reader a new and broadened view of the significance of the colonial experiments, and of the influences which, at the beginning, determined their course.

A further quality of Mr. Fiske's, and one which stands him in good stead in the present work, is his sympathy. His lively historic imagination, his power of realizing past events as having actually happened, gives to his personal appreciations a human character not always found in the pages of more learned historians. Stuyvesant, loyal servant of his masters, but constitutionally blinded to some of the most patent of the conditions which surrounded him, merits respect and kindly pity rather than condemnation. Kieft, with all his highhandedness, is almost as amusing as he is tyrannical. Leisler is an ignorant but not half-bad person, less an adventurer at heart than the victim of his own overweening conceit, and in the end, at least, mentally unstrung. The lovable side of Penn's character, and the peaceful course of his "holy experiment," have never been more sympathetically sketched. There is cordial recognition of Nicolls's ability, and a kindly word for the hated Andros. In short, whether we have here the whole story or not, there is no doubt but that the subjects of Mr. Fiske's investigations actually lived, walked and talked, had characters and aims like other men, and met the conditions which confronted them in pretty much the same way that men of similar character and station meet similar conditions now.

Then there is the question of literary merit. Whatever the worth of Mr. Fiske's books as critical historical studies, none will deny that they are, in the full and genuine sense of the word, literature. It would be

superfluous to dwell again on the qualities of Mr. Fiske's writing—its perfect clearness and simplicity, its smoothness, its movement and sprightliness, its skilful alternation of grave and gay. It is not, we think, a style wholly without faults. Much public lecturing, we suspect, has tended to make it a bit diffuse, and opened the way for occasional pleasantries and trivialities which, however pleasing to a popular audience, jar a little when met with on the printed page. But it is, for all that, a style with character, distinction, and charm. It is a notable thing that in this day, when our younger historical scholars are so often warned against devoting precious time and space to questions of form and expression, the most popular of our historians should insist upon making history interesting, and spend his wealth of literary power in the serious business of historical exposition.

Yet, notwithstanding the undoubted interest of the whole performance, and its pervading impression of satisfactoriness, we nevertheless do not have here the whole story—nor always, if quantity alone be considered, even the larger part of it. It needs no exhaustive acquaintance with the field to make clear that a great many things happened of which Mr. Fiske's narrative takes either slight account, or none at all. The criticism, applicable to all of the author's historical works, finds renewed illustration in this his latest one. The account of Pennsylvania, for example, in the volumes before us, gives little indication of the controversies between the Proprietor and the colonists which, beginning soon after the colony was planted, gave form to much of its later history. The occasions of the successive frames of government are not clearly pointed out, nor more than a hint given of the changes introduced by each. There is no distinct impression of the history of New Jersey, save as that colony comes into collision with Andros, nor of Delaware, save as an unimportant appanage of Pennsylvania. In general, too, what we like to call "institutions" do not seem to appeal to Mr. Fiske. One will search his pages in vain for particular light on the problems of government, administration, and law, of land tenure, suffrage, and citizenship, which vexed the course of middle-colony history and formed the subjects of sharp political discussion. The same is true, in the main, of economic history. Doubtless, these are all prosaic matters, not very interesting to read, and often difficult to make clear in a limited space; but they were unquestionably vital issues, however overshadowed at times by more spectacular events; and they were potent influences in forming the tone and temper of colonial life. Mr. Fiske, however, takes a different course. He seizes upon leading incidents, always typical and important, but also always capable of vivid and stirring treatment; and to these he gives a picturesque and brilliant treatment. The resulting picture is true, the parts well grouped, and the general effect undeniably fine; but it must be confessed that a good deal of importance is left out which, if inserted, would sometimes make the picture less lovely to look upon.

Save in the respects already mentioned, the 'Dutch and Quaker Colonies' presents few points for detailed comment, and little occasion for differing from the author's judgments and critical estimates. Like all its predecessors, it does not impress one as primarily a work of erudition—partly, no doubt, because the wealth of first-hand information is so interestingly presented. But no one will get from them an erroneous impression of American history; and it is because Mr. Fiske knows whereof he speaks, and speaks because he has something to say, that his books are, especially for non-professional readers, such safe and inspiring guides. If the chief business of the historian is to add to the stock of available and sifted knowledge, and increase the load of fact which the human mind must somehow bear, Mr. Fiske's works must doubtless yield somewhat to others; but if the object be, rather, so to select and group facts as to make the past live again, their success must be admitted to be of a high order.

Animal and Plant Lore. Collected from the Oral Tradition of English-speaking Folk. Edited and annotated by Fanny D. Bergen, with an introduction by Joseph Y. Bergen. Published for the American Folk-Lore Society by Houghton, Mifflin & Co. 1899.

Mrs. Bergen gives 1,397 sayings concerning animals and plants in their relations to weather signs, incantations, supposed remedial powers, and the like, placing after each number the name of the locality where some one has heard the utterance. Doubtless Mrs. Bergen possesses exact records of the authorities who have communicated to her these fragments of folk-lore, and we regret that she has not given these in her pages. Without such citation it is exceedingly difficult to make scientific use of the material she has so laboriously accumulated. Some of the geographical ranges appear to be too wide; for instance, "General in the United States" is frequently given. We should be glad to acquire exact information as to how many separate authorities in diverse localities have made identical contributions. In the absence of such data, it is impossible to trace the historical relations and the distribution as fully as is desirable. Since Mrs. Bergen must needs have these data, we earnestly urge her to publish them in a revised edition.

There is another change which should be suggested, namely, a more rigorous classification of the sayings. In such a revision, we should expect to find the following placed under the heading Folk-medicine, rather than under Omens, where they are now:

"140. Whooping-cough may be cured by binding about the neck of the diseased one some hair of a little girl that has never seen her father. Green Harbor, Mass.

"141. If a child has the thrush, and some one who has never seen his own father blows in its face (down its throat), the child will be cured. Salem, Ind., and Fort Worth, Tex."

Another on the same page is with difficulty classified, but we do not clearly see its relation to the heading Omens:

"145. Wish when you see a new-born calf."

Mrs. Bergen's notes are excellent. They supplement the sayings very largely, and point out a few of the relations of these curious phrases among our own people to the folk-sayings in other countries. And, lastly, we may say, before making a few citations, that the omissions which will occur to some of the readers of the book are very few, and perhaps Mrs. Bergen could give good reasons for them.

First, to illustrate the different and uncertain views taken in regard to omens:

"174. A black cat coming to the house is unlucky. Cape Breton and New Hampshire.

"175. It is good luck for a black cat to come to your house. Eastern Massachusetts and Pennsylvania.

"172. To be followed by a black cat signifies good luck. New England and Eastern Kansas.

"173. A black cat following you at night means bad luck. Eastern Mass.

"187. If a cat wash her face in front of several persons, the first person she looks at will be the first to get married. Alabama.

"188. The first person a cat looks at after washing its face will die sooner than any other bystander. [No locality noted.]"

From this it would appear that "folk" are rather undecided as to the real significance of cats.

Fingernails are almost as perplexing as cats, as the following citations show:

"750. Cut the baby's nails every Friday, and it will never have the toothache. [No locality cited.]

"751. If you cut off your fingernails on Friday, you will never have the toothache. [No locality cited.]"

But observe how the next, which is assigned to Chester, N. H., puts us all at sea again:

"752. Cut your nails on Friday, and you will have toothache."

Of course, it is among the negroes that we find some of the most startling beliefs treasured in folk-sayings:

"759. If you lose a tooth, you will have to search for it on the Day of Judgment. Alabama (negro).

"742. If you lose a hair, you will have to search for it on the Day of Judgment. Alabama (negro).

"51. After a death in the house, change the position of the door-knob, so that the ghost may not find his way in. Norfolk, Va. (negro).

"993. Jay-birds are on duty in hell every third day. They go as messengers to tell of backsliders, etc., to the devil. Heaven's no place for them. Chestertown, Md. (negro).

"915. White people are descendants of Cain. All mankind was once black, but when the Lord asked Cain where Abel was, Cain turned white with fright, and so remained. Chestertown, Md. (negro)."

Enough citations have been given to indicate that in this book Mrs. Bergen has brought together certain fragments of common speech which, with the additional data for which we ask, might be of use in tracing out the paths by which certain folk have wandered through the world. We hope that collections like this of Mrs. Bergen may stimulate even unobservant persons to record faithfully the few folk-sayings which may still linger in their neighborhood.

Letters of David Ricardo to Hutches Trower and Others, 1811-1823. Edited by James Bonar, LL.D., and J. H. Hollander, Ph.D. Oxford: Clarendon Press; New York: Henry Frowde.

Much has been done during the last few years by the publication of Ricardo's correspondence to make the great economist a more human figure to our imagination. The present publication will do even more in this direction than the letters to Malthus, edited by Dr. Bonar in 1887, or the letters to McCulloch, edited by Professor Hollander in 1896. Not only do they cover a greater variety of topics, and deal, as the editors remark, almost as much with Ireland, savings banks, and Queen Caroline as with pure economics and finance, but Ricardo here "lets himself go" with greater freedom, and sometimes even jests

—"with difficulty," it is true, but still he manages it. To do it, he actually condescends to echo the current misrepresentation of Malthus. "Our Princes," he writes in 1817, "have certainly not refrained from marriage from a consideration of Malthus's prudential check. If they had, . . . we might expect that the great demand for Royal infants would be followed by so ample a supply as to occasion a glut." This is elephantine playfulness. And these letters show that Ricardo was not devoid of the æsthetic sense. From Antwerp he writes: "To see the Descent from the Cross by Rubens is alone worth all the trouble of a journey from London"; and it is interesting to see how naturally his artistic appreciation expresses itself in the language of value.

On economic doctrine these letters do but repeat the arguments and explanations addressed elsewhere to Malthus and others. Like these, they raise a question on which there prevails a certain ambiguity, which the editor's introduction will hardly clear up. What is to be called "the doctrine" of a writer? His statement in a formal treatise, interpreted according to the ordinary meaning of the words, and so understood by contemporaries? or a version of that statement which introduces all the qualifications that he left out, and that subsequent criticism made him acknowledge? Surely, both views are necessary, and the former as much as the latter; for if the latter is required for the understanding of the man, the former is required for the understanding of his influence. It might be suggested that the time has come for an edition of Ricardo's Principles which shall print at the foot of the page Ricardo's explanations of his meaning as given in his correspondence. It would probably show that the difficulty with Ricardo often lay in his use of terms and not in his deductions. There is a significant passage here where he remarks (p. 113): "By the very definition of natural price, it is wholly dependent on cost of production, and has nothing to do with demand and supply." Of course, if natural price is defined as dependent on cost of production only, the conclusion as to demand and supply is not a conclusion at all, but another way of saying the same thing. Ricardo regrets that "the progress of the science" of political economy "is very much impeded by the contrary ideas which men attach to the word value." To put it mildly, Ricardo did not do anything to secure unanimity.

The volume before us, the joint work of the Secretary of H. M. Civil Service Commission and of a professor in the Johns Hopkins University, is a pleasing illustration of that growing coöperation between English and American scholars of which the recent publication of a Cornell professor's edition of Petty by the Cambridge University Press is another example.

How Women May Earn a Living. By Helen Churchill Candee. The Macmillan Co. 1900.

A woman who has been trained from her youth up, as many women now are trained, to the practice of some art, profession, trade, or handicraft, will probably find the title of this book more comprehensive than the contents warrant. In general, the earner contemplated is she who has neither training nor considerable capital; and the dedication, "To all those women who labor through necessity and not caprice," betrays a curious confusion of economic ideas. The notion that women who hold sufficient property to live on its income, or who are supported by the property or exertions of others, are committing an injustice by undertaking paid work, involves a socialistic proposition which those who hold the notion would be slow to extend, as it should logically be extended, to include the case of men. Unless we are willing to say that no millionaire should be president of a university or member of the cabinet, we cannot exhaustively divide workers for hire into those inspired by necessity and those inspired by "caprice." The man or woman who can do the work best is the person who, in the interests of the community, should do it.

Moreover, every one who has had to do with the administration of concerted work, in philanthropic or other enterprises, where volunteers are employed, knows the nuisances attending the presence of unpaid service. If it be argued that such fields are precisely those which the rich should use their leisure to cultivate without hire, it must be rejoined that the receipt of a fee, however unimportant its money value to the recipient, secures from the average worker an added punctuality of service and sense of business responsibility, while its payment confirms in the director the power of unembarrassed suggestion and control. These facts are peculiarly true of women. The steadying effect on a well-meaning rich woman of obliging her to receive payment for her work, is often such as to remove completely from her mental attitude the stigma of "caprice." These considerations have been overlooked by the author of the work under discussion.

Having realized, however, that the book is chiefly an antiseptic for the use of gentlewomen threatened with decay, the reader will find it thoroughly well done. A clear, brisk style has been used to set forth facts and advice which the experience of most working-women will endorse. Amid a well-chosen array of illuminating details, the fundamental moral qualities necessary for successful work are never lost sight of. The would-be earner is reminded again and again that she need not despair though she have not training or experience or capital or influence, but that capacity she must have. The unity of treatment secured by the discussion by the same author of all the subjects treated, gives the treatise a superiority over collections of papers by different hands, and ample notice is served on the reader that special treatment of each branch of activity must be sought for in its own literature. Though all are excellent, the chapters on "The Ideal Boarding-House," on "Architecture and Interiors," and on "The Out-of-Town Woman" may perhaps be singled out as most fully showing the common sense, candor, and intelligence which form the character of the book.

Outlines of Military Geography. By T. Miller Maguire, LL.D., of the Inner Temple, Barrister-at-Law; Lieutenant, Inns of Court Rifle Volunteers. [Cambridge, Eng., Geographical Series.] The Macmillan Co. 8vo, pp. 359, with maps, plans, etc.

The zeal of the English volunteers is well shown by this handsome volume, which is a convenient compilation from a wide examination of authorities in various languages, from nearly all parts of the world. After a brief presentation of the leading principles of strategy, the author considers the application of these to geography, and the necessary relations between geographical knowledge and the conduct of campaigns. To an English writer the Command of the Sea is a subject of capital importance, and this, including the special strategical importance of the Mediterranean, is treated in several chapters. Then follows the study of Frontiers in their relation to military operations, of fortifications as related to geography, of routes of invasion, of roads and defiles, of historic lines of invasion, ancient and modern, with interesting comments on their frequent identity. A chapter on the effects of climate completes the work.

Strategy is, of course, so closely connected with both geography and local topography that all strategic study is geographical. Yet Mr. Maguire's book so gathers together brief sketches from campaigns in all parts of the world that an approximate classification of geographical conditions results, and the student is both stimulated and guided in geographical study as an essential of military art. Examples of the embarrassments and losses resulting from neglect or insufficient mastery of geographical knowledge are strongly presented; prominent among these being the inferior preparation of the French in this department of training in 1870.

The lessons of our civil war are much more frequently referred to than is usual with European writers. This is not always done with fully digested knowledge, but many of the references are very apt. On page 206, however, the first bombardment of Fort Fisher on the North Carolina coast (December 24, 1864) is mistakenly made part of the attack upon Vicksburg on the Mississippi, nearly two years earlier.

Browning, Poet and Man: A Survey. By Elisabeth Luther Cary. Illustrated. G. P. Putnam's Sons.

It is easy enough to call a book sumptuous, but that much abused epithet is really not wasted on the mechanical execution of Miss Cary's 'Browning.' Like Dr. Hale's 'James Russell Lowell and his Friends,' it is sure to be bought for its illustrations, had it no other value. To have in one volume eight different portraits of Robert Browning taken at different periods of life and by a variety of artists and methods, is a pleasure before denied to his admirers. To these are added, most appropriately, four of the sketches and caricatures made by the poet's father; also portraits, more or less appropriate, of Tennyson, Morley, Carlyle, and Lord Sherbrooke; the familiar likeness of Mrs. Browning; ten pictures of places identified with Browning's life or mentioned in his poems, and a reproduction of the curious pair of designs which appeared in the London *Sketch*, giving the poet's own idea of the 'Pied Piper.' To these must be added full-page engravings of Guercino's 'Guardian Angels' and Fra Lippo Lippi's 'Coronation of the Virgin,' with its endless array of interesting heads. This is a great deal; but, after all, the chief interest of the book lies in the series of portraits, ranging from the conventionalized and Byronic one, taken in

Browning's youth, very familiar years ago to the readers of Horne's 'Spirit of the Age'—through the self-conscious pose of Lehmann's picture in the National Portrait Gallery, the distorted outlines of Alexander, the over-florid painting by the poet's son, representing the father in his academical robes, and the somewhat obtrusively cheery *Art Journal* picture in middle life—to the wholly simple and natural photograph, taken in old age, of Browning sitting in the open air with his hat on. Were there nothing else in the book but this series of pictures, one might say that no lover of the poet could well go without it.

When we turn to the letter-press, one cannot speak so unreservedly. In this respect the book must be pronounced faithful and conscientious, representing a good deal of labor with the pen and sometimes with the scissors; also free from pettiness or undue briskness, and bringing together a great deal of information, if not adding much. Some of its summaries of character, as that on page 119, are extremely good, and there are excellent *obiter dicta*, as where the author speaks (p. 111) of "the curious temper of acquiescence that almost invariably enters into Browning's conception of heroism," or of Browning's "invariable premise that life is worth while" (p. 131), or of the "pagan serenity of the natural world" as seen in Wordsworth (p. 135); or where she describes the mind of Louis Napoleon as "obscure, contradictory, and elusive" (p. 147). These indicate in the author a mind more penetrating and original than the ordinary execution of the book exhibits. But the work as a whole is of decided value, and to the average reader it will afford more pleasure, in all probability, than any single volume yet produced in respect to Browning.

Picture Study in Elementary Schools: Manual for Teachers, Parts I. and II. Pupil's Book, Parts I. and II. By L. L. W. Wilson, Author of 'Nature Study in Elementary Schools,' etc. Macmillan Co. 1900.

These little books are in so far welcome as they show a growing realization of the educational value of art, and a tendency among teachers to introduce the study of art (not the study of drawing, which is a very different thing) into elementary schools. We wish we could say that the books themselves are well done, but we cannot. The idea is excellent, but the execution is inferior.

The idea is briefly this. The Pupil's Book provides four or five pictures for each month of the school year, each a reproduction of some well-known work of art, and accompanied merely by some short prose or verse quotation. An attempt is made to provide a natural arrangement of subjects with some reference to the time of year. The small pictures in the book are intended to be supplemented by at least one large picture each month, of a size to be seen by the whole class, and to become a permanent decoration for the school-room. All comment and instruction is to be supplied by the teacher, and the Manual is intended to provide suggestions for such instruction and references for further study by the teacher.

The first thing to be considered in the execution of such a plan is the selection of the pictures for reproduction, and in the present case this may be praised in so far as there are many good pictures chosen, and few or no positively bad ones. But this is not enough. The very best is none too good for the child, and it would be perfectly possible to replace many of the mediocre pictures here given by works of the highest order of merit, which should be equally interesting in subject, and infinitely more valuable in the unconscious education of taste. One instance will show what we mean as well as a dozen. Hofmann's very popular but very cheap and meretricious picture of "Christ among the Doctors" is one of those given. Luini's noble painting of the same subject in the National Gallery is equally available from every point of view as to subject and treatment, and incomparably better as art. Why fob the child off with Hofmann, when he might have Luini? Salvator's "Diogenes in Search of an Honest Man" is a picture so ugly that, to our mind, it should have been excluded, but if it was to be given, why is it reproduced from an engraving rather than from the original? It is not the only case in these books of this unjustifiable proceeding, and we must repeat that the children have a right to the best, not only in art, but in reproduction. Engravings, especially old ones, are notoriously unfaithful, and should never be shown to beginners where a reproduction from the original can be had. If no good direct reproduction is available, it would be better to omit the picture entirely. The present author is not so bitten with the mania for "grading" as some other educators. She quotes two courses, proposed by the State Director of Drawing of Massachusetts and by the Director of Drawing of Boston, in each of which there are five "Primary Grades" and four "Grammar Grades," all, presumably, arranged on some theory of progression. Mrs. Wilson is content with the separation of the pictures into two sets, Part I. for the primary schools, and Part II. for grammar schools; but even so we cannot discover the system on which the choice is made. Why is Adam's "Cat Family" a picture for primary scholars, and Mme. Ronner's cat picture, "A Fascinating Tale," one for grammar-school pupils? Or in what way is Boughton's "Return of the *Mayflower*" more fitted for advanced study than is his very similar "Pilgrim Exiles"? Of the two we should have said that the presence of the ship in the first-named picture rendered it the easier of comprehension. Only in the postponement to the second part of such old masters as Lionardo, Michelangelo, and Veronese, and of such moderns as Burne-Jones and Sargent—that is, of such painters as are more artistic than popular—do we seem to get a glimpse of system.

Many of the quotations in the Pupil's Books are pretty and appropriate, but many of them are the reverse of appropriate. To mention only a few of those we had marked: "Come to the sunset tree" as appended to a picture of mid-day (Bastien's "Hay Harvest"); "Where the pools are bright and deep," to a picture of street gamins ("The Meeting," by Marie Bashkirtseff); Shelley's "Swiftly walk over the western wave, Spirit of Night!" applied to one of Fra Angelico's angels; "A creature not too bright or good for human nature's daily food," as a motto to the "Mona Lisa"; and "More water glideth by the mill Than wots the miller of," as a comment on the picture of a *wind*-mill (Rembrandt), are singularly inept.

But it is, after all, in the Manuals for Teachers that the faults and errors are most important. That the pictures selected, their reproduction, and the mottoes appended to them should not all be of the best is regrettable; that the teachers who are to expound should themselves be mistaught is lamentable. Yet these notes for the instruction of the teacher are crammed with errors and blunders of greater or less magnitude. They are not all of the author's making, it is true, but the author is responsible for her choice of quotations and her application of them, as for her original matter. It may have been John Ruskin who said that Rembrandt was a "man of the world," "never in earnest," and "would have mocked the idea of a spirit," but it is Mrs. Wilson who has put this down for the guidance of the bewildered primary teacher. Walter Cranston Larned may have been justified in representing Dr. Tulp as surprised at Rembrandt's audacity in conceiving of "The Anatomy Lesson," for Mr. Larned was writing 'A Romance of Holland'; but Mrs. Wilson should have known that such pictures were common, and that Dr. Tulp got just what he ordered. And when remarks which Muther has made about C. F. Ulrich are quoted as referring to L. Passini, only because that name occurs on the same page, the blunder is surely Mrs. Wilson's own. She has also a weakness for the apocrypha of art. Here again her responsibility is indirect, for the stories are not of her invention, but she should not have retold them in a book of this kind without a warning of their nature. The silly tale of the vinedresser's daughter and the barrel-head, which was invented to account for the circular shape of the "Madonna of the Chair," is incredible to those who know the frequency of the *tondo* in Renaissance art; but how many school-teachers are of this number? And these tales also are occasionally decorated with new incredibilities surely of the present author's invention. If Van Dyck deceived Rubens by his retouching of a picture which he had accidentally damaged, the picture was certainly not one painted years before he entered Rubens's studio; and if he ever painted a portrait of Franz Hals, he did not transport the latter to Rome for that purpose.

Besides the above, there is a plentiful crop of errors in these books for which it is difficult to find any excuse or to imagine any origin. When we hear of Bastien's "study of his 'Grandfather, the Fagot-Gatherer,' called 'Père Jacque,'" the printer may be in fault, and a change of quotation-marks would set things right; to make Zuber a German and give his name a superfluous umlaut, is a venial sin; it would have been better not to give the Redentore Madonna as an example of Bellini without a caution that its authenticity is gravely questioned—but this may pass. What, however, shall we say of the astounding statement that Guido Reni was in the habit of "copying, with small changes, his women from the Venus of Milo" discovered in 1820? Or of the confusion which attributes to Jules Dupré two pictures by *Julian* Dupré, and gives a brief biography of the former, a quotation or two, and references to books on art, all of which have no more to do with the painter of these pictures than with Michelangelo or Artaxerxes?

We have given more space to these books than they deserve because they come from a good publisher, and might, therefore, be taken seriously, and because they illustrate

the great danger of much of our attempted education, the teaching of that which is unknown to the teacher. Our school-teachers are expected to teach a little of everything; and as they do not know these things, they must "get them up" in a hand-book. Moreover, as the person who has conceived the idea of the hand-book does not know the subject either, he also "gets it up" as best he can. He compiles something, somehow, not knowing good authorities from bad, or how to verify facts or judge of the value of criticisms; and to the farrago he has got together he adds various blunders and misunderstandings of his own. Thus we get a "Manual for Teachers" and thus is the teacher taught. Most artists have met with the would-be pupil who "only wants to learn enough to teach." It seems as if that modicum were becoming steadily smaller.

Italy and her Invaders. Vol. VII. Frankish Invasions. Vol. VIII. The Frankish Empire. By Thomas Hodgkin. Oxford: Clarendon Press; New York: Henry Frowde. 1899.

With these volumes, Dr. Hodgkin completes the great work of which he issued the first part nearly twenty years ago. He pursues the method which he adopted in the beginning, of tracing the story of each tribe up to the time when it came to interfere directly in the affairs of Italy, and then to describe in detail its influence on Italy's development. The work is thorough, scholarly, and as lucid as it is possible to make it, considering the fewness of extant sources. Fair-minded is an epithet which Dr. Hodgkin certainly deserves, and the quality it represents is required at many points, for the period covered by these two volumes saw the rise of institutions from which Europe has hardly yet shaken herself free, and over which the bitterest controversies have raged. To understand the history of modern Europe one must go back beyond the French Revolution, and the Reformation, and the Crusades, to the fateful eighth century, when the Bishop of Rome expanded into the spiritual autocrat of Western Christendom, with the temporal Papacy already in sight, and when the warrior chief of a German tribe put on what was believed to be the very crown of Imperial Rome.

The description of these momentous transformations makes this the most interesting part of Dr. Hodgkin's work. Speaking with due qualification, we may say that it was the mission of the earlier invaders—the Goths and Huns and Lombards—to break up the Roman Empire and to destroy the highest civilization that Western Europe had known. With the supremacy of the Franks, on the contrary, the constructive forces more than matched the destructive, and a new civilization, a composite of Roman reminiscences and barbarian novelties, gradually emerged from the chaos of dissolution. Unfortunately, unless records now unknown shall hereafter come to light, there will never be a full chronicle of this transformation. Nevertheless, the records that exist enable us to get a general survey, and, what is equally important, to discern the features of the four or five great figures of the age. The two popes, Zacharias and Hadrian, the two Byzantine sovereigns, Constantine V. and Irene, and Charlemagne, who towers above them all, become, through Dr. Hodgkin's skilful resuscitation, persons whose characteristics we recognize as human. Most of the others are simply generic types of ecclesiastics or war-lords, so few are the individual touches which remain of them. We doubt whether Dr. Hodgkin himself could distinguish between Charles Martel and Pippin if he were to see an eighth-century Frankish king suddenly turn the corner.

These volumes convey admirably the impression that many of the steps which led up to the formal establishment of the Frankish Empire and its relations with the Popes were almost unpremeditated. In view of the gaps in the records, no honest historian would be justified in hinting at a long-prepared, definite policy; although, needless to say, more than one writer of history, especially among the partisans of the Papacy, has tried to demonstrate a continuity which the facts do not warrant. The Bishop of Rome acknowledged in theory the suzerainty of the Eastern Emperors long after these exercised any real power in Italy. Between Gregory the Great and Zacharias, pope after pope reigned precariously at Rome, with no more far-reaching purpose than to defend the Holy City against turbulent neighbors. Then came, gradually and very naturally, the plan of creating in Italy a papal kingdom that should unite the various "patrimonies" which had been acquired by the successors of St. Peter; and henceforth we find continuity, unbroken down to our day. The appeals of the eighth-century popes to be confirmed and defended in their temporal power might have been written by Pius IX. or Leo XIII., so inveterate is the clerical instinct never to let go worldly possessions. The one unpardonable sin was the invasion or seizure of papal lands. Even heresy could be condoned, but this could not. Pope Hadrian, for instance, declares that if the Eastern Emperor "fails to restore its patrimonies to the Holy Roman Church, we shall decide him to be a heretic for thus obstinately persevering in his old error" (viii., 19).

Dr. Hodgkin has chosen the best way of handling these questions on which men will never agree; he simply quotes, or summarizes, the important passages in the original documents. He holds throughout the attitude of the historian, not that of the Protestant, and consequently he does not attribute to Catholic dogmas iniquities which inhere in theocratic government of whatever creed and in a semi-civilized society. His analysis of that tremendous fraud, the Donation of Constantine, which began to be circulated towards the end of the eighth century in support of papal claims, is a model of fairness; in it he wastes no words in denunciation, but shows how the forger may have believed that he was performing a pious act, and how the first popes who cited it may have been deceived by it. That it was a forgery must have been unknown to many generations of ecclesiastics before Valla exposed it in the fifteenth century.

Concerning the coronation of Charlemagne by Leo III., on Christmas Day, 800, Dr. Hodgkin, after a minute sifting of the evidence, concludes that the Frankish King never meant by that act to acknowledge the Pope as his suzerain. That was the interpretation put on it by the Church, and converted by her into a precedent which remained in vigor for many centuries, but it seems most probable that Charles regarded the coronation just as his father Pippin had regarded his own anointing, as a sign of friendliness and not as an admission of inferiority. The Church used the precedent for her own aggrandizement, but the most ambitious pontiff could not in the year 800 have foreseen what the fantastic novelty, the Holy Roman Empire, which he had conjured into being, would amount to. Neither was so shrewd and masterful a conqueror as Charlemagne likely to surrender any of his prerogatives for a vague title, or to consent wittingly to an act which should diminish his power.

The most entertaining portions of these volumes are naturally those in which Dr. Hodgkin describes Charlemagne's family and court life, which he contrasts with the Byzantine court under Irene and her son. Einhard's biography, and the literary remains of Angilbert, Theodulf, Alcuin, Paulus Diaconus, and Peter of Pisa, supply material for a vivid picture; but when he compares this Frankish renaissance with that which came to pass six centuries later in Italy, we feel that in the intrinsic value of its literary and art products the former cannot bear such a comparison at all. Einhard, Alcuin, and Angilbert were remarkable when measured by the half barbaric environment out of which they sprang; but they left no work of permanent worth. The fire of culture kindled by them sank and went out within a score of years. Nevertheless, if it be possible to attribute to their revival of Latin culture Charlemagne's ambition to revive the Roman Empire, then we can agree with Dr. Hodgkin that the Renaissance at Aachen had an immense influence; only, the influence was political and not literary nor artistic.

We cannot take leave of this work without a final word of praise. The brilliant epochs will always attract historians; it is Dr. Hodgkin's distinction to have presented, for the first time in English, a complete history of an important but obscure and uncongenial period. He has mastered all the original sources, and, what is a still heavier task, all that German scholarship has written about them, with the result that, unless much new material shall hereafter turn up, his work is not likely to be superseded. His style is clear, even, and unmannered. Every statement he makes gives evidence of having been carefully weighed. He has not only investigated such minute questions as the sites of ancient places, but has visited most of the localities he describes. If there are dry passages in the course of his volumes, this is due to the lack of authentic information, and not to any defect in himself. He could never, like Freeman, inflate six or seven pages of facts into sixty pages of conjectures and facts, and pass them off as history. He has the satisfaction granted to few scholars of bringing to a successful end the work of twenty-five years.

Modern Land Law. By Edward Jenks. Oxford: Clarendon Press; New York: Henry Frowde. 1899.

It seems ungracious to dismiss a work on which so much labor has been expended as on this without somewhat extended comment; but the nature of the subject is such as to interest but a small class of readers, and that class is to be found almost exclusively in England. Even at the time of the Revolution, the land law of this coun-

try was starting on a different course of development from that of the parent state, and since that time the two systems have been entirely independent. If not for a century, certainly for half that period, the land laws of our States have been modified with very little regard for English examples and tendencies, and perhaps generally in ignorance of modern English statutes. In fact, our State Legislatures have paid comparatively little attention to one another's proceedings, and while New York has largely reconstructed her system, neighboring States, like New Jersey and Connecticut, have ignored her example. Under these circumstances, not many American lawyers are likely to interest themselves in the details of the changes in a system which has now become practically altogether distinct from our own.

Nevertheless, we can conceive the scholarly young lawyer, fresh from his Blackstone, taking a keen delight in tracing the later development of the wonderful law which that great writer so lucidly expounded. Whoever has felt curiosity to know how that extraordinary relic of feudalism could be adapted to the conditions and requirements of modern business, can do no better than study Mr. Jenks's pages. He will not find the stately periods of Blackstone, nor the graceful fluency of Kent; but he will find a skill in compressed and lucid exposition which approaches closely to the ideal style of a scientific legal treatise. Mr. Jenks does not deal with origins and antiquities except so far as is necessary to explain institutions which are an outgrowth of them. He has attempted, and, in our judgment, with great success, to state the result of the authorities, rather than the authorities themselves; "to combine authority and commentary in clear language." And he has also endeavored successfully to give his matter a logical arrangement.

For the reasons which we have assigned we cannot criticise his work in detail. That, indeed, can be fairly attempted only in the professional reviews. But we do not hesitate to say to lawyers who like to take broad views of their profession, that they will find this book extremely interesting and suggestive. Were our legislators worthy of their title, we should say that they would regard such a treatise as an indispensable aid; but probably few of them would appreciate it.

BOOKS OF THE WEEK.

A Book of Family Worship. Edited by W. R. Nicoll. Dodd, Mead & Co. $1.75.
Alma-Tadema, L. The Fate-Spinner. London: E. B. Mortlock.
Baedeker, K. The Dominion of Canada, with Newfoundland and an Excursion to Alaska: Handbook for Travellers. New ed. Leipzig: K. Baedeker; New York: Scribners. $1.50.
Blythe, W. H. Geometrical Drawing. Macmillan. Part I. 60c.
Boothby, G. A Maker of Nations. Appletons. $1.
Bothmer, Countess A. von. The Sovereign Ladies of Europe. London: Hutchinson & Co.; Philadelphia: J. B. Lippincott Co.
Bowley, A. L. Wages in the United Kingdom in the Nineteenth Century. Macmillan.
Brentano, F. F. Legends of the Bastille. London: Downey & Co.; New York: Scribners. $1.75.
Brontë, C. The Professor. London: Downey & Co.; New York: Scribners. $2.
Browning, R. Earlier Monologues. [Temple Classics.] London: Dent; New York: Macmillan. 50c.

The Nation.

NEW YORK, THURSDAY, MARCH 15, 1900.

The Week.

"It may be wise to defer legislation for the establishment of a form of civil government in Porto Rico," says the *Tribune's* Washington correspondent. Lack of information is the ostensible reason for delay. The real reason is the threatened breach in the Republican party on the Porto Rican tariff bill, on the eve of the Presidential election. Already the party leaders have decided to postpone the decision of the Philippine question until some future time, and to clothe President McKinley with all the powers that Congress itself could exercise, thus making him an autocrat over ten millions of people on the other side of the globe. The convenience of this game of battledore and shuttlecock is apparent at a glance. The President went through the Northwestern States last autumn, telling the good people, in response to their inquiries, that it rested with Congress to determine the kind of government that the Filipinos should have, and that Congress had not yet had an opportunity to act on that question. There was some plausibility in this answer, and it satisfied the greater number of those who put questions to the President. Congress has now been in session more than three months, and has not dared to take up the question seriously. Neither does it dare to ignore it altogether. So it proposes, by the Spooner bill, to put it comfortably on Mr. McKinley's shoulders, or rather to leave it there, and postpone the real decision till some future time. And now, finding itself confronted with unexpected difficulties in Porto Rico, it is considering whether that would not be the best way to dispose of that problem also. The chances are rather against this decision, if it can be called a decision when there has been a complete failure to decide.

If Congress should dump the solution of the Porto Rican tariff problem on the President, what will the poor man do? He first declared that it was "our plain duty" to abolish all tariff between the island and the United States. When the sugar and tobacco men came to Washington and threatened him, he turned squarely around and actually urged Congressmen who had committed themselves to his free-trade policy, to turn around also. Congressman Sperry of Connecticut says in the New Haven *Register:*

"On the day of the vote, Mr. McKinley sent to me, asking me to come to the White House. He told me that he hoped every Republican would vote for the Porto Rican bill. He endorsed it thoroughly, he said. At an earlier time, he continued, he had believed in free trade for Porto Rico, but he had changed his mind for certain definite reasons which he stated to me."

Similar statements have been made by Congressmen Watson of Indiana, and Morris of Minnesota, Weymouth of Massachusetts, and Prince of Illinois. Congressman Crumpacker of Indiana was also urged by the President to change his position. Now if the Senate fails to pass the House bill, and throws the whole question back on the President, what will Mr. Facing-both-ways do then?

The Porto Ricans may not know how to govern themselves, but they certainly know how to draw up a statement which leaves the President and the Republicans in Congress looking uncommonly sheepish and silly. In the letter of the island planters and merchants to Congress published on Tuesday, the Republican pretence that a tariff on Porto Rican products was absolutely necessary in order to provide "revenue," is punctured and left so flabby that it can hardly be inflated for use again. The men on the spot, who will have to pay the internal taxes, show how easy it would be to meet all necessary expenses of government without any tax whatever on trade with the United States. Such freedom of trade they appeal for both as a "right in equity," and as the only means of preventing the starvation of the natives. The combined logic and pathos of this plea must have a powerful effect upon opinion in this country, and should help to bring the Republicans at Washington to their senses. Into what a lamentable state of divided counsels and impotence they have been thrown by the attempt to extend the blessings of our rule to one small island, all the dispatches from the capital show. It is chaos come again in the Senate, and in the White House a wringing of helpless hands. So much for trying to escape plain duty. So much for "the wisdom of Congress" and "the wisdom of the President" eternally yielding the *pas* to each other, while organized greed steps in to assert control of both. In the distracted state of the party lies the best hope that the one clear and complete and honorable solution of the question will yet be reached—free trade. Everything else may be quarrelled over to the crack of doom; absolute throwing down of customs barriers is the only thing which can finally unite the warring factions. And no one need worry about the President. He will accept free trade, and then issue an "authorized statement" showing that the result was due to his far-sighted wisdom and firm courage.

One of the bitter complaints of the Porto Ricans is, that the American government of the island gives all the fat offices to foreigners. Thus, we read in the *Diario de Puerto Rico* of February 13, in a list of the reasons why American rule has fallen into such disrepute:

"For the leading public positions Americans are brought here, on high salaries, and in many instances have been without either competence or integrity."

This, as is well known, is an old vice of Spanish colonial government. It was eloquently denounced by Senator Beveridge. Spain selected her colonial officials, he said, in fine disdain, "to placate members of the Cortes." Well, the American way is to select office-holders to placate members of the Senate. Mr. Beveridge himself has been duly placated by the appointment of his own father-in-law to a good office in Porto Rico. That gentleman, we learn, is well advanced in years, and had been an office-holder in Indiana of no special note. He was promptly "saddled upon the postal department of Porto Rico" by his high-sounding son-in-law. He is now very likely one of the officials who are embittering the Porto Ricans against the United States. That class of appointees was aptly characterized by Senator Beveridge (after he had been placated by his father-in-law's inclusion in it) as "the spawn of Government favor and Government fear, and, therefore, of Government iniquity." So dangerous is the gift of eloquence.

The opinion seems to prevail in high quarters that an ex-President of the United States is not at liberty to express dissent from the policy of any of his successors in that office, or that, if he does take that liberty, he must be considered a candidate for reëlection. This rule has been applied to ex-President Harrison since he ventured to express dissent from the Porto Rican tariff bill. He is accused of seeking a renomination by fomenting discord in the party. If he cared to reply to such accusations, he might say that he is following the President's first definition of "our plain duty" to Porto Rico, and that if he has not been able to change his views of duty so frequently as the President has, the fault is with Mr. McKinley himself, who has not bulletined his changes, as a good commander ought to have done. How was Benjamin Harrison in Indianapolis to know the proper time to go in for a twenty-five per cent. tariff, and when to drop to fifteen per cent.? The Hon. Page Morris, M. C. from Minnesota, might easily find out by calling at the White House when the proper time had come. Other Congressmen could arrange their turnabouts with the same facility, but nobody could give the assurance to Mr. Harrison.

Therefore, he must either adhere to the President's first proclamation of "plain duty," or say nothing about a subject upon which all other men are talking rather earnestly.

Those Americans who, like Senator Beveridge and Representative Grosvenor, are revelling in the money which we are going to make out of the Philippine transaction, should be interested in some figures furnished by Mr. H. S. Nelson to the *World*. If we are to take a business-like view of the situation, we ought to have a debit as well as a credit page in our ledger, and Mr. Nelson furnishes some items for insertion in the debit column. The war with Spain began in April, 1898, and the expenses of our army to the end of that fiscal year, exclusive of river and harbor improvement, were about $71,000,000, while those of the navy were nearly $59,000,000. During a little more than two months our belligerent activity cost over $95,000,000 more than was expended during the previous twelvemonth. In 1899 the cost of the military establishment, omitting river and harbor expenditure, was nearly $214,000,000, and the cost of the navy was about $64,000,000, making a total of $277,700,000. Striking off $70,000,000 as the cost of these departments in a normal year, we have over $207,000,000 increase, and, making all possible deductions, the cost of the Philippine war in 1899 must be figured at nearly $164,000,000. We do not know how much this war is costing at present, but we do know that for the year 1900 Congress appropriated for the pay of the military forces $29,106,000, and that an additional sum of $15,188,000 is now asked for, while the item of transportation, for which $17,500,000 was allowed, now calls for $20,000,000 more. Judging from the disbursements this year and the estimates for 1901, the Philippine war will cost us at the rate of $90,000,000 for the army alone, while the increased charge for the navy and civil list will be at least $10,000,000. What the pension bill will eventually be, cannot be foretold. Altogether, Mr. Nelson's estimate of $550,000,000 as the cost of the war with Spain, with indefinitely enlarged annual expenses in the future, seems not excessive.

It is impossible to believe that the naval committee of the House would have dreamed of recommending sixty millions of dollars as the proper sum to be voted for new navy vessels this year, if the Administration had refrained from its plunge into Imperialism. This vast amount, if voted, together with the millions granted last year, and the millions which the army operations in the Philippines have thus far cost the country, alone come to a total which years of trade with Luzon and its neighbors will not counterbalance. Indeed, the price we are paying for this "taking our place among the great nations" is being made plain, even to the most superficial thinkers, and the recent increase in the sickness and mortality in Gen. Otis's army is not without its effect. It is to be hoped that the naval bill will be carefully discussed in the House. Any debate must bring out the fact, demonstrated even by the antiquated Spanish guns, as is now widely believed, that land batteries well manned and equipped are sufficient for the defence of any harbor, and that our outlying island possessions are nothing but sources of great military weakness.

The application of the New York law for the taxation of the franchises of certain corporations raises questions of great difficulty. The law did not provide specific rules for assessing the value of these franchises, and the State Tax Commissioners have, perhaps unavoidably, proceeded in a somewhat arbitrary manner. Their assessments are generally objected to by the corporations affected, and there is every indication that very prolonged and expensive litigation will take place before the taxes are finally collected. As Senator Ford expresses the opinion that the corporations ought to pay as much as $25,000,000 a year under this law, it is not to be expected that they would submit without a desperate struggle. The protests made by some of the corporations affected, if their statements of fact are correct, show that the valuations assumed by the Tax Commissioners are excessive. The Buffalo Electric Light Company asserts that its tax under this law would amount to 16 per cent. of its gross, and 30 per cent. of its net, earnings. The Cataract Power and Conduit Company, which is now paying dividends of from 4 to 5 per cent., after ten years during which no dividends were paid, is assessed at a figure which would make its taxes equal to half its dividends. Such taxation as this would amount to confiscation, and the situation shows the imperative necessity of adopting some general principle of valuation which shall work equitably.

It is to be hoped that the favorable report which the Assembly committee on cities is to make on the bill regulating the confession of judgments by the city of New York will be followed by prompt legislative action. No attorney-at-law can confess judgment without the written authority of his client, but the Law Department of this city recognizes no such restraint. The Corporation Counsel appears to rely on the decision made concerning the aqueduct claims, although it was assumed in that decision that the city authorities had specifically authorized the confession of judgment. It may be decided hereafter that all judgments against the city confessed without such authority are void, but it would be a hopeless undertaking to try to get back the money which the city has once paid to creditors of this class. All doubt would be removed by the bill in question, which requires the approval of the Comptroller, and in some cases of the Mayor also, before any judgment can be entered against the city by consent. It is claimed by the Brooklyn *Eagle* that the provision in the "labor law" under which many city employees have made large claims against the city for back pay, has been repealed. The *Eagle* maintains that the present "prevailing rate of wages" law applies only to the case of men employed by contractors on public works. The language of the statute is, "Each contract to which the State or municipal corporation is a party" shall provide for the payment of the prevailing rate of wages. It is doubtful if this will be held inapplicable to contracts of employment made directly between the city and its employees, in which case the main argument of the *Eagle* would fail. But, as that journal points out, many of the claims allowed by the Corporation Counsel rest on very questionable definitions of the prevailing rate of wages. In fact, that rate, so far as claims against the city are concerned, is whatever it is declared to be by the trade unions.

The reception given to Comptroller Coler at the dinner of working men and women at Terrace Garden on Thursday evening was a most encouraging token of the growing belief of all classes that the power of Tammany Hall must be broken, or the city will be rendered uninhabitable by civilized beings. Nothing since Tweed's time has given the public such a shock as the attempted Ramapo swindle. Nothing at the Terrace Garden meeting called forth such shouts of approval as Mr. Coler's denunciation of the scheme to make the city dependent on a private company for its water supply. It is true that a few persons in the room who had pecuniary claims on the city which had been held up by the Comptroller for further examination, tried to disconcert him by hisses, but when the audience came to understand the cause of the interruption, their applause overwhelmed all opposition. Mr. Coler could not have asked for a more emphatic demonstration of approval of his course as a public officer. The meeting was a great success, not merely as an endorsement of honest government at home, but as a condemnation of Imperialism in the Philippines and in Porto Rico.

The political situation in Kentucky is still disquieting, and both sides are making military preparations. Gov. Taylor, we must say, does almost everything that he can to alienate conservative supporters outside the State. He damaged his case greatly by using mili-

tary force to prevent the meeting of the Legislature, and now he officially denounces the courts. He declares that, being composed almost entirely of Democratic judges, they have become "so partisan that it is practically, if not absolutely, impossible for any man not of their persuasion to obtain a fair trial. As organized, the courts are courts of conviction instead of courts of trial." On this ground Gov. Taylor has pardoned, before they were tried, several persons arrested on the charge of murdering Goebel. He says that he believes they are innocent, and that "designing men controlling the courts should not be enabled to shed the blood of innocent men." After these statements, he submits his course to the judgment of fair-minded people! If he desired a favorable judgment from that quarter, he should have waited until the courts had so acted as to make their iniquity evident. By an appeal which is, to say the least, premature, Gov. Taylor has prejudiced his cause. His future complaints will require corroboration before they can be regarded.

The large increase of wealth that has accrued to the Southern States since last fall from the great rise in the price of cotton, is scarcely appreciated by those not conversant with the cotton-growing industry. For the past three years the price has averaged 6 to 6½ cents per pound, and there has not been much profit in raising the staple. But now, largely by reason of the world's increasing consumption, the crop failure in India and the threatened failure in Egypt and in consequence of our own crop falling from 11,250,000 bales the past two years to 9,000,000 to 9,500,000 bales, the price has gone up to 9½ cents. The following table shows approximately the increase in the value of last season's crop, and what the ensuing season's yield would return at present prices if another 11,000,000-bale crop should be raised, as seems likely from the fact that the acreage will be the largest on record, probably exceeding 26,000,000 acres:

Crop of 1899-1900 about 9,000,000 bales, 6,000,000 of which sold at average price, 7½ cents, or $35 per bale, or	$225,000,000
3,000,000 sold at average price of 9 cents, or $45 per bale, or.....	135,000,000
Total value of crop	$360,000,000
Crop of 1900 to 1901 likely to turn out, under favorable weather, 11,000,000. Farmers under present system of "future" trading could sell, for October to January delivery, at 8 cents or $40 per bale.....	$440,000,000
Total value two years' crops, as indicated	$800,000,000

It was freely predicted in the South last autumn that if the price of cotton should reach eight cents per pound, the silver question would be shelved as a political issue in that section. If we may judge from the small interest taken in the pending currency bill by the Southern press and the Southern members of Congress, that prediction has already come true.

The career of Edward J. Phelps, who died on Friday, is a curious illustration of how national reputation in the United States may depend upon the result of a single election. In 1884 Mr. Phelps was a leading citizen of Vermont, who was highly esteemed throughout his State; but, except as lawyers throughout the country recognized his legal ability, he was a man unknown outside of Vermont. If the Republicans in that year had nominated a man of good character and carried the Presidential election, Mr. Phelps would doubtless have died with a reputation no wider than he then possessed. He had always been a Democrat, while Vermont was the strongest Republican State in the Union. He was thus debarred from holding office at home, and for a quarter of a century there had been no Democratic President to think of giving him a position in the Federal service. The nomination of Blaine by the Republicans resulted in the election of Cleveland, and the latter's selection of Mr. Phelps for Minister to England gave the great Vermont Democrat his opportunity. He improved it to the full, speedily vindicating the wisdom of his choice, and strengthening, year by year, the favorable impression which he early made upon both nations. He died full of years and honors, with citizens of both parties proud of public service in a high and difficult place.

Behind the German meat-inspection bill, with its threat of a tariff war with the United States, stands the Emperor's pet scheme, the new navy bill. He said recently that he did not want to be a "so-called constitutional monarch, who reigns but does not govern"; yet he has been forced to deal and dicker like any politician to get his naval plans accepted by the Reichstag. To win the votes of the Agrarians he has had to make terms with them; and their terms are the meat bill and other protectionist monstrosities. The price is seen to be impossibly high to pay for such support, and even with it the doubt grows daily whether the present Reichstag will give the Emperor his ships. Some of the pleas made for them are arousing ridicule. Thus, Count von Bülow, who usually speaks like a man of hard business sense, made a tearful appeal to the Reichstag the other day. Germania had two children, brother and sister, the Reichstag and the fleet. The older brother ought to come to the aid of his little sister. Excellent, cried Richter, but little sisters have a way of growing up and needing frightful sums for their clothes. And was not Von Bülow leaving out important members of the German happy family? There was big brother Army, who cost the household a pretty penny. Agriculture was a crying baby requiring constant care. In fact, said Richter, the family was growing at such a rate and was getting so expensive that the distracted *père de famille* —the taxpayer—was strongly thinking of suicide.

The particulars of the attempt recently made in the German Reichstag to repeal the "Dictatorial Paragraph" in the law prescribing the government of Alsace-Lorraine, have now come to hand. This paragraph gives the Statthalter nearly absolute power over the administration of the Reichsland, and its repeal was urged on the ground that friendly relations with France would thereby be encouraged. The repeal was opposed by the Imperial Chancellor for reasons which seem very feeble. He stated that he had himself been Statthalter for nine years, during which period the paragraph had occasioned very little friction. The provisions of the paragraph, he admitted, were only suitable for exceptional circumstances, and represented a continuous state of siege. In fact, the chief use of the paragraph appeared to be to furnish a grievance to malcontent agitators. This might seem to be an argument for its repeal, but the Imperial Government were unwilling to relinquish it so long as anti-German sentiments continued to be expressed. Exceptional circumstances might arise, the Chancellor said, and he continued: "Alsace-Lorraine is a border country. Our neighbors are excitable. . . . We acquired Alsace-Lorraine not by a *plébiscite*, but by force of arms. We mean to retain the land we have regained possession of, for that is our right." In spite of this declaration of its policy by the Government, the motion to repeal the paragraph was carried by a large majority, although there is little probability that the Government will give effect to the wishes of the Reichstag. The incident shows that the relations between Germany and France are really unchanged.

President Krüger's suit for peace is not likely to be any the less urgent for the British occupation of Bloemfontein. This he must have foreseen, as also the danger that the Dutch troops to the south may now be caught between two forces. It is also probable that the Free State will separately abandon the war and make peace, unless joint action to end hostilities be taken speedily by the two republics. As for terms, no one can know better than Krüger that his proposal to take more than the *status quo ante* is wholly inadmissible. His ultimatum last October ruled that out. Doubtless, having asked for peace, he is ready in the end to accept reasonable terms of peace. If these could now be offered in a generous and statesmanlike way, hostilities might cease very soon, and the world might be spared the horrible spectacle of a desperate last-ditch fight by the burghers.

THE REPUBLICAN IMBROGLIO.

The Republican party is now rent in so many different places and on so many different questions that it cannot possibly go into the coming Presidential campaign presenting a solid front to the enemy. It may win votes enough from the other side to make good its inevitable losses, but they will not be the same votes that carried it to victory four years ago. In the first place, it has lost all those who regard the new policy of Imperialism as a menace to free institutions—such men as ex-Gov. Boutwell, ex-Senator Henderson, Herbert Welsh, Edwin Burritt Smith, and other well-known men who have not been chronic Mugwumps, but have refused to follow the party in a path which they consider opposed to the foundation principles of the republic. Not all the men who have taken a decided stand against Imperialism will vote against the nominees of the party in the last extremity, but the greater part of them will either vote the Democratic ticket, or for a third party, or abstain from voting altogether.

This contingent, although not unimportant in numbers and influence, is small in comparison with the mass of those who have been roused to anger by the Porto Rican tariff bill, of whom ex-President Harrison and Congressmen McCall and Littlefield are types. These men believed that the fear of Imperialism was baseless. They assumed that the inhabitants of the new possessions were to be treated as members of one family, as citizens under one jurisdiction, as Americans, not as foreigners. They had heard the President say that it was our plain duty to treat them so. When the contrary doctrine was promulgated at Washington, and it was declared by a party vote in the House that the inhabitants of Porto Rico were regarded as aliens, and were to be taxed by us without representation, the scales fell from the eyes of thousands. The revolt in the party has been without precedent in magnitude and in spirit, and the breach is widening instead of closing. Of course, much depends on the action which the Senate is yet to take, but no compromise which puts Porto Rico on a different footing from the United States, as regards taxation, will do any good. The percentage of tax against Porto Rico is not of the least consequence.

These are not the only causes of heartburning in the councils of the party, but the others could, perhaps, be smoothed over if these were absent. First among them is the ship-subsidy bill. At the beginning of the session it seemed likely that this scheme would be rushed through both houses, with nothing more than a perfunctory opposition on the part of the Democrats. The ground had been carefully prepared beforehand. All manner of so-called boards of trade in small prairie villages had been seen, and hoodwinked to pass resolutions favorable to a measure of the details of which they had no knowledge, or any means of acquiring knowledge. But when Congressmen began to investigate it, some of them discovered that it was a bill to plunder the Treasury for the benefit of a few rich men, under pretence of doing something for the flag. Considering the party so far committed to the bill that they could only oppose it by indirection, they set themselves to the task of killing it by amendments and delay. The four Western members of the House committee having the bill in charge have declared their hope and expectation that a subsidy bill would pass, but have sought to amend it so that it should give as little ground as possible for the charge that it favors a shipping monopoly or a syndicate of rich men. The public have not been admitted to the contest in the two committees on this subject, or in the steering committee of the Senate, but there can be no doubt that there has been much tension. Where so much money is involved, it could not be otherwise. To this imbroglio the Porto Rican controversy has added fresh bitterness. It has supplied a new reason for not passing any subsidy bill, since the party has so many burdens to carry without it.

The Nicaragua Canal bill and the Hay-Pauncefote treaty constitute a fresh subject of party disagreement, but this can be shelved in a rational manner by saying that it will be wise to wait for the report of the Commission which is now investigating the whole question of interoceanic canal routes. It was the intention of the Maritime Company to rush its bill through regardless of the Commission, regardless of the Clayton-Bulwer treaty, regardless even of Nicaragua. This would have been done had not the Hay-Pauncefote treaty been laid upon the Senate's table just in time to stop an act of incredible folly. Although the canal question may be shelved for the remainder of the present session, it cannot be kept out of the coming campaign. The Democrats have the coign of vantage, since they are not the party responsible for carrying on the government. They can show the conflict between the Hay-Pauncefote treaty and the Hepburn report, and will, no doubt, gain some votes thereby.

Another source of discord is found in the Quay case. The Republicans are now the majority of the Senate, and they will be held responsible for seating Quay if he is seated. The bad character of the man counts for more in the public mind than the principle involved in the case. It is proposed now to reverse a settled rule of the Senate in order to admit a very slippery customer to a seat in the Senate to which he has not been elected by the Legislature of his State, although that Legislature was in session when the vacancy occurred. It seems likely that this will constitute another firebrand in the party.

SENATOR LODGE'S SPEECH.

With the historical matter in Senator Lodge's 7th of March speech (ill-omened date) on the Philippines we shall not deal; we agree with him that it is now of no use to cry over spilt milk. He himself did cry over it for the space of something like three hours, though he had not one new fact, only fresh pettifogging, to offer. In his prophecies he is, of course, invulnerable, and we decline the unequal combat of predicting the future in rivalry with such a master of divination. Of his political and moral principles, as freshly avowed, it is enough to say that he has gone over completely to the pro-slavery doctrine of expansion by filibustering which Massachusetts and her Senators used to denounce as dangerous and unholy; and that, by his sophistications about the consent of the governed, he justifies the suppression of the negro vote in the South. This is odd coming from the erstwhile furious advocate of negro rights and the Force bill. But he no doubt would include his recent championship of manhood suffrage and equal rights for men of all colors among those "grievous mistakes" which, he says, we have all committed, yet from which we have risen, "bruised and grimed."

Senator Lodge's main proposition is that there is a complete analogy between the Louisiana purchase and the annexation of the Philippines. Hence his advocacy of a bill giving the President such powers in the Philippines as Jefferson was voted in Louisiana. But this claim to be following "well-settled American precedents" vanishes on examination of the facts. Louisiana was adjoining territory, certain at once to be developed by a large population homogeneous with that of the rest of the country. Both social and political "union" with the annexed inhabitants was what Jefferson wished, as conducive to "their happiness," so he wrote. Nothing of the kind is possible in the Philippines. There are other glaring disparities. The population of Louisiana at the time of the purchase was less than 50,000. If not wholly pleased with their transfer to the United States, the people were yet ready to make the best of the new relation. They were easily assimilable, and were soon assimilated. Yet Senator Lodge adduces their case as on all fours with the forcible annexation of 8,000,000 of people of an alien race, 7,000 miles away, who are fighting us tooth and nail! Whatever he may say as a statesman, we think that as an historian he must have private historic doubts about the exactness of his boasted parallel.

Mr. Lodge came out strong on the qualities of "the Asiatic mind." There is no "Asian mystery" for him. One

thing, he said, is simply fatal in dealing with Asiatics, and that is to make them a promise. A promise to the Asiatic mind is simply a "proof of weakness." Thereupon, in proof of his own weakness, Senator Lodge proceeded to make the Filipinos a whole string of promises. On one of them we shall comment in a moment. But this tendency to excuse tyrannical methods in the Orient is an old trick of Eastern conquerors. Burke exposed and denounced it in words which are a standing rebuke to this pretence. "Fraud, injustice, peculation, engendered in India," cried the indignant Irishman, when told that he knew nothing of "Indian detail," "are crimes of the same blood, family, and cast with those that are born and bred in England." The truth is, if we are to fit our methods to those of Asiatic despots, we shall have to begin by suppressing such speeches as Mr. Lodge's, with his talk about the powers of Congress and the limited authority of the President. What respect will the Asiatic mind have for a ruler who has to confess that a lot of talking men, including a writer of essays from Massachusetts, dictate his action? The Ameer of Afghanistan preferred the Russian alliance precisely on the ground that the Queen might be overruled by a set of speechifying Sahibs. "I and the Czar of Russia," he told the English Envoy, "are kings, and can do what we like." If Senator Lodge is to go the whole figure in this "Asiatic-mind" business, he will have to abolish the Senate and set up a Czar.

In one passage of his speech, Mr. Lodge was guilty of the jauntiest indiscretion. After saying that promises should never be made the Filipinos, he went on to make them this promise: "The land, which belongs to the people, and of which they have been robbed in the past, should be returned to them." Now, this can refer only to the lands acquired by the Catholic Church in the Philippines. Both Foreman and Worcester represent the amount of real estate held by the religious orders as very large. Lodge promises to return all this to the people. But there are two difficulties in the way. One of them is legal. The Treaty of Paris declares that the cession of the Philippines does not "in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds . . . of *ecclesiastical* or civil bodies." There we are, bound to make good the land titles of the religious orders. Judge Taft, we know, regards this question of church property as one of the immense difficulties before him. But Lodge lightly waves aside law and treaty, and says off-hand, "Let the land be returned to the people." But if he easily leaps over the legal difficulty, will he over the political? Will he go to that great city of Irish Catholics —Boston—and assert that the Catholic Church has been a "robber" in the Philippines, and should be made to disgorge? If he does, we think he will soon be numbering himself with those despicable persons of his speech who "distrust ourselves, shiver before our own greatness, and shrink from the responsibilities which come to us."

It has been rumored that Senator Hoar was only waiting for Lodge to speak in order to answer him. If he does rejoin to his colleague, he might truthfully say, as he did of Senator Beveridge's coarse and silly speech, that the junior Senator from Massachusetts had failed to utter one word about honor and right and freedom. His speech was one long exaltation of naked force. He closed with a pious citation of the old prayer, "Sicut patribus, sit Deus nobis." We might quote against him Latin of higher authority, and bid him, in the language of Scripture, beware "ne forte et Deo repugnare inveniamini."

THE GRAVEYARD OF GOOD TREATIES.

The United States Senate is rapidly establishing the reputation of being, not the ratifier, but the destroyer of good treaties. Its attempt to wreck the Hay-Pauncefote treaty, by indirection, is only the latest manifestation of its disposition to fling itself like a brute, unreasoning force athwart the progress of civilization. Consider some of the items in the Senate's inglorious record as the funeral director of treaties intended to heal ancient disputes and promote the cause of peace. In 1887 it killed the Chamberlain-Bayard treaty for the settlement of the fisheries controversy. In 1897 it buried the arbitration treaty, though appealed to by two Presidents of different parties, and by the entire religious press and moral sentiment of the country, to ratify that humane instrument. The Senate did, indeed, accept the Hague treaty, but did it, as it now appears, under a misapprehension. It thought one of the clauses could be used to help mediation in the Boer war. Otherwise, we may be sure, it would have thought and talked long, and made many grimaces, before committing itself to anything which looked like lessening the chances of international quarrels.

What is the reason for this obscurantist and obstructionist attitude of the Senate? Partly, the game of small politics. The Republicans defeated Mr. Cleveland's fisheries treaty on unconcealed partisan grounds. What, allow a Democratic President to point to an old trouble composed? Senator Edmunds guessed not. But it was a dangerous example. The constitutional power of one-third of the Senate to embarrass the Administration by blocking its treaties is too great a temptation for the latter-day Senator. Petty political intrigue is only too ready to make the greatest international and moral interests give way to the exigencies of a campaign in a doubtful State. Then there is the overweening sense of importance on the part of Senators. Why were not their superhuman skill and knowledge consulted? This appears to be the present grievance of Senator Davis. Secretary Hay actually dared to negotiate a treaty without putting himself in the hands of the chairman of the foreign-relations committee of the Senate! This may be perfectly constitutional, but the Senate has changed all that, and will teach these upstart Secretaries where the real treaty-making power is now located.

There is also, we cannot help seeing, a faction in the Senate which is against all treaties that make for peace. It wants the sores left open. It prefers to nurse old quarrels. Especially with Great Britain, it wants no settlement whatever of any outstanding dispute. If Lord Salisbury were to put his name to a treaty quieting, because conceding, every possible American demand on every possible subject, this faction in the Senate would be bitterly opposed to it. There are some Senators who would oppose any settlement of any kind with England, simply because it is a settlement. The more the friends of peace say in favor of a treaty, the more suspect and hated it becomes in the eyes of these professional stirrers-up of international strife.

All the motives mentioned—partisan plotting, personal pique, and outright preference for international unrest—seem to have entered into the Senate's opposition to the Hay-Pauncefote treaty. The report of the foreign-relations committee professes to praise it, pretends to urge its ratification, but, by the proposed amendment, really plants a dagger under its fifth rib. Senator Morgan, in his dissenting report, states the exact truth when he says, "The only legal effect of the amendment is to annul the neutralization of the canal provided for in article 2 of the treaty." A glance at the terms is enough to show this. "None of the foregoing stipulations," reads the amendment, "shall apply to measures which the United States may find it necessary to take for securing, by its own forces, the defence of the United States and the maintenance of public order." That is to say, if it is "necessary" to shut the canal either in peace or war, or to levy discriminating tolls on shipping, or to blockade or to fortify the canal, the United States, while apparently binding itself to do none of these things, shall, in fact, be at liberty to do any or all of them. This is equivalent to proposing to kill the whole treaty. Even if Great Britain should accept it in the form suggested—which is inconceivable—it would be only a self-contradictory hodge-podge.

Senator Davis solemnly declares that his amendment merely takes over one of the articles of the Suez agreement which Mr. Hay had unaccountably overlooked.

We presume the Secretary would reply that he had not overlooked it, but had omitted it because it was wholly inapplicable. The Khedive needed certain rights of defence because Egypt in the case of the Suez Canal was the territorial power. The United States is not the territorial power at the Isthmus. We observe that the logical, but indiscreet, supporters of the Davis amendment see this point, but meet it by advocating an immediate seizure of the Isthmus so that we *shall* be the territorial power. Senator Davis will not thank such unscrupulous admirers for showing where his argument really leads. The purpose and use of the right of defence reserved for the Khedive of Egypt appeared at the time of Arabi Pasha's rebellion. It was feared then that the rebels would cut the canal, and forces had to be sent out to protect it. On one such expedition Prof. E. H. Palmer lost his life. For mere local policing of an Isthmian Canal, and protecting it against "lawlessness and disorder," the Hay-Pauncefote treaty makes ample provision, and vests the power to execute it in the United States. But nothing of that kind is aimed at by Senator Davis and the implacables behind him. They want to kill the whole treaty; or else to insert into it an ambiguous clause under cover of which we can break the promises we apparently give, and play the international ruffian at our pleasure.

It is clear, however, that this underhanded attempt to eviscerate the treaty will fail, if it is firmly opposed. The first outcry about the absolute need of fortifying the canal has subsided. Competent military opinion holds that the true defence of the canal in time of war is and must be naval. Admiral Dewey so maintains. Capt. Mahan does, also, we judge. This Davis amendment is, therefore, a final resort of subterfuge, a sort of last line of defence adopted by the enemies of a civilized canal. Secretary Hay, we understand, is not disposed to yield to them one inch or for an instant. But the President—aye, there's the rub. His backbone is all cartilaginous on this subject, too. A semi-official announcement states that Mr. McKinley cannot, of course, oppose his views to those of the Senate. "Would that I might live to see it!" said Goethe in 1827, speaking of a canal across the Isthmus of Panama. Most Americans share the aspiration; but with it they join the wish that they had a President who would stand by his Secretary, stand by his treaty, and insist upon having the canal built on such terms that it would be indeed a monument of peace. But if he does not—if pressure is not applied in such a way as to give him the semblance of standing firm—the treaty will be beaten, and be added to the collection of the lamented dead in the Senate's cemetery.

A LONG BATTLE ENDED.

The adoption by the Senate of the conference report on the currency bill, and, as we write, its assured adoption by the House, form a fit occasion for a review of the financial legislation of the country since specie payments were suspended, nearly forty years ago. The most impressive lesson it conveys is the old one about the descent to Avernus.

The suspension of specie payments took place in the month of December, 1861, in consequence of the civil war; the banks and the Government suspending simultaneously.

The legal-tender act was passed February 25, 1862. It provided for the issue of $150,000,000 of United States notes to circulate as money. Another issue of $150,000,000 was authorized by Congress June 7, 1862, and a third issue of $100,000,000 January 17, 1863. These notes were convertible into United States bonds, bearing 6 per cent. interest, payable in coin, but this clause in the law was repealed March 3, 1863. This change in the law was recommended by Secretary Chase, but he lived to regret his action. In an opinion written by him as Chief Justice, he said that if the funding clause had been retained, specie payments would have been resumed automatically very soon after the close of the war. The greenbacks would have been converted into bonds. Gold and convertible banknotes would have flowed in to take their place. The transition would have come about in a natural way and would have been scarcely observed.

February 25, 1863, Congress passed the first national banking law. It was superseded by the more elaborate act of June 3, 1864.

June 17, 1864, Congress passed a law to prohibit speculation in gold or foreign exchange. It was a complete fiasco and was repealed July 2, 1864.

April 12, 1866, Congress passed a law authorizing the Secretary of the Treasury to retire and cancel $10,000,000 of United States notes within six months, and $4,000,000 per month thereafter. This act was repealed February 4, 1868.

A controversy having arisen over the question whether the interest-bearing debt of the United States was payable in greenbacks, Congress passed a joint resolution, March 18, 1869, declaring that all Government obligations were payable in coin, unless the law under which they were issued expressly provided for some other payment. This was the first great controversy that grew out of the legal-tender act. It was bitter and long continued. Political parties made platforms in reference to this issue. Congresses and Presidents were elected upon it. The Greenbackers were finally beaten and driven out of the field, but they contended for the right to pay the bonds with greenbacks until after specie payments were resumed.

February 12, 1873, Congress passed a law regulating the coinage. By this act the coinage of the silver dollar was discontinued, and the legal-tender faculty of silver coins was limited to five dollars in one payment (afterwards raised to ten dollars), and the gold dollar was made the unit of value. This act was passed unanimously in the Senate and with only 13 negative votes in the House. The author of the bill was the late John Jay Knox, Comptroller of the Currency. Neither he, nor anybody else at that time, anticipated the decline that afterwards took place in the price of silver. The silver dollar was then worth two cents more than the gold dollar. No silver dollars had been in circulation for thirty years. The only purpose of the bill was to consolidate and revise the coinage laws and bring them into conformity to facts. The act must be regarded a most fortunate one, although it led to one of the most protracted controversies on the money question that the country has ever seen.

April 22, 1874, Congress having passed an act to increase the amount of United States notes by $44,000,000, President Grant vetoed it, and it was not passed over the veto. This was commonly called the "Inflation Bill."

January 4, 1875, Congress passed an act to provide for the resumption of specie payments on the 1st of January, 1879. It fell to the administration of President Hayes to carry this law into effect. John Sherman was Secretary of the Treasury. He acted in a very energetic and intelligent manner, and he was helped by a very favorable condition of the foreign trade of the country. Specie payments were resumed at the date named in the law. The premium on gold had disappeared before the time fixed for resumption. No gold was called for on the day when the Treasury doors were opened, and only $11,000,000 of greenbacks were presented for redemption during the succeeding twelve months.

In 1876 the decline in the value of silver had become sufficiently marked to attract the attention of ambitious politicians and the so-called "debtor class." An agitation, led by the late R. P. Bland of Missouri, was started for the remonetization of that metal, which became the most important issue in politics. The Bland bill passed the House in 1877, was sent to the Senate, and there amended, on the motion of Senator Allison, so as to require the Government to buy at least $2,000,000 worth of silver bullion per month, and coin it into dollars which should be legal tender, and pay the same for Government expenses, or to purchase more bullion. As thus amended the act was vetoed by President Hayes, and was passed over his veto February 28, 1878. The sum of $378,166,793 was coined under it.

The act continued in force until July 14, 1890, when it was superseded by the

so-called Sherman act, which increased the Government's purchases of silver to 4,500,000 ounces of silver bullion per month. In order to avoid the delay of coining, it was provided that legal-tender notes should be issued to the sellers of the silver, and that the bullion should be kept in the Treasury.

This act caused the panic of 1893. It continued in force until October 30 of that year, when it was repealed by Congress at a special session called by President Cleveland for that purpose.

Such is a brief résumé of a most prolonged and perilous controversy now brought to an end by the present currency bill, which makes gold the standard of value beyond dispute or peradventure. It imposes upon the Secretary of the Treasury the duty of redeeming the legal-tender notes in gold and maintaining the parity of all forms of money issued by the Government, and gives him ample means therefor. No political party can successfully assail this legislation during the next six years, and it is not likely that any party will desire to do so at the end of that time.

THE CUBAN SITUATION.

In his article in the *North American Review* for February, the republication of which in Havana has just caused such an outburst of indignation there, Major James E. Runcie thus summarized the history of the year of American government in Cuba under Gen. Brooke: "It is a record of error and neglect; of folly, ending necessarily in failure, and, possibly, in shame and disgrace. . . . After almost a year of American supremacy, Cuba is governed by Spanish methods. The only change has been in the substitution of Cubans for Spaniards as the administrators of the machinery of government." This was the deliberate conclusion of an able army officer and lawyer, put on paper without the slightest expectation of its publication, after a year and a half of unselfish and gratuitous labor on Gen. Wood's staff, on behalf of the Cubans.

If these words seem strong to those of his readers who have taken it for granted that the administrative successes achieved by Gen. Wood and his officers in the province of Santiago were paralleled throughout the island, they have but to read on to find many sound reasons for Major Runcie's forcible language. They will learn also the vitally important fact in the Cuban situation, that the responsibilities assumed by the United States require not merely the honest and able administration of the government, but radical social reforms as well, if the purposes for which the Americans intervened are to be accomplished, and the Cubans given a fair start in self-government. Even Gen. Wood's work in Santiago, as he would be the first to admit, was of a superficial nature, since the fundamental laws and the governmental procedure can, of course, be altered, for the benefit of the entire island, only in Havana.

Major Runcie's sweeping charges relate to the American failure to grapple with the underlying reforms. Their publication, even though unauthorized by him and without his consent, and their truth, for as a whole they cannot be denied, brought down upon him the wrath of Washington officialdom long before they roused the Cubans to anger by their accompanying reflections upon the ability of the latter to govern themselves and to institute reforms. It was not timely that such revelations, even though hinted at when the new Governor went to Havana in December, should come just at the moment when the Porto Rican inhumanity led many loyal Republican newspapers to doubt the McKinley ability to solve the McKinley expansion problems. The article might even cause some uneasiness in the simple Filipino mind, should it follow Senator Beveridge's "traitorous" and sedition-making words across the Pacific.

With the arrival of Gen. Wood in Havana, a vigorous reformation of the imperfections in the machinery of government was begun. Commissions were appointed to revise the barbarities of Spanish legal procedure and the antiquated codes; to reorganize the judiciary; to adopt a modern charter for the cities of the island, with the especial purpose of returning to the municipalities some of the powers now centralized in Havana; to arrange for municipal elections; to reorganize the systems of finance and of taxation, perhaps the most difficult and vital problem of all; and to regulate and expedite the transfer of real estate. It has even been found necessary to go so far into social details as to prescribe the methods under which brokers shall conduct their business, and meanwhile the great humanitarian work of cleansing the cities and making their public institutions habitable has gone on unceasingly.

Secretary Root, however, will discover, in the course of his present trip to Cuba, that nothing more than substantial progress has been made in the short time of Gen. Wood's governorship. He may learn of Americans being confined two months before trial on what we should consider a police-court charge; he will hear that the Cubans caught months ago in robbing the custom-house are still unpunished, and that the courts have not yet learned to respect and use their new-found freedom from interference by the executive branch of the Government. He will find, too, that the new administration has embarked upon the very questionable policy of buying off and silencing clamorous Cuban agitators with offices and, in a very few cases, with sinecures; and that, being human, it is making still other mistakes. But Secretary Root cannot fail to see that Gen. Wood, and not his cabinet, is the real ruler of Cuba to-day, and that he has made an excellent beginning along the right lines. Furthermore, it must become plain to him that the only true way to govern the island is to place the responsibility squarely upon the shoulders of the Governor-General, to remove him at once if he is not equal to it, and, what is most important of all, to back him up with a firm and definite policy, as long as he is in office. The dangerous silence as to the intentions of the United States, so fatal in the Philippines, has been happily broken by Gen. Wood's repeated declarations as to Cuban independence. Any attempt to run the island for the benefit of the Republican party in the approaching Presidential election, or any display of the changeability of opinion which has characterized the Administration's course in the Porto Rican question, will only place additional burdens upon Gen. Wood's shoulders, and again bring up that vision of failure and disgrace which stirred Major Runcie so deeply. It is bad enough now that an Assistant Secretary as head of an insular bureau should be in a position to interfere and to meddle, and that important pending reforms should be held up because of White House fears as to their effect upon Southern Republicans.

Gen. Wood's task and that of the United States in Cuba is to build a governmental structure from the bottom upward, which shall have greater elements of strength than any yet upraised south of Washington. The American spirit of honesty and fair play demands the working out of this problem without reference to any elections at home. The most skilled English colonial administrator might well think twice before undertaking a task requiring such infinite patience, diplomacy, and wisdom as the regeneration of the island; and if American ability is to solve the problem, the "powers that be" must place success in Cuba above personal ambition and party triumphs. Mr. McKinley has had, and has failed to take advantage of, some glorious opportunities. The chance offered him in Cuba, of rehabilitating and setting upon its feet a crushed people, suffering from a frightful heritage of ignorance, dishonesty, and crime, and of nursing into full bloom the strongly budding desire for national life and self-government, should stir even a politician's heart to a realization that there are better and nobler things in life than national aggrandizement and all the commerce of Cathay and the Indies combined.

POLITICS AND PLAYS IN IRELAND.

DUBLIN, February 26, 1900.

While the devil's work is proceeding in South Africa, and we may presume in the Philippines (though latterly we have thence

heard little), Irish affairs are not likely to be of absorbing interest outside our own shores. Yet they are not without their influence on your and imperial politics, and it may be allowable to devote a short space to them.

A reunion of Irish parties in the House of Commons has come about as unexpectedly, to most even of the "best informed," as did disunion nine years ago. An approaching general election, with the certainty of disaster to all parties if feuds were maintained, common sympathy for the Boers, and the extension of the United Irish League were doubtless the principal compulsions. It is all satisfactory, but it does not tend to increase our conception of the reasonableness of politics, that men who theoretically were sworn opponents two months ago, are now, with little real alteration in the situation of affairs on which they differed, sworn friends. The country has the Parliamentary union for which it is said to have been pining and praying. It remains to be seen whether it is still in the same temper as to Home Rule that it was when the split took place—whether increasing deadness upon that subject of late years has been due only to the want of Parliamentary union, or whether it may not rather be attributable to a general cooling of sentiment upon the subject. There is certainly apparent in Ireland a greater proportionate contempt for the constituted government than in any other country in the world but Finland. The exertions now having to be put forth by the moderates to return to Parliament their man as against the candidate of the extremists—the commander of an Irish regiment in the Boer service—is striking proof of this. The question is the real extent and basis of this contempt and dislike; whether, as without doubt successive reforms have circumscribed its volume, further changes, short of Home Rule, might not further circumscribe and eventually extinguish it altogether. To what extent is this dislike but upon the surface, or, where heartfelt, but in the minds of a generation passing away? Home Rule is undoubtedly desired, but is it desired to the degree of the curbing individual and class interests, and the curtailing of present pleasures, necessary for its accomplishment? Enthusiastic open-air meetings are held in favor of the Boers, but I remark at last night's fortnightly meeting of the Dublin Trades Council protests, not against Irishmen enlisting to fight them, but against military uniforms being manufactured in England rather than in Ireland. The progress of the war reveals that a larger proportion of our young men voluntarily take "the Saxon shilling" than of the men of other portions of the United Kingdom. Seldom has the world seen more sickening exhibitions of mock sentimentality and unreal feeling than Irish regiments leaving Ireland for the war, cheering for Mr. Krüger and singing "Who Fears to Speak of '98?" As to our commercial, official, and upper classes generally, the Jingoism out-Herods that of Great Britain. However, upon the whole, to the credit of our people it must be said that their sympathy for the Transvaal arises more from the absence of a domineering imperial spirit and the knowledge of what it is to be a small people, than from animosity towards England; and this sympathy is expended towards an almost exclusively Protestant people.

Meanwhile, whatever may be the course of politics, we are separated from our ante-Land League days almost as widely as you are from your ante-bellum period. The uprising of twenty years ago has compelled a greater respect for the masses of our people than previously. There is an inclination in the upper classes to interest themselves as they never did before in the material prosperity of their poorer neighbors. The country never was so peaceable and free from crime. Moreover, a literary movement has taken hold of classes of our people. It is of it I desire mainly to write.

Irish is being generally studied as it never was before. Its process of rapid disappearance as a spoken language has been arrested. Next year's census will probably show an extension of its domain, not as one only spoken, but as spoken beside English. It is true that this movement is as yet confined mostly to Catholics. Some of the principal leaders of it are, however, Protestants, and there is no reason why there should be anything sectarian about it. Efforts are being made to encourage the study in schools, to make its preservation by those who already speak it a matter of pride rather than shame, and to insist that in Irish-speaking districts children shall be taught English through Irish, rather than, as heretofore, English merely by rote, and without proper understanding. Barring extravagant claims put forward by some, the movement is healthy and elevating. Multitudes of our young people of both sexes are coming together to cultivate and enrich their minds by the acquisition of a second language, and that a beautiful and expressive one. Irish, in the surroundings of most who are cultivating it, will give an interest to daily life such as it is not likely any other language could give; and in gatherings for the cultivation of Irish songs and music, hours are spent that otherwise would be less profitably employed. I am not at all sure that this sphere of thought, however little those engaged in it may be aware, does not tend to the obliteration of the national ideals struggled for during the past sixty years. The principal popular bookseller in Ireland lately told me that the sale of Irish primers, grammars, and reading-books is supplanting that of Davis's Poems, Sullivan's 'Story of Ireland,' and 'Speeches from the Dock.' There are now two weekly Irish papers and one monthly journal. Interesting current reading is being supplied where there was none formerly. Indeed, one of the causes of the discouragement of Irish study in parts of the country sixty years ago by the Catholic clergy is said to have been that the only available printed literature in Irish was then the publications of the various Protestant controversial societies—a propaganda that has long come to an end. It is interesting to note that one of the leaders in the movement in Ireland, a writer of vigorous idiomatic Irish, is a Scottish lady, who commenced the study but ten years ago.

Following upon the language cult has come that of the Irish Literary Theatre. W. B. Yeats, George Moore, Edward Martyn, Alice Milligan, and others are giving themselves to the production and presentation of plays supposed to be peculiarly expressive of Irish genius and sentiment. They are backed by an imposing list of guarantors of all classes and opinions—from Lord Dufferin and Lord Ardilaun to Mr. Healy; from John O'Leary, Mr. Dillon, and Mr. O'Brien to Mr. Lecky and Horace Plunkett. Many of us believe that there is in our people, more especially those of Celtic blood, a spirituality, a preference of the ideal to the coarser things of life, such as there is not among similar classes across the Channel. It would be difficult, however, to endorse the claims put forward by the enthusiasts of the Literary Theatre. In the last number of their magazine, *Beltaine* (Irish for "May"), against Matthew Arnold's estimate of England—"our upper classes materialized and dull, our middle classes purblind and hideous, our lower classes crude and brutal"—is set, "Ireland is virgin soil, yielding endless inspiration to the artist; and her people, uncontaminated by false ideals, are ready to receive the new art. . . . Dublin audiences have awakened to the insipidity of the modern English theatre." Again: "The best thing that could happen to the intellect of Ireland would be if England were blotted out of Ireland's sphere. English influence can be nothing but bad." Three of their plays, "The Bending of the Bough," "Maeve," "The Last Feast of the Fianna," have just been produced at our principal theatre. They were altogether charming; in their simplicity of presentation, and reliance rather upon interest in motive and dialogue, a refreshing change from the glare, glitter, artificiality, and cumbering attention to dress and scenery of the modern stage drama. To those acquainted with Irish legend there could scarcely be a more thrillingly beautiful piece than Miss Alice Milligan's "Last Feast of the Fianna." It is to be hoped some of these plays will be produced in the United States. They will doubtless appeal to many in English-speaking lands who would desire the stage to be more of a teacher and elevator, less of a mere amuser. But there has been nothing in their reception by the Dublin public, appealing in their motives as they specially did to them, to lead us to believe that Irish taste is in such matters superior to British taste. They were anything but well attended. "Good plays, poor houses" was the comment of one interested in theatrical property. A new English farcical comedy took their place this week, and the papers report the theatre as "crowded in every part."

Let us here encourage every movement likely to conduce to our improvement; but do not let us hug the delusion that we are so much more finely constituted than other peoples that we can safely dispense with the self-discipline and plodding essential to all peoples who desire to maintain a position in a practical work-a-day world. D. B.

Correspondence.

THE UNSELFISHNESS OF IMPERIALISM.

To the Editor of The Nation:

Sir: I was amused, in reading to-day the letter from Washington of a Republican correspondent to a Republican paper, to find in it the following assertion: "One thing is reasonably certain, and that is, that if called upon to surrender the protective tariff or the Philippines, the Republican party would give up the Philippines." This may be commended to the attention of those who think the Republican leaders are keeping these islands for the good of their inhabitants. As soon as the tariff is threatened, the corporations and manufacturing interests which control the Republican party threaten to abandon the

Philippines. What then will become of "benevolent assimilation"?

Yours sincerely, H. M. CLARKE.

ELDRED, PA., March 9, 1900.

FELLOWSHIPS FOR WOMEN.

TO THE EDITOR OF THE NATION:

SIR: The committee appointed to examine the applications for the European Fellowship which is awarded each year by the National Association of Women College Graduates, has again to report that no one of the professors who has written a letter of recommendation for a candidate, after saying, "She has shown marked originality," has added the phrase, "so rare in a woman." This information was regularly volunteered in the early years of this fellowship, and the fact that it has now fallen into desuetude may be taken as showing that women college graduates, as a class, have been found to show every bit as much capacity for original investigation at the end of their course of study as do men. That they also have an eager enthusiasm for work of that sort is evidenced by the increasingly large number of them who take it up, in spite of the financial obstacles which, as a general thing, it is harder for women to overcome than for men. This year, for instance, of the fifteen students who are studying at the School of Archæology at Athens, four are women, and this proportion will be found to hold approximately at many centres of learning.

It is interesting to note each year in what terms distinguished professors speak of the candidates whom they recommend. This year, for instance, a Harvard professor says:

"As an undergraduate she distinguished herself in this subject, obtaining Honors. I have seldom had a pupil who equalled her in the accuracy, breadth, and largeness of view of her scholarship. She is at present, out of a large section of twenty-five graduate students, distinctly one of the very best. She has force and originality; and will, I am confident, make a distinguished record, and contribute to the advancement of learning."

Another writes: "She is one of the two or three best students I have ever had." A great German mathematician writes of one that she has "in meinem Seminar eifrig theilgenommen"—what we should have regarded a few years ago as an impossible feat for an American man during his first year in a German university. A professor writes: "She has a thoroughly logical and analytical mind" (with no word about this too being rare in a woman); and again; "She is one of the two most promising and able students whom I have had during my entire work since the opening of the University" (Chicago). They refer to "her unusual ability, her thorough training, her brilliant work"; they say:

"No reservations are needed; I have found her attainments, ability, and critical power distinctly exceptional and worthy of note; and she shows logical accuracy of the highest order." "As a matter of native endowment she possesses one of the most remarkable minds I have ever known"; "of extraordinary strength of mind, and has before her a brilliant career." "She has received the highest honors which the University could confer upon a student"; "this capacity is in no measure limited to her special subject—in no one of the branches required for her first degree did she fail to win high honors." "She possesses distinct originality, and gives promise of admirable results in research"; "the Association would be doing a genuine service in the promotion of investigation by giving her a fellowship." And to end with, this: "It is only justice to her to say that she is decidedly the ablest student in this subject who has had connection with this university."

Lest it should be supposed that all this learning and ardor of research makes women disagreeable and pedantic, it is worth while to add one more quotation: "I venture to mention that few women are so likely to enjoy a successful academic career as Miss ——, provided personal charm and beauty of character are of moment."

The Association has it in its power to offer only one fellowship. It solicits contributions, in order that scientific investigation may be promoted by putting women who have shown the most remarkable ability for original research into a position where their powers may be effective.

STUDENTS AND LIBRARIES IN BERLIN.

TO THE EDITOR OF THE NATION:

SIR: I cannot resist saying a few words in answer to the remarks in this week's *Nation* about the reading propensities of the students of the University of Berlin. Every student is a member of the University Library, from which he draws books of reference, classics, and all that is needed for scholarly work. Both this and the other great library—the Royal Library, to which students have free access also—are always thronged with students standing in long lines as they wait to receive their books. The Akademische Lesehalle, which is a private and privileged institution of the students themselves, is meant mainly to supply the magazines and fiction which the regular libraries consider beneath their dignity. Perhaps this may explain why only 335 out of 5,000 students subscribe, and why so few classics are taken out. Moreover, very few homes, even of the lower middle class, are without their Goethe, Schiller, Heine, and Shakspere; and, apart from that, their plays are acted regularly. I myself have found among the students an enthusiasm and appreciation—an *absorption*—of the classics, that contrast strangely with the cold and superior spirit or impersonal criticism which has become so prevalent in our own schools and colleges. How and why Hermann Kantorowicz comes to give such a queer impression of this matter, I cannot understand; but all I have said is my own personal observation.

A FORMER STUDENT OF THE UNIVERSITY OF BERLIN.

March 11, 1900.

Notes.

Houghton, Mifflin & Co. will issue during the present season only the large-paper edition of Edmund C. Stedman's 'American Anthology,' which has been delayed by the compiler's illness; the edition uniform with his 'Victorian Anthology' being deferred till the autumn. They will shortly publish also 'Notes on the Bacon-Shakspere Question,' by the Hon. Charles Allen, particularly from the point of view of legal attainment; 'The Hôtel de Rambouillet and the Précieuses,' by Leon H. Vincent; and 'A Danvis Pioneer,' by Rowland E. Robinson.

D. Appleton & Co.'s March announcements include the fifth volume of Prof. McMaster's 'History of the People of the United States,' reaching to the verge of the great anti-slavery conflict in Jackson's administration; 'The Principles of Taxation,' by the late David A. Wells; 'Bird Studies with a Camera,' by Frank M. Chapman; 'Stories of the Great Astronomers,' by Edward S. Holden; 'The Storied West Indies,' by F. A. Ober; 'A History of Russian Literature,' from the French of K. Waliszewski; and 'The Chronicles of Sir John Froissart,' an abridgment for children by Adam Singleton.

Dodd, Mead & Co. promise 'From Cape Town to Ladysmith,' by the late G. W. Steevens; 'Paris,' by Esther Singleton; 'A History of Scotland,' in three volumes, by Andrew Lang; 'Grey Stone and Porphyry,' verse by Prof. Harry Thurston Peck; 'English Embroidered Book Bindings,' by Cyril Davenport; and 'Down North,' travel in Nova Scotia, by Margaret W. Morley.

'Flame, Electricity, and the Camera,' by George Iles, a record of man's progress, is in the press of Doubleday, Page & Co.

E. P. Dutton & Co. will add to their "Master Musician Series" 'Bach,' by C. F. Abdy Williams.

'Israel's Messianic Hope,' by Prof. George S. Goodspeed, and 'The Reign of Law,' by James Lane Allen, are further announcements by Macmillan Co.

Meyer Bros. & Co. will publish as the third volume of their "Philobiblon Series" 'Bibliomania in the Middle Ages,' by F. Somner Merryweather.

John Lane will issue "Flowers of Parnassus," illustrated booklets edited by F. B. Money-Coutts; and, as agent of the Vale Press, its new edition of Shakspere's Plays, limited to 310 sets, of which 100 are for America.

A. C. McClurg & Co., Chicago, will shortly publish 'McLoughlin and Old Oregon,' an historical chapter, by Eva Emery Dye.

To the regret, we must suppose, of the Pacific Coast, Mr. Doxey removes his "Sign of the Lark" from San Francisco to New York in the course of the present month. His latest venture in publishing is an illustrated edition of Omar Khayyám's Quatrains, for which Miss Florence Lundborg of California furnishes designs that must stand comparison with Vedder's. They have been executed in line.

The Department of History, University of Pennsylvania, will change its Translations and Reprints from original sources (primarily intended for class use) to a series of volumes containing each the translation of some complete historical source or of selections from a single author, and edited with notes. The first volume will be 'Selections from the Writings of Zwingli,' by Samuel Macauley Jackson, D.D. Herman V. Ames, Ph.D., will edit "State Documents on Federal Relations: The States and the United States," *e. g.*, 'Interpretation of the Constitution prior to the War of 1812'; 'The Reserved Rights of the States, 1812-1832'; 'Nullification'; 'Slavery and the Constitution.'

For the Dante Society, Ginn & Co. announce, for May, Pio Rajna's Critical Text of the De Vulgari Eloquentia, by Paget Toynbee; a compilation of additions to the Harvard Dante collection by Theodore W. Koch and W. C. Lane; and Dante's references to Æsop, by Kenneth McKenzie.

A second edition of Prof. Karl Pearson's 'Grammar of Science' (Macmillan) makes a much bulkier volume than the first; but

the additions to it are inconsiderable. Prof. Pearson has contributed to the theory of evolution much that is of great value, in addition to highly important work in mathematical physics. But, notwithstanding that, the new edition of the present work, like the first, contains a good deal that is simply untenable. The author seeks to ally idealism and scientific philosophy—an attempt which is, in itself, altogether praiseworthy. But the work is not sound either on the one side or on the other.

Heinrich Hertz, who revolutionized current conceptions of electrical action by developing the theory of Maxwell, and who was incontestably one of the most extraordinary intellects that have illumined nineteenth-century science, left behind him, at his early death, an unfinished work, of which a translation now appears under the title of 'The Principles of Mechanics Presented in a New Form' (Macmillan). The manuscript had been laboriously edited, at the desire of the lamented author, by Prof. P. Lenard, and the present translation, by D. E. Jones and J. T. Walley, has received the care of Prof. Lenard. The book is an attempt to elaborate with a strict logic a conception of dynamics which excludes action at a distance, substituting for it concealed connections. Accordingly, we find energy defined as kinetic energy. At this rate our famous doctrine of energy is dissipated into thin air by being reduced to a mathematical truism. It is curious that the work is preceded by an introduction from the pen of Helmholtz, than whom, for all his ineluctable admiration of Hertz, nobody could naturally be less disposed to accept the doctrines of the present essay. Nothing in the notable volume better deserves to be pondered than this same introduction as a lesson in scientific calm and openness to every idea. A logician trained in modern conceptions will not have to read far in Hertz's Spinoza-like presentation to see that it abounds in logical crudities. But these are not inseparable from the doctrine; and perhaps continued health and vigor would have eliminated them before publication. It is certainly a book to be reckoned with and an historic monument. There is no complicated mathematics to be dreaded in it.

A contribution to the much-discussed question of the future of the small college comes to us in the shape of an address by the Rev. Henry Hopkins, D.D., of Kansas City, delivered at the Boston meeting of the International Congregational Council, last December, and now printed in pamphlet form. The address strikes us as special pleading rather than sufficient argument, but it will doubtless help to confirm the faith of some. While giving large praise to the university and its work, Dr. Hopkins emphatically believes that it is in the college, and not in the university, that the best all-round education for the average man or woman is still to be had. That so many men conspicuous in public affairs are graduates of small colleges seems to him to augur well for the future of those institutions. The question is, of course, two-sided. There are colleges and colleges. What Dr. Hopkins, and many others who take pronouncedly his view of the matter, fail to put with sufficient clearness, is the fact that we have in the United States an array of insignificant institutions (most of them, it must be admitted, established in the interest of denominational aggrandizement), which fulfil no indispensable function, and which ought never to have existed at all. It is these superfluous enterprises, with the form but not the substance of sound learning, which most discredit our higher education, and bring the name of college into contempt. We quite agree with Dr. Hopkins that twenty million dollars bestowed in a lump upon some great university might, very likely, accomplish less for the educational welfare of the community than the same sum allotted to twenty small colleges; but we should wish to pick the colleges with care.

The twenty-seventh instalment of the Hatzfeld-Darmesteter 'Dictionnaire Général de la Langue Française' (Paris: Ch. Delagrave) passes from S to T. The tract in question is rather remarkable for the non-appearance of new words in the quarter-century since Littré. In fact, we have noticed only *téléphone* (non-existent in 1875, although Littré has, in an older sense, *téléphonie* and *téléphonique*). The Academy in 1878 set its seal of approbation on a number of words and senses, mostly English, to be found in Littré, such as *spirite* and *spiritisme, steeple-chaise, stéréoscope, stériliser* (which fell into disuse in the seventeenth and eighteenth centuries, and was revived in the nineteenth), *stock*, and *thalweg. Sous-main, syndicat* (financial), *taille-plume, tandem, téléphone* are still unauthorized neologisms.

The first of eight large octavo volumes of a new 'Weltgeschichte' (Leipzig and Vienna: Bibliographisches Institut) has reached us through the publishers' agents in this city, Messrs. Lemcke & Buechner. The work is edited by Dr. Hans F. Helmolt of the Institut, with the collaboration of thirty specialists of good repute. The reasons which induced the editor to plan the work, contrary to all precedent, on an ethnogeographical rather than a chronological basis, and, beginning with America (according to Ratzel the "orient of the inhabited earth"), to proceed westward, reaching western Europe and the Atlantic Ocean last, are sufficiently explained in the preface and the introductory chapter. Two chapters, both very interesting, the one by Prof. J. Kohler (Berlin), the other by Prof. Friedrich Ratzel (Leipzig), deal with the general conditions of the life and development of man on the earth. Prof. J. Ranke (Munich) discusses the prehistoric times in about sixty pages. Then follows the history of North and South America from the earliest times to the present (368 pp.); and a brief chapter (30 pp.) on the historical significance of the Pacific Ocean, succeeded by a good index, completes the volume. Prof. Konrad Haebler's contribution to the volume (America) combines as well as could be expected the spirit of scientific research with the encyclopædic character conditioned by the general plan of the work; and his history of the United States, for example, may well afford pleasure with reliable information to the German readers of the 'Weltgeschichte.' Prof. Ratzel's statement (p. 69), however, that after the abolition of slavery "white masters emigrated and black ex-slaves immigrated, and the Black Belt of negro majorities from South Carolina to Texas was darkened" is to be challenged. The spelling "carpet-*beggar*tum" (p. 568) no doubt results from an unintentional overdose of humor. The strange form *kännte* for the preterite subjunctive of *kennen*, occurs at least three times in the volume.

The revival of historical study in the South has been one of the most gratifying symptoms of recent years. The South Carolina Historical Society, founded in 1855, has felt the impulse, has trebled its membership, engaged a secretary, treasurer, and librarian in one (A. S. Salley, jr.), and founded the quarterly *South Carolina Historical and Genealogical Magazine* (Charleston). Number one contains a list of members in which the names Barnwell, Bull, Calhoun, Gadsden, Gaillard, Grimké, Lowndes, McCrady, Memminger, Pinckney, Ravenel, Rhett, and Tillman occur, and a list of the Society's publications hitherto. There is a very interesting inedited letter from Jefferson to Judge William Johnson, June 12, 1823, noticeable for its recollections concerning the authorship of Washington's Farewell Address and its censure of Marshall; inedited papers touching Col. John Laurens's mission to Europe in 1781; papers of the first South Carolina Council of Safety; and a genealogy of the Bull Family. This is a vigorous beginning.

The *Boletin de la Sociedad Geográfica de Lima*, Peru (*trimestre primero*, 1899), contains a list of all the published works of Raimondi, embracing 87 items, exclusive of 14 maps, covering a period of extraordinary activity extending from 1853 to 1890. The announcement is also made that Sr. José Balta is preparing a critical study of the life and works of Raimondi, which promises to be of more importance than the brief appreciation, "La Obra de Raimondi," by Emiliano Llona. Although somewhat neglected in the latter part of his life, for which the savant himself was largely to blame, he has his reward now in an adoration by the Peruvians which amounts almost to a cult. Other articles of more than passing interest are the conclusion of J. T. Polo's synopsis of all recorded earthquakes and volcanic eruptions in Peru, and a brief but comprehensive account of the Department of Libertad, by Carlos B. Cisneros and Rómulo E. Garcia, which is evidently an advance chapter of the next volume of their Commercial Geography of South America.

That sociological considerations, quite as much as educational, are involved in the modifications everywhere of secondary and higher education appears again from the debates in the Swedish Chambers on which Dr. Klinghardt reports in the *Zeitschrift für ausländisches Unterrichtswesen* (v., 2). As a result of these discussions the gymnasial course in Sweden is to undergo a radical change, the Latin being entirely relegated to the four upper classes. The Swedish gymnasium will then consist of a common substructure of five years, and a twofold superstructure of four years, one with and one without Latin—not unlike our own high school. Besides, there will be a sort of rounding-up one-year course for pupils who have gone through the first five years and do not intend to enter the higher courses—an innovation which would greatly benefit the many thousands who pass from our own grammar schools directly into life.

The *National Geographic Magazine* (Washington) for March contains a sketch of the Transvaal, in which the author, Mr. F. F. Hilder, dwells particularly on the native races, holding that the future of South Africa depends largely, not on the supre-

macy of any one European nation, but upon the manner in which the natives are treated by the whites. Surgeon-General Sternberg gives an historical review of the bubonic plague with many facts and statistics. He closes with an extract from a graphic account by Dr. L. F. Barker of Johns Hopkins University of a visit last year to Poona, India, where the deaths were 150 a day. "Such a rate of mortality in New York would mean about 10,000 deaths per day, 70,000 per week." Other articles are on the ice-cliffs on White River, Yukon Territory, and a hunting trip for walrus and reindeer in Northern Greenland.

An interesting account of the present condition of labor in Hawaii is given in the Consular Reports for February, showing the manner in which laborers are engaged, lodged, cared for, and paid. The Japanese, who are a little more than two-thirds of the whole number (36,000, it is said), can live on from $4 to $6 a month, or about half what it costs a Chinaman. There is also a description of the methods of cultivating cacao in Samoa, by an American planter, with an estimate of the possible profits in it. A report on the French wine crop refers to the immunity of the imported California vines from the phylloxera—"the small cicatrice that it leaves being filled with sap and closed as soon as made"—and adds, "No vine can be looked upon as worth cultivation until it is grafted with the American vine." On the other hand, the Consul at Tientsin reports that attempts to introduce American cotton into northern China, which produces a large quantity of native cotton, have proved a failure. The plant "grows to a luxuriant height, but it has no bolls." There is also a brief reference to the ten free household schools in Liège, nine being evening schools, in which girls from 12 to 13 years of age are taught "cooking, washing, mending, hygiene, household economy, and, in fact, everything relating to housekeeping. Of late, the care of little children has been added."

Corals, as is well known, form a large proportion of the fossils found in the palæozoic rocks of Canada. The classification and nomenclature of these corals, however, have been in a state of some confusion, and, with a view to remedying this, Mr. Lawrence M. Lambe has undertaken a revision of the genera and species. His report on the *Madreporaria perforata* and the *Alcyonaria*, with five plates, forms the first part of the fourth volume of "Contributions to Canadian Palæontology" published by the Geological Survey of Canada. He gives as complete a description as possible of structural characteristics, and attempts to show that some forms, hitherto considered of little value as regards the determination of the age of the deposits in which they occur, really indicate "definite horizons through the possession of distinctive structural peculiarities." The advances made in palæontology during recent years, and the new light thrown on some doubtful points, have necessitated the transfer of certain species to different genera, and have strengthened others in the positions already assigned them. A second part, illustrated by thirteen plates, is in preparation, and is intended to conclude the revision of this class so far as available material permits.

A year ago, some evening lectures on Browning's poetry delivered at University College, London, by Mr. Stopford Brooke, excited a movement to provide for the regular delivery of such a course, as well as to testify to public appreciation of the distinguished lecturer. It is proposed to raise $50,000 for the perpetual endowment of a Stopford Brooke Lectureship or Professorship of Literature or Poetry, he being the first incumbent during his pleasure. An English general committee has been formed, and an American auxiliary is in contemplation. Sir W. Besant, Mr. Bryce, Mr. Sidney Colvin, Dr. Furnivall, Dr. Garnett, Mr. Gosse, Mr. Henry James, Mr. George Meredith, Mr. Leslie Stephen are among the members of the former. Subscriptions may be sent to the Honorary Treasurer, J. Foster Howe, Holwood, Grove Park, Lee, London, S. E.

The University of Edinburgh, which has not hitherto conferred an honorary degree on a woman, will, it is announced, confer the degree of LL.D. on Eleanor A. Ormerod. Miss Ormerod has long been well known, not only as an entomologist of great learning, but also as one who has been the source of most important practical measures for the extermination of insect pests.

The late Daniel G. Brinton, the Americanist, is the latest addition to Mr. F. Gutekunst's (Philadelphia) gallery of imperial panel photographs.

—The *Atlantic* for March opens with Mr. Olney's much-heralded article on the "Growth of Our Foreign Policy." He begins, as all writers of his class do, with the statement that until within two years the characteristics of the foreign policy of the United States was "isolation"; isolation was brought to an end by our annexing the Philippines, which was a great mistake, but is now past talking about, because "the thing is done." "We are no longer an American Empire simply—we are become an Asiatic Empire also," and, so far from being isolated, are elbowed by armed neighbors on every side. What do we deduce from all this? Evidently that we need help. "Except for Great Britain's countenance," we should hardly have got the Philippines; except for her continued support, "our hold upon them would be likely to prove precarious, perhaps altogether unstable." It follows that "we now find ourselves actually caught in an entangling alliance" with Great Britain. Besides the English alliance, moreover, we must have plenty of guns and ships and a large standing army. Through this, however, we shall get an enlarged trade, because the simple Orientals trade by preference with those who make a great display of warlike resources. The only really strong thing in the article is the author's résumé of the reasons why the Philippine adventure is sure to be disadvantageous and dangerous; and if this paper represents the highest level of Massachusetts imperialistic thought, we should strongly recommend the "antis" to republish it as a tract, double-leading the passages which show the real nature of the scrape into which we have got. A political paper of considerable value is that on "British Shipping Subsidies," by J. W. Root, in which the author shows, by means of statistics, how absurd is the pretence that these subventions are anything more than reasonable payments for carrying the mails. Mr. George McLean Harper has a readable article on "The Place of French Literature," in which he points out that the uniformity of the French language, in style and orthography, and the simplicity and neatness of its mechanism, make it the most useful of all to foreign students. Of all great literatures—and it is one of the greatest—French is most open and hospitable. It is only the degenerate writers of our own time "who have gathered slang and thieves' jargon from the gutters of Paris," and "the half-crazed decadent poets who, in their ignoble scramble for notoriety, have invented meaningless phrases"—"it is only through the deliberate efforts of these men that the French language has suffered any radical change in the last three hundred years."

—*Scribner's* publishes the second instalment of H. J. Whigham's narrative of the Boer war, which improves in interest as it goes on. "The Fighting with Methuen's Division" (Belmont, Gras Pan, and Modder River) is here described; and the reader gets a very good idea of these engagements, and of the nature of the campaign in general. The newspapers, notwithstanding their enormous enterprise, give us a very confused notion of the war, and we shall need to revise our impressions as time goes on. Nevertheless, this article confirms the general idea that Lord Methuen's advance was conducted with a wonderful disregard of all the conditions by which he was faced. At Modder River the Boers had an intrenched position extending for about three miles along the steep banks of the river, "having, therefore, not only plenty of material shelter, but a background of trees, which made them absolutely invisible to our advancing troops." In front of them was a field of fire extending for two miles to the horizon of their vision, with no cover. To the Boer in his trench, therefore, the advancing British soldier was an exposed target on the sky-line until he got within a thousand yards, and after that the ground was as flat as a cricket field. For the advance over this deadly plain, no preparation was made by a cannonade, and the British infantry "were well within the range of the enemy's rifle fire before the strength of his force was grasped." The attack was begun in broad daylight, and lasted all day. In the night, the Boers took away their guns and evacuated the position. They "left a position which seemed impregnable, and the march to Modder River was over." George F. Pentecost, jr., has a paper on "The Renaissance of Landscape Architecture," accompanied by a plan based on Bacon's essay. The author is a lover of the Formal or Geometrical style, and insists that new interest is awakening in it. He admits, however, that the question in treating a site is not, Which is the superior style? but, Which treatment does the ground itself call for? To enable artifice to adopt or simulate the methods of nature, the scale must be large.

—The leading paper in the *Century* for March is an article by Ernest Seton-Thompson, illustrated by himself, on the "National Zoo at Washington," in which he makes a strong argument in favor of the preservation of all breeds of animals. Many boasted human inventions, he thinks, have been of less use to mankind than some animal, if preserved, might have been. Grateful as we

ever must be for gunpowder, Mr. Seton-Thompson is doubtful whether we owe it as much as we have lost in the extinction of the buffalo. We, to-day, "who deliberately exterminate any large and useful, possibly domesticable, wild animal *may* be doing more harm to the country than if we had robbed it of its navy." It is to be remembered that the total destruction of an organized being is irreparable, and that "each animal is in itself an inexhaustible volume of facts that man must have, to solve the great problem of knowing himself." It must be said for man that he is quite as ready to exterminate varieties of his own species as he is to destroy the brute creation. In another article, on "The Giant Indians of Tierra del Fuego," Dr. Frederick A. Cook of the Belgian antarctic expedition gives some account, illustrated with pictures made from his own photographs, of what is going on in that little-known part of the world. From this it seems that the Yahgans are already nearly extinct, and that the Onas, who have taken their place, are in a fair way to perish, being helped on the road to extermination by the white sheep-farmer and the missionary. There is no "Zoo" to preserve them, and before long these fine savages will be numbered among the races destroyed by civilization. It is amusing to see how the *entente* with England affects magazine literature. One of the old periodical English stand-bys was the article on the "Designs of Russia," showing how the progress of that Empire threatened the future of the world, and consequently must be checkmated. Formerly these vaticinations of disaster attracted but little attention in this country, and it was rather difficult for an American to understand why there was not as much room in the world for Russia as for some of her rivals. But since the Spanish-American war has opened our eyes to what the world really is, this Russophobe article now makes its appearance in our magazines. Under the title, "The Warfare of Railways in Asia," it may be found in the current *Century*. The author, on this occasion, is Alexander Hume Ford, and he shows conclusively that Russia is at her old tricks. She is "advancing" and "is almost ready once more to close her ever forward hand," and "again reach out for more"; but now, God be praised, "the Great Bear finds her way contested" by every other great Power in the world. The question is now, Who will get their railways built first? By "completing their routes," England, Italy, Germany, Japan, and the United States may "checkmate Russia"; but if we remain apathetic, and leave our routes uncompleted, "the Great Bear will have all Asia in the merciless grasp of his steel-shod claws, and no man can foretell the outcome." It hangs in the balance.

—"Moose-Hunting with the Tro-chu-tin" is the title of a descriptive paper in *Harper's*, by Tappan Adney, with illustrations by the author. The Tro-chu-tin are the Klondike Indians, and the paper is a lifelike account of a primitive winter hunt by a village community. The more one hears of Alaska, the more clearly one perceives that its government by the United States is a sort of constitutional fiction, at least so far as the Indians are concerned. They either shift for themselves, or else they apply for alms to the Alaska Commercial Company—and are told that the Company can do nothing for them. There seem to be no game-laws of any kind, the Indians killing the cow-moose when they are heavy with young. Yet in Bering Sea we were maintaining the other day, at enormous expense, the proposition that sealing of this sort was *contra bonos mores*. Among the heavier articles, Capt. Mahan begins a discussion of "The Problem of Asia." So far as we are concerned, any one can hold what opinion he pleases about the future of Asia, but we must protest against Capt. Mahan's attempted reinforcement of his positions by false or misleading doctrines of public law, manufactured by himself for the occasion. For instance, in this article he undertakes to draw a line between matters which can be arbitrated and those which cannot, and lays it down that "when a difference between two States can be brought to the test of ascertained and defined *right*, this carries with it a strong presumption in favor of submission"; but "when a matter touches only *advantage*, not qualified by law or by prescription, and the question is one of expediency, it is justly and profitably considered in the light of self-preservation." (The italics are not his.) If this were true, then if England set up a claim to sovereignty in the United States, this being a matter of clearly ascertained and defined right, we ought to submit it to arbitration; while over a matter like the neutralization of the Isthmus Canal we ought to go to war and fight to the death. Hitherto publicists have maintained, and the course of history has been supposed to demonstrate, the exact opposite of Capt. Mahan's proposition—that matters of right, such as sovereignty, independence, and freedom, are worth fighting for, but that matters of expediency may be better compromised or arbitrated. Capt. Mahan must surely be aware that one of the arguments by which the arbitration treaty between this country and England was defeated was that we were threatened by it with having to submit fundamental questions of sovereignty and territory, and the attempt was made to exclude these by means of an amendment; both sides admitted that questions of mere expediency were fit subjects for arbitration. But we must be patient and humble with the reactionary writers who are expounding for us the new Jingo learning. From the nature of the case, they are, if possible, to persuade themselves that black is white.

—Eighteen large "colortype" plates, very well reproduced from water-colors by E. W. Deming, twice as many black-and-white drawings by the same artists, and accompanying nursery-keyed "stories" by Therese O. Deming, fulfil a showy and not unattractive album of 'Indian Child-Life' (Stokes). The book is sympathetic in its attitude of introducing the baby original-American to the friendly consideration of the youthful new-American, and for its human tolerance is best worth while. The color schemes are nearly all decidedly good; the compositions generally pleasing. On the other hand, there is a surprising amount of very bad drawing and even more of impossible characterization. Such wooden anatomies as here persistently recur (for egregious examples, the elder Indian's neck, or the child's head and torso, in colorplates 8 and 2, respectively), of course, largely carry their own refutation. Even the young will outgrow any faith that Indians are so inhumanly framed. But such an irremediable jumble of tribal face-types and "properties" is more misleading; and it would be difficult to recall a more serious offender in this regard. Not only is there no suggestion of Burbank's splendid type-portraiture or Lungren's almost prophetic interpretation of the arid atmospheres and landscapes, but no hint of the scrupulous regard to ethnographic truth which distinguishes these masters of the Southwest. It is all the more surprising that this carelessness of fact should inhabit with so sensitive a feeling for color. There never was a pueblo which resembled that pictured for "the Burro Race," nor any such cliff-dwelling as is here shown forth. No Pueblo woman ever wore such dress as all Mr. Deming's Pueblo women wear—nor is ever likely to; for, when she shall depart from the rigid convention of centuries, it will be to something very unlike his fashion-plate. She never even wore a dress of the color he finds most consonant with his scheme; and she cannot until she ceases to be a Pueblo Indian. Scores of these hopeless incompatibilities—facial, geographic, habilimentary, architectural—make it most charitable to presume that the artist has relied mostly upon photographs which left much to the imagination.

—The International Society of Painters, Sculptors, and Gravers, in two years' time, has made a reputation for itself by giving by far the finest exhibitions of contemporary art held in London. It is appropriate, therefore, that its catalogue should also be the best as yet produced in England. Last year's, in its *édition de luxe* (London: William H. Ward & Co.), has just reached us, at a moment when it seems doubtful if the first and second shows will be followed by a third; at all events, none is announced for this coming spring. But to the work already accomplished by the Society the catalogue is a fitting monument. It proves that there are good engravers and printers in England, when they are wanted, just as the exhibitions proved that there are good artists, though they receive little, if any, official encouragement. Last year not a member of the Academy was on the Council, only one or two Academicians were among the contributors. But the Society, with Mr. Whistler as its President, already holds a position among artists that the Academy lost nearly a century ago and has never made the effort to regain. The first great merit of the Catalogue, therefore, is that it contains reproductions of pictures and drawings, prints and sculpture worth reproducing. But, more than this, the reproductions are excellent. There are a number of photogravures, chief among them Mr. Whistler's "Little Lady Sophie of Soho" as frontispiece; and all are fairly successful in suggesting the quality of the originals, great as the reduction has necessarily been. There are also numerous process blocks, clean and clear, and not the mere smudges with which the compiler of catalogues is too often content. It is the invention and development of half-tone, really, that has all but ruined the Salon catalogues. In the old days, the artists themselves often made amusing line drawings after their own pictures, but nowadays the camera does the work for them, and the engravers and the printer apparently do not think the results worth much trouble. But Messrs. Ward's blocks are good, and they, and also the photogravures and the well-arranged types, are admirably printed. Altogether the Catalogue is interesting, in itself and as an his-

torical record of a very striking and influential artistic venture. There is also an illustrated catalogue of the first year's show issued by Mr. Henschel in London, and, in the event of the Society's not making a third appearance in public, the two volumes together will have an additional attraction for the collector. However, it is to be hoped that the Society still has a great future before it.

—The Messrs. Putnam have reprinted for Mr. Archer M. Huntington the 'Relation du Voyage d'Espagne' of Mme. d'Aulnoy (1679), done into English shortly after its first appearance as a collection of letters. This "ingenious and diverting" narrative, as it is styled in its title-page, is here and there retarded by long-winded stories of casually encountered travellers, much after the fashion of the fiction of those days, as in 'Gil Blas,' for instance; but the rest is sufficiently lively to warrant Taine's desire of seeing the work rendered generally accessible to modern readers. In fact, it might well have been advisable not only to rewrite this somewhat slovenly seventeenth-century translation, but to add from its companion work, 'Mémoires de la Cour d'Espagne,' a selection of passages further illustrative of manners of the time; for in the latter occur several of the episodes which give its piquancy to Taine's familiar essay. To cite but one instance, the anecdote of the cobbler who buys two superfluous pounds of dear salmon with the strut and swagger of an hidalgo, for the silly vanity of making the stranger stare, is not found in the present volume. A biographical introduction sketches the historical and literary aspect of Spain in Mme. d'Aulnoy's day. We must point out, however, that the entertaining French woman wrote neither 'Contes des Fées,' nor 'L'Oiseau Bleue,' although the latter elementary mistake is countenanced in Dunlop's 'History of Fiction.' Her husband's name is commonly given as La Mothe, not La Motte; and the lady herself, here reduced to the rank of a baroness, is presented as a countess in several leading authorities.

HART'S CHASE.

Salmon Portland Chase. By Albert Bushnell Hart. (American Statesmen Series.) Boston: Houghton, Mifflin & Co. 16mo, pp. 465.

It is a pleasure to see the life of Mr. Chase in the popular handy-volume series of American Statesmen. The larger book published by Mr. Schuckers five and twenty years ago still remains a faithful and well-written guide to the study of the career of the statesman and judge; but Prof. Hart has had access to new materials and large files of intimate correspondence, and the lapse of time creates a demand for an estimate of the man in accordance with the fuller light and a more distant perspective. Mr. Hart, himself born an Ohioan, inheriting the great regard and respect for Mr. Chase which his family shared with the anti-slavery men of the last generation, is so well fitted by tradition, by education, and by his favorite studies to do justice to the subject of his memoir, that we feel at once that the task has fallen into the right hands.

Mr. Chase, like many men of large frame and muscle, was slow in maturing intellectually. The body, when rapidly growing and filling out, uses nature's forces so lavishly that the brain must wait, or at least does wait, in many cases, till, the physical man being otherwise fully grown, the development of mind goes on with accelerated momentum far into middle life. The final result was, in his case, a constant gain in weight and power of thought and will, proportioned to the body and capable of responding to demands upon him in a way to produce the conviction that he was equal to the greatest occasion, and at his best when the juncture was most important and critical. This was a solid basis for leadership. His contemporaries Ewing and Giddings in his own State were men of similar mould, and so were Miller and Davis, his associates on the bench. Great latent strength and force marked them all, and all were formidable when aroused.

Mr. Chase formed high ideals in morals, early in life, and through his whole career was sincerely frank in bringing his private and public conduct to the test of true standards of right. Zeal for a cause might warp his judgment, or an ambition based upon a consciousness of his capacity to guide great affairs might at times mislead him and make him connect personal success too closely with public duty. Taken as a whole, however, his life was an example of no ordinary devotion to principle. An attempt to crush liberty of the press by mob law in Cincinnati in 1836 made him volunteer as counsel for James G. Birney, the eminent anti-slavery leader; and the conduct of the case worked such deep conviction as to right and duty that, from being the legal advocate of the oppressed, he passed on to a life-long devotion to the cause of negro emancipation. It seemed to be a renunciation of all selfish ambition in his profession or in politics, and the step was taken in full knowledge of the cost. In the progress of public affairs he came to hold party allegiance very lightly, but no exigency or temptation ever made him waver in devotion to the practical purpose of ridding the country of slavery, and of promoting the enlightenment and the citizenship of the freedmen.

Mr. Hart's sympathy with the cause to which Mr. Chase devoted his life never makes him an indiscriminating eulogist. He calmly weighs the motives and reasons for Mr. Chase's action in each phase of his career, and we feel that approval thus given may be accepted as justice and not favor or affection. In this spirit we are led through the stages of a brilliant public life—a senatorship conferred by a Legislature having little sympathy with anti-slavery doctrine; a splendid fight against the repeal of the Missouri Compromise, and in support of freedom in Kansas and Nebraska; a governorship busy with preparation for terrible contingencies; a ministership of finance with operations so vast and difficult as to make all preceding experience in this country trivial in the comparison; a chief-justiceship busied with reducing to order the laws and the administrative acts of a period of convulsion, and with the reconstruction of constitutional government in States recognized as belligerents in a great rebellion lasting for years. To find steady adherence to principle controlling such a career, to find broad and calm statesmanship dominating it, without panic or passion, to know that faith in his country's destiny never faltered, to see him as judge overruling, with calm and strong appeal to fundamental principles, conclusions which had made his great glory in popular opinion as a minister of state—if these are not marks of a great character, where shall we find it? The final judgment of history may not approve the wisdom of every step or find every act free from human fallibility of motive; but it is so clear in the summing up that the ruling purpose was noble and patriotic, that carping at the few debatable incidents is silenced. We are sure that we are dealing with a life which ought to be and will be the pride of the nation, and which is worthy to be associated with that of Lincoln in permanent reverence.

Passing from the broader view of Mr. Hart's treatment to minor matters of detail, we occasionally find ourselves hesitating to accept the biographer's view. The statement (p. 34) that the prohibition of slavery by the Ordinance of 1787 did not apply to slaves already in the Northwest Territory, seems to go too far. The language of the Ordinance does not warrant it, and the most that can fairly be said is that there was for a time a tacit tolerance of slavery in the case of Southern visitors or squatters, and some hiring of slave-labor along the Ohio River.

In drawing a contrast between Mr. Chase's views and the more radical ones of Giddings (pp. 65, 66), Lysander Spooner is said to have "worked into logical form," in 1845, Mr. Chase's argument. But Spooner's book, so famous in that early controversy, was entitled 'The Unconstitutionality of Slavery,' and went the whole length of contending that, by fixed rules of legal interpretation, slavery had no constitutional existence, either in the national domain or in the several States; that it was within the power of Congress to sweep it away by law, and it was the duty of the judiciary to deny its lawful existence. Spooner was, therefore, the radical of radicals, and his position far beyond Chase's.

We cannot go with Mr. Hart in finding Chase involved in a contradiction by "declaring that the acts of Congress establishing slavery in the District [of Columbia] were void, and yet that Congress had power to repeal them" (p. 71). Surely unconstitutional laws ought to be removed from the statute-book. While they remain there they are a continual source of contention, and a ground for new revival of agitation in both legislatures and courts. But the only possible way of removing them is by repeal, and their unconstitutionality is the strongest of reasons for resorting to it.

The period of hesitation at the beginning of Lincoln's Presidency was not to be charged to the President or his cabinet as a fault. The more sure one might be that war must be the result of secession, the wiser it might also be to wait for the ripening of the public sentiment of the Northern people, and to let the secessionists assume the full responsibility of beginning the clash of arms. Such seems to have been Mr. Lincoln's attitude, with whom the practical was always a dominating idea. Mr. Chase, however, was more under the dominion of systematic theory, and love for self-government embarrassed him when it came to the question of forcibly suppressing a revolution organized by several States. His letter of April 20, 1861, which Mr. Hart quotes (p. 209), seems to us to show, not a "wavering judgment," but an adherence to what he fairly calls "a positive policy," viz., recognizing the Montgomery Government "as an accomplished revolution, accomplished

through the complicity of the late Administration, and letting that Confederacy try its experiment." Greeley, Gen. Scott, and others gave expression to the same thought in different forms. The more determined nationalists were so fully convinced that it was only a question of a short time, and that flagrant war was both inevitable and near, that they thought it was not worth while to debate whether this would be a war of conquest, or whether we could look forward to holding millions of people in a federal union they hated. We said, the occupation of national forts, arsenals, custom-houses, and navy-yards *is* war, and complete disintegration of the nation must follow unless we assert our nationality by arms. A quarrel over a demand to give up half the Western Territories, over the control of the navigation of the Mississippi, over the money value of public property in the hands of either party, would be no more a challenge to arms than the actual expulsion of national officers, civil, military, and judicial, from their functions in the insurrectionary States. Mr. Lincoln was believed to share this opinion, and to be watching for the evidence of support in it by a public sentiment he could rely on.

Mr. Chase's opinion was entirely consistent with readiness to wage war resolutely whenever it should be begun by aggressive military action on the part of the insurrectionists. Events moved so fast that the attack upon Fort Sumter, which gave Mr. Lincoln the indubitable assurance of popular support that he desired, was also the termination of the peaceful experiment which Mr. Chase favored. They were never apart in the practical question, What is to be done to-day? and the 12th of April found them equally in readiness to prosecute the war then made flagrant. This was not by change of "wavering" opinion, but by the logical outcome of the theoretic policy of each. Each may have thought the other was "drifting," but we can now see that neither was doing so.

The mental and personal characteristics of Lincoln and Chase were so different that it it is not strange that chafing occurred. Chase's standards of deportment and of the gravity of thought proper to the conduct of great affairs made him impatient with the President. He evidently shared the error of nearly all the members of Congress in depreciating the abilities and statesmanship of Lincoln, by reason of their failure to see beneath the surface. When we add to this Mr. Chase's natural growth of confidence in his own powers, his increasing ambition to lead, and disposition to press his opinions on others, we do not wonder that the two great men drifted apart. This tendency culminated when the most active Unionists in Congress became hostile to the candidacy of Mr. Lincoln for a second term, and turned to Chase for a successor. From that time they were political rivals in fact, whatever efforts might be made to smooth their current relations. Lincoln's greater suavity and real kindliness of character made the situation easier for him; but Mr. Chase was too vehement to maintain his self-control, especially when his own State very promptly declared for the renomination of the President. His pride and self-esteem met a rebuff which could not fail to humiliate and irritate. From that time matters ran on rapidly toward a separation. All this is treated with a firm yet delicate touch by Mr. Hart, with fulness enough to make the attitude of the men sufficiently clear without belittling either of them by making too much of their differences. Justice is also done to Mr. Lincoln's characteristic magnanimity in the appointment of Mr. Chase to be Chief Justice. True loftiness of soul was shown in his superiority to all considerations but those of patriotism, and a sincere desire to place at the head of the Supreme Court a man who should combine a statesman's breadth of view with solid judicial ability.

The country soon found the benefit of this in being saved from the shame of making political differences about policy the ground of impeaching and removing a President. The partisans of impeachment were swift to claim to be the party of the Union, while they were only the most excited faction of it, and they began the denunciation of Chase as a renegade from party. To be above party in doing his judicial duty should have been, on the other hand, a new claim to honor.

When the legal-tender cases came before the court, the Chief Justice was forced to consider the constitutional validity of a law which, as Secretary of the Treasury, he had himself supported. The truth seems to be that his original opinion as Secretary had been adverse to making Treasury notes a legal tender. But, in the straits for money to carry on the war and in the face of the danger of destruction to the public credit, he was persuaded that the legal-tender act was the most promising measure for relief, and it was passed with his approval. The exigency of a great war for national existence was the only excuse for it. When all the departments of the government had proclaimed the end of the war and the restoration of peace, this exercise of war power continued with little prospect of repeal. Some of the leading politicians of the dominant party advocated even the substitution of the greenbacks for the funded debt of the country. Cases brought by private citizens were pending in the Supreme Court in which the decision necessarily involved the question of the constitutionality of the law when passed, its applicability to contracts previously made, and its continuing validity after peace had been officially declared.

It is safe to say that, as a statesman, the Chief Justice believed that Congress should have acted by making provision for the resumption of specie payments. This would have disposed of the most troublesome practical questions, and the court would have felt justified in avoiding the constitutional question by postponing decision till resumption should have solved the whole difficulty. Not only was no resumption then provided for, though the court delayed decision for a year, but the current seemed running toward the terrible dangers of fiat money. In these circumstances, studying the subject in the light of his experience as finance minister and of its historical development, Chief Justice Chase was convinced that he had erred in thinking the legal-tender law a necessity during the war. He believed that it had, in fact, been of no benefit in upholding the credit of the country, and had demonstrably failed in that which had been supposed to be its peculiar virtue, viz., the prevention of the depreciation of the Treasury notes as currency. The measure had proved a mistake in fact. But the ground on which it had been defended was its necessity as a war measure for the national safety—not its supposed or imagined, or asserted, necessity, but its real necessity. Its constitutional support was found, by the judges who upheld the measure, in the war powers of the Government given by the fundamental law to do those things necessary for carrying on the war.

Mr. Hart seems to go too far in saying that the opinion of the Chief Justice in the Hepburn and Griswold case was "practically a legal defence for a change of mind which was founded really on financial and political considerations" (p. 394). The discussions of the consultation room had divided the court on the question of the necessity of the legal-tender act as a war measure. The judges were agreed that if it was unnecessary, it was unsupported by the war powers granted by the Constitution. On the question of the necessity, the experience of the Chief Justice as Secretary and the study he had given to the finances of the country made his opinion outweigh that of his colleagues. The intimation that it was weakened by his change of mind was only an argument *ad hominem*, which made it necessary for him to give reasons for the change. This he did not only with dignity, but with an avoidance of personal treatment that is remarkable.

The practical sense of intelligent laymen in close contact with the business community seized on the overturning of contract obligations as the fatal vice of the law. An editorial in the *Nation* of December 9, 1869 (before the decision by the court) may be taken as a fair index of such enlightened mercantile opinion, which great courts have often received as a good basis of mercantile law. Of the law itself it said: "It was undoubtedly a measure of injustice and spoliation, justifiable in the minds of the public by the supposed invincible necessities of war." It referred to the principle "that a contract is to be interpreted according to the intentions of the parties making it," recognized as fundamental law by every intelligent business man. Under this self-evident rule, it was declared to be indisputable, first, that contracts to pay money made before the passage of the act were contracts to pay coin; second, that, after the law passed, such contracts were intended to be in currency as defined by the law, unless the parties specified coin; third, that a system based only on the "invincible necessities of war" ought to terminate at the official declaration of peace, and *a fortiori* when the court of last resort should remove the asserted foundation upon the necessities of war. A reasonable consensus of the business community in such principles of action would remove all the practical difficulties, and save the assertion of the repellent doctrine that wanton destruction of the obligation of contracts is at the discretion of Congress.

The dangerous tendency of the doctrines held by the majority of the court on the rehearing was shown more plainly in Justice Bradley's concurring opinion than in the official one. He took the extraordinary ground that as the prohibition to the States to make anything but coin a legal tender was accompanied by no express prohibition on the Federal Government in the Constitution, "it must have been expected that it would issue them" (p. 407). This was, too, in the face of the declaration of the

Constitution itself against any such loose implication of powers, in the face of the fact that the inviolability of contracts was destroyed in the same fell swoop, and in the face of the strongest repudiation by the Constitutional Convention itself of the whole odious doctrine of paper legal tender. Ten days before this reversing decision, the *Nation* had published (April 21, 1870) a correspondent's full quotation from Elliot's Debates, of the warm expression of the Convention in this regard, and its decisive vote. In sharpest contrast to the words and the act of the Convention, Justice Bradley declared the making of Treasury notes a legal tender a merely "incidental power" following "almost as a matter of course" from the power to issue such notes at all (p. 407)! The power to make fiat money could hardly be more explicitly declared. Judicious men grieved over such revolutionary doctrine. Respect for the Chief Justice's sounder reasoning does not diminish with time and reflection. He did not swerve from the righteous judgment that the right of private property, like that of life and liberty, underlies the whole Constitution.

Although there was no party issue involved in this question, it became such by the subsequent drift of events, and Judge Chase was charged with abandoning the cause for which he had fought and labored as few others had done. The accusation itself tended to estrange him from old associates; and when he dallied with the idea of accepting a Democratic nomination for the Presidency upon his platform of universal freedom, suffrage, and amnesty, a retroactive hostility to him led many old friends to condemn a whole life of conduct based on patriotism, on deep study of republican institutions, and a wise judgment as to governmental guidance of affairs in a terrible crisis. He yielded somewhat to impatience at tendencies in the impeachment, in the dominant reconstruction policy, and in the greenback craze, and hurried into antagonism when it might have been wiser to await the clarifying process of political fermentation. He was alive to motives of personal ambition when he felt sure that he had the capacity and saw the way to guide affairs by a better standard, and ambition is most apt to be misleading. But as the gap widens between our time and his, the dominant purpose of his life comes into better perspective, the defects in his career seem comparatively trivial, and we recognize in him a great character and a patriot.

Literary Reminiscences. By Édouard Grenier. Translated from the French by Mrs. Abel Ram. London: Adam & Charles Black; New York: Macmillan. 1899.

French Portraits: Being Appreciations of the Writers of Young France. By Vance Thompson. Boston: Badger & Co. 1900.

To have lived as a privileged literary satellite, revolving in turn around most of the great luminaries of French Romanticism, constitutes a fair title to attention, even though the borrowed light gives out no dazzling glow. In the anecdotic recollections of M. Édouard Grenier, the brilliant array of creators and critics from Béranger to Sainte-Beuve, whose achievement relieves the dulness of one reign and conceals the corruption of another, finds a faithful veteran admirer. We are told (p. 110) that "the present generation knows nothing about heroes and hero-worship"; in which remark we trust there lurks neither sarcasm nor irony. But many of us are yet capable of enjoying "belated confessions," innocent of malice or guile, and candid in their simplicity. There is some pleasure also in seeing justice done to men misrepresented by unsympathetic critics, or even through their own perverseness. Mérimée, for instance, is here presented as a charming companion, as the most considerate and obliging of friends. "The Parisian," says M. Grenier (p. 150), "is a thousand times better than he wishes to seem." Few men, indeed, are capable of such delicacy as Mérimée showed proof of, on hearing of the public communication of his outspoken pamphlet on Stendhal and the simultaneous smudging of his last private copy. Good service is also done in these memoirs by the demolishing of fanciful legends, as in the case of Heine. Gautier, carried away by his romantic imagination, gave to the German poet the face of a Greek god; and Mr. Stigand, a most partial biographer, refused to admit any serious blemishes in the character or conduct of his hero. But M. Grenier, who looked on Heine with the eyes of a man of the world and a diplomatist, saw in him "a good northern bourgeois, with a slight German accent." We discover, too, that Heine's boasted bilingualism was something of a myth, his celebrated articles in the *Revue des Deux Mondes* having invariably undergone correction from more competent hands; for which assistance, it would seem, adequate recognition was not commonly given, as M. Grenier found to his cost.

Of the latter's accuracy, in so far as his own recollections are concerned, there seems to be no doubt; but he occasionally goes astray in dealing with writers out of his more immediate ken. Lammenais, he says, "after he had forsaken the sanctuary, wrote 'Paroles d'un Croyant'" (p. 10). Now, this little volume followed immediately upon Lammenais's formal submission to the Church, and was intended by him as a definitive explanation of that act; but, seeing that the bull *Singulari nos* promptly condemned his work in the words, *Mole quidem exiguum, pravitate tamen ingentem*, all further connection with Rome became impossible for him thenceforth. In the case of Lamartine, George Sand, Montalembert, Nodier, the author's intimacy, having been closer, supplied the material for faithful, though not strikingly vivid, portraits. According to his own admissions, M. Grenier's lifelong devotion to literature manifested itself in early youth in the somewhat singular freak of composing letters or dedicatory verses to almost every one of these celebrities, none of which reached their destination, for the timidity of the writer invariably held them back at the very mouth of the post-box. Fortunately for him, the future offered opportunities for regular introductions. Such acquaintanceships must help to console one for the damper of being talked of for many years as a "candidat perpétuel" for the Academy. Want of success, however, leaves no real bitterness in these recollections by a genuinely modest survivor of the days in which it was still thought meet for the lesser man to own his lawful lords. Readers unacquainted with the original chapters in the *Revue Bleue* will find in the present translation no inadequate substitute.

Mr. Vance Thompson, writing of to-day, belongs in almost every particular in a very different category. He has been preserved, he says, for many years "from the sin of inutile reading." In what respect this abstention can serve such "appreciations" as his profess to be, is primarily, not exclusively, his own concern. But a timely refreshing of one's memory of trite scraps or quotations —nay, the mere consulting of a dictionary— is not ordinarily deemed a hindrance to accurate literary work. The veriest "village-schoolmaster" critic, sneeringly girded at in his preface, might tell him that "gossip with *Pym* and Pistol" is neither simultaneously possible, nor profitable; and any schoolboy can point out the hackneyed phrase aimed at, but missed, in the futile barbarism of *et id omnes* (p. 66). Any one who assumes what Mr. Thompson seems to imply in the description of Georges Eekhoud as "semi-paganus," might surely have discovered for himself that Persius, in that expression, referred possibly to his own rustic surroundings, possibly to the *Paganalia*, or festivals taken part in by common dwellers in a *pagus*. Excusable though these slips may be, what warrant have we of the soundness of a critic's knowledge when we find him capable of writing *pointe du départ* (p. 51) in a work on French literature? And Walt Whitman, for whom boundless admiration is here professed, did not glory in a "*barbarous* yawp" (p. 115). This insecurity of touch increases as the themes recede the farther from easy grasp. "The ideographic hand is that of Mallarmé, but the voice is that of Beau Tibbs" (p. 226). Reading not altogether "inutile" teaches that Beau Tibbs is Goldsmith's conception of a shabby second-rate buck, while M. Robert de Montesquiou, the subject of this sarcasm, is, according to his critic, a "gentleman." The 'Tristia' doubtless suggests a variety of impressions to readers of Ovid; did any one before now ever discover that in this poem the exile "sang like a nightingale" (p. 51)?
